Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), P.L. 104–4, establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments and the private sector. Under section 202 of the UMRA, EPA generally must prepare a written statement, including a cost-benefit analysis, for proposed and final rules with "Federal mandates" that may result in expenditures to State, local, and tribal governments, in the aggregate, or to the private sector, of $100 million or more in any one year. Before promulgating an EPA rule for which a written statement is needed, section 205 of the UMRA generally requires EPA to identify and consider a reasonable number of regulatory alternatives and adopt the least costly, most cost-effective, or least burdensome alternative that achieves the objectives of the rule. The provisions of section 205 do not apply when they are inconsistent with applicable law. Moreover, section 205 allows EPA to adopt an alternative other than the least costly, most cost-effective, or least burdensome alternative if the Administrator publishes with the final rule an explanation why that alternative was not adopted. Before EPA establishes any regulatory requirements that may significantly or uniquely affect small governments, including tribal governments, it must have developed under section 203 of the UMRA a small government agency plan. The plan must provide for notifying potentially affected small governments, enabling officials of affected small governments

to have meaningful and timely input in the development of EPA regulatory proposals with significant Federal intergovernmental mandates, and informing, educating, and advising small governments on compliance with the regulatory requirements.

This proposed rule is not expected to result in expenditures of more than $100 million in any one year and, as such, is not subject to section 202 of the UMRA. Although the proposed rule is not expected to significantly or uniquely affect small governments, the Agency has notified all potentially affected small governments that own or operate units potentially affected by the proposal in order to assure that they have the opportunity to have meaningful and timely input on the proposed rule. EPA will continue to use its outreach efforts related to part 75 implementation, including a policy manual that is generally updated on a quarterly basis, to inform, educate, and advise all potentially impacted small governments about compliance with part 75.

E. Paperwork Reduction Act

The information collection requirements in this proposal have been submitted for approval to the OMB under the Paperwork Reduction Act, 44 U.S.C. 3501, *et seq.* An Information Collection Request (ICR) document has been prepared by EPA (ICR No. 1835.01), and a copy may be obtained from Sandy Farmer, OPPE Regulatory Information Division; U.S. Environmental Protection Agency (2137); 401 M Street, SW, Washington, DC 20460, by calling (202) 260–2740, or via the Internet at www.gov/icr.

Currently, all affected utilities are required to keep records and submit electronic quarterly reports under the provisions of part 75. The proposed rule includes several new options for compliance with part 75 which have been requested by affected utilities. To implement these options, EPA would have to modify the existing recordkeeping and reporting requirements. In some circumstances, these changes would result in significant reductions in the reporting and recordkeeping burdens or costs for some units (such as low mass emissions units). However, these changes would require modifications to the software used to generate electronic reports. In addition, there would be some increased burden or costs for certain units to fulfill the new quality assurance procedures proposed in these proposed revisions. Finally, several other technical revisions to the existing reporting and recordkeeping requirements have been proposed to clarify existing provisions or to facilitate reporting for other regulatory programs in the context of Acid Rain Program reporting. Although these one-time software changes would tend to increase the short-term burdens allocated to the Acid Rain Program, such changes should reduce a source's overall long-term burden by streamlining the source's reporting obligations under both the Acid Rain Program and the Act.

The average annual projected hour burden is 2,608,836, which is based on an estimated 835 likely respondents (on a per utility basis). The projected cost burden resulting from the collection of information is $47,555,000, which includes a total projected capital and start-up cost of $1,436,000 (for monitoring equipment/software), and a total projected operation and maintenance cost (which includes purchase of testing contractor services and total projected fuel sampling and analysis cost of $716,000) of $46,119,000. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, disclose, or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations are listed in 40 CFR part 9 and 48 CFR chapter 15.

Comments are requested on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including through the use of automated collection techniques. Send comments on the ICR to the Director, OPPE Regulatory Information Division; U.S. Environmental Protection Agency (2137); 401 M Street, SW, Washington, DC 20460; and to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street, NW, Washington, DC 20503, marked "Attention: Desk Officer for EPA." Include the ICR number in any correspondence. Since OMB is required to make a decision concerning the ICR between 30 and 60 days after May 21, 1998, a comment to OMB is best assured of having its full effect if OMB receives it by June 22, 1998. The final rule will respond to any OMB or public comments on the information collection requirements contained in this proposal.

F. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA), 5 U.S.C. 601, *et seq.*, generally requires an agency to conduct a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and governmental jurisdictions. This proposed rule would not have a significant impact on a substantial number of small entities.

Today's proposed revisions to part 75 result in a net cost reduction to utilities affected by the Acid Rain Program, including small entities. Most importantly, the proposed changes to Appendix D and the addition of an optional calculation procedure instead of actual monitoring for oil- and gas-fired units with low mass emissions would significantly reduce the cost of complying with part 75 for oil-and gas-fired units, many of which are owned or operated by small entities. Therefore, I certify this action will not have a significant economic impact on a substantial number of small entities.

G. National Technology Transfer and Advancement Act

Section 12(d) of the National Technology Transfer and Advancement Act of 1995 ("ANTTAA"), Pub L. No. 104–113 15 USC 272 note, directs EPA to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., materials specifications, test methods, sampling procedures, business practices, etc.) that are developed or adopted by voluntary consensus standards bodies. The NTTAA requires EPA to provide Congress, through OMB, explanations when the Agency decides not to use available and applicable voluntary consensus standards.

This regulatory action proposes to incorporate by reference voluntary consensus standards pursuant to § 12(d) of the NTTAA. The EPA has adopted the general policy of using voluntary

consensus standards from technically knowledgeable groups such as the Organization for International Standards (ISO), the American Society for Testing and Materials (ASTM), the American Society of Mechanical Engineers (ASME), the American Gas Association (AGA), the Gas Processors Association (GPA), and the American Petroleum Institute (API).

EPA invites public comment on the voluntary consensus standards which are proposed to be incorporated by reference for use in part 75. EPA has not identified any additional voluntary consensus standards which might be applicable to this rulemaking. This does not indicate that other applicable standards do not exist or that any other standards should not be allowed. Therefore, EPA also invites public comment on any other voluntary consensus standards which may be appropriate for the proposed regulatory action. Further, if additional applicable voluntary consensus standards are identified in the future, the designated representative may petition under § 75.66(c) to use an alternative to any standard incorporated by reference and prescribed in this part.

EPA proposes to incorporate by reference the following voluntary consensus standards for use under part 75:

a. ASTM D5373–93 "Standard Methods for Instrumental Determination of Carbon, Hydrogen and Nitrogen in laboratory samples of Coal and Coke." This standard is proposed to be incorporated by reference for use under section 2.1 of Appendix G to part 75 and is discussed further in section III.Q.1 of this preamble.

b. API Section 2 "Conventional Pipe Provers" from Chapter 4 of the *Manual of Petroleum Measurement Standards*, October 1988 edition. This standard is proposed to be incorporated by reference for use under paragraph (g)(1)(i) of § 75.20 and under section 2.1.5.1 of Appendix D to part 75. The proposal to incorporate this standard by reference is discussed further in section III.P.6.(b) of this preamble.

List of Subjects in 40 CFR Parts 72 and 75

Air pollution control, Carbon dioxide, Continuous emission monitors, Electric utilities, Environmental protection, Nitrogen oxides, Reporting and recordkeeping requirements, Sulfur dioxide.

Dated: April 27, 1998.

Carol M. Browner,

Administrator, U.S. Environmental Protection Agency.

For the reasons set out in the preamble, title 40 chapter 1 of the Code of Federal Regulations is proposed to be amended as follows:

PART 72—PERMITS REGULATION

1. The authority for part 72 continues to read as follows:

Authority: 42 U.S.C. 7601 and 7651, *et seq.*

2. Section 72.2 is amended by revising the definitions of "calibration gas," "excepted monitoring system," "gas-fired," "pipeline natural gas," "span," "stationary gas turbine," and "zero air material"; by revising paragraph (2) of "oil-fired" and paragraph (2) of the "peaking unit"; by adding paragraph (3) to the definition of "peaking unit"; by adding new definitions for "conditionally valid data," "EPA protocol gas," "gas manufacturer's intermediate standard," "low mass emissions unit," "maximum rated hourly heat input," "ozone season," "probationary calibration error test," "research gas mixture (RGM)", and "standard reference material-equivalent compressed gas primary reference material"; and by removing the definition of "protocol 1 gas," to read as follows:

§ 72.2 Definitions.

* * * * *

Calibration gas means:

(1) A standard reference material;

(2) A standard reference material-equivalent compressed gas primary reference material;

(3) A NIST traceable reference material;

(4) NIST/EPA-approved certified reference materials;

(5) A gas manufacturer's intermediate standard;

(6) An EPA protocol gas;

(7) Zero air material; or

(8) A research gas mixture.

* * * * *

Conditionally valid data means data from a continuous monitoring system that are not quality assured, but which may become quality assured if certain conditions are met. Examples of data that may qualify as conditionally valid are: data recorded by an uncertified monitoring system prior to its initial certification; or data recorded by a certified monitoring system following a significant change to the system that may affect its ability to accurately measure and record emissions. A monitoring system must pass a probationary calibration error test, in accordance with section 2.1.1 of appendix B of part 75 of this chapter, to initiate the conditionally valid data status. In order for conditionally valid emission data to become quality assured, one or more quality assurance tests or diagnostic tests must be passed within a specified time period.

* * * * *

EPA protocol gas means a calibration gas mixture prepared and analyzed according to section 2 of the "EPA Traceability Protocol for Assay and Certification of Gaseous Calibration Standards," September 1997, EPA–600/R–97/121 or such revised procedure as approved by the Administrator.

* * * * *

Excepted monitoring system means a monitoring system that follows the procedures and requirements of § 75.19 of this chapter or of appendix D or E to part 75 for approved exceptions to the use of continuous emission monitoring systems.

* * * * *

Gas-fired means:

(1) For all purposes under the Acid Rain Program, except for part 75 of this chapter, the combustion of:

(i) Natural gas or other gaseous fuel (including coal-derived gaseous fuel), for at least 90.0 percent of the unit's average annual heat input during the previous three calendar years and for at least 85.0 percent of the annual heat input in each of those calendar years; and

(ii) Any fuel, except coal or solid or liquid coal-derived fuel for the remaining heat input, if any.

(2) For purposes of part 75 of this chapter, the combustion of:

(i) Natural gas or other gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas (including coal-derived gaseous fuel) for at least 90.0 percent of the unit's average annual heat input during the previous calendar years and for at least 85.0 percent of the annual heat input in each of those calendar years; and

(ii) Fuel oil, for the remaining heat input, if any.

(3) For purposes of part 75 of this chapter, a unit may initially qualify as gas-fired if the designated representative demonstrates to the satisfaction of the Administrator that the requirements of paragraph (2) of this definition are met, or will in the future be met, through one of the following submissions:

(i) For a unit for which a monitoring plan has not been submitted under § 75.62 of this chapter,

(A) The designated representative submits fuel usage data for the unit for

the three calendar years immediately preceding the date of initial submission of the monitoring plan for the unit under § 75.62; or

(B) For a unit that does not have fuel usage data for one or more of the three calendar years immediately preceding the date of initial submission of the monitoring plan for the unit under § 75.62, if the designated representative submits: the unit's designated fuel usage; all available fuel usage data (including the percentage of the unit's heat input derived from the combustion of gaseous fuels), beginning with the date on which the unit commenced commercial operation; and the unit's projected fuel usage.

(ii) For a unit for which a monitoring plan has already been submitted under § 75.62, that has not qualified as gas-fired under paragraph (3)(i) of this definition, and whose fuel usage changes, the designated representative submits either:

(A) Three calendar years of data following the change in the unit's fuel usage, showing that no less than 90.0 percent of the unit's average annual heat input during the previous three calendar years, and no less than 85.0 percent of the unit's annual heat input during any one of the previous three calendar years is from the combustion of gaseous fuels with a total sulfur content no greater than the total sulfur content of natural gas and the remaining heat input is from the combustion of fuel oil; or

(B) A minimum of 720 hours of unit operating data following the change in the unit's fuel usage, showing that no less than 90.0 percent of the unit's heat input is from the combustion of gaseous fuels with a total sulfur content no greater than the total sulfur content of natural gas and the remaining heat input is from the combustion of fuel oil, and a statement that this changed pattern of fuel usage is considered permanent and is projected to continue for the foreseeable future.

(iii) If a unit qualifies as gas-fired under paragraph (2)(i) or (ii) of this definition, the unit is classified as gas-fired as of the date of the submission under such paragraph.

(4) For purposes of part 75 of this chapter, a unit that initially qualifies as gas-fired must meet the criteria in paragraph (2) of this definition each year in order to continue to qualify as gas-fired. If such a unit fails to meet such criteria for a given year, the unit no longer qualifies as gas-fired starting January 1 of the year after the first year for which the criteria are not met. If a unit failing to meet the criteria in paragraph (2) of this definition initially qualified as a gas-fired unit under paragraph (3)(ii) of this definition, the unit may qualify as a gas-fired unit for a subsequent year only under paragraph (3)(i) of this definition.

* * * * *

Gas manufacturer's intermediate standard (GMIS) means a compressed gas calibration standard that has been assayed and certified by direct comparison to a standard reference material (SRM), an SRM-equivalent PRM, a NIST/EPA-approved certified reference material (CRM), or a NIST traceable reference material (NTRM), in accordance with section 2.1.2.1 of the "EPA Traceability Protocol for Assay and Certification of Gaseous Calibration Standards," September 1997, EPA–600/R–97/121.

* * * * *

Low mass emissions unit means a gas-fired or oil-fired unit that burns only natural gas and/or fuel oil and that qualifies under §§ 75.19(a) and (b) of this chapter.

* * * * *

Maximum rated hourly heat input means a unit-specific maximum hourly heat input (mmBtu) which is the higher of the manufacturer's maximum rated hourly heat input or the highest observed hourly heat input.

Oil-fired means:

* * * * *

(2) For purposes of part 75 of this chapter, a unit may qualify as oil-fired if the unit burns only fuel oil and gaseous fuels with a total sulfur content no greater than the total sulfur content of natural gas and if the unit does not meet the definition of gas-fired.

* * * * *

Ozone season means the period of time from May 1st to September 30th, inclusive.

* * * * *

Peaking unit means:

* * * * *

(2) For purposes of part 75 of this chapter, a unit may initially qualify as a peaking unit if the designated representative demonstrates to the satisfaction of the Administrator that the requirements of paragraph (1) of this definition are met, or will in the future be met, through one of the following submissions:

(i) For a unit for which a monitoring plan has not been submitted under § 75.62,

(A) The designated representative submits capacity factor data for the unit for the three calendar years immediately preceding the date of initial submission of the monitoring plan for the unit under § 75.62; or

(B) For a unit that does not have capacity factor data for one or more of the three calendar years immediately preceding the date of initial submission of the monitoring plan for the unit under § 75.62, the designated representative submits: all available capacity factor data, beginning with the date on which the unit commenced commercial operation; and projected capacity factor.

(ii) For a unit for which a monitoring plan has already been submitted under § 75.62, that has not qualified as a peaking unit under paragraph (2)(i) of this definition, and where capacity factor changes, the designated representative submits either:

(A) Three calendar years of data following the change in the unit's capacity factor showing an average capacity factor of no more than 10.0 percent during the three previous calendar years and a capacity factor of no more than 20.0 percent in each of those calendar years; or

(B) One calendar year of data following the change in the unit's capacity factor showing a capacity factor of no more than 10.0 percent and a statement that this changed pattern of operation resulting in a capacity factor less than 10.0 percent is considered permanent and is projected to continue for the foreseeable future.

(3) For purposes of part 75 of this chapter, a unit that initially qualifies as a peaking unit must meet the criteria in paragraph (1) of this definition each year in order to continue to qualify as a peaking unit. If such a unit fails to meet such criteria for a given year, the unit no longer qualifies as a peaking unit starting January 1 of the year after the year for which the criteria are not met. If a unit failing to meet the criteria in paragraph (1) of this definition initially qualified as a gas-fired unit under paragraph (2)(ii) of this definition, the unit may qualify as a peaking unit for a subsequent year only under paragraph (2)(i) of this definition.

* * * * *

Pipeline natural gas means natural gas that is provided by a supplier through a pipeline and that contains 0.3 grains or less of hydrogen sulfide per 100 standard cubic feet. The hydrogen sulfide content of the natural gas must be documented either through quality characteristics specified by a purchase contract or pipeline transportation contract, through certification of the gas vendor, based on routine vendor sampling and analysis, or through at least one year's worth of analytical data on the fuel hydrogen sulfide content from samples taken at least monthly, demonstrating that all samples contain

0.3 grains or less of hydrogen sulfide per 100 standard cubic feet.

* * * * *

Probationary calibration error test means an on-line calibration error test performed in accordance with section 2.1.1 of appendix B of part 75 of this chapter that is used to initiate a conditionally valid data period.

* * * * *

Research gas mixture (RGM) means a calibration gas mixture developed by agreement of a requestor and NIST that NIST analyzes and certifies as "NIST traceable." RGMs may have concentrations different from those of standard reference materials.

* * * * *

Span means the highest pollutant or diluent concentration or flow rate that a monitor component is required to be capable of measuring under part 75 of this chapter.

* * * * *

Standard reference material-equivalent compressed gas primary reference material (SRM-equivalent PRM) means those gas mixtures listed in a declaration of equivalence in accordance with section 2.1.2 of the "EPA Traceability Protocol for Assay and Certification of Gaseous Calibration Standards," September 1997, EPA–600/R–97/121.

* * * * *

Stationary gas turbine means a turbine that is not self-propelled and that combusts natural gas, other gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas, or fuel oil in order to heat inlet combustion air and thereby turn a turbine, in addition to or instead of producing steam or heating water.

* * * * *

Zero air material means either:

(1) A calibration gas certified by the gas vendor not to contain concentrations of SO_2, NO_X, or total hydrocarbons above 0.1 parts per million (ppm), a concentration of CO above 1 ppm, a concentration of CO_2 above 400 ppm; or

(2) Ambient air conditioned and purified by a CEMS for which the CEMS manufacturer or vendor certifies that the particular CEMS model produces conditioned gas that does not contain concentrations of SO_2, NO_X, or total hydrocarbons above 0.1 ppm, a concentration of CO above 1 ppm, or a concentration of CO_2 above 400 ppm; or

(3) For dilution-type CEMS, conditioned and purified ambient air provided by a conditioning system concurrently supplying dilution air to the CEMS; or

(4) A multicomponent mixture certified by the supplier of the mixture that the concentration of the component being zeroed is less than or equal to the applicable concentration specified in paragraph (1) of this definition, and that the mixture's other components do not interfere with the specific CEM readings or cause the CEM being zeroed to read concentrations of the gas being zeroed.

3. Section 72.3 is amended by adding in alphabetical order, new acronyms for kacfm, kscfh, and NIST to read as follows:

§ 72.3 Measurements, abbreviations, and acronyms.

* * * * *

kacfm—thousands of cubic feet per minute at actual conditions.

kscfh—thousands of cubic feet per hour at standard conditions.

NIST—National Institute of Standards and Technology.

* * * * *

§ 72.6 [Amended]

4. Section 72.6 is amended by removing from paragraph (b)(1) the word "operation" and adding, in its place, the words "commercial operation."

5. Section 72.90 is amended by revising paragraph (c)(3) to read as follows:

§ 72.90 Annual compliance certification report.

* * * * *

(c) * * *

(3) Whether all the emissions from the unit, or a group of units (including the unit) using a common stack, were monitored or accounted for through the missing data procedures and reported in the quarterly monitoring reports, including whether conditional data were reported in the quarterly report. If conditional data were reported, the owner or operator shall indicate whether the status of all conditional data has been resolved and all necessary quarterly report resubmissions have been made.

* * * * *

PART 75—CONTINUOUS EMISSION MONITORING

6. The authority citation for part 75 continues to read as follows:

Authority: 42 U.S.C. 7601 and 7651k.

7. Section 75.1 is amended by revising paragraph (a) to read as follows:

§ 75.1 Purpose and scope.

(a) *Purpose.* The purpose of this part is to establish requirements for the monitoring, recordkeeping, and reporting of sulfur dioxide, nitrogen oxides, and carbon dioxide emissions, volumetric flow, and opacity data from affected units under the Acid Rain Program pursuant to Sections 412 and 821 of the Clean Air Act, 42 U.S.C. 7401-7671q as amended by Public Law 101–549 (November 15, 1990) (the Act). In addition, this part sets forth provisions for the monitoring, recordkeeping, and reporting of NO_X mass emissions with which EPA, individual States, or groups of States may require sources to comply in order to demonstrate compliance with a NO_X mass emission reduction program, if these provisions are adopted as requirements under such a program.

* * * * *

8. Section 75.2 is amended by revising paragraph (a) and adding a new paragraph (c) to read as follows:

§ 75.2 Applicability.

(a) Except as provided in paragraphs (b) and (c) of this section, the provisions of this part apply to each affected unit subject to Acid Rain emission limitations or reduction requirements for SO_2 or NO_X.

* * * * *

(c) The provisions of this part may apply to sources subject to a State or federal NO_X mass emission reduction program, if these provisions are adopted as requirements under such a program.

9. Section 75.4 is amended by revising paragraphs (a) introductory text and (d)(1) and adding a new paragraph (i) to read as follows:

§ 75.4 Compliance dates.

(a) The provisions of this part apply to each existing Phase I and Phase II unit on February 10, 1993. For substitution or compensating units that are so designated under the Acid Rain permit which governs that unit and contains the approved substitution or reduced utilization plan, pursuant to § 72.41 or § 72.43 of this chapter, the provisions of this part become applicable upon the issuance date of the Acid Rain permit. For combustion sources seeking to enter the Opt-in Program in accordance with part 74 of this chapter, the provisions of this part become applicable upon the submission of an Opt-in permit application in accordance with § 74.14 of this chapter. The provisions of this part for the monitoring, recording, and reporting of NO_X mass emissions become applicable on the deadlines specified in the applicable State or federal NO_X mass emission reduction program, if these provisions are adopted as requirements under such a program. In accordance with § 75.20, the owner or operator of each existing affected unit shall ensure that all monitoring systems required by

this part for monitoring SO_2, NO_X, CO_2, opacity, and volumetric flow are installed and that all certification tests are completed no later than the following dates (except as provided in paragraphs (d) through (h) of this section):

* * * * *

(d) * * *

(1) The maximum potential concentration of SO_2, the maximum potential NO_X emission rate, the maximum potential flow rate, as defined in section 2.1 of appendix A to this part, or the maximum potential CO_2 concentration, as defined in section 2.1.3.1 of appendix A to this part.

* * * * *

(i) In accordance with § 75.20, the owner or operator of each affected unit at which SO_2 concentration is measured on a dry basis or at which moisture corrections are required to account for CO_2 emissions, NO_X emission rate in lb/mmBtu, or heat input, shall ensure that the continuous moisture monitoring system required by this part is installed and that all applicable initial certification tests required under § 75.20(c)(5), (c)(6), or (c)(7) for the continuous moisture monitoring system are completed no later than the following dates:

(1) January 1, 2000, for a unit that is existing and has commenced commercial operation by October 3, 1999; or

(2) For a new affected unit which has not commenced commercial operation by October 4, 1999, not later than 90 days after the date the unit commences commercial operation; or

(3) For an existing unit that is shutdown and is not yet operating by January 1, 2000, not later than the earlier of 45 unit operating days or 180 calendar days after the date that the unit recommences commercial operation.

10. Section 75.5 is amended by revising paragraph (f)(2) to read as follows:

§ 75.5 Prohibitions.

* * * * *

(f) * * *

(2) The owner or operator is monitoring emissions from the unit with another certified monitoring system or an excepted methodology approved by the Administrator for use at that unit that provides emission data for the same pollutant or parameter as the retired or discontinued monitoring system; or

* * * * *

11. Section 75.6 is amended by redesignating paragraph (a)(40) as paragraph (a)(41) and by adding new paragraphs (a)(40) and (f) to read as follows:

§ 75.6 Incorporation by reference.

* * * * *

(a) * * *

(40) ASTM D5373–93, "Standard Methods for Instrumental Determination of Carbon, Hydrogen, and Nitrogen in Laboratory Samples of Coal and Coke," for appendix G to this part.

* * * * *

(f) The following materials are available for purchase from the following address: American Petroleum Institute, Publications Department, 1220 L Street NW, Washington, DC 20005–4070: American Petroleum Institute (API) Section 2, "Conventional Pipe Provers," from Chapter 4 of the Manual of Petroleum Measurement Standards, October 1988 (Reaffirmed 1993), for § 75.20 and appendix D to this part.

12. Section 75.10 is amended by revising paragraphs (d)(3) and (f) to read as follows:

§ 75.10 General operating requirements.

* * * * *

(d) * * *

(3) Failure of an SO_2, CO_2, or O_2 pollutant concentration monitor, flow monitor, or NO_X continuous emission monitoring system to acquire the minimum number of data points for calculation of an hourly average in paragraph (d)(1) of this section, shall result in the failure to obtain a valid hour of data and the loss of such component data for the entire hour. An hourly average NO_X or SO_2 emission rate in lb/mmBtu is valid only if the minimum number of data points is acquired by both the pollutant concentration monitor (NO_X or SO_2) and the diluent monitor (O_2 or CO_2). For a moisture monitoring system consisting of one or more oxygen analyzers capable of measuring O_2 on a wet-basis and a dry-basis, an hourly average percent moisture value is valid only if the minimum number of data points is acquired for both the wet-and dry-basis measurements. Except for SO_2 emission rate data in lb/mmBtu, if a valid hour of data is not obtained, the owner or operator shall estimate and record emission, moisture, or flow data for the missing hour by means of the automated data acquisition and handling system, in accordance with the applicable procedure for missing data substitution in subpart D of this part.

* * * * *

(f) *Minimum measurement capability requirement.* The owner or operator shall ensure that each continuous emission monitoring system and component thereof is capable of accurately measuring, recording, and reporting data, and shall not incur a full scale exceedance, except as provided in sections 2.1.1.5, 2.1.2.5, and 2.1.4.3 of appendix A to this part.

* * * * *

13. Section 75.11 is amended by revising paragraphs (a), (b), (d)(1), (d)(2), (e)(2), (e)(3) introductory text, (e)(3)(ii), (e)(3)(iv), and (e)(4) and by adding paragraph (d)(3), to read as follows:

§ 75.11 Specific provisions for monitoring SO_2 emissions (SO_2 and flow monitors).

(a) *Coal-fired units.* The owner or operator shall meet the general operating requirements in § 75.10 for an SO_2 continuous emission monitoring system and a flow monitoring system for each affected coal-fired unit while the unit is combusting coal and/or any other fuel, except as provided in paragraph (e) of this section, in § 75.16, and in subpart E of this part. During hours in which only natural gas or gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas (i.e., ≤ 20 grains per 100 standard cubic feet (gr/100 scf)) is combusted in the unit, the owner or operator shall comply with the applicable provisions of paragraph (e)(1), (e)(2), or (e)(3) of this section.

(b) *Moisture correction.* Where SO_2 concentration is measured on a dry basis, the owner or operator shall install, operate, maintain, and quality assure a continuous moisture monitoring system for measuring and recording the moisture content of the flue gases, in order to correct the measured hourly volumetric flow rates for moisture when calculating SO_2 mass emissions (in lb/hr) using the procedures in appendix F to this part. The following continuous moisture monitoring systems are acceptable: a continuous moisture sensor; an oxygen analyzer (or analyzers) capable of measuring O_2 both on a wet basis and on a dry basis; or a stack temperature sensor and a moisture look-up table, i.e., a psychrometric chart (for saturated gas streams following wet scrubbers, only). The moisture monitoring system shall include as a component the automated data acquisition and handling system (DAHS) for recording and reporting both the raw data (e.g., hourly average wet and dry-basis O_2 values) and the hourly average values of the stack gas moisture content derived from those data. When a moisture look-up table is used, the moisture monitoring system shall be represented as a single component, the certified DAHS, in the monitoring plan for the unit or common stack.

* * * * *

(d) * * *

(1) By meeting the general operating requirements in § 75.10 for an SO_2 continuous emission monitoring system

and flow monitoring system. If this option is selected, the owner or operator shall comply with the applicable provisions in paragraph (e)(1), (e)(2), or (e)(3) of this section during hours in which the unit combusts only natural gas (or gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas);

(2) By providing other information satisfactory to the Administrator using the applicable procedures specified in appendix D to this part for estimating hourly SO_2 mass emissions. Appendix D shall not, however, be used when the unit combusts gaseous fuel with a total sulfur content greater than the total sulfur content of natural gas (i.e., > 20 gr/100 scf); when such fuel is burned, the owner or operator shall comply with the provisions of paragraph (e)(4) of this section; or

(3) By using the low mass emissions excepted methodology in § 75.19(c) for estimating hourly SO_2 mass emissions if the affected unit qualifies as a low mass emissions unit under § 75.19(a) and (b).

(e) * * *

(2) When gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas (i.e., ≤ 20 gr/100 scf) is combusted in the unit, the owner or operator may, in lieu of operating and recording data from the SO_2 monitoring system, determine SO_2 emissions by certifying an excepted monitoring system in accordance with § 75.20 and with appendix D to this part, by following the fuel sampling and analysis procedures in section 2.3.1 of appendix D to this part, by meeting the recordkeeping requirements of § 75.55 or § 75.58, as applicable, and by meeting all quality control and quality assurance requirements for fuel flowmeters in appendix D to this part. If this compliance option is selected, the hourly unit heat input reported under § 75.54(b)(5) or § 75.57(b)(5), as applicable, shall be determined using a certified flow monitoring system and a certified diluent monitor, in accordance with the procedures in section 5.2 of appendix F of this part. The flow monitor and diluent monitor shall meet all of the applicable quality control and quality assurance requirements of appendix B of this part.

(3) When gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas (i.e., ≤ 20 gr/100 scf) is burned in the unit, the owner or operator may determine SO_2 mass emissions by using a certified SO_2 continuous monitoring system, in conjunction with a certified flow rate monitoring system. However, on and after January 1, 2000, the SO_2 monitoring system shall be subject to the following provisions; prior to January 1, 2000, the owner or operator may comply with these provisions:

* * * * *

(ii) The calibration response of the SO_2 monitoring system shall be adjusted, either automatically or manually, in accordance with the procedures for routine calibration adjustments in section 2.1.3 of appendix B to this part, whenever the zero-level calibration response during a required daily calibration error test exceeds the applicable performance specification of the instrument in section 3.1 of appendix A to this part (i.e., ± 2.5 percent of the span value or ± 5 ppm, whichever is less restrictive). This calibration adjustment is optional if gaseous fuel is burned in the affected unit only during unit startup.

* * * * *

(iv) In accordance with the requirements of section 2.1.1.2 of appendix A to this part, for units that sometimes burn natural gas (or gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas) and at other times burn higher-sulfur fuel(s) such as coal or oil, a second low-scale SO_2 measurement range is not required when natural gas (or gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas) is combusted. For units that burn only natural gas (or gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas) and burn no other type(s) of fuel(s), the owner or operator shall set the span of the SO_2 monitoring system to a value no greater than 200 ppm.

(4) During any hours in which a unit combusts only gaseous fuel(s) with a total sulfur content no greater than the total sulfur content of natural gas (i.e., ≤ 20 gr/100 scf), the owner or operator shall meet the general operating requirements in § 75.10 for an SO_2 continuous emission monitoring system and a flow monitoring system.

* * * * *

14. Section 75.12 is amended by revising the title; by redesignating existing paragraphs (b), (c), and (d) as paragraphs (c), (d), and (f), respectively; by adding new paragraphs (b) and (e); and by revising the newly designated paragraph (c), to read as follows:

§ 75.12 Specific provisions for monitoring NO_x emission rate (NO_x and diluent gas monitors).

* * * * *

(b) *Moisture correction.* If a correction for the stack gas moisture content is needed to properly calculate the NO_x emission rate in lb/mmBtu, i.e., if the NO_x pollutant concentration monitor measures on a different moisture basis from the diluent monitor, the owner or operator shall install, operate, maintain, and quality assure a continuous moisture monitoring system, as defined in § 75.11(b).

(c) *Determination of NO_x emission rate.* The owner or operator shall calculate hourly, quarterly, and annual NO_x emission rates (in lb/mmBtu) by combining the NO_x concentration (in ppm), diluent concentration (in percent O_2 or CO_2), and percent moisture (if applicable) measurements according to the procedures in appendix F to this part.

* * * * *

(e) *Low mass emissions units.* Notwithstanding the requirements of §§ 75.12(a) and (c), the owner or operator of an affected unit that qualifies as a low mass emissions unit under § 75.19(a) and (b) shall comply with one of the following:

(1) Meet the general operating requirements in § 75.10 for a NO_x continuous emission monitoring system;

(2) Meet the requirements specified in paragraph (d)(2) of this section for using the excepted monitoring procedures in appendix E to this part, if applicable; or

(3) Use the low mass emissions excepted methodology in § 75.19(c) for estimating hourly NO_x emission rate and hourly NO_x mass emissions.

* * * * *

15. Section 75.13 is amended by revising paragraphs (a) and (c) and by adding paragraph (d) to read as follows:

§ 75.13 Specific provisions for monitoring CO_2 emissions.

(a) *CO_2 continuous emission monitoring system.* If the owner or operator chooses to use the continuous emission monitoring method, then the owner or operator shall meet the general operating requirements in § 75.10 for a CO_2 continuous emission monitoring system and flow monitoring system for each affected unit. The owner or operator shall comply with the applicable provisions specified in §§ 75.11(a) through (e) or § 75.16, except that the phrase "SO_2 continuous emission monitoring system" is replaced with "CO_2 continuous emission monitoring system," the phrase "SO_2 concentration" is replaced with "CO_2 concentration," the term "maximum potential concentration of SO_2" is replaced with "maximum potential concentration of CO_2," and the phrase "SO_2 mass emissions" is replaced with "CO_2 mass emissions."

* * * * *

(c) *Determination of CO_2 mass emissions using an O_2 monitor*

according to appendix F. If the owner or operator chooses to use the appendix F method, then the owner or operator may determine hourly CO_2 concentration and mass emissions with a flow monitoring system; a continuous O_2 concentration monitor; fuel F and F_c factors; and, where O_2 concentration is measured on a dry basis, a continuous moisture monitoring system, as defined in § 75.11(b), using the methods and procedures specified in appendix F to this part. For units using a common stack, multiple stack, or bypass stack, the owner or operator may use the provisions of § 75.16, except that the phrase "SO_2 continuous emission monitoring system" is replaced with "CO_2 continuous emission monitoring system," the term "maximum potential concentration of SO_2" is replaced with "maximum potential concentration of CO_2," and the phrase "SO_2 mass emissions" is replaced with "CO_2 mass emissions."

(d) *Determination of CO_2 mass emissions from low mass emissions units.* The owner or operator of a unit that qualifies as a low mass emissions unit under §§ 75.19(a) and (b) shall comply with one of the following:

(1) Meet the general operating requirements in § 75.10 for a CO_2 continuous emission monitoring system and flow monitoring system;

(2) Meet the requirements specified in paragraph (b) or (c) of this section for use of the methods in appendix G or F to this part, respectively; or

(3) Use the low mass emissions excepted methodology in § 75.19(c) for estimating hourly CO_2 mass emissions.

16. Section 75.16 is amended by:

a. Revising paragraphs (b)(2)(ii)(B), (b)(2)(ii)(D), (d)(2), and (e)(1);

b. Removing paragraphs (e)(2) and (e)(3);

c. Redesignating existing paragraphs (e)(4) and (e)(5) as paragraphs (e)(2) and (e)(3), respectively;

d. Revising the last sentence and adding a new sentence to the end of the newly designated paragraph (e)(3); and

e. Adding a new paragraph (e)(4), to read as follows:

§ 75.16 Special provisions for monitoring emissions from common, bypass, and multiple stacks for SO_2 emissions and heat input determinations.

* * * * *

(b) * * *

(2) * * *

(ii) * * *

(B) Install, certify, operate, and maintain an SO_2 continuous emission monitoring system and flow monitoring system in the duct from each nonaffected unit; determine SO_2 mass emissions from the affected units as the difference between SO_2 mass emissions measured in the common stack and SO_2 mass emissions measured in the ducts of the nonaffected units, not to be reported as an hourly average value less than zero; combine emissions for the Phase I and Phase II affected units for recordkeeping and compliance purposes; calculate and report SO_2 mass emissions from the Phase I and Phase II affected units, pursuant to an approach approved by the Administrator, such that these emissions are not underestimated; or

* * * * *

(D) Petition through the designated representative and provide information satisfactory to the Administrator on methods for apportioning SO_2 mass emissions measured in the common stack to each of the units using the common stack and on reporting the SO_2 mass emissions. The Administrator may approve such demonstrated substitute methods for apportioning and reporting SO_2 mass emissions measured in a common stack whenever the demonstration ensures that there is a complete and accurate accounting of all emissions regulated under this part and, in particular, that the emissions from any affected unit are not underestimated.

* * * * *

(d) * * *

(2) Install, certify, operate, and maintain an SO_2 continuous emission monitoring system and flow monitoring system in each stack. Determine SO_2 mass emissions from each affected unit as the sum of the SO_2 mass emissions recorded for each stack. Notwithstanding the prior sentence, if another unit also exhausts flue gases to one or more of the stacks, the owner or operator shall also comply with the applicable common stack requirements of this section to determine and record SO_2 mass emissions from the units using that stack and shall calculate and report SO_2 mass emissions from the affected units and stacks, pursuant to an approach approved by the Administrator, such that these emissions are not underestimated.

(e) * * *

(1) The owner or operator of an affected unit using a common stack, bypass stack, or multiple stack with a diluent monitor and a flow monitor on each stack may choose to install monitors to determine the heat input for the affected unit, wherever flow and diluent monitor measurements are used to determine the heat input, using the procedures specified in paragraphs (a) through (d) of this section, except that the terms "SO_2 mass emissions" and "emissions" are replaced with the term "heat input" and the phrase "SO_2 continuous emission monitoring system and flow monitoring system" is replaced with the phrase "a diluent monitor and a flow monitor." The applicable equation in appendix F to this part shall be used to calculate the heat input from the hourly flow rate, diluent monitor measurements, and (if the equation in appendix F requires a correction for the stack gas moisture content) hourly moisture measurements. Notwithstanding the options for combining heat input in paragraphs (a)(1)(ii), (a)(2)(ii), (b)(1)(ii), and (b)(2)(ii) of this section, the owner or operator of an affected unit with a diluent monitor and a flow monitor installed on a common stack to determine the combined heat input at the common stack shall also determine and report heat input to each individual unit.

* * * * *

(3) * * * The heat input may be apportioned either by using the ratio of load (in MWe-hr) for each individual unit to the total load for all units utilizing the common stack or by using the ratio of steam flow (in 1000 lb) for each individual unit to the total steam flow for all units utilizing the common stack. The heat input should be apportioned according to the procedures in appendix F to this part.

(4) Notwithstanding paragraph (e)(1) of this section, any affected unit that is using the procedures in this part to meet the monitoring and reporting requirements of a State or federal NO_X mass emission reduction program must also meet the requirements for monitoring heat input in §§ 75.71 and 75.72.

17. Section 75.17 is amended by adding introductory text before paragraph (a) and by revising paragraph (a)(2)(i)(C) to read as follows:

§ 75.17 Specific provisions for monitoring emissions from common, by-pass, and multiple stacks for NO_X emission rate.

Notwithstanding the provisions of paragraphs (a), (b), and (c) of this section, the owner or operator of an affected unit that is using the procedures in this part to meet the monitoring and reporting requirements of a State or federal NO_X mass emission reduction program must also meet the provisions for monitoring NO_X emission rate in §§ 75.71 and 75.72.

(a) * * *

(2) * * *

(i) * * *

(C) Each unit's compliance with the applicable NO_X emission limit will be determined by a method satisfactory to

the Administrator for apportioning to each of the units the combined NO_X emission rate (in lb/mmBtu) measured in the common stack and for reporting the NO_X emission rate, as provided in a petition submitted by the designated representative. The Administrator may approve such demonstrated substitute methods for apportioning and reporting NO_X emission rate measured in a common stack whenever the demonstration ensures that there is a complete and accurate estimation of all emissions regulated under this part and, in particular, that the emissions from any unit with a NO_X emission limitation are not underestimated.

* * * * *

18. Section 75.19 is added to subpart B to read as follows:

§ 75.19 Optional SO_2, NO_X, and CO_2 emissions calculation for low mass emissions units.

(a) *Applicability.* (1) Consistent with the requirements of paragraphs (a)(2) and (b) of this section, the low mass emissions excepted methodology in paragraph (c) of this section may be used in lieu of continuous emission monitoring systems or, if applicable, in lieu of excepted methods under appendix D or E to this part, for the purpose of determining hourly heat input, hourly NO_X emission rate, and hourly NO_X, SO_2, and CO_2 mass emissions from a low mass emissions unit. A low mass emissions unit is a gas-fired or oil-fired unit that burns only natural gas and/or fuel oil and that:

(i) Emits no more than 25 tons of SO_2 annually and no more than 25 tons of NO_X annually; and

(ii) Has calculated emissions of no more than 25 tons of SO_2 annually and no more than 25 tons of NO_X annually based on the maximum rated hourly heat input, the actual operating time for each fuel burned, and the low mass emissions excepted methodology, calculations, and values in paragraph (c) of this section.

(2) A unit may initially qualify as a low mass emissions unit only under the following circumstances:

(i) The designated representative provides historical actual and calculated emissions data from the previous three calendar years immediately prior to the submission of an application to use the low mass emissions excepted methodology, and the data demonstrates to the satisfaction of the Administrator that the unit meets the criteria in paragraphs (a)(1)(i) and (ii) of this section; or

(ii) If a unit does not have the historical data required in paragraph (a)(2)(i) of this section for any one or more of the previous three calendar years, the designated representative submits:

(A) Any historical annual emissions and operating data, as required in paragraphs (a)(1)(i) and (a)(1)(ii) of this section, beginning with the unit's first calendar year of commercial operation, and the data demonstrates to the satisfaction of the Administrator that the unit meets the criteria in paragraphs (a)(1)(i) and (a)(1)(ii) of this section; and

(B) A demonstration satisfactory to the Administrator that the unit will continue to qualify as a low mass emissions unit under the requirements of this paragraph (a). The demonstration shall include any historical emissions and operating data for less than a calendar year for the unit and projected emissions information for the unit, as determined using projected operating hours and fuel usage, and the low mass emissions excepted methodology, calculations, and values in paragraph (c) of this section.

(b) *Disqualification.* If a unit that initially qualifies as a low mass emissions units under this section changes the fuel that is burned in the unit such that a fuel other than natural gas or fuel oil is combusted in the unit, the unit is disqualified from using the low mass emissions excepted methodology as of the first hour that the new fuel is combusted in the unit. In addition, if a unit that initially qualifies as a low mass emissions unit under this section emits more than 25 tons of SO_2 or 25 tons of NO_X in any calendar year or has calculated emissions greater than 25 tons of SO_2 or 25 tons of NO_X in any calendar year, as determined using the low mass emission equations in paragraph (c) of this section, the owner or operator of the unit shall have two quarters from the end of the quarter in which the exceedance occurs to install, certify, and report SO_2, NO_X, and CO_2 from monitoring systems that meet the requirements of §§ 75.11, 75.12, and 75.13, respectively. The unit shall be disqualified as a low mass emissions unit as of the end of the second quarter following the quarter in which either of the 25 ton limits was exceeded. A unit that has been disqualified from using the low mass emissions excepted methodology may subsequently qualify again as a low mass emissions unit under paragraph (a)(2) of this section, provided that if such unit qualified under paragraph (a)(2)(ii) of this section, the unit may subsequently qualify again if the unit meets the requirements of paragraph (a)(2)(i) of this section.

(c) *Low mass emissions excepted methodology, calculations, and values.*—(1) *Operating time.* (i) Report an hourly record if the unit operated for any portion of the hour or if records are missing, as to whether or not the unit operated for any portion of that hour.

(ii) Quarterly operating time (hr) is equal to the sum of all of the reported operating hours in the quarter, such that any hour in which the unit combusted fuel for any portion of the hour is considered a full hour.

(iii) Year-to-date cumulative operating time (hr) is equal to the sum of all of the reported operating hours in the year to date, such that any hour in which the unit combusted fuel for any portion of the hour is considered a full hour.

(2) *Heat input.* (i) Hourly heat input (mmBtu) is equal to the maximum rated hourly heat input, as defined in § 72.2 of this chapter. However, the owner or operator of an affected unit may petition the Administrator under § 75.66 for a lower value for maximum rated hourly heat input than that defined in § 72.2 of this chapter. The Administrator may approve such lower value if the owner or operator demonstrates that either the maximum hourly heat input specified by the manufacturer or the highest observed hourly heat input, or both, are not representative of the unit's current capabilities because modifications have been made to the unit, limiting its capacity permanently.

(ii) Calculate the quarterly total heat input (mmBtu) using Equation 7a as follows:

$$HI_{qtr} = T_{qtr} \times HI_{hr} \quad \text{(Eq. 7a)}$$

where:

T_{qtr} = Actual number of operating hours in the quarter, in hr.

HI_{hr} = Hourly heat input under paragraph (c)(2)(i) of this section, in mmBtu.

(iii) Calculate the year-to-date cumulative heat input (mmBtu) as the sum of all of the hourly heat input values in the year to date.

(3) SO_2. (i) Calculate the hourly total SO_2 mass emissions (lbs) using Equation 7b and the appropriate fuel-based SO_2 emission factor from Table 1a for the fuel being burned in that hour. If more than one fuel is burned in the hour, use the highest emission factor for all of the fuels burned in the hour. If records are missing as to which fuel was burned in the hour, use the highest emission factor for all of the fuels capable of being burned in that unit.

TABLE 1a.—SO_2 EMISSION FACTORS (LB/MMBTU) FOR VARIOUS FUEL TYPES

Fuel type	SO_2 Emission factors
Pipeline Natural Gas	0.0006 lb/mmBtu.

TABLE 1a.—SO_2 EMISSION FACTORS (LB/MMBTU) FOR VARIOUS FUEL TYPES—Continued

Fuel type	SO_2 Emission factors
Natural Gas	0.06 lb/mmBtu.
Residual Oil	2.1 lb/mmBtu.
Diesel Fuel	0.5 lb/mmBtu.

$W_{SO2} = EF_{SO2} \times HI_{hr}$

(Eq. 7b)

Where:

W_{SO2} = SO_2 mass emissions, in lbs.

EF_{SO2} = Fuel-based SO_2 emission factor from Table 1a of this section, in lb/mmBtu.

HI_{hr} = Hourly heat input under paragraph (c)(2)(i) of this section, in mmBtu.

(ii) Calculate the quarterly total SO_2 mass emissions (tons) by summing all of the hourly SO_2 mass emissions under paragraph (c)(3)(i) of this section in the quarter and dividing by 2000 lb/ton.

(iii) Calculate the year-to-date cumulative SO_2 mass emissions (tons) by summing all of the SO_2 mass emissions under paragraph (c)(3)(i) of this section in the year to date.

(4) NO_X. (i) Determine the hourly NO_X emission rate (lb/mmBtu) by using the appropriate fuel and boiler type default NO_X emission rate in Table 1b for the fuel being burned in that hour. If more than one fuel is burned in the hour, use the highest emission rate for all of the fuels burned in the hour. If records are missing as to which fuel was burned in the hour, use the highest emission factor for all of the fuels capable of being burned in that unit.

TABLE 1b.—NO_X EMISSION RATES (LB/MMBTU) FOR VARIOUS BOILER/FUEL TYPES

Boiler type	Fuel type	NO_X Emission rate
Tangentially fired	Oil	0.366
Tangentially fired	Gas	0.290
Dry Bottom Wall fired	Oil	0.490
Dry Bottom Wall fired	Gas	0.400
Combustion Turbine	Oil	0.258
Combustion Turbine	Gas	0.172
Combined Cycle	Oil	0.273
Combined Cycle	Gas	0.273

(ii) Calculate the hourly total NO_X mass emissions (lbs) as the product of the NO_X emission rate (lb/mmBtu) and hourly heat input (mmBtu), using Equation 7c as follows:

$W_{NOX} = EF_{NOX} \times HI_{hr}$

(Eq. 7c)

where:

W_{NOX} = NO_X mass emissions, in lbs.

EF_{NOX} = Boiler-type and fuel-type NO_X emission factor from Table 1b of this section, in lb/mmBtu.

HI_{hr} = Hourly heat input under paragraph (c)(2)(i) of this section, in mmBtu.

(iii) Calculate the quarterly average NO_X emission rate (lb/mmBtu) by summing all of the hourly NO_X emission rates for the quarter and dividing the total by the number of reported operating hours under paragraph (c)(1)(i) of this section in the quarter.

(iv) Calculate the quarterly total NO_X mass emissions (tons) by summing all of the hourly NO_X mass emissions under paragraph (c)(4)(ii) of this section in the quarter and dividing the total by 2000 lb/ton.

(v) Calculate the year-to-date cumulative average NO_X emission rate (lb/mmBtu) by summing all of the hourly NO_X emission rates for all of the hours in the year to date and dividing the total by the number of reported operating hours under paragraph (c)(1)(i) of this section in the year to date.

(vi) Calculate the year-to-date cumulative NO_X mass emissions total (tons) by summing all of the hourly NO_X mass emissions under paragraph (c)(4)(ii) of this section in the year to date.

(5) *CO_2*. (i) Calculate the hourly total CO_2 mass emissions (tons) using Equation 7d and the appropriate fuel-based CO_2 emission factor from Table 1c for the fuel being burned in that hour. If more than one fuel is burned in the hour, use the highest emission factor for all of the fuels burned in the hour. If records are missing as to which fuel was burned in the hour, use the highest emission factor for all of the fuels capable of being burned in that unit.

TABLE 1c.—CO_2 EMISSION FACTORS (TON/MMBTU) FOR GAS AND OIL

Fuel type	CO_2 emission factors
Natural Gas	0.059 ton/mmBtu.
Oil	0.081 ton/mmBtu.

$W_{CO2} = EF_{CO2} \times HI_{hr}$

(Eq. 7d)

Where:

W_{CO2} = CO_2 mass emissions, in tons.

EF_{CO2} = Fuel-based CO_2 emission factor from Table 1c, in ton/mmBtu.

HI_{hr} = Hourly heat input under paragraph (c)(2)(i) of this section, in mmBtu.

(ii) Calculate the quarterly total CO_2 mass emissions (tons) by summing all of the hourly CO_2 mass emissions under paragraph (c)(5)(i) of this section in the quarter.

(iii) Calculate the year-to-date cumulative CO_2 mass emissions (tons) by summing all of the hourly CO_2 mass emissions under paragraph (c)(5)(i) of this section in the year to date.

(d) The quality control and quality assurance requirements in § 75.21 are not required for a low mass emissions unit for which the optional low mass emissions excepted methodology in paragraph (c) of this section is being used in lieu of a continuous emission monitoring system or an excepted monitoring system under appendix D or E to this part.

Subpart C—[Amended]

19. Section 75.20 is amended by:

a. Revising the title of the section;

b. Revising the titles of paragraphs (a)(3), (a)(4), (c), (d), (g), (g)(1), (g)(2), (g)(4), and (g)(5);

c. Revising paragraphs (a) introductory text, (a)(1), (a)(3), (a)(4) introductory text, (a)(4)(i), (a)(4)(ii), (a)(4)(iii), (a)(5)(i), (b), (c) introductory text, (c)(1)(iii), (d)(1), (d)(2), (g) introductory text, (g)(1) introductory text, (g)(1)(i), (g)(2), (g)(4), and (g)(5);

d. Removing existing paragraph (c)(3);

e. Revising and redesignating existing paragraphs (c)(4), (c)(5), (c)(6), (c)(7), and (c)(8) as paragraphs (c)(3), (c)(4), (c)(8), (c)(9), and (c)(10), respectively; and revising newly designated paragraphs (c)(4) introductory text, (c)(8) introductory text, (c)(8)(i),

(c)(9)(ii), and (c)(10) introductory text; and

f. Adding new paragraphs (c)(5), (c)(6), (c)(7), (g)(6), (g)(7), (h), and (i), to read as follows:

§ 75.20 Initial certification and recertification procedures.

(a) *Initial certification approval process.* The owner or operator shall ensure that each continuous emission or opacity monitoring system required by this part, which includes the automated data acquisition and handling system, and, where applicable, the CO_2 continuous emission monitoring system, meets the initial certification requirements of this section and shall ensure that all applicable initial certification tests under paragraph (c) of this section are completed by the deadlines specified in § 75.4 and prior to use in the Acid Rain Program. In addition, whenever the owner or operator installs a continuous emission or opacity monitoring system in order to meet the requirements of §§ 75.13 through 75.18, where no continuous emission or opacity monitoring system was previously installed, initial certification is required.

(1) *Notification of initial certification test dates.* The owner or operator or designated representative shall submit a written notice of the dates of initial certification testing at the unit as specified in § 75.61(a)(1).

* * * * *

(3) *Provisional approval of certification (or recertification) applications.* Upon the successful completion of the required certification (or recertification) procedures of this section for each continuous emission or opacity monitoring system or component thereof, each continuous emission or opacity monitoring system or component thereof shall be deemed provisionally certified (or recertified) for use under the Acid Rain Program for a period not to exceed 120 days following receipt by the Administrator of the complete certification (or recertification) application under paragraph (a)(4) of this section, provided that no continuous emission or opacity monitor systems for a combustion source seeking to enter the Opt-in Program in accordance with part 74 of this chapter shall be deemed provisionally certified (or recertified) for use under the Acid Rain Program. Data measured and recorded by a provisionally certified (or recertified) continuous emission or opacity monitoring system or component thereof, in accordance with the requirements of appendix B to this part, will be considered valid quality-assured data (retroactive to the date and time of provisional certification or recertification)), provided that the Administrator does not invalidate the provisional certification (or recertification) by issuing a notice of disapproval within 120 days of receipt by the Administrator of the complete certification (or recertification) application. Note that if the data validation procedures of paragraph (b)(3) of this section are applied to the initial certification (or recertification) of a continuous emissions monitoring system, it is possible for data recorded by the CEMS during the certification (or recertification) test period to be quality assured retrospectively, upon completion of all of the certification (or recertification) tests. Therefore, in certain instances, the date and time of provisional certification (or recertification) of the CEMS may be earlier than the date and time of completion of the required certification (or recertification) tests.

(4) *Certification (or recertification) application formal approval process.* The Administrator will issue a notice of approval or disapproval of the certification (or recertification) application to the owner or operator within 120 days of receipt of the complete certification (or recertification) application. In the event the Administrator does not issue such a written notice within 120 days of receipt, each continuous emission or opacity monitoring system which meets the performance requirements of this part and is included in the certification (or recertification) application will be deemed certified (or recertified) for use under the Acid Rain Program.

(i) *Approval notice.* If the certification (or recertification) application is complete and shows that each continuous emission or opacity monitoring system meets the performance requirements of this part, then the Administrator will issue a written notice of approval of the certification (or recertification) application within 120 days of receipt.

(ii) *Incomplete application notice.* A certification (or recertification) application will be considered complete when all of the applicable information required to be submitted in § 75.63 has been received by the Administrator, the EPA Regional Office, and the appropriate State and/or local air pollution control agency. If the certification (or recertification) application is not complete, then the Administrator will issue a written notice of incompleteness that provides a reasonable timeframe for the designated representative to submit the additional information required to complete the certification (or recertification) application. If the designated representative has not complied with the notice of incompleteness by a specified due date, then the Administrator may issue a notice of disapproval specified under paragraph (a)(4)(iii) of this section. The 120-day review period shall not begin prior to receipt of a complete application.

(iii) *Disapproval notice.* If the certification (or recertification) application shows that any continuous emission or opacity monitoring system or component thereof does not meet the performance requirements of this part, or if the certification (or recertification) application is incomplete and the requirement for disapproval under paragraph (a)(4)(ii) of this section has been met, the Administrator shall issue a written notice of disapproval of the certification (or recertification) application within 120 days of receipt. By issuing the notice of disapproval, the provisional certification (or recertification) is invalidated by the Administrator, and the data measured and recorded by each uncertified continuous emission or opacity monitoring system or component thereof shall not be considered valid quality-assured data beginning with the following time: from the hour of the probationary calibration error test that began the initial certification (or recertification) test period, if the data validation procedures of paragraph (b)(3) of this section were used to retrospectively validate data; or from the date and time of completion of the invalid certification tests until the date and time that the owner or operator completes subsequently approved initial certification tests, if the data validation procedures of paragraph (b)(3) of this section were not used. The owner or operator shall follow the procedures for loss of initial certification in paragraph (a)(5) of this section for each continuous emission or opacity monitoring system or component thereof which is disapproved for initial certification. For each disapproved recertification, the owner or operator shall follow the procedures of paragraph (b)(5) of this section.

* * * * *

(5) * * *

(i) Until such time, date, and hour as the continuous emission monitoring system or component thereof can be adjusted, repaired, or replaced and certification tests successfully completed, the owner or operator shall substitute the following values, as applicable, for each hour of unit operation during the period of invalid

data specified in paragraph (a)(4)(iii) of this section or in § 75.21: the maximum potential concentration of SO_2 as defined in section 2.1.1.1 of appendix A to this part to report SO_2 concentration; the maximum potential NO_X emission rate, as defined in § 72.2 of this chapter to report NO_X emissions; the maximum potential flow rate, as defined in section 2.1.4.1 of appendix A to this part to report volumetric flow; or the maximum potential concentration of CO_2, as defined in section 2.1.3.1 of appendix A to this part to report CO_2 concentration data; and

* * * * *

(b) *Recertification approval process.* Whenever the owner or operator makes a replacement, modification, or change in a certified continuous emission monitoring system or continuous opacity monitoring system that is determined by the Administrator to significantly affect the ability of the system to accurately measure or record the SO_2 or CO_2 concentration, stack gas volumetric flow rate, NO_X emission rate, or opacity, or to meet the requirements of § 75.21 or appendix B to this part, the owner or operator shall recertify the continuous emission monitoring system or continuous opacity monitoring system, according to the procedures in this paragraph. Furthermore, whenever the owner or operator makes a replacement, modification, or change to the flue gas handling system or the unit operation that is determined by the Administrator to significantly change the flow or concentration profile, the owner or operator shall recertify the monitoring system according to the procedures in this paragraph. Examples of changes which require recertification include: replacement of the analyzer; change in location or orientation of the sampling probe or site; changing of flow rate monitor polynomial coefficients; and complete replacement of an existing continuous emission monitoring system or continuous opacity monitoring system. The owner or operator shall recertify a continuous opacity monitoring system whenever the monitor path length changes or as required by an applicable State or local regulation or permit. Any change to a stack flow rate or gas monitoring system for which the Administrator determines that a RATA is not necessary shall not be considered a recertification event. In such cases, any other tests that the Administrator determines to be necessary (linearity checks, calibration error tests, DAHS verifications, etc.) shall be performed as diagnostic tests, rather than recertification tests. The data validation procedures in paragraph (b)(3) of this section shall be applied to linearity checks, 7-day calibration error tests, and cycle time tests when these are required as diagnostic tests. When the data validation procedures of paragraph (b)(3) of this section are applied in this manner, replace the word "recertification" with the word "diagnostic."

(1) *Tests required.* For recertification testing after changing the flow rate monitor polynomial coefficients, the owner or operator shall complete a 3-level RATA. For all other recertification testing, the owner or operator shall complete all initial certification tests in paragraph (c) of this section that are applicable to the monitoring system, except as otherwise approved by the Administrator.

(2) *Notification of recertification test dates.* The owner, operator, or designated representative shall submit notice of testing dates for recertification under this paragraph as specified in § 75.61(a)(1)(ii), unless all of the tests in paragraph (c) of this section are required for recertification, in which case the owner or operator shall provide notice in accordance with the notice provisions for initial certification testing in § 75.61(a)(1)(i).

(3) *Recertification test period requirements and data validation.* (i) In the period extending from the hour of the replacement, modification or change made to a monitoring system that triggers the need to perform recertification test(s) of the CEMS to the hour of successful completion of a probationary calibration error test (according to paragraph (b)(3)(ii) of this section) following the replacement, modification, or change to the CEMS, the owner or operator shall either substitute for missing data, according to the standard missing data procedures in §§ 75.33 through 75.37, or report emission data using a reference method or another monitoring system that has been certified or approved for use under this part.

(ii) Once the modification or change to the CEMS has been completed and all of the associated repairs, component replacements, adjustments, linearization, and reprogramming of the CEMS have been completed, a probationary calibration error test is required to establish the beginning point of the recertification test period. In this instance, the first successful calibration error test of the monitoring system following completion of all necessary repairs, component replacements, adjustments, reprogramming, and any preliminary tests (e.g., trial RATA runs or a challenge of the monitor with calibration gases other than those used to perform the daily calibration error test) shall be the probationary calibration error test. The probationary calibration error test must be passed before any of the required recertification tests are commenced.

(iii) Beginning with the hour of commencement of a recertification test period, emission data recorded by the CEMS are considered to be conditionally valid, contingent upon the results of the subsequent recertification tests.

(iv) Each required recertification test shall be completed no later than the following number of unit operating hours after the probationary calibration error test that initiates the test period:

(A) For a linearity test and/or cycle time test, 168 consecutive unit operating hours;

(B) For a RATA (whether normal-load or multiple-load), 720 consecutive unit operating hours; and

(C) For a 7-day calibration error test, 21 consecutive unit operating days.

(v) All recertification tests shall be performed hands-off, as follows. No adjustments to the calibration of the CEMS, other than the adjustments described in section 2.1.3 of appendix B to this part, are permitted prior to or during the recertification test period. Routine daily calibration error tests shall be performed throughout the recertification test period, in accordance with section 2.1.1 of appendix B to this part. The additional calibration error test requirements in section 2.1.3 of appendix B to this part shall also apply during the recertification test period.

(vi) If all of the required recertification tests and required daily calibration error tests are successfully completed in succession with no failures, and if each recertification test is completed within the time period specified in paragraph (b)(3)(iv)(A), (B), or (C) of this section, then all of the conditionally valid emission data recorded by the CEMS shall be considered quality assured, from the hour of commencement of the recertification test period until the hour of completion of the required test(s).

(vii) If a required recertification test is failed or aborted due to a problem with the CEMS, or if a calibration error test is failed during a recertification test period, data validation shall be done as follows:

(A) If any required recertification test is failed, it shall be repeated. If any recertification test other than a 7-day calibration error test is failed or aborted due to a problem with the CEMS, the original recertification test period is ended, and a new recertification test period must be commenced with a

probationary calibration error test. The tests that are required in this new recertification test period will include any tests that were required for the initial recertification event which were not successfully completed and any recertification or diagnostic tests that are required as a result of changes made to the monitoring system to correct the problems that caused the failure of the recertification test. The new recertification test sequence shall not be commenced until all necessary maintenance activities, adjustments, linearizations, and reprogramming of the CEMS have been completed;

(B) If a linearity test, RATA, or cycle time test is failed or aborted due to a problem with the CEMS, all conditionally valid emission data recorded by the CEMS are invalidated, from the hour of commencement of the recertification test period to the hour in which the test is failed or aborted. Data from the CEMS remain invalid until the hour in which a new recertification test period is commenced, following corrective action, and a probationary calibration error test is passed, at which time the conditionally valid status of emission data from the CEMS begins;

(C) If a 7-day calibration error test is failed within the recertification test period, previously-recorded conditionally valid emission data from the CEMS are not invalidated, provided that the calibration error on the day of the failed 7-day calibration error test does not exceed twice the performance specification in section 3 of appendix A to this part; and

(D) If a calibration error test is failed (i.e., the results of the test exceed twice the performance specification in section 3 of appendix A to this part) during a recertification test period, the CEMS is out-of-control as of the hour in which the calibration error test is failed. Emission data from the CEMS shall be invalidated prospectively from the hour of the failed calibration error test until the hour of completion of a subsequent successful calibration error test following corrective action, at which time the conditionally valid status of data from the monitoring system resumes. Failure to perform a required daily calibration error test during a recertification test period shall also cause data from the CEMS to be invalidated prospectively, from the hour in which the calibration error test was due until the hour of completion of a subsequent successful calibration error test. Previously-passed recertification tests in the sequence and previously-recorded conditionally valid data shall not be affected by a late calibration error test. Whenever a calibration error test is failed or missed during a recertification test period, no further recertification tests shall be performed until the required subsequent calibration error has been passed, re-establishing the conditionally valid status of data from the monitoring system.

(viii) If any required recertification test is not completed within its allotted time period, data validation shall be done as follows. For a late linearity test, RATA, or cycle time test that is passed on the first attempt, data from the monitoring system shall be invalidated from the hour of expiration of the recertification test period until the hour of completion of the late test. For a late 7-day calibration error test, whether or not it is passed on the first attempt, data from the monitoring system shall also be invalidated from the hour of expiration of the recertification test period until the hour of completion of the late test. For a late linearity test, RATA, or cycle time test that is failed on the first attempt or aborted on the first attempt due to a problem with the monitor, all conditionally valid data from the monitoring system shall be considered invalid back to the hour of the first probationary calibration error test which initiated the recertification test period. Data from the monitoring system shall remain invalid until the hour of successful completion of the late recertification test and any additional recertification or diagnostic tests that are required as a result of changes made to the monitoring system to correct problems that caused failure of the late recertification test.

(ix) If any required recertification test of a monitoring system has not been completed by the end of a calendar quarter and if data contained in the quarterly report is conditionally valid pending the results of test(s) to be completed in a subsequent quarter, the owner or operator shall indicate this by means of a suitable conditional data flag in the electronic quarterly report for that quarter. The owner or operator shall resubmit the report for that quarter if the required recertification test is subsequently failed. In the resubmitted report, the owner or operator shall use the appropriate missing data routine in § 75.31 or § 75.33 to replace with substitute data each hour of conditionally valid data that was invalidated by the failed recertification test. In addition, if the owner or operator submits any conditionally valid data (as defined in § 72.2 of this chapter) in any of the four quarterly reports for a given year, the owner or operator shall indicate the status of the conditionally valid data (i.e., resolved or unresolved) in the annual compliance certification report required under § 72.90 of this chapter for that year. Alternatively, if any required recertification test is not completed by the end of a particular calendar quarter but is completed no later than 30 days after the end of that quarter (i.e., prior to the deadline for submitting the quarterly report under § 75.64), the test data and results may be submitted with the earlier quarterly report even though the test date(s) are from the next calendar quarter. In such instances, if the recertification test(s) are passed in accordance with the provisions of paragraph (b)(3) of this section, conditionally valid data may be reported as quality-assured, in lieu of reporting a conditional data flag. If the recertification test(s) is failed and if conditionally valid data are replaced, as appropriate, with substitute data, then neither the reporting of a conditional data flag nor resubmission is required.

(x) If the replacement, modification, or change requiring recertification of the CEMS is such that the data collected by the prior certified monitoring system are no longer representative, such as after a change to the flue gas handling system or unit operation that requires changing the span value to be consistent with section 2.1 of appendix A to this part, the owner or operator shall substitute for missing data as follows, in the period extending from the hour of commencement of the replacement, modification, or change requiring recertification of the CEMS to the hour of commencement of the recertification test period:

(A) For a change that results in a significantly higher concentration or flow rate, substitute maximum potential values according to the procedures in paragraph (a)(5) of this section; or

(B) For a change that results in a significantly lower concentration or flow rate, substitute data using the standard missing data procedures.

(C) The owner or operator shall then use the initial missing data procedures in § 75.31, beginning with the first hour of quality assured data obtained with the recertified monitoring system, unless otherwise provided by § 75.34 for units with add-on emission controls.

(4) *Recertification application.* The designated representative shall apply for recertification of each continuous emission or opacity monitoring system used under the Acid Rain Program. The owner or operator shall submit the recertification application in accordance with § 75.60, and each complete recertification application shall include the information specified in § 75.63.

(5) *Approval or disapproval of request for recertification.* The procedures for

provisional certification in paragraph (a)(3) of this section shall apply to recertification applications. The Administrator will issue a written notice of approval or disapproval according to the procedures in paragraph (a)(4) of this section. In the event that a recertification application is disapproved, data from the monitoring system are invalidated and the applicable missing data procedures in § 75.31 or § 75.33 shall be used from the date and hour of receipt of such notice back to the hour of the probationary calibration error test that began the recertification test period. Data from the monitoring system remain invalid until a subsequent probationary calibration error test is passed, beginning a new recertification test period. The owner or operator shall repeat all recertification tests or other requirements, as indicated in the Administrator's notice of disapproval, no later than 30 unit operating days after the date of issuance of the notice of disapproval. The designated representative shall submit a notification of the recertification retest dates, as specified in § 75.61(a)(1)(ii), and shall submit a new recertification application according to the procedures in paragraph (b)(4) of this section.

(c) *Initial certification and recertification procedures.* Prior to the deadline in § 75.4, the owner or operator shall conduct initial certification tests and in accordance with § 75.63, the designated representative shall submit an application to demonstrate that the continuous emission or opacity monitoring system and components thereof meet the specifications in appendix A to this part. The owner or operator shall compare reference method values with output from the automated data acquisition and handling system that is part of the continuous emission monitoring system being tested. Except as specified in paragraphs (b)(1), (d), and (e) of this section, the owner or operator shall perform the following tests for initial certification or recertification of continuous emission or opacity monitoring systems or components according to the requirements of appendix A to this part:

(1) * * *

(iii) A relative accuracy test audit. For the NO_X-diluent system, the RATA shall be done on a system basis, in units of lb/mmBtu.

* * * * *

(3) The initial certification test data from an O_2-or a CO_2-diluent gas monitor certified for use in a NO_X continuous emission monitoring system may be submitted to meet the requirements of paragraph (c)(4) of this section. Also, for a diluent monitor that is used both as a CO_2 monitoring system and to determine heat input, only one set of diluent monitor certification data need be submitted (under the component and system identification numbers of the CO_2 monitoring system).

(4) For each CO_2 pollutant concentration monitor, each O_2 monitor which is part of a CO_2 continuous emission monitoring system, each diluent monitor used to monitor heat input and each SO_2-diluent continuous emission monitoring system:

* * * * *

(5) For each continuous moisture monitoring system consisting of wet-and dry-basis O_2 analyzers:

(i) A 7-day calibration error test of each O_2 analyzer;

(ii) A cycle time test of each O_2 analyzer;

(iii) A linearity test of each O_2 analyzer; and

(iv) A RATA, directly comparing the percent moisture measured by the monitor to a reference method.

(6) For each continuous moisture sensor:

(i) A 7-day calibration error test; and

(ii) A RATA, directly comparing the percent moisture measured by the monitor sensor to a reference method.

(7) For a continuous moisture monitoring system consisting of a temperature sensor and a data acquisition and handling system (DAHS) software component programmed with a moisture lookup table:

(i) A demonstration that the correct moisture value for each hour is being taken from the moisture lookup tables and applied to the emission calculations. At a minimum, the demonstration shall be made at three different temperatures covering the normal range of stack temperatures.

(ii) [Reserved]

(8) The owner or operator shall ensure that initial certification or recertification of a continuous opacity monitor for use under the Acid Rain Program is conducted according to one of the following procedures:

(i) Performance of the tests for initial certification or recertification, according to the requirements of Performance Specification 1 in appendix B to part 60 of this chapter; or

* * * * *

(9) * * *

(ii) Proper computation and application of the missing data substitution procedures in subpart D of this part and the bias adjustment factors in section 7 of appendix A to this part.

(10) The owner or operator shall provide, or cause to be provided, adequate facilities for initial certification or recertification testing that include:

* * * * *

(d) *Initial certification and recertification and quality assurance procedures for optional backup continuous emission monitoring systems.*

(1) *Redundant backups.* The owner or operator of an optional redundant backup continuous emission monitoring system shall comply with all the requirements for initial certification and recertification according to the procedures specified in paragraphs (a), (b), and (c) of this section. The owner or operator shall operate the redundant backup continuous emission monitoring system during all periods of unit operation, except for periods of calibration, quality assurance, maintenance, or repair. The owner or operator shall perform upon the redundant backup continuous emission monitoring system all quality assurance and quality control procedures specified in appendix B to this part, except that the daily assessments in section 2.1 of appendix B to this part are optional for days on which the redundant backup monitoring system is not used to report emission data under this part. For any day on which a redundant backup monitoring system is used to report emission data, the system must meet all of the applicable daily assessment criteria in appendix B to this part.

(2) *Non-redundant backups.* The owner or operator of an optional non-redundant backup continuous emission monitoring system shall comply with all of the following requirements for initial certification, quality assurance, recertification, and data reporting:

(i) For a non-redundant backup gas monitoring system that has its own separate probe, sample interface, and analyzer or for a non-redundant backup flow monitor, all of the tests in paragraph (c) of this section are required for initial certification of the system, except for the 7-day calibration error test.

(ii) For a non-redundant backup gas monitoring system consisting of one or more like-kind replacement analyzers that use the same probe and sample interface as a primary monitoring system, no initial certification of the non-redundant backup monitoring system is required. Note that a non-redundant backup analyzer, connected to the same probe and interface as a primary analyzer in order to satisfy the dual span requirements of section

2.1.1.4 or 2.1.2.4 of appendix A to this part, shall be considered a like-kind, non-redundant backup analyzer.

(iii) Each non-redundant backup monitoring system shall comply with the daily and quarterly quality assurance and quality control requirements in appendix B to this part for each day and quarter that the non-redundant backup monitoring system is used to report data, except that the requirements for when a linearity test must be performed are superseded by the requirements of this section. The owner or operator shall ensure that each non-redundant backup continuous emission monitoring system passes a linearity check (for pollutant concentration and diluent gas monitors) or a calibration error test (for flow monitors) prior to each use for recording and reporting emissions. For a non-redundant backup NO_X-diluent or SO_2-diluent monitoring system consisting of a primary pollutant analyzer and a like-kind replacement diluent analyzer (or vice-versa), provided that the primary analyzer is operating and is not out-of-control with respect to any of its quality assurance requirements, only the like-kind replacement analyzer must pass a linearity check before the system is used for data reporting. When a non-redundant backup monitoring system is brought into service prior to conducting the linearity test, a probationary calibration error test (as described in paragraph (b)(3)(ii) of this section), which will begin a period of conditionally valid data, may be performed in order to allow the use of data retrospectively, as follows. Conditionally valid data from the CEMS are validated back to the hour of completion of the probationary calibration error test if the following conditions are met: if no adjustments are made to the monitor other than those specified in section 2.1.3 of appendix B to this part between the probationary calibration error test and the successful completion of the linearity test, and if the linearity test is passed within 168 unit operating hours of the probationary calibration error test. However, if the linearity test is either failed, aborted due to a problem with the CEMS, or not completed as required, then all of the conditionally valid data are invalidated back to the hour of the probationary calibration error test, and data from the CEMS remain invalid until the hour of completion of a successful linearity test.

(iv) When data are reported from a non-redundant backup monitoring system, the appropriate bias adjustment factor (BAF) shall be determined as follows:

(A) Apply the BAF from the most recent RATA of the non-redundant backup system (even if that RATA was done more than 12 months previously); or

(B) If no RATA results are available for the non-redundant backup system (e.g., for a non-redundant backup gas monitoring system that uses the same probe and sample interface as the primary monitoring system), apply the primary monitoring system BAF.

(v) A non-redundant backup system may not be used for reporting data from a particular affected unit or common stack for more than 720 hours in any one calendar year, unless the monitoring system passes a RATA at that same unit or stack.

(vi) For each non-redundant backup gas monitoring system that has its own separate probe, sample interface, and analyzer and for each non-redundant backup flow monitor, no more than eight successive calendar quarters shall elapse following the quarter in which the last RATA of the monitoring system was done at a particular unit or stack, without performing a subsequent RATA. Otherwise, the monitoring system may not be used to report data from that unit or stack until the hour of completion of a successful RATA at that location.

* * * * *

(g) *Initial certification and recertification procedures for excepted monitoring systems under appendices D and E.* The owner or operator of a gas-fired unit, oil-fired unit, or diesel-fired unit using the optional protocol under appendix D or E to this part shall ensure that an excepted monitoring system under appendix D or E to this part meets the applicable general operating requirements of § 75.10, the applicable requirements of appendices D and E to this part, and the initial certification or recertification requirements of this paragraph.

(1) *Initial certification and recertification testing.* The owner or operator shall use the following procedures for initial certification and recertification of an excepted monitoring system under appendix D or E to this part.

(i) When the optional SO_2 mass emissions estimation procedure in appendix D to this part or the optional NO_X emissions estimation protocol in appendix E to this part is used, the owner or operator shall provide data from a flowmeter accuracy test (or shall provide a statement of calibration if the flowmeter meets the accuracy standard by design) for each fuel flowmeter, according to the appropriate calibration procedures using one of the following standard methods: ASME MFC–3M–1989 with September 1990 Errata, "Measurement of Fluid Flow in Pipes Using Orifice, Nozzle, and Venturi"; ASME MFC–4M–1986 (Reaffirmed 1990) "Measurement of Gas Flow by Turbine Meters"; ASME MFC–5M–1985, "Measurement of Liquid Flow in Closed Conduits Using Transit-Time Ultrasonic Flowmeters"; ASME MFC–6M–1987 with June 1987 Errata, "Measurement of Fluid Flow in Pipes Using Vortex Flow Meters"; ASME MFC–7M–1987 (Reaffirmed 1992), "Measurement of Gas Flow by Means of Critical Flow Venturi Nozzles"; ASME MFC–9M–1988 with December 1989 Errata, "Measurement of Liquid Flow in Closed Conduits by Weighing Method"; ISO 8316: 1987(E) "Measurement of Liquid Flow in Closed Conduits—Method by Collection of the Liquid in a Volumetric Tank"; Section 8, Calibration from American Gas Association Transmission Measurement Committee Report No. 7: Measurement of Gas by Turbine Meters (1985 Edition); American Gas Association Report No. 3: Orifice Metering of Natural Gas and Other Related Hydrocarbon Fluids Part 1: General Equations and Uncertainty Guidelines (October 1990 Edition), Part 2: Specification and Installation Requirements (February 1991 Edition), and Part 3: Natural Gas Applications (August 1992 Edition), excluding the modified calculation procedures of Part 3; or American Petroleum Institute (API) Section 2, "Conventional Pipe Provers," from Chapter 4 of the Manual of Petroleum Measurement Standards, October 1988 (Reaffirmed 1993), as required by appendices D and E to this part (all methods incorporated by reference under § 75.6).

* * * * *

(2) *Initial certification and recertification testing notification.* The designated representative shall provide initial certification testing notification and periodic retesting notification for an excepted monitoring system under appendix E to this part as specified in § 75.61. The designated representative shall submit recertification testing notification, as specified in § 75.61, for quality assurance related NO_X emission rate testing under section 2.3 of appendix E to this part for an excepted monitoring system under appendix E to this part. Initial certification testing notification or periodic retesting notification is not required for testing of a fuel flowmeter or for testing of an excepted monitoring system under appendix D to this part.

* * * * *

(4) *Initial certification or recertification application.* The designated representative shall submit an initial certification or recertification application in accordance with §§ 75.60 and 75.63.

(5) *Provisional approval of initial certification and recertification applications.* Upon the successful completion of the required initial certification or recertification procedures for each excepted monitoring system under appendix D or E to this part, each excepted monitoring system under appendix D or E to this part shall be deemed provisionally certified for use under the Acid Rain Program during the period for the Administrator's review. The provisions for the initial certification or recertification application formal approval process in paragraph (a)(4) of this section shall apply, except that "continuous emission or opacity monitoring system" shall be replaced with "excepted monitoring system" and except that "shall follow the procedures for loss of initial certification in paragraph (a)(5)" or "shall follow the procedures of paragraph (b)(5)" shall be replaced with "shall follow the procedures for loss of certification in paragraph (g)(7)". Data measured and recorded by a provisionally certified excepted monitoring system under appendix D or E to this part will be considered quality assured data from the date and time of completion of the last initial certification or recertification test, provided that the Administrator does not revoke the provisional certification by issuing a notice of disapproval in accordance with the provisions in paragraph (a)(4) or (b)(5) of this section.

(6) *Recertification requirements.* Recertification of an excepted monitoring system under appendix D or E to this part is required for any modification to the system or change in operation that could significantly affect the ability of the system to accurately account for emissions and for which the Administrator determines that an accuracy test of the fuel flowmeter or a retest under appendix E to this part to re-establish the NO_X correlation curve is required. Examples of such changes or modifications include fuel flowmeter replacement, changes in unit configuration, or exceedance of operating parameters.

(7) *Procedures for loss of certification or recertification for excepted monitoring systems under appendices D and E to this part.* In the event that a certification or recertification application is disapproved for an excepted monitoring system, data from the monitoring system are invalidated, and the applicable missing data procedures in section 2.4 of appendix D or section 2.5 of appendix E to this part shall be used from the date and hour of receipt of such notice back to the hour of the provisional certification. Data from the excepted monitoring system remain invalid until all required tests are repeated and the excepted monitoring system is again provisionally certified. The owner or operator shall repeat all certification or recertification tests or other requirements, as indicated in the Administrator's notice of disapproval, no later than 30 unit operating days after the date of issuance of the notice of disapproval. The designated representative shall submit a notification of the certification or recertification retest dates if required under paragraph (g)(2) of this section and shall submit a new certification or recertification application according to the procedures in paragraph (g)(4) of this section.

(h) *Initial certification and recertification procedures for low mass emission units using the excepted methodologies under § 75.19.* The owner or operator of a gas-fired, oil-fired, or diesel-fired unit using the optional low mass emissions excepted methodologies under § 75.19 shall meet the applicable general operating requirements of § 75.10, the applicable requirements of § 75.19, and the applicable certification requirements of this paragraph (h).

(1) *Monitoring plan.* The designated representative shall submit a monitoring plan in accordance with §§ 75.53 and 75.62.

(2) *Certification application.* The designated representative shall submit a certification application in accordance with § 75.63(a)(1)(iii).

(3) *Approval of certification applications.* Upon submission of the required certification application for approval to use the low mass emissions excepted methodology under § 75.19, the excepted methodology shall be deemed provisionally certified for use under the Acid Rain Program during the period for the Administrator's review. The provisions for the certification application formal approval process in the introductory text of paragraph (a)(4) and in paragraphs (a)(4)(i), (ii), and (iv) of this section shall apply, except that "continuous emission or opacity monitoring system" shall be replaced with "excepted methodology."

(4) *Disapproval of certification applications.* If the Administrator determines that the certification application does not demonstrate that the unit meets the requirements of §§ 75.19(a) and (b), the Administrator shall issue a written notice of disapproval of the certification application within 120 days of receipt. By issuing the notice of disapproval, the provisional certification is invalidated by the Administrator, and the data recorded under the excepted methodology shall not be considered valid. The owner or operator shall follow the procedures for loss of certification:

(i) The owner or operator shall substitute the following values, as applicable, for each hour of unit operation during the period of invalid data specified in paragraph (a)(4)(iii) of this section or in §§ 75.21(e) (introductory paragraph) and 75.21(e)(1): the maximum potential concentration of SO_2, as defined in section 2.1 of appendix A to this part to report SO_2 concentration; the maximum potential NO_X emission rate, as defined in § 72.2 of this chapter to report NO_X emissions; the maximum potential flow rate, as defined in section 2.1 of appendix A to this part to report volumetric flow; or the maximum CO_2 concentration used to determine the maximum potential concentration of SO_2 in section 2.1.1.1 of appendix A to this part to report CO_2 concentration data until such time, date, and hour as a continuous emission monitoring system or excepted monitoring system, where applicable, is installed and provisionally certified;

(ii) The designated representative shall submit a notification of certification test dates, as specified in § 75.61(a)(1)(ii), and a new certification application according to the procedures in paragraph (a)(2) of this section; and

(iii) The owner or operator shall install and provisionally certify continuous emission monitoring systems or excepted monitoring systems, where applicable, no later than 180 unit operating days after the date of issuance of the notice of disapproval.

(i) *Initial certification and recertification procedures for excepted flow monitoring systems under appendix I.* The owner or operator of a gas-fired unit, oil-fired unit, or diesel-fired unit using the optional protocol under appendix I to this part shall ensure that an excepted flow monitoring system under appendix I to this part meets the applicable general operating requirements of § 75.10, the applicable requirements of appendix I to this part, and the initial certification and recertification requirements of this paragraph.

(1) *Initial certification and recertification testing.* The owner or operator shall, where applicable, use the

following procedures for certification and recertification of an excepted flow monitoring system under appendix I to this part.

(i) For an excepted flow monitoring system under appendix I to this part where each component is tested separately, perform the following tests on each O_2 or CO_2 component monitor:

(A) 7-day calibration error test;

(B) Linearity check;

(C) Cycle time test;

(D) Relative accuracy test audit using Test Method 3A from appendix A to part 60 of this chapter; and

(E) Bias test.

(ii) For an excepted flow monitoring system under appendix I to this part where each component is tested separately, meet the certification procedures under paragraph (g)(1)(i) of this section and the recertification procedures under paragraph (g)(6) of this section on each fuel flowmeter component using the standards specified, or meet the testing procedure under section 2.1.5.2 of appendix D to this part.

(iii) For an excepted flow monitoring system under appendix I to this part that is tested as an entire system, perform the following tests:

(A) 7-day calibration error test on the O_2 or CO_2 monitor,

(B) Linearity check on the O_2 or CO_2 monitor,

(C) Cycle time test on the O_2 or CO_2 monitor,

(D) Relative accuracy test audit on the entire excepted flow monitoring system under appendix I to this part, using Test Method 2 (or its allowable alternatives) from appendix A to part 60 of this chapter, and

(E) Bias test on the entire excepted flow monitoring system under appendix I to this part.

(iv) For the automated data acquisition and handling system used as part of an excepted flow monitoring system under appendix I to this part, the owner or operator shall perform tests designed to verify:

(A) The proper computation of hourly averages for volumetric flow rates, heat input, and pollutant mass emissions; and

(B) The proper computation and application of the missing data substitution procedures for volumetric flow in subpart D of this part.

(2) *Initial certification and recertification testing notification.* The designated representative shall provide initial certification and recertification testing notification for an excepted flow monitoring system under appendix I to this part, as specified in § 75.61, for any relative accuracy test audit.

(3) *Monitoring plan.* The designated representative shall submit a monitoring plan in accordance with §§ 75.53 and 75.62. For a unit that previously had a flow monitoring system or an excepted monitoring system under appendix D to this part and later submits a revised monitoring plan for an excepted flow monitoring system under appendix I to this part, the designated representative shall submit the revised monitoring plan no later than 45 days prior to the first day of certification testing.

(4) *Certification or recertification application.* The designated representative shall submit an initial certification or recertification application in accordance with §§ 75.60 and 75.63.

(5) *Approval of initial certification and recertification applications.* Upon successful completion of the required initial certification or recertification procedures for each excepted monitoring system under appendix I to this part, each excepted monitoring system under appendix I to this part shall be deemed provisionally certified for use under the Acid Rain Program during the period for the Administrator's review. The provisions for the initial certification (or recertification) application formal approval process in paragraph (a)(4) of this section shall apply, except that "continuous emission or opacity monitoring system" shall be replaced with "excepted monitoring system" and except that "shall follow the procedures for loss of initial certification in paragraph (a)(5)" or "shall follow the procedures of paragraph (b)(5)" shall be replaced with "shall follow the procedures for loss of certification in paragraph (i)(7)". Data measured and recorded by a provisionally certified excepted monitoring system under appendix I to this part will be considered quality assured data from the date and time of completion of the final certification test, provided that the Administrator does not revoke the provisional certification by issuing a notice of disapproval within 120 days of receipt of the complete initial certification or recertification application in accordance with the provisions in paragraph (a)(4) of this section.

(6) *Recertification requirements.* A recertification of an excepted flow monitoring system under appendix I to this part is required for any modification to the equipment used in the appendix I excepted flow monitoring system that would require recertification under paragraph (b) or (g) of this section.

(7) *Procedures for loss of certification for excepted monitoring systems under appendix I to this part.* In the event that a certification or recertification application is disapproved for an excepted monitoring system under appendix I to this part, data from the monitoring system are invalidated, and the applicable missing data procedures in section 4 of appendix I to this part shall be used from the date and hour of receipt of such notice back to the hour of the provisional certification. Data from the excepted monitoring system remain invalid until all required tests are repeated and the excepted monitoring system is again provisionally certified. The owner or operator shall repeat all certification or recertification tests or other requirements, as indicated in the Administrator's notice of disapproval, no later than 30 unit operating days after the date of issuance of the notice of disapproval. The designated representative shall submit a notification of the certification or recertification retest dates, if required under paragraph (i)(2) of this section, and shall submit a new certification or recertification application according to the procedures in paragraph (i)(4) of this section.

20. Section 75.21 is amended by:

a. Revising paragraphs (a)(2), (a)(4), (a)(5), (a)(6) and (e);

b. Redesignating existing paragraphs (a)(7) and (a)(8) as paragraphs (a)(9) and (a)(10), respectively; revising newly designated paragraph (a)(9); and

c. Adding new paragraphs (a)(7), (a)(8), and (f), to read as follows:

§ 75.21 Quality assurance and quality control requirements.

(a) * * *

(2) The owner or operator shall ensure that each non-redundant backup continuous emission monitoring system meets the quality assurance requirements of § 75.20(d) for each day and quarter that the system is used to report data.

* * * * *

(4) When a unit combusts only natural gas or gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas and SO_2 emissions are determined in accordance with § 75.11(e)(3), the owner or operator of a unit with an SO_2 continuous emission monitoring system is not required to perform the daily or quarterly assessments of the SO_2 monitoring system under appendix B to this part on any day or in any calendar quarter in which only natural gas (or gaseous fuel with a total sulfur content no greater than the total sulfur content

of natural gas) is combusted in the unit. Notwithstanding, the results of any daily calibration error test and linearity test of the SO_2 monitoring system performed while the unit is combusting only natural gas (or gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas) shall be considered valid. If any such test is failed, the SO_2 monitoring system shall be considered to be out-of-control. The length of the out-of-control period shall be determined in accordance with the applicable procedures in section 2.1.4 or 2.2.3 of appendix B to this part.

(5) For a unit with an SO_2 continuous monitoring system, in which natural gas (or gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas) is sometimes burned as a primary and/or backup fuel and in which higher-sulfur fuel(s) such as oil or coal are, at other times, burned as primary or backup fuel(s), the owner shall perform the relative accuracy test audits of the SO_2 monitoring system (as required by section 6.5 of appendix A to this part and section 2.3.1 of appendix B to this part) only when the higher-sulfur fuel is combusted in the unit and shall not perform SO_2 relative accuracy test audits when gaseous fuel is the only fuel being combusted.

(6) If the designated representative certifies that a unit with an SO_2 monitoring system burns only fuel(s) with a total sulfur content no greater than the total sulfur content of natural gas, the SO_2 monitoring system is exempted from the relative accuracy test audit requirements in appendices A and B to this part. For the purposes of this part, a fuel having a total sulfur content no greater than 0.05 percent sulfur by weight shall be deemed to qualify as a "fuel with a total sulfur content no greater than the total sulfur content of natural gas."

(7) If the designated representative certifies that a particular unit with an SO_2 monitoring system combusts fuel(s) with a total sulfur content greater than the total sulfur content of natural gas (i.e., >0.05 percent sulfur by weight) only as emergency backup fuel(s) or for short-term testing, the SO_2 monitoring system shall be conditionally exempted from the RATA requirements of appendices A and B to this part, provided that the unit combusts the higher-sulfur fuel(s) for no more than 480 hours per calendar year. If, in a particular calendar year, the higher-sulfur fuel usage exceeds 480 hours, a RATA of the SO_2 monitor shall be performed (while combusting the higher-sulfur fuel) either by the end of the calendar quarter in which the exceedance occurs or by the end of a 720 unit operating hour grace period following the quarter in which the exceedance occurs (see SO_2 RATA provisions in section 2.3.3 of appendix B to this part for further discussion of the grace period).

(8) On and after January 1, 2000, the quality assurance provisions of §§ 75.11(e)(3)(i) through 75.11(e)(3)(iv) shall apply (except that the term "gaseous fuel" shall be replaced with "fuel") to all units with SO_2 monitoring systems during hours in which only fuel having a total sulfur content no greater than the total sulfur content of natural gas (i.e., ≤0.05 percent sulfur by weight) is combusted in the unit, except for units that use such fuel only for unit startup.

(9) Provided that a unit with an SO_2 monitoring system is not exempted under paragraph (a)(6) or (a)(7) of this section from the SO_2 RATA requirements of this part, any calendar quarter during which a unit combusts only fuel(s) with a total sulfur content no greater than the total sulfur content of natural gas (i.e. ≤0.05 percent sulfur by weight) shall be excluded in determining the quarter in which the next relative accuracy test audit must be performed for the SO_2 monitoring system. However, no more than eight successive calendar quarters shall elapse after a relative accuracy test audit of an SO_2 monitoring system, without a subsequent relative accuracy test audit having been performed. The owner or operator shall ensure that a relative accuracy test audit is performed either by the end of the eighth successive elapsed calendar quarter since the last RATA or in the next calendar quarter in which a fuel with a total sulfur content greater than the total sulfur content of natural gas is burned in the unit.

* * * * *

(e) *Consequences of audits.* The owner or operator shall invalidate data from a continuous emission monitoring system or continuous opacity monitoring system upon failure of an audit under paragraph (a)(4)(iv) of § 75.20, an audit under appendix B to this part, or any other audit, beginning with the unit operating hour of completion of a failed audit as determined by the Administrator. The owner or operator shall not use invalidated data for reporting either emissions or heat input, nor for calculating monitor data availability.

(1) *Audit decertification.* Whenever both an audit of a continuous emission or opacity monitoring system (or component thereof, including the data acquisition and handling system), or an audit of any excepted monitoring system under appendix D, E, or I to this part, or of any alternative monitoring system under subpart E of this part, and a review of the initial certification application or of a recertification application, reveal that any system or component should not have been certified or recertified because it did not meet a particular performance specification or other requirement of this part, both at the time of the initial certification or recertification application submission and at the time of the audit, the Administrator will issue a notice of disapproval of the certification status of such system or component. For the purposes of this paragraph, an audit shall be either a field audit of the facility or an audit of any information submitted to EPA or the State agency regarding the facility. By issuing the notice of disapproval, the certification status is revoked, prospectively, by the Administrator. The data measured and recorded by each system shall not be considered valid quality-assured data from the date of issuance of the notification of the revoked certification status until the date and time that the owner or operator completes subsequently approved initial certification or recertification tests. The owner or operator shall follow the procedures in § 75.20(a)(5) for initial certification or § 75.20(b)(5) for recertification to replace, prospectively, all of the invalid, non-quality-assured data for each disapproved system.

(2) *Out-of-control period.* Whenever a continuous emission monitoring system or continuous opacity monitoring system fails a quality assurance audit, an audit under § 75.20(a)(4)(iv), or another audit, the system is out-of-control. The owner or operator shall follow the procedures for out-of-control periods in § 75.24.

(f) *Excepted flow monitoring systems under appendix I.* The owner or operator of an affected unit shall operate, calibrate, and maintain each excepted flow monitoring system under appendix I to this part used under the Acid Rain Program according to the quality assurance and quality control procedures in appendices B and I to this part.

21. Section 75.22 is amended by revising paragraphs (a)(2), (a)(4), and (c)(1) introductory text to read as follows:

§ 75.22 Reference test methods.

(a) * * *

(2) Method 2 or its allowable alternatives, except for 2B and 2E, are the reference methods for determination of volumetric flow.

* * * * *

(4) Method 4 (either the standard procedure described in section 2 of the method or the moisture approximation procedure described in section 3 of the method) shall be used to correct pollutant concentrations from a dry basis to a wet basis (or from a wet basis to a dry basis) and shall be used when relative accuracy test audits of continuous moisture monitoring systems are conducted. For the purpose of determining the stack gas molecular weight, however, the alternative techniques for approximating the stack gas moisture content described in section 1.2 of Method 4 may be used in lieu of the procedures in sections 2 and 3 of the method.

* * * * *

(c) * * *

(1) Instrumental EPA Reference Methods 3A, 6C, 7E, and 20 shall be conducted using calibration gases as defined in section 5 of appendix A to this part. Otherwise, performance tests shall be conducted and data reduced in accordance with the test methods and procedures of this part unless the Administrator:

* * * * *

22. Section 75.24 is amended by revising paragraph (d) to read as follows:

§ 75.24 Out-of-control periods.

* * * * *

(d) When the bias test indicates that an SO_2 monitor, volumetric flow monitor, or NO_x continuous emission monitoring system is biased low (i.e., the arithmetic mean of the differences between the reference method value and the monitor or monitoring system measurements in a relative accuracy test audit exceed the bias statistic in section 7 of appendix A to this part), the owner or operator shall adjust the monitor or continuous emission monitoring system to eliminate the cause of bias such that it passes the bias test or calculate and use the bias adjustment factor as specified in section 2.3.4 of appendix B to this part and in accordance with § 75.7.

* * * * *

23. Section 75.30 is amended by revising paragraphs (a)(2) and (d) to read as follows:

§ 75.30 General provisions.

(a) * * *

(2) A valid quality assured hour of flow data (in scfh) has not been measured and recorded for an affected unit from a certified flow monitor, or from a certified excepted flow monitoring system under appendix I to this part, or by an approved alternative monitoring system under subpart E of this part; or

* * * * *

(d) The owner or operator shall comply with the applicable provisions of this paragraph during hours in which a unit with an SO_2 continuous emission monitoring system combusts only natural gas or gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas.

(1) Whenever a unit with an SO_2 continuous emission monitoring system combusts only pipeline natural gas and the owner or operator is using the procedures in section 7 of appendix F to this part to determine SO_2 mass emissions pursuant to § 75.11(e)(1), the owner or operator shall, for purposes of reporting heat input data under § 75.54(b)(5) or § 75.57(b)(5), as applicable, and for the calculation of SO_2 mass emissions using Equation F–23 in section 7 of appendix F to this part, substitute for missing data from a flow monitoring system, CO_2-diluent monitor or O_2-diluent monitor using the missing data substitution procedures in § 75.36.

(2) Whenever a unit with an SO_2 continuous emission monitoring system combusts gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas (i.e., ≥20 gr/100 scf) and the owner or operator uses the gas sampling and analysis and fuel flow procedures in appendix D to this part to determine SO_2 mass emissions pursuant to § 75.11(e)(2), the owner or operator shall substitute for missing total sulfur content, gross calorific value, and fuel flowmeter data using the missing data procedures in appendix D to this part and shall also, for purposes of reporting heat input data under § 75.54(b)(5) or § 75.57(b)(5), substitute for missing data from a flow monitoring system, CO_2-diluent monitor, or O_2-diluent monitor using the missing data substitution procedures in § 75.36.

(3) The owner or operator of a unit with an SO_2 monitoring system shall not include hours, when the unit combusts only natural gas (or a gaseous fuel with total sulfur content no greater than the total sulfur content of natural gas), in the SO_2 data availability calculations in § 75.32 or in the calculations of substitute SO_2 data using the procedures of either § 75.31 or § 75.33, when SO_2 emissions are determined in accordance with § 75.11(e)(1) or (e)(2). For the purpose of the missing data and availability procedures for SO_2 pollutant concentration monitors in §§ 75.31 and 75.33 only, all hours during which the unit combusts only natural gas, or gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas, shall be excluded from the definition of "monitor operating hour," "quality assured monitor operating hour," "unit operating hour," and "unit operating day," when SO_2 emissions are determined in accordance with § 75.11(e)(1) or (e)(2).

(4) During all hours in which a unit with an SO_2 continuous emission monitoring system combusts only natural gas (or gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas) and the owner or operator uses the SO_2 monitoring system to determine SO_2 mass emissions pursuant to § 75.11(e)(3), the owner or operator shall determine the percent monitor data availability for SO_2 in accordance with § 75.32 and shall use the standard SO_2 missing data procedures of § 75.33.

24. Section 75.32 is amended by revising the last sentence in paragraph (a)(3) to read as follows:

§ 75.32 Determination of monitor data availability for standard missing data procedures.

(a) * * *

(3) * * * The owner or operator of a unit with an SO_2 monitoring system shall, when SO_2 emissions are determined in accordance with § 75.11(e)(1) or (e)(2), exclude hours in which a unit combusts only natural gas (or gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas) from calculations of percent monitor data availability for SO_2 pollutant concentration monitors, as provided in § 75.30(d).

* * * * *

25. Section 75.33 is amended by adding a new paragraph (d) to read as follows:

§ 75.33 Standard missing data procedures.

* * * * *

(d) On and after January 1, 2000, failure to maintain a monitor data availability, as calculated pursuant to § 75.32, of at least 80.0 percent for SO_2, NO_x, flow rate, or CO_2 shall be considered a violation of the primary measurement requirement of § 75.10(a). This paragraph (d) shall not apply: if, for a particular unit or stack for which the monitor data availability drops below 80.0 percent, less than 3,000 unit operating hours have been accumulated in the previous 12 calendar quarters; or if a data availability percentage of less than 80.0 percent results from a sudden and reasonably unforeseeable event beyond the control of the owner or operator, such as catastrophic monitor failure or destruction of monitoring equipment by fire, flood, etc. If such

circumstances have caused (or are projected to cause) the monitor data availability to drop below 80.0 percent, the owner or operator shall notify the Administrator, in writing, within 7 days of the event(s). Notification, in writing, shall also be provided to the EPA Regional Office and to the appropriate State agency. The written notifications shall fully explain the circumstances that have caused (or may cause) the low monitor data availability and shall contain an action plan and a projected time schedule for correction of the problem. Failures that are caused in part by poor maintenance or careless operation shall not, for the purposes of this paragraph, be considered reasonably unforeseeable events beyond the control of the owner or operator.

26. Section 75.34 is amended by revising paragraph (a)(3) to read as follows:

§ 75.34 Units with add-on emission controls.

(a) * * *

(3) The designated representative may petition the Administrator under § 75.66 for approval of site-specific parametric monitoring procedure(s) for calculating substitute data for missing SO_2 pollutant concentration and NO_x emission rate data in accordance with the requirements of paragraphs (b) and (c) of this section and appendix C to this part. The owner or operator shall record the data required in appendix C to this part, pursuant to § 75.55(b) or § 75.58(b), as applicable.

* * * * *

27. Section 75.35 is amended by revising paragraphs (a) and (c) to read as follows:

§ 75.35 Missing data procedures for CO_2 data.

(a) On and after January 1, 2000, the owner or operator of a unit with a CO_2 continuous emission monitoring system (or an O_2-diluent monitor that is used to determine CO_2 concentration in accordance with appendix F to this part) shall substitute for missing CO_2 concentration data using the procedures of this section. Prior to January 1, 2000, the owner or operator may substitute for missing CO_2 or O_2 concentration data using the procedures of this section.

* * * * *

(c) Upon completion of the first 720 quality assured monitor operating hours following initial certification of the CO_2 continuous emission monitoring system, the owner or operator shall provide substitute data for CO_2 concentration or CO_2 mass emissions required under this subpart, including CO_2 data calculated from O_2 measurements using the procedures in appendix F to this part, in accordance with the procedures in § 75.33(b), except that the terms "SO_2 concentration" and "SO_2 pollutant concentration monitor" shall be replaced, respectively, with "CO_2 concentration" and "CO_2 pollutant concentration monitor."

28. Section 75.36 is amended by revising paragraphs (a), (b), and (c) to read as follows:

§ 75.36 Missing data procedures for heat input.

(a) When hourly heat input is determined using a flow monitoring system and a diluent gas (O_2 or CO_2) monitor, substitute data must be provided to calculate the heat input whenever quality assured data are unavailable from the flow monitor, the diluent gas monitor, or both. When flow rate data are unavailable, substitute flow rate data for the heat input calculation shall be provided according to § 75.31 or § 75.33, as applicable. On and after January 1, 2000, when diluent gas data are unavailable, the owner or operator shall provide substitute O_2 or CO_2 data for the heat input calculations in accordance with this section. Prior to January 1, 2000, the owner or operator may substitute for missing CO_2 or O_2 concentration data using the procedures in this section.

(b) During the first 720 quality assured monitor operating hours following initial certification (i.e., following the date and time of completion of successful certification tests of the CO_2 or O_2 monitor), the owner or operator shall provide substitute CO_2 or O_2 data, as applicable, for the calculation of heat input (under section 5.2 of appendix F to this part) according to § 75.31(b).

(c) Upon completion of the first 720 quality assured monitor operating hours following initial certification of the CO_2 (or O_2) monitor, the owner or operator shall provide substitute data for CO_2 or O_2 concentration to calculate heat input according to the procedures in § 75.33(b), except that the term "SO_2 concentration" shall be replaced with "CO_2 concentration" or "O_2 concentration" (as applicable) and the term "SO_2 pollutant concentration monitor" shall be replaced with "CO_2-diluent monitor" or "O_2-diluent monitor" (as applicable).

* * * * *

29. Section 75.37 is added to subpart D to read as follows:

§ 75.37 Missing data procedures for moisture.

The owner or operator shall substitute for missing moisture data (beginning no later than January 1, 2000 or the date and hour on which the unit or stack is required to begin reporting under § 75.64, whichever date is earlier) as follows:

(a) Where no prior quality assured percent moisture data exist, substitute 0.0 percent moisture for each unit operating hour;

(b) For the first 720 quality assured monitor operating hours, substitute for each hour of the missing data period the average of the percent moisture values obtained during the hour before and the hour after the missing data period;

(c) Once 720 quality assured monitor operating hours have been obtained, begin calculating the percent data availability of the moisture monitoring system, in accordance with § 75.32;

(d) When the percent data availability, as of the last hour in the missing data period, is ≥90.0 percent, substitute for each hour of the missing data period the average of the percent moisture values obtained during the hour before and the hour after the missing data period;

(e) If the percent data availability of the moisture monitor is < 90.0 percent as of the last hour in the missing data period, substitute 0.0 percent moisture for each hour of the missing data period.

Subpart E—[Amended]

30. Section 75.48 is amended by revising paragraphs (a)(3)(ii) and (a)(3)(iii) to read as follows:

§ 75.48 Petition for an alternative monitoring system.

(a) * * *

(3) * * *

(ii) Hourly test data for the alternative monitoring system at each required operating level and fuel type. The fuel type, operating level and gross unit load shall be recorded.

(iii) Hourly test data for the continuous emissions monitoring system at each required operating level and fuel type. The fuel type, operating level and gross unit load shall be recorded.

* * * * *

31. Section 75.50 is removed and reserved.

§ 75.50 [Removed and Reserved]

32. Section 75.51 is removed and reserved.

§ 75.51 [Removed and Reserved]

33. Section 75.52 is removed and reserved.

§ 75.52 [Removed and Reserved]

34. Section 75.53 is amended by revising paragraphs (a) and (b) and adding paragraphs (e) through (f) to read as follows:

§ 75.53 Monitoring plan.

(a) *General Provisions.*

(1) Compliance dates. Beginning on January 1, 2000, the owner or operator shall comply with the provisions in paragraphs (a), (b), (e) and (f) of this section only. Before January 1, 2000, the owner or operator shall comply with either paragraphs (a) through (d) or paragraphs (a), (b), (c), and (f) of this section, except that the owner or operator shall comply with provisions in paragraphs (e) and (f) of this section only before January 1, 2000, when those provisions support a regulatory option provided in another section of this part 75 and the regulatory option is exercised before January 1, 2000.

(2) The owner or operator of an affected unit shall prepare and maintain a monitoring plan. Except as provided in paragraphs (d) (or (f), as applicable) of this section, a monitoring plan shall contain sufficient information on the continuous emission or opacity monitoring systems, excepted methodology under § 75.19, or excepted monitoring systems under appendix D or E to this part and the use of data derived from these systems to demonstrate that all unit SO_2 emissions, NO_x emissions, CO_2 emissions, and opacity are monitored and reported.

(b) Whenever the owner or operator makes a replacement, modification, or change in the certified continuous emission monitoring system, continuous opacity monitoring system, excepted methodology under § 75.19, excepted monitoring system under appendix D, E, or I to this part, or alternative monitoring system under subpart E of this part, including a change in the automated data acquisition and handling system or in the flue gas handling system, that affects information reported in the monitoring plan (e.g., a change to a serial number for a component of a monitoring system), then the owner or operator shall update the monitoring plan.

* * * * *

(e) *Contents of the monitoring plan.* Each monitoring plan shall contain the information in paragraph (e)(1) of this section in electronic format and the information in paragraph (e)(2) of this section in hardcopy format.

(1) *Electronic.* (i) ORISPL numbers developed by the Department of Energy and used in the National Allowance Database, for all affected units involved in the monitoring plan, with the following information for each unit:

(A) Short name;

(B) Classification of unit as one of the following: Phase I (including substitution or compensating units), Phase II, new, or nonaffected;

(C) Type of boiler (or boilers for a group of units using a common stack);

(D) Type of fuel(s) fired by boiler, fuel type start and end date, primary/secondary fuel indicator, and, if more than one fuel, the fuel classification of the boiler;

(E) Type(s) of emission controls for SO_2, NO_x, and particulates installed or to be installed, including specifications of whether such controls are pre-combustion, post-combustion, or integral to the combustion process; control equipment code, installation date, and optimization date; control equipment retirement date (if applicable); and, an indicator for whether the controls are an original installation;

(F) Maximum hourly heat input capacity;

(G) Date of first commercial operation;

(H) Unit retirement date (if applicable);

(I) Maximum hourly gross load (in MW, rounded to the nearest MW, or steam load in 1000 lb/hr, rounded to the nearest 100 lb/hr);

(J) Identification of all units using a common stack;

(K) Activation date for the stack/pipe;

(L) Retirement date of the stack/pipe (if applicable); and

(M) Indicator of whether the stack is a bypass stack.

(ii) For each unit and parameter required to be monitored, identification of monitoring methodology information, consisting of monitoring methodology, type of fuel associated with the methodology, missing data approach for the methodology, methodology start date, and methodology end date (if applicable).

(iii) The following information:

(A) Program(s) for which the EDR is submitted;

(B) Unit classification;

(C) Reporting frequency;

(D) Program participation date;

(E) State regulation code (if applicable); and

(F) State or local regulatory agency code.

(iv) Identification and description of each monitoring component (including each monitor and its identifiable components, such as analyzer and/or probe) in the continuous emission monitoring systems (i.e., SO_2 pollutant concentration monitor, flow monitor, moisture monitor; NO_x pollutant concentration monitor and diluent gas monitor), the continuous opacity monitoring system, or excepted monitoring system (i.e., fuel flowmeter, data acquisition and handling system), including:

(A) Manufacturer, model number and serial number;

(B) Component/system identification code assigned by the utility to each identifiable monitoring component (such as the analyzer and/or probe). Each code shall use a three-digit format, unique to each monitoring component and unique to each monitoring system;

(C) Designation of the component type or method of operation, such as in situ pollutant concentration monitor or thermal flow monitor;

(D) Designation of the system as a primary, redundant backup, non-redundant backup, like kind non-redundant backup, data backup, or reference method backup system, as provided in § 75.10(e);

(E) First and last dates the system reported data; and

(F) Status of the monitoring component.

(v) Identification and description of all major hardware and software components of the automated data acquisition and handling system, including:

(A) For hardware components, the manufacturer and model number; and

(B) For software components, identification of the provider and model/version number.

(vi) Explicit formulas for each measured emission parameter, using component/system identification codes for the primary system used to measure the parameter to link continuous emission monitoring system or excepted monitoring system observations with reported concentrations, mass emissions, or emission rates, according to the conversions listed in appendix D, E, or F to this part. Formulas for backup monitoring systems are required only if different formulas for the same parameter are used for the primary and backup monitoring systems (e.g., if the primary system measures pollutant concentration on a different moisture basis from the backup system). The formulas must contain all constants and factors required to derive mass emissions or emission rates from component/system code observations and an indication of whether the formula is being added, corrected, deleted, or is unchanged. Each emissions formula is identified with a unique three digit code. The owner or operator of a low mass emissions unit for which the owner or operator is using the optional low mass emissions excepted methodology in § 75.19(c) is not required to report such formulas.

(vii) Inside cross-sectional area (ft^2) at flue exit (for all units) and at flow monitoring location (for units with flow monitors, only).

(viii) Stack height (ft) above ground level and stack base elevation above sea level.

(ix) Flue identification number, as reported to the Energy Information Administration (EIA).

(x) For each parameter monitored: scale, maximum potential concentration (and method of calculation), maximum expected concentration (if applicable) (and method of calculation), maximum potential flow rate (and method of calculation), maximum potential NO_X emission rate, span value, full-scale range, daily calibration units of measure, span effective date/hour, span inactivation date/hour, indication of whether dual spans are required, default high range value, flow rate span, and flow rate span value and full scale value (in scfh) for each unit or stack using SO_2, NO_X, CO_2, O_2, or flow component monitors.

(xi) If the monitoring system or excepted methodology provides for the use of a constant, assumed, or default value for a parameter under specific circumstances, then include the following information for each such value for each parameter:

(A) Identification of the parameter;

(B) Default, maximum, minimum, or constant value, and units of measure for the value;

(C) Purpose of the value;

(D) Indicator of use during controlled/uncontrolled hours;

(E) Type of fuel;

(F) Source of the value;

(G) Value effective date and hour;

(H) Date and hour value is no longer effective (if applicable); and

(I) For units using the excepted methodology under § 75.19, the applicable SO_2 emission factor.

(2) *Hardcopy.* (i) Information, including (as applicable) identification of the test strategy; protocol for the relative accuracy test audit; other relevant test information; calibration gas levels (percent of span) for the calibration error test and linearity check; calculations for determining maximum potential concentration, maximum expected concentration (if applicable), maximum potential flow rate, maximum potential NO_X emission rate, and span; and apportionment strategies under §§ 75.13 through 75.17.

(ii) Description of site locations for each monitoring component in the continuous emission or opacity monitoring systems, including schematic diagrams and engineering drawings specified in paragraphs (e)(2)(iv) and (e)(2)(v) of this section and any other documentation that demonstrates each monitor location meets the appropriate siting criteria.

(iii) A data flow diagram denoting the complete information handling path from output signals of continuous emission monitoring system components to final reports.

(iv) For units monitored by a continuous emission or opacity monitoring system, a schematic diagram identifying entire gas handling system from boiler to stack for all affected units, using identification numbers for units, monitor components, and stacks corresponding to the identification numbers provided in paragraphs (e)(1)(i), (e)(1)(ii), (e)(1)(vi), and (e)(1)(vii) of this section. The schematic diagram must depict stack height and the height of any monitor locations. Comprehensive and/or separate schematic diagrams shall be used to describe groups of units using a common stack.

(v) For units monitored by a continuous emission or opacity monitoring system, stack and duct engineering diagrams showing the dimensions and location of fans, turning vanes, air preheaters, monitor components, probes, reference method sampling ports, and other equipment that affects the monitoring system location, performance, or quality control checks.

(f) *Contents of monitoring plan for specific situations.* The following additional information shall be included in the monitoring plan for the specific situations described:

(1) For each gas-fired unit or oil-fired unit for which the owner or operator uses the optional protocol in appendix D to this part for estimating heat input and/or SO_2 mass emissions or in appendix I to this part for estimating stack flow rate, or for each gas-fired or oil-fired peaking unit for which the owner/operator uses the optional protocol in appendix E to this part for estimating NO_X emission rate (using a fuel flowmeter), the designated representative shall include the following additional information in the monitoring plan:

(i) *Electronic.* (A) Parameter monitored;

(B) Type of fuel measured, maximum fuel flow rate, units of measure, and basis of maximum fuel flow rate (i.e., upper range value or unit maximum) for each fuel flowmeter;

(C) Test method used to check the accuracy of each fuel flowmeter;

(D) Submission status of the data; and

(E) Monitoring system identification code.

(ii) *Hardcopy.* (A) A schematic diagram identifying the relationship between the unit, all fuel supply lines, the fuel flowmeter(s), and the stack(s). The schematic diagram must depict the installation location of each fuel flowmeter and the fuel sampling location(s). Comprehensive and/or separate schematic diagrams shall be used to describe groups of units using a common pipe.

(B) For units using the optional protocol for gaseous fuel in appendix D to this part, historical fuel sampling information on the sulfur content of the gaseous fuel according to section 2.3.3 of appendix D to this part.

(2) For each gas-fired peaking unit and oil-fired peaking unit for which the owner or operator uses the optional procedures in appendix E to this part for estimating NO_X emission rate, the designated representative shall include in the monitoring plan:

(i) *Electronic.* Unit operating and capacity factor information demonstrating that the unit qualifies as a peaking unit or gas-fired unit, as defined in § 72.2 of this chapter.

(ii) *Hardcopy.* (A) A protocol containing methods used to perform the baseline or periodic NO_X emission test; and

(B) Unit operating parameters related to NO_X formation by the unit.

(3) For each gas-fired unit and diesel-fired unit or unit with a wet flue gas pollution control system for which the designated representative claims an opacity monitoring exemption under § 75.14, the designated representative shall include in the hardcopy monitoring plan the information specified under § 75.14(b), (c), or (d), demonstrating that the unit qualifies for the exemption.

(4) For each monitoring system recertification, maintenance, or other event, the designated representative shall include the following additional information in electronic format in the monitoring plan:

(i) Component/system identification code;

(ii) Event code or code for required test;

(iii) Event begin date and hour;

(iv) Conditional data period begin date and hour (if applicable);

(v) Date and hour that last test is successfully completed; and

(vi) Indicator of whether conditionally valid data were reported at the end of the quarter.

35. Section 75.54 is amended by adding new paragraphs (g) and (h) to read as follows:

§ 75.54 General recordkeeping provisions.

* * * * *

(g) *Missing data records.* The owner or operator shall record the causes of any missing data periods and the actions

taken by the owner or operator to cure such causes.

(h) *Compliance dates.* On January 1, 2000, the provisions of this section are no longer applicable. Before January 1, 2000, the owner or operator shall comply with either this section or § 75.57. Beginning on January 1, 2000, the owner or operator shall comply with § 75.57 only.

36. Section 75.55 is amended by adding a new paragraph (g) to read as follows:

§ 75.55 General recordkeeping provisions for specific situations.

* * * * *

(g) *Compliance dates.* On January 1, 2000, the provisions of this section are no longer applicable. Before January 1, 2000, the owner or operator shall comply with either this section or § 75.58. Beginning on January 1, 2000, the owner or operator shall comply with § 75.58 only.

37. Section 75.56 is amended by adding new paragraphs (a)(5)(vii) and (e) to read as follows:

§ 75.56 Certification, quality assurance, and quality control record provisions.

(a) * * *

(5) * * *

(vii) For flow monitors, the flow polynomial equation used to linearize the flow monitor and the numerical values of the polynomial coefficients of that equation.

* * * * *

(e) *Compliance dates.* On January 1, 2000, the provisions of this section are no longer applicable. Before January 1, 2000, the owner or operator shall comply with either this section or § 75.59. Beginning on January 1, 2000, the owner or operator shall comply with § 75.59 only.

38. Section 75.57 is added to Subpart F to read as follows:

§ 75.57 General recordkeeping provisions.

(a) *Recordkeeping requirements for affected sources.* The owner or operator of any affected source subject to the requirements of this part shall maintain for each affected unit a file of all measurements, data, reports, and other information required by this part at the source in a form suitable for inspection for at least three (3) years from the date of each record. Unless otherwise provided, throughout this subpart the phrase "for each affected unit" also applies to each group of affected or nonaffected units utilizing a common stack and common monitoring systems, pursuant to §§ 75.13 through 75.18, or utilizing a common pipe header and common fuel flowmeter, pursuant to section 2.1.2 of appendix D to this part. The file shall contain the following information:

(1) The data and information required in paragraphs (b) through (f) of this section, beginning with the earlier of the date of provisional certification or the deadline in § 75.4(a), (b), or (c);

(2) The supporting data and information used to calculate values required in paragraphs (b) through (f) of this section, excluding the subhourly data points used to compute hourly averages under § 75.10(d), beginning with the earlier of the date of provisional certification or the deadline in § 75.4(a), (b), or (c);

(3) The data and information required in § 75.55 or § 75.58 for specific situations, as applicable, beginning with the earlier of the date of provisional certification or the deadline in § 75.4(a), (b), or (c);

(4) The certification test data and information required in § 75.56 or § 75.59 for tests required under § 75.20, beginning with the date of the first certification test performed; the quality assurance and quality control data and information required in § 75.56 or § 75.59 for tests; and the quality assurance/quality control plan required under § 75.21 and appendix B to this part, beginning with the date of provisional certification;

(5) The current monitoring plan as specified in § 75.53, beginning with the initial submission required by § 75.62; and

(6) The quality control plan as described in section 1 of appendix B to this part, beginning with the date of provisional certification.

(b) *Operating parameter record provisions.* The owner or operator shall record for each hour the following information on unit operating time, heat input rate, and load, separately for each affected unit and also for each group of units utilizing a common stack and a common monitoring system or utilizing a common pipe header and common fuel flowmeter.

(1) Date and hour;

(2) Unit operating time (rounded up to the nearest fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator));

(3) Hourly gross unit load (rounded to nearest MWge) (or steam load in 1000 lb/hr at stated temperature and pressure, rounded to the nearest 1000 lb/hr, if elected in the monitoring plan);

(4) Operating load range corresponding to hourly gross load of 1 to 10, except for units using a common stack or common pipe header, which may use up to 20 load ranges for stack or fuel flow, as specified in the monitoring plan;

(5) Hourly heat input rate (mmBtu/hr, rounded to the nearest tenth);

(6) Identification code for formula used for heat input, as provided in § 75.53; and

(7) For CEMS units only:

(i) F-factor for heat input calculation; and

(ii) Indication of whether the diluent cap was used for heat input calculations for the hour.

(c) *SO_2 emission record provisions.* The owner or operator shall record for each hour the information required by this paragraph for each affected unit or group of units using a common stack and common monitoring systems, except as provided under § 75.11(e) or for a gas-fired or oil-fired unit for which the owner or operator is using the optional protocol in appendix D to this part or for a low mass emissions unit for which the owner or operator is using the optional low mass emissions methodology in § 75.19(c) for estimating SO_2 mass emissions:

(1) For SO_2 concentration during unit operation, as measured and reported from each certified primary monitor, certified back-up monitor, or other approved method of emissions determination:

(i) Component-system identification code, as provided in § 75.53;

(ii) Date and hour;

(iii) Hourly average SO_2 concentration (ppm, rounded to the nearest tenth);

(iv) Hourly average SO_2 concentration (ppm, rounded to the nearest tenth), adjusted for bias if bias adjustment factor is required, as provided in § 75.24(d);

(v) Percent monitor data availability (recorded to the nearest tenth of a percent), calculated pursuant to § 75.32; and

(vi) Method of determination for hourly average SO_2 concentration using Codes 1–55 in Table 4a of this section.

(2) For flow rate during unit operation, as measured and reported from each certified primary monitor, certified back-up monitor, or other approved method of emissions determination:

(i) Component system identification code, as provided in § 75.53 (including the separate identification code for the moisture monitoring system, if applicable);

(ii) Date and hour;

(iii) Hourly average volumetric flow rate (in scfh, rounded to the nearest thousand);

(iv) Hourly average volumetric flow rate (in scfh, rounded to the nearest thousand), adjusted for bias if bias

adjustment factor required, as provided in § 75.24(d);

(v) Hourly average moisture content of flue gas (percent, rounded to the nearest tenth), where SO_2 concentration is measured on a dry basis. If the continuous moisture monitoring system consists of wet- and dry-basis oxygen analyzers, record both the wet- and dry-basis oxygen hourly averages (in percent O_2, rounded to the nearest tenth);

(vi) Percent monitor data availability (recorded to the nearest tenth of a percent), for the flow monitor, and, if applicable, separately for the moisture monitoring system, calculated pursuant to § 75.32; and

(vii) Method of determination for hourly average flow rate using Codes 1–55 in Table 4a of this section.

(3) For SO_2 mass emission rate during unit operation, as measured and reported from the certified primary monitoring system(s), certified redundant or non-redundant back-up monitoring system(s), or other approved method(s) of emissions determination:

(i) Date and hour;

(ii) Hourly SO_2 mass emission rate (lb/hr, rounded to the nearest tenth);

(iii) Hourly SO_2 mass emission rate (lb/hr, rounded to the nearest tenth), adjusted for bias if bias adjustment factor required, as provided in § 75.24(d); and

(iv) Identification code for emissions formula used to derive hourly SO_2 mass emission rate from SO_2 concentration and flow data in paragraphs (c)(1) and (c)(2) of this section, as provided in § 75.53.

TABLE 4A.—CODES FOR METHOD OF EMISSIONS AND FLOW DETERMINATION

Code	Hourly emissions/flow measurement or estimation method
1	Certified primary emission/flow monitoring system.
2	Certified backup emission/flow monitoring system.
3	Approved alternative monitoring system.
4	Reference method: SO_2: Method 6C. Flow: Method 2. NO_X: Method 7E. CO_2 or O2: Method 3A.
5	For units with add-on SO_2 and/or NO_X emission controls: SO_2 concentration or NO_X emission rate estimate from Agency preapproved parametric monitoring method.
6	Average of the hourly SO_2 concentrations, CO_2 concentrations, flow rate, or NO_X emission rate for the hour before and the hour following a missing data period.
7	Hourly average SO_2 concentration, CO_2 concentration, flow rate, or NO_X emission rate using initial missing data procedures.
8	90th percentile hourly SO_2 concentration, flow rate, or emission rate.
9	95th percentile hourly SO_2 concentration, flow rate, or NO_X emission rate.
10	Maximum hourly SO_2 concentration, flow rate, or NO_X emission rate.
11	Hourly average flow rate or NO_X emission rate in corresponding load range.
12	Maximum potential concentration of SO_2, maximum potential concentration of CO_2, maximum potential flow rate, or maximum potential NO_X emission rate, as determined using section 2.1 of appendix A to this part.
13	Fuel analysis data from appendix G to this part for CO_2 mass emissions. (This code is optional through 12/31/99, and shall not be used after 1/1/00.)
14	Diluent cap value (if the cap is replacing a CO_2 measurement, it shall be 5.0 percent for boilers and 1.0 percent for turbines; if it is replacing an O_2 measurement, it shall be 14.0 percent for boilers and 19.0 percent for turbines.
15	Fuel analysis data from appendix G to this part for CO_2 mass emissions. (This code is optional through 12/31/99, and shall not be used after 1/1/00.)
16	SO_2 concentration value of 2 ppm during hours when only natural gas (or fuel with equivalent sulfur content) is combusted.
19	200.0 percent of the MPC; default high range value.
20	200.0 percent of the full-scale range setting (full-scale exceedance of high range).
40	Stack volumetric flow calculated using the procedures of appendix I.
54	Other quality assured methodologies approved through petition. These hours are included in missing data lookback and are included as unavailable hours for percent monitor availability calculations.
55	Other substitute data approved through petition. These hours are not included in missing data lookback and are included as unavailable hours for percent monitor availability calculations.

(d) *NO_X emission record provisions.* The owner or operator shall record the information required by this paragraph for each affected unit for each hour, or partial hour during which the unit operates, except for a gas-fired peaking unit or oil-fired peaking unit for which the owner or operator is using the optional protocol in appendix E to this part or a low mass emissions unit for which the owner or operator is using the optional low mass emissions excepted methodology in § 75.19(c) for estimating NO_X emission rate. For each NO_X emission rate as measured and reported from the certified primary monitor, certified back-up monitor, or other approved method of emissions determination:

(1) Component system identification code, as provided in § 75.53 (including identification code for the moisture monitoring system, if applicable);

(2) Date and hour;

(3) Hourly average concentration (ppm, rounded to the nearest tenth);

(4) Hourly average diluent gas concentration (percent O_2 or percent CO_2, rounded to the nearest tenth) and, if applicable, the hourly average moisture content of the stack gas (percent H_2O, rounded to the nearest tenth). If the continuous moisture monitoring system consists of wet- and dry-basis oxygen analyzers, also record both the hourly wet- and dry-basis oxygen readings (in percent O_2, rounded to the nearest tenth);

(5) Hourly average NO_X emission rate (lb/mmBtu, rounded either to the nearest hundredth or thousandth prior to January 1, 2000 and rounded to the nearest thousandth on and after January 1, 2000);

(6) Hourly average NO_X emission rate (lb/mmBtu, rounded either to the nearest hundredth or thousandth prior to January 1, 2000 and rounded to the nearest thousandth on and after January 1, 2000), adjusted for bias if bias adjustment factor is required, as provided in § 75.24(d). The requirement to report hourly NO_X emission rates to the nearest thousandth shall not affect NO_X compliance determinations under part 76 of this chapter; compliance with each applicable emission limit under part 76 shall be determined to the nearest hundredth pound per million Btu;

(7) Percent monitoring system data availability (recorded to the nearest tenth of a percent), for the NO_X

monitoring system, and, if applicable, separately for the moisture monitoring system, calculated pursuant to § 75.32;

(8) Method of determination for hourly average NO_X emission rate using Codes 1–55 in Table 4a of this section;

(9) Identification code for emissions formulas used to derive hourly average NO_X emission rate and total NO_X mass, as provided in § 75.53, and F-factor used to convert NO_X concentrations into emission rates;

(e) *CO_2 emission record provisions.* Except for a low mass emissions unit for which the owner or operator is using the optional low mass emissions excepted methodology in § 75.19(c) for estimating CO_2 mass emissions, the owner or operator shall record or calculate CO_2 emissions for each affected unit using one of the following methods specified in this section:

(1) If the owner or operator chooses to use a CO_2 continuous emission monitoring system (including an O_2 monitor and flow monitor, as specified in appendix F to this part), then the owner or operator shall record for each hour or partial hour during which the unit operates the following information for CO_2 mass emissions, as measured and reported from the certified primary monitor, certified back-up monitor, or other approved method of emissions determination:

(i) Component/system identification code, as provided in § 75.53;

(ii) Date and hour;

(iii) Hourly average CO_2 concentration (in percent, rounded to the nearest tenth);

(iv) Hourly average volumetric flow rate (scfh, rounded to the nearest thousand scfh);

(v) Hourly average moisture content of flue gas (percent, rounded to the nearest tenth), where CO_2 concentration is measured on a dry basis. If the continuous moisture monitoring system consists of wet- and dry-basis oxygen analyzers, also record both the hourly wet- and dry-basis oxygen readings (in percent O_2, rounded to the nearest tenth);

(vi) Hourly average CO_2 mass emission rate (tons/hr, rounded to the nearest tenth);

(vii) Percent monitor data availability for both the CO_2 monitoring system and, if applicable, the moisture monitoring system (recorded to the nearest tenth of a percent), calculated pursuant to § 75.32;

(viii) Method of determination for hourly average CO_2 mass emission rate using Codes 1–55 in Table 4a of this section;

(ix) Identification code for emissions formula used to derive hourly average CO_2 mass emission rate, as provided in § 75.53; and

(x) Indication of whether the diluent cap was used for CO_2 calculation for the hour.

(2) As an alternative to paragraph (e)(1) of this section, the owner or operator may use the procedures in § 75.13 and in appendix G to this part, and shall record daily the following information for CO_2 mass emissions:

(i) Date;

(ii) Daily combustion-formed CO_2 mass emissions (tons/day, rounded to the nearest tenth);

(iii) For coal-fired units, flag indicating whether optional procedure to adjust combustion-formed CO_2 mass emissions for carbon retained in flyash has been used and, if so, the adjustment;

(iv) For a unit with a wet flue gas desulfurization system or other controls generating CO_2, daily sorbent-related CO_2 mass emissions (tons/day, rounded to the nearest tenth); and

(v) For a unit with a wet flue gas desulfurization system or other controls generating CO_2, total daily CO_2 mass emissions (tons/day, rounded to the nearest tenth) as sum of combustion-formed emissions and sorbent-related emissions.

(f) *Opacity records.* The owner or operator shall record opacity data as specified by the State or local air pollution control agency. If the State or local air pollution control agency does not specify recordkeeping requirements for opacity, then record the information required by paragraphs (f) (1) through (5) of this section for each affected unit, except as provided in § 75.14 (b), (c), and (d). The owner or operator shall also keep records of all incidents of opacity monitor downtime during unit operation, including reason(s) for the monitor outage(s) and any corrective action(s) taken for opacity, as measured and reported by the continuous opacity monitoring system:

(1) Component/system identification code;

(2) Date, hour, and minute;

(3) Average opacity of emissions for each six minute averaging period (in percent opacity);

(4) If the average opacity of emissions exceeds the applicable standard, then a code indicating such an exceedance has occurred; and

(5) Percent monitor data availability (recorded to the nearest tenth of a percent), calculated according to the requirements of the procedure recommended for State Implementation Plans in appendix M to part 51 of this chapter.

(g) *O_2-diluent record provisions.* The owner or operator of a unit using a flow monitor and an O_2-diluent monitor to determine heat input, in accordance with Equation F–17 or F–18 of appendix F to this part, shall keep the following records for the O_2-diluent monitor:

(1) Component-system identification code, as provided in § 75.53;

(2) Date and hour;

(3) Hourly average O2 concentration (in percent, rounded to the nearest tenth);

(4) Percent monitor data availability (recorded to the nearest tenth of a percent), calculated pursuant to § 75.32;

(5) Method of determination code for O_2 concentration data using Codes 1–55, substituting the words "O_2 concentrations" and "O_2 concentration" for the words "CO_2 concentrations" and "CO_2 concentration" in the descriptions of Codes 6 and 7 in Table 4a of this section, respectively.

(h) *Missing data records.* The owner or operator shall record the causes of any missing data periods and the actions taken by the owner or operator to cure such causes.

(i) Compliance dates. Beginning on January 1, 2000, the owner or operator shall comply with the provisions in paragraphs (a), (b), (e) and (f) of this section only. Before January 1, 2000, the owner or operator shall comply with either paragraphs (a) through (d) or paragraphs (a), (b), (c), and (f) of this section, except that the owner or operator shall comply with provisions in paragraphs (e) and (f) of this section only before January 1, 2000, when those provisions support a regulatory option provided in another section of this part 75 and the regulatory option is exercised before January 1, 2000.

39. Section 75.58 is added to read as follows:

§ 75.58 General recordkeeping provisions for specific situations.

(a) *Specific SO_2 emission record provisions for units with qualifying Phase I technology.* In addition to the SO_2 emissions information required in § 75.54(c), from January 1, 1997 through December 31, 1999, the owner or operator shall record the applicable information in this paragraph for each affected unit on which SO_2 emission controls have been installed and operated for the purpose of meeting qualifying Phase I technology requirements pursuant to § 72.42 of this chapter and § 75.15.

(1) For units with post-combustion emission controls:

(i) Component/system identification codes for each inlet and outlet SO_2-diluent continuous emission monitoring system;

(ii) Date and hour;

(iii) Hourly average inlet SO_2 emission rate during unit operation (lb/mmBtu, rounded to nearest hundredth);

(iv) Hourly average outlet SO_2 emission rate during unit operation (lb/mmBtu, rounded to nearest hundredth);

(v) Percent data availability for both inlet and outlet SO_2-diluent continuous emission monitoring systems (recorded to the nearest tenth of a percent), calculated pursuant to Equation 8 of § 75.32 (for the first 8,760 unit operating hours following initial certification) and Equation 9 of § 75.32, thereafter; and

(vi) Identification code for emissions formula used to derive hourly average inlet and outlet SO_2 mass emissions rates for each affected unit or group of units using a common stack.

(2) For units with combustion and/or pre-combustion emission controls:

(i) Component/system identification codes for each outlet SO_2-diluent continuous emission monitoring system;

(ii) Date and hour;

(iii) Hourly average outlet SO_2 emission rate during unit operation (lb/mmBtu, rounded to nearest hundredth);

(iv) For units with combustion controls, average daily inlet SO_2 emission rate (lb/mmBtu, rounded to nearest hundredth), determined by coal sampling and analysis procedures in § 75.15; and

(v) For units with pre-combustion controls (i.e., fuel pretreatment), fuel analysis demonstrating the weight, sulfur content, and gross calorific value of the product and raw fuel lots.

(b) *Specific parametric data record provisions for calculating substitute emissions data for units with add-on emission controls.* In accordance with § 75.34, the owner or operator of an affected unit with add-on emission controls shall either record the applicable information in paragraph (b)(3) of this section for each hour of missing SO_2 concentration data or NO_X emission rate (in addition to other information), or shall record the information in paragraph (b)(1) of this section for SO_2 or paragraph (b)(2) of this section for NO_X through an automated data acquisition and handling system, as appropriate to the type of add-on emission controls:

(1) For units with add-on SO_2 emission controls petitioning to use or using the optional parametric monitoring procedures in appendix C to this part, for each hour of missing SO_2 concentration or volumetric flow data:

(i) The information required in § 75.54(b) or § 75.57(b) for SO_2 concentration and volumetric flow, if either one of these monitors is still operating;

(ii) Date and hour;

(iii) Number of operating scrubber modules;

(iv) Total feedrate of slurry to each operating scrubber module (gal/min);

(v) Pressure differential across each operating scrubber module (inches of water column);

(vi) For a unit with a wet flue gas desulfurization system, an in-line measure of absorber pH for each operating scrubber module;

(vii) For a unit with a dry flue gas desulfurization system, the inlet and outlet temperatures across each operating scrubber module;

(viii) For a unit with a wet flue gas desulfurization system, the percent solids in slurry for each scrubber module.

(ix) For a unit with a dry flue gas desulfurization system, the slurry feed rate (gal/min) to the atomizer nozzle;

(x) For a unit with SO_2 add-on emission controls other than wet or dry limestone, corresponding parameters approved by the Administrator;

(xi) Method of determination of SO_2 concentration and volumetric flow using Codes 1–55 in Table 4 of § 75.54 or Table 4a of § 75.57; and

(xii) Inlet and outlet SO_2 concentration values, recorded by an SO_2 continuous emission monitoring system, and the removal efficiency of the add-on emission controls.

(2) For units with add-on emission controls petitioning to use or using the optional parametric monitoring procedures in appendix C to this part, for each hour of missing NO_X emission rate data:

(i) Date and hour;

(ii) Inlet air flow rate (scfh, rounded to the nearest thousand);

(iii) Excess O_2 concentration of flue gas at stack outlet (percent, rounded to nearest tenth of a percent);

(iv) Carbon monoxide concentration of flue gas at stack outlet (ppm, rounded to the nearest tenth);

(v) Temperature of flue gas at furnace exit or economizer outlet duct (°F);

(vi) Other parameters specific to NO_X emission controls (e.g., average hourly reagent feedrate);

(vii) Method of determination of NO_X emission rate using Codes 1–55 in Table 4 of § 75.54 or Table 4a of § 75.57; and

(viii) Inlet and outlet NO_X emission rate values recorded by a NO_X continuous emission monitoring system and the removal efficiency of the add-on emission controls.

(3) For units with add-on SO_2 or NO_X emission controls following the provisions of § 75.34(a)(1) or (a)(2), the owner or operator shall, for each hour of missing SO_2 or NO_X emission data, record:

(i) Parametric data which demonstrate the proper operation of the add-on emission controls, as described in the quality assurance/quality control program for the unit. The parametric data shall be maintained on site and shall be submitted, upon request, to the Administrator, EPA Regional office, State, or local agency;

(ii) A flag indicating either that the add-on emission controls are operating properly, as evidenced by all parameters being within the ranges specified in the quality assurance/quality control program, or that the add-on emission controls are not operating properly;

(iii) For units petitioning under § 75.66 for substituting a representative SO_2 concentration during missing data periods, any available inlet and outlet SO_2 concentration values recorded by an SO_2 continuous emission monitoring system; and

(iv) For units petitioning under § 75.66 for substituting a representative NO_X emission rate during missing data periods, any available inlet and outlet NO_X emission rate values recorded by a continuous emission monitoring system.

(c) *Specific SO_2 emission record provisions for gas-fired or oil-fired units using optional protocol in appendix D to this part.* In lieu of recording the information in § 75.54(c) or § 75.57(c), the owner or operator shall record the applicable information in this paragraph for each affected gas-fired or oil-fired unit for which the owner or operator is using the optional protocol in appendix D to this part for estimating SO_2 mass emissions.

(1) For each hour when the unit is combusting oil:

(i) Date and hour;

(ii) Hourly average flow rate of oil, while the unit combusts oil, with the units in which oil flow is recorded (gal/hr, lb/hr, m^3/hr, or bbl/hr, rounded to the nearest tenth) (flag value if derived from missing data procedures);

(iii) Sulfur content of oil sample used to determine SO_2 mass emission rate (rounded to nearest hundredth for diesel fuel or to the nearest tenth of a percent for other fuel oil) (flag value if derived from missing data procedures);

(iv) Method of oil sampling (flow proportional, continuous drip, as delivered, manual from storage tank, or daily manual);

(v) Mass rate of oil combusted each hour (lb/hr, rounded to the nearest tenth) (flag value if derived from missing data procedures);

(vi) SO_2 mass emission rate from oil (lb/hr, rounded to the nearest tenth);

(vii) For units using volumetric oil flowmeters, density of oil with the units in which oil density is recorded (flag

value if derived from missing data procedures);

(viii) Gross calorific value (heat content) of oil used to determine heat input (Btu/mass unit) (flag value if derived from missing data procedures);

(ix) Hourly heat input rate from oil, according to procedures in appendix F to this part (mmBtu/hr, to the nearest tenth);

(x) Fuel usage time for combustion of oil during the hour (rounded up to the nearest fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator)) (flag to indicate multiple/single fuel types combusted); and

(xi) Monitoring system identification code.

(2) For gas-fired units or oil-fired units using the optional protocol in appendix D to this part for daily manual oil sampling, when the unit is combusting oil, the highest sulfur content recorded from the most recent 30 daily oil samples (rounded to nearest tenth of a percent).

(3) For gas-fired units or oil-fired units, using the optional protocol in appendix D to this part for using an assumed sulfur content or density, or for as-delivered fuel sampled from each delivery:

(i) Record the measured sulfur content, GCV and, if applicable, density from each fuel sample; and

(ii) Record and report the assumed sulfur content, GCV and, if applicable, density used to calculate SO_2 mass emission rate or heat input rate.

(4) For each hour when the unit is combusting gaseous fuel:

(i) Date and hour;

(ii) Hourly heat input rate from gaseous fuel, according to procedures in appendix F to this part (mmBtu/hr, rounded to the nearest tenth);

(iii) Sulfur content or SO_2 emission rate, in one of the following formats, in accordance with the appropriate procedure from appendix D to this part:

(A) Sulfur content of gas sample (rounded to the nearest 0.1 grains/100 scf) (flag value if derived from missing data procedures); or

(B) SO_2 emission rate from NADB or default SO_2 emission rate of 0.0006 lb/mmBtu for pipeline natural gas;

(iv) Hourly flow rate of gaseous fuel, while the unit combusts gas (100 scfh) (flag value if derived from missing data procedures);

(v) Gross calorific value (heat content) of gaseous fuel used to determine heat input rate (Btu/100 scf) (flag value if derived from missing data procedures);

(vi) Heat input rate from gaseous fuel, while the unit combusts gas (mmBtu/hr, rounded to the nearest tenth);

(vii) SO_2 mass emission rate due to the combustion of gaseous fuels (lb/hr);

(viii) Fuel usage time for combustion of gaseous fuel during the hour (rounded up to the nearest fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator)) (flag to indicate multiple/single fuel types combusted); and

(ix) Monitoring system identification code.

(5) For each oil sample or sample of diesel fuel:

(i) Date of sampling;

(ii) Sulfur content (percent, rounded to the nearest hundredth for diesel fuel and to the nearest tenth for other fuel oil) (flag value if derived from missing data procedures);

(iii) Gross calorific value or heat content (Btu/lb) (flag value if derived from missing data procedures); and

(iv) Density or specific gravity, if required to convert volume to mass (flag value if derived from missing data procedures).

(6) For each sample of gaseous fuel for sulfur content:

(i) Date of sampling;

(ii) Sulfur content (grains/100 scf, rounded to the nearest tenth) (flag value if derived from missing data procedures);

(7) For each sample of gaseous fuel for gross calorific value:

(i) Date of sampling; and

(ii) Gross calorific value or heat content (Btu/100 scf) (flag value if derived from missing data procedures).

(8) For each oil sample or sample of gaseous fuel:

(i) Type of oil or gas; and

(ii) Type of sulfur sampling and value used in calculations.

(d) *Specific NO_X emission record provisions for gas-fired peaking units or oil-fired peaking units using optional protocol in appendix E to this part.* In lieu of recording the information in paragraph § 75.54(d) or § 75.57(d), the owner or operator shall record the applicable information in this paragraph for each affected gas-fired peaking unit or oil-fired peaking unit for which the owner or operator is using the optional protocol in appendix E to this part for estimating NO_X emission rate. The owner or operator shall meet the requirements of this section, except that the requirements under paragraphs (d)(1)(vii), (d)(2)(vii), and (d)(3)(vi) of this section shall become applicable on the date on which the owner or operator is required to monitor, record, and report NO_X mass emissions under an applicable State or federal NO_X mass emission reduction program, if the provisions of subpart H of this part are adopted as requirements under such a program.

(1) For each hour when the unit is combusting oil:

(i) Date and hour;

(ii) Hourly average fuel flow rate of oil while the unit combusts oil with the units in which oil flow is recorded (gal/hour, lb/hr, or bbl/hour) (flag value if derived from missing data procedures);

(iii) Gross calorific value (heat content) of oil used to determine heat input (Btu/lb) (flag value if derived from missing data procedures);

(iv) Hourly average NO_X emission rate from combustion of oil (lb/mmBtu);

(v) Heat input rate of oil (mmBtu/hr, rounded to the nearest tenth;

(vi) Fuel usage time for combustion of oil during the hour (rounded up to the nearest fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator)); and

(vii) NO_X mass emissions, calculated in accordance with section 8.1 of appendix F to this part.

(2) For each hour when the unit is combusting gaseous fuel:

(i) Date and hour;

(ii) Hourly average fuel flow rate of gaseous fuel, while the unit combusts gas (100 scfh) (flag value if derived from missing data procedures);

(iii) Gross calorific value (heat content) of gaseous fuel used to determine heat input (Btu/100 scf) (flag value if derived from missing data procedures);

(iv) Hourly average NO_X emission rate from combustion of gaseous fuel (lb/mmBtu, rounded to nearest hundredth);

(v) Heat input rate from gaseous fuel, while the unit combusts gas (mmBtu/hr, rounded to the nearest tenth);

(vi) Fuel usage time for combustion of gaseous fuel during the hour (rounded up to the nearest fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator)); and

(vii) NO_X mass emissions, calculated in accordance with section 8.1 of appendix F to this part.

(3) For each hour when the unit combusts any fuel:

(i) Date and hour;

(ii) Hourly average heat input rate from all fuels (mmBtu/hr, rounded to the nearest tenth);

(iii) Hourly average NO_X emission rate for the unit for all fuels;

(iv) For stationary gas turbines and diesel or dual-fuel reciprocating engines, hourly averages of operating parameters under section 2.3 of appendix E to this part (flag if value is

UMI
VOL
63
ISS
98
MY
21
1998
UMI

outside of manufacturer's recommended range);

(v) For boilers, hourly average boiler O_2 reading (percent, rounded to the nearest tenth) (flag if value exceeds by more than 2 percentage points the O_2 level recorded at the same heat input during the previous NO_X emission rate test);

(vi) NO_X mass emissions, calculated in accordance with section 8.1 of appendix F to this part;

(vii) Segment ID of the correlation curve; and

(viii) Monitoring system identification code.

(4) For each fuel sample:

(i) Date of sampling;

(ii) Gross calorific value (heat content) (Btu/lb for oil, Btu/100 scf for gaseous fuel); and

(iii) Density or specific gravity, if required to convert volume to mass.

(e) *Specific SO_2 emission record provisions during the combustion of gaseous fuel.* (1) If SO_2 emissions are determined in accordance with the provisions in § 75.11(e)(2) during hours in which only natural gas (or gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas) is combusted in a unit with an SO_2 continuous emission monitoring system, the owner or operator shall record the information in paragraph (c)(3) of this section in lieu of the information in §§ 75.54(c)(1) and (c)(3) or §§ 75.57(c)(1) and (c)(3), for those hours.

(2) The provisions of this paragraph apply to a unit which, in accordance with the provisions of § 75.11(e)(3), uses an SO_2 continuous emission monitoring system to determine SO_2 emissions during hours in which only natural gas or gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas is combusted in the unit. If the unit sometimes burns only natural gas (or gaseous fuel with total sulfur content no greater than the total sulfur content of natural gas) as a primary and/or backup fuel and at other times combusts higher-sulfur fuels, such as coal or oil, as primary and/or backup fuel(s), then the owner or operator shall keep records on-site, suitable for inspection, of the type(s) of fuel(s) burned during each period of missing SO_2 data and the number of hours that each types of fuel was combusted in the unit during each missing data period. This recordkeeping requirement does not apply to an affected unit that burns natural gas (or gaseous fuel with a total sulfur content no greater than the total sulfur content of natural gas) exclusively, nor does it apply to a unit that burns such gaseous fuel(s) only during unit startup.

(f) *Specific SO_2, NO_X, and CO_2 record provisions for gas-fired or oil-fired units using the optional low mass emissions excepted methodology in § 75.19.* In lieu of recording the information in §§ 75.54(b) through (e) or § 75.57(b) through (e), the owner or operator shall record, for each hour when the unit is operating for any portion of the hour, the following information for each affected low mass emissions unit for which the owner or operator is using the optional low mass emissions excepted methodology in § 75.19(c):

(1) Date and hour;

(2) Fuel type (pipeline natural gas, natural gas, residual oil, or diesel fuel) (note: if more than one type of fuel is combusted in the hour, indicate the fuel type which results in the highest emission factors for SO_2, CO_2, and NO_X);

(3) Average hourly NO_X emission rate (lb/mmBtu, rounded to the nearest thousandth);

(4) Hourly NO_X mass emissions (lbs, rounded to the nearest tenth);

(5) Hourly SO_2 mass emissions (lbs, rounded to the nearest tenth); and

(6) Hourly CO_2 mass emissions (tons, rounded to the nearest tenth).

(g) *Specific provisions for gas-fired units or oil-fired units using optional protocol in appendix I to this part.* In addition to recording the information in § 75.54(c) or § 75.57(c), as applicable, the owner or operator shall record the applicable information in this paragraph for each affected unit for which the owner or operator is using the optional protocol in appendix I to this part. This includes:

(1) For each hour when the unit is combusting oil:

(i) Date and hour;

(ii) Hourly average flow rate of oil with the units in which oil flow is recorded (gal/hr, lb/hr, m^3/hr, or bbl/hr, rounded to the nearest tenth) (flag value if derived from missing data procedures);

(iii) Method of oil sampling (flow proportional, continuous drip, as delivered, or manual);

(iv) Mass of oil combusted each hour (lb/hr, rounded to the nearest tenth);

(v) For units using volumetric oil flowmeters, density of oil (flag value if derived from missing data procedures);

(vi) Gross calorific value (heat content) of oil used to determine heat input (Btu/mass unit) (flag value if derived from missing data procedures);

(vii) Hourly heat input rate from oil, according to procedures in appendix F to this part (mmBtu/hr, to the nearest tenth); and

(viii) Fuel usage time for combustion of oil during the hour (rounded up to the nearest 15 minutes).

(2) For each hour when the unit is combusting gaseous fuel:

(i) Date and hour;

(ii) Hourly heat input rate from gaseous fuel according to procedures in appendix F to this part (mmBtu/hr, rounded to the nearest tenth);

(iii) Hourly flow rate of gaseous fuel (100 scfh) (flag value if derived from missing data procedures);

(iv) Gross calorific value (heat content) of gaseous fuel used to determine heat input (Btu/100 scf) (flag value if derived from missing data procedures);

(v) Heat input rate from gaseous fuel (mmBtu/hr, rounded to the nearest tenth);

(vi) Fuel usage time for combustion of gaseous fuel during the hour (rounded up to the nearest 15 minutes); and

(vii) F-factor (F_c=Carbon-based F-factor of 1040 scf CO_2/mmBtu for natural gas, or F_d=Dry basis, O_2-based F-factor of 8,710 dscf/mmBtu for natural gas).

(3) For each oil sample or sample of diesel fuel:

(i) Date of sampling;

(ii) Gross calorific value or heat content (Btu/lb) (flag value if derived from missing data procedures);

(iii) Density or specific gravity, if required to convert volume to mass (flag value if derived from missing data procedures); and

(iv) Percent carbon by weight.

(4) For each monthly sample of gaseous fuel:

(i) Date of sampling; and

(ii) Gross calorific value or heat content (Btu/100 scf) (flag value if derived from missing data procedures).

(5) Hourly average diluent gas concentration (percent O_2 or percent CO_2, rounded to the nearest tenth).

(h) *Compliance dates.* Beginning on January 1, 2000, the owner or operator shall comply with this section only. Before January 1, 2000, the owner or operator shall comply with either this section or § 75.55; except that if a regulatory option provided in another section of this part 75 is exercised prior to January 1, 2000, then the owner or operator shall comply with any provisions of this section that support the regulatory option beginning with the date on which the option is exercised.

40. Section 75.59 is added to read as follows:

§ 75.59 Certification, quality assurance, and quality control record provisions.

(a) *Continuous emission or opacity monitoring systems.* The owner or

operator shall record the applicable information in this section for each certified monitor or certified monitoring system (including certified backup monitors) measuring and recording emissions or flow from an affected unit.

(1) For each SO_2 or NO_x pollutant concentration monitor, flow monitor, CO_2 monitor (including O_2 monitors used to determine CO_2 emissions), moisture sensor, or diluent gas monitor (including wet-and dry-basis O_2 monitors used to determine percent moisture), the owner or operator shall record the following for all daily and 7-day calibration error tests, including any follow-up tests after corrective

(i) Component/system identification code;

(ii) Instrument span and span scale;

(iii) Date and hour;

(iv) Reference value (i.e., calibration gas concentration or reference signal value, in ppm or other appropriate units);

(v) Observed value (monitor response during calibration, in ppm or other appropriate units);

(vi) Percent calibration error (rounded to the nearest tenth of a percent) (flag if using alternative performance specification for low emitters or differential pressure flow monitors);

(vii) Calibration gas level;

(viii) Test number and reason for test;

(ix) For 7-day calibration tests for certification or recertification, a certification from the cylinder gas vendor or CEMS vendor that calibration gas, as defined in § 72.2 of this chapter and appendix A to this part, was used to conduct calibration error testing;

(x) Description of any adjustments, corrective actions, or maintenance following test; and

(xi) For the qualifying test for off-line calibration, the owner or operator shall indicate whether the unit is off-line or on-line.

(2) For each flow monitor, the owner or operator shall record the following for all daily interference checks, including any follow-up tests after corrective action:

(i) Code indicating whether monitor passes or fails the interference check; and

(ii) Description of any adjustments, corrective actions, or maintenance following test.

(3) For each SO_2 or NO_x pollutant concentration monitor, CO_2 monitor (including O_2 monitors used to determine CO_2 emissions), or diluent gas monitor (including wet-and dry-basis O_2 monitors used to determine percent moisture), the owner or operator shall record the following for the initial and all subsequent linearity check(s), including any follow-up tests after corrective action:

(i) Component/system identification code;

(ii) Instrument span and span scale;

(iii) Date and hour;

(iv) Reference value (i.e., reference gas concentration, in ppm or other appropriate units);

(v) Observed value (average monitor response at each reference gas concentration, in ppm or other appropriate units);

(vi) Percent error at each of three reference gas concentrations (rounded to nearest tenth of a percent) (flag if using alternative performance specification);

(vii) Calibration gas level;

(viii) Mean of reference values and mean of measured values;

(ix) Test number and reason for test (flag if aborted test); and

(x) Description of any adjustments, corrective action, or maintenance following test.

(4) For each flow monitor (where applicable) the owner or operator shall record items in paragraphs (a)(4)(i) through (v) of this section, for all quarterly leak checks, including any follow-up tests after corrective action, and items in paragraphs (a)(4)(vi) and (vii) of this section, for all flow-to-load ratio and gross heat rate tests:

(i) Component/system identification code;

(ii) Date and hour;

(iii) Reason for test;

(iv) Code indicating whether monitor passes or fails the quarterly leak check;

(v) Description of any adjustments, corrective actions, or maintenance following test;

(vi) Test data from the flow-to-load ratio or gross heat rate evaluation, including:

(A) Component/system identification code;

(B) Calendar year and quarter;

(C) Indication of whether the test is a flow-to-load ratio or gross heat rate evaluation;

(D) Indication of whether bias adjusted flow rates were used;

(E) Average absolute percent difference between reference ratio (or BHR) and hourly ratios (or GHE values);

(F) Test result;

(G) Number of hours used in final quarterly average;

(H) Number of hours exempted for use of a different fuel type;

(I) Number of hours exempted for load ramping up or down;

(J) Number of hours exempted for scrubber bypass;

(K) Number of hours exempted for hours preceding a normal-load flow RATA; and

(L) Number of hours exempted for hours preceding a successful diagnostic test, following a documented monitor repair or major component replacement; and

(vii) Reference data for the flow-to-load ratio or gross heat rate evaluation, including:

(A) Reference flow RATA end date and time;

(B) Test number;

(C) Reference RATA load and load level;

(D) Average reference method flow rate during reference flow RATA;

(E) Reference flow/load ratio;

(F) Average reference method diluent gas concentration during flow RATA and diluent gas units of measure;

(G) Fuel specific F_d- or F_c-factor during flow RATA and F-factor units of measure; and

(H) Reference gross heat rate value.

(5) For each SO_2 pollutant concentration monitor, flow monitor, CO_2 pollutant concentration monitor (including any O_2 concentration monitor used to determine CO_2 mass emissions or heat input), NO_x continuous emission monitoring system, SO_2-diluent continuous emission monitoring system, moisture monitoring system, and approved alternative monitoring system, the owner or operator shall record the following information for the initial and all subsequent relative accuracy test audits:

(i) Reference method(s) used;

(ii) Individual test run data from the relative accuracy test audit for the SO_2 concentration monitor, flow monitor, CO_2 pollutant concentration monitor, NO_x continuous emission monitoring system, SO_2-diluent continuous emission monitoring system, moisture monitoring system, or approved alternative monitoring systems, including:

(A) Date, hour, and minute of beginning of test run;

(B) Date, hour, and minute of end of test run;

(C) System identification code;

(D) Test number and reason for test;

(E) Operating load level (low, mid, high, or normal, as appropriate) and number of load levels comprising test;

(F) Run number;

(G) Run data for monitor, in the appropriate units of measure;

(H) Run data for reference method, in the appropriate units of measure;

(I) Flag value (0, 1, or 9, as appropriate) indicating whether run has been used in calculating relative accuracy and bias values or whether the test was aborted prior to completion;

(J) Average gross unit load; and

(K) Flag to indicate whether an alternative performance specification has been used.

(iii) Calculations and tabulated results, as follows:

(A) Arithmetic mean of the monitoring system measurement values, of the reference method values, and of their differences, as specified in Equation A–7 in appendix A to this part.

(B) Standard deviation, as specified in Equation A–8 in appendix A to this part.

(C) Confidence coefficient, as specified in Equation A–9 in appendix A to this part.

(D) Relative accuracy test results, as specified in Equation A–10 in appendix A to this part. (For multi-level flow monitor tests the relative accuracy test results shall be recorded at each load level tested. Each load level shall be expressed as a total gross unit load, rounded to the nearest MWe, or as steam load, rounded to the nearest thousand lb/hr.)

(E) Bias test results as specified in section 7.6.4 in appendix A to this part.

(F) Bias adjustment factor from Equations A–11 and A–12 in appendix A to this part for any monitoring system that failed the bias test (except as provided in section 7.6.5 of appendix A to this part) and 1.000 for any monitoring system that passed the bias test. (For multi-load RATAs of flow monitors only, when the bias test is passed at the load level(s) designated as normal in section 6.5.2.1 of appendix A to this part, the system BAF shall be recorded as 1.000. When the bias test is failed at any load level designated as normal in section 6.5.2.1 of appendix A to this part, bias adjustment factors shall be recorded at the two most frequently used load levels, as defined in section 6.5.2.1 of appendix A to this part.)

(iv) Description of any adjustment, corrective action, or maintenance following test.

(v) F-factor value(s) used to convert NO_X pollutant concentration and diluent gas (O_2 or CO_2) concentration measurements into NO_X emission rates (in lb/mmBtu), heat input or CO_2 emissions.

(vi) For flow monitors, the flow polynomial equation used to linearize the flow monitor and the numerical values of the polynomial coefficients of that equation.

(6) For each SO_2, NO_X, CO_2, or O_2 pollutant concentration monitor, NO_X-diluent continuous emission monitoring system, or SO_2-diluent continuous emission monitoring system, the owner or operator shall record the following information for the cycle time test:

(i) Component/system identification code;

(ii) Date;

(iii) Start and end times;

(iv) Upscale and downscale cycle times for each component;

(v) Stable start monitor value;

(vi) Stable end monitor value;

(vii) Reference value of calibration gas(es);

(viii) Calibration gas level; and

(ix) Cycle time result for the entire system.

(x) Reason for test.

(7) The owner or operator shall also record, for each relative accuracy test audit, supporting information sufficient to substantiate compliance with all applicable sections and appendices in this part. This RATA supporting information shall include, but shall not be limited to, the following data elements:

(i) For each RATA using Reference Method 2 (or its allowable alternatives) in appendix A to part 60 of this chapter to determine volumetric flow rate:

(A) Information indicating whether or not the location meets requirements of Method 1 in appendix A to part 60 of this chapter; and

(B) Information indicating whether or not the equipment passed the required leak checks.

(ii) For each run of each RATA using Reference Method 2 (or its allowable alternatives) in appendix A to part 60 of this chapter to determine volumetric flow rate, record the following data elements (as applicable to the measurement method used):

(A) Operating load level (low, mid, high, or normal, as appropriate);

(B) Number of reference method traverse points;

(C) Average absolute stack gas temperature (° F);

(D) Barometric pressure at test port (inches of mercury);

(E) Stack static pressure (inches of H_2O);

(F) Absolute stack gas pressure (inches of mercury);

(G) Percent CO_2 and O_2 in the stack gas, dry basis;

(H) CO_2 and O_2 reference method used;

(I) Moisture content of stack gas (percent H_2O);

(J) Molecular weight of stack gas, dry basis (lb/lb-mole);

(K) Molecular weight of stack gas, wet basis (lb/lb-mole);

(L) Stack diameter (or equivalent diameter) at the test port (ft);

(M) Average square root of velocity head of stack gas (inches of H_2O) for the run;

(N) Stack or duct cross-sectional area at test port (ft^2);

(O) Average axial velocity (ft/sec); and

(P) Total volumetric flow rate (scfh, wet basis).

(iii) For each traverse point of each run of each RATA using Reference Method 2 (or its allowable alternatives) in appendix A to part 60 of this chapter to determine volumetric flow rate, record the following data elements (as applicable to the measurement method used):

(A) Reference method probe type;

(B) Pressure measurement device type;

(C) Traverse point ID;

(D) Probe or pitot tube calibration coefficient;

(E) Date of latest probe or pitot tube calibration;

(F) ΔP at traverse point (inches of H_2O);

(G) T_s, stack temperature at the traverse point (° F);

(H) Calculated impact (total) velocity at the traverse point (ft/sec);

(I) Composite (wall effects) traverse point identifier;

(J) Number of points included in composite traverse point;

(K) Yaw angle of flow at traverse point (degrees);

(L) Pitch angle of flow at traverse point (degrees); and

(M) Calculated axial velocity at traverse point (ft/sec).

(iv) For each RATA using Method 6C, 7E, or 3A in appendix A to part 60 of this chapter to determine SO_2, NO_X, CO_2, or O_2 concentration:

(A) Pollutant or diluent gas being measured;

(B) Span of reference method analyzer;

(C) Type of reference method system (e.g., extractive or dilution type);

(D) Reference method dilution factor (dilution type systems, only);

(E) Reference gas concentrations (zero, mid, and high gas levels) used for the 3-point pre-test analyzer calibration error test (or for dilution type reference method systems, for the 3-point pre-test system calibration error test) and for any subsequent recalibrations;

(F) Analyzer responses to the zero-, mid-, and high-level calibration gases during the 3-point pre-test analyzer (or system) calibration error test and during any subsequent recalibration(s);

(G) Analyzer calibration error at each gas level (zero, mid, and high) for the 3-point pre-test analyzer (or system) calibration error test and for any subsequent recalibration(s) (percent of span value);

(H) Reference gas concentration (zero, mid, or high gas levels) used for each pre-run or post-run system bias check or (for dilution type reference method

systems) for each pre-run or post-run system calibration error check;

(I) Analyzer response to the calibration gas for each pre-run or post-run system bias (or system calibration error) check;

(J) The arithmetic average of the analyzer responses to the zero-level gas, for each pair of pre- and post-run system bias (or system calibration error) checks;

(K) The arithmetic average of the analyzer responses to the upscale calibration gas, for each pair of pre-and post-run system bias (or system calibration error) checks;

(L) The results of each pre-run and each post-run system bias (or system calibration error) check using the zero-level gas (percentage of span value);

(M) The results of each pre-run and each post-run system bias (or system calibration error) check using the upscale calibration gas (percentage of span value);

(N) Calibration drift and zero drift of analyzer during each RATA run (percentage of span value);

(O) Moisture basis of the reference method analysis;

(P) Moisture content of stack gas, in percent, during each test run (if needed to convert to moisture basis of CEMS being tested);

(Q) Unadjusted (raw) average pollutant or diluent gas concentration for each run;

(R) Average pollutant or diluent gas concentration for each run, corrected for calibration bias (or calibration error) and, if applicable, corrected for moisture;

(S) The F-factor used to convert reference method data to units of lb/mmBtu (if applicable);

(T) The code for the formula used to convert reference method data to units of lb/mmBtu (if applicable);

(U) Date(s) of the latest analyzer interference test(s);

(V) Results of the latest analyzer interference test(s);

(W) Date of the latest NO_2 to NO conversion test (Method 7E only);

(X) Results of the latest NO_2 to NO conversion test (Method 7E only); and

(Y) For each calibration gas cylinder during each RATA, record the cylinder gas vendor, cylinder number, expiration date, pollutant(s) in the cylinder, and certified gas concentration(s).

(v) For each test run of each moisture determination using Method 4 in appendix A to part 60 of this chapter (or its allowable alternatives), whether the determination is made to support a gas RATA, to support a flow RATA, or to quality assure the data from a continuous moisture monitoring system, record the following data elements (as applicable to the moisture measurement method used):

(A) Parameter (SO_2, NO_x, flow, CO_2, or H_2O), to indicate whether the moisture determination is used to support a gas or flow rate RATA or whether the determination is used to quality assure a moisture monitoring system;

(B) Test number;

(C) Run number;

(D) The beginning date, hour, and minute of the run;

(E) The ending date, hour, and minute or the run;

(F) Unit operating level (low, mid, high, or normal, as appropriate);

(G) Moisture measurement method;

(H) Volume of H_2O collected in the impingers (ml);

(I) Mass of H_2O collected in the silica gel (g);

(J) Dry gas meter calibration factor;

(K) Average dry gas meter temperature (°F);

(L) Barometric pressure (inches of mercury);

(M) Differential pressure across the orifice meter (inches of H_2O);

(N) Initial and final dry gas meter readings (ft^3);

(O) Total sample gas volume, corrected to standard conditions (dscf); and

(P) Percentage of moisture in the stack gas (percent H_2O).

(vi) The upper and lower boundaries of the range of operation (as defined in section 6.5.2.1 of appendix A to this part) for the unit or common stack on which the continuous emission monitor(s) are installed, expressed in megawatts or thousands of lb/hr of steam;

(vii) The load level(s) designated as normal in section 6.5.2.1 of appendix A to this part for the unit or common stack on which the continuous emission monitor(s) are installed, expressed in megawatts or thousands of lb/hr of steam;

(viii) Except for peaking units, the two load levels (i.e., low, mid, or high) identified in section 6.5.2.1 of appendix A to this part as the most frequently used;

(ix) Except for peaking units, the relative frequency (percentage) of historical usage of each load level (low, mid, and high) in the previous four QA operating quarters, as determined in section 6.5.2.1 of appendix A to this part, to the nearest 0.1 percent. The beginning and ending calendar quarters in the historical look-back period shall also be recorded. A summary of the data used to determine the most frequently and second most frequently used load levels and the percentage of time that each load level has been used historically shall be kept on-site in a format suitable for inspection;

(x) Indication of whether the unit/stack qualifies for single load flow RATA testing (operation for ≥ 85.0 percent of operating hours is at a single load level); and

(xi) Date of the load analysis described in paragraphs (a)(7)(vi) through (a)(7)(x) of this section.

(8) For each certified continuous emission monitoring system, continuous opacity monitoring system, or alternative monitoring system, the date and description of each event which requires recertification of the system and the date and type of each test performed to recertify the system in accordance with § 75.20(b).

(9) Hardcopy quality assurance relative accuracy test reports, certification reports, or recertification reports for pollutant concentration or stack flow CEMS shall include, as a minimum, the following elements (as applicable to the type(s) of test(s) performed):

(i) Summarized test results near the front of the report;

(ii) DAHS printouts of the CEMS data generated during the calibration error, linearity, cycle time, and relative accuracy tests;

(iii) For pollutant concentration monitor relative accuracy tests at normal operating load:

(A) The raw reference method data from each run (usually in the form of a computerized printout, showing a series of one-minute readings and the run average);

(B) The raw data and results for all required pre-test and post-test quality assurance checks (i.e., calibration gas injections) of the reference method analyzers;

(C) The raw data and results for any moisture measurements made during the relative accuracy testing;

(D) Tabulated, final, corrected reference method run data (i.e., the actual values used in the relative accuracy calculations), along with the equations used to convert the raw data to the final values and example calculations to demonstrate how the test data were reduced;

(iv) For flow monitor relative accuracy tests:

(A) The raw Reference Method 2 data, including auxiliary moisture data (often in the form of handwritten data sheets);

(B) The tabulated, final volumetric flow rate values used in the relative accuracy calculations (determined from the Method 2 data and other necessary measurements, e.g., moisture, stack temperature and pressure, etc.), along

with the equations used to convert the raw data to the final values and example calculations to demonstrate how the test data were reduced;

(v) Calibration gas certificates for the gases used in the linearity, calibration error, and cycle time tests and for the calibration gases used to quality assure the gas monitor reference method data during the relative accuracy test audit;

(vi) Laboratory calibrations of the source sampling equipment;

(vii) A copy of the test protocol used for the CEMS certifications or recertifications, including narrative that explains any testing abnormalities, problematic sampling, and analytical conditions that required a change to the test protocol, and/or solutions to technical problems encountered during the testing program;

(viii) Diagrams illustrating test locations and sample point locations (to verify that locations are consistent with presented information in the monitoring plan). Include a discussion of any special traversing or measurement scheme. The discussion shall also confirm that sample points satisfied applicable acceptance criteria; and

(ix) Names of key personnel involved in the test program, including test team members, plant contacts, agency representatives or test observers on site, etc.

(10) Whenever reference methods are used as backup monitoring systems pursuant to § 75.20(d)(3), the owner or operator shall record the following information:

(i) For each test run using Reference Method 2 (or its allowable alternatives) in appendix A to part 60 of this chapter to determine volumetric flow rate, record the following data elements (as applicable to the measurement method used):

(A) Unit or stack identification number;

(B) Reference method system and component identification numbers;

(C) Run date and hour;

(D) The data elements in paragraph (a)(7)(ii) of this section, except for paragraphs (a)(7)(ii) (A), (F), (H), and (L);

(E) Data element in paragraph (a)(7)(iii)(A) of this section.

(ii) For each reference method test run using Method 6C, 7E, or 3A in appendix A to part 60 of this chapter to determine SO_2, NO_X, CO_2, or O_2 concentration:

(A) Unit or stack identification number;

(B) The reference method system and component identification numbers;

(C) Run number;

(D) Run start date and hour;

(E) Run end date and hour;

(F) Data elements in paragraph (a)(7)(iv) (B) through (I) and (L) through (O) of this section; and

(G) Stack gas density adjustment factor (if applicable).

(iii) For each hour of each reference method test run using Method 6C, 7E, or 3A in appendix A to part 60 of this chapter to determine SO_2, NO_X, CO_2, or O_2 concentration:

(A) Unit or stack identification number;

(B) The reference method system and component identification numbers;

(C) Run number;

(D) Run date and hour;

(E) Pollutant or diluent gas being measured;

(F) Unadjusted (raw) average pollutant or diluent gas concentration for the hour; and

(G) Average pollutant or diluent gas concentration for the hour, adjusted as appropriate for moisture, calibration bias (or calibration error) and stack gas density.

(11) For each other quality-assurance test or other quality assurance activity, the owner or operator shall record the following:

(i) Component/system identification code;

(ii) Parameter;

(iii) Test or activity completion date and hour;

(iv) Test or activity description;

(v) Test result;

(vi) Reason for test;

(vii) Test code.

(12) For each quality assurance test extension or exemption request, the owner or operator shall record the following:

(i) For a RATA deadline extension or exemption request:

(A) Monitoring system identification code;

(B) Date of last RATA;

(C) RATA expiration date without extension;

(D) RATA expiration date with extension;

(E) Type of RATA extension of exemption claimed or lost;

(F) Year to date hours of fuel usage with a sulfur content >0.05 percent by weight; and

(G) Year to date hours of non-redundant back-up CEMS use at the unit/stack.

(ii) For a linearity test quarterly exemption:

(A) Component/system identification code; and

(B) Basis for exemption.

(iii) For a quality assurance test extension claim based on a grace period:

(A) Component/system identification code;

(B) Type of test;

(C) Beginning of grace period;

(D) Date and hour of completion of required quality assurance test or maximum allowable grace period if no quality assurance test was completed during the grace period; and

(E) Number of unit/stack operating hours from the beginning of the grace period to the completion of the quality assurance test or the maximum allowable grace period.

(13) An indication of which data have been excluded from the quarterly span and range evaluations of the SO_2 and NO_X monitors and the reasons for excluding the data, as required in sections 2.1.1.5 and 2.1.2.5 of appendix A to this part. For purposes of reporting under § 75.64(a)(1), this information shall be reported with the quarterly report as descriptive text consistent with § 75.64(g).

(b) *Excepted monitoring systems for gas-fired and oil-fired units.* The owner or operator shall record the applicable information in this section for each excepted monitoring system following the requirements of appendix D to this part or appendix E to this part for determining and recording emissions from an affected unit.

(1) For each oil-fired unit or gas-fired unit using the optional procedures of appendix D to this part for determining SO_2 mass emissions and/or heat input or the optional procedures of appendix E to this part for determining NO_X emission rate, for certification and quality assurance testing of fuel flowmeters tested against a reference fuel flow rate (i.e., flow rate another fuel flowmeter under section 2.1.5.2 of appendix D to this part or flow rate from a procedure according to a standard incorporated by reference under section 2.1.5.1 of appendix D to this part):

(i) Date and hour of test completion;

(ii) Upper range value of the fuel flowmeter;

(iii) Flowmeter measurements during accuracy test (and mean of values), including units of measure;

(iv) Reference flow rates during accuracy test (and mean of values), including units of measure;

(v) Average flowmeter accuracy as a percent of upper range value for low, mid, and high fuel flowrates;

(vi) Indicator of whether test method was a lab comparison to reference meter or an in-line comparison against a master meter;

(vii) Test result (aborted, pass, or fail);

(viii) Component and system identification numbers of the fuel flowmeter being tested;

(ix) Date and hour fuel flowmeter was reinstalled (only for tests not performed inline); and

(x) Description of fuel flowmeter calibration specification or procedure (in the certification application, or periodically if a different method is used for annual quality assurance testing).

(2) For each transmitter or transducer accuracy test for an orifice-, nozzle-, or venturi-type flowmeter used under section 2.1.6 of appendix D to this part:

(i) Date of test;

(ii) Full-scale value of the transmitter or transducer;

(iii) Transmitter input (pre-calibration) prior to accuracy test, including units of measure;

(iv) Expected transmitter output during accuracy test (reference value from NIST-traceable equipment), including units of measure;

(v) Actual transmitter output during accuracy test, including units of measure;

(vi) Transmitter or transducer accuracy as a percent of the full-scale value;

(vii) Transmitter output level as a percent of the full-scale value);

(viii) Transmitter or transducer accuracy, as a percent of full-scale value, and overall accuracy (if applicable), as a percent of upper range value;

(ix) Test and run number;

(x) Time of run (only for tests against another flowmeter inline);

(xi) Component and system identification numbers of the fuel flowmeter being tested;

(xii) Transmitter or transducer type (differential pressure, static pressure, or temperature); and

(xiii) Test result.

(3) For each visual inspection of the primary element or transmitter or transducer accuracy test for an orifice-, nozzle-, or venturi-type flowmeter under sections 2.1.6.1 through 2.1.6.6 of appendix D to this part:

(i) Date of inspection/test;

(ii) Hour of completion of inspection/test;

(iii) Component and system identification numbers of the fuel flowmeter being inspected/tested; and

(iv) Results of inspection/test (pass or fail).

(4) For fuel flowmeters that are tested using the flow-to-load ratio procedures of section 2.1.7 of appendix D to this part:

(i) Test data for the fuel flowmeter flow-to-load ratio or gross heat rate check, including:

(A) Component/system identification code;

(B) Calendar year and quarter;

(C) Indication of whether the test is for flow-to-load ratio or gross heat rate;

(D) Test result;

(E) Number of hours excluded due to co-firing;

(F) Number of hours excluded due to ramping;

(G) Number of hours excluded for lower 10.0 percent range of operation; and

(H) Quarterly average absolute percent difference between baseline ratio (or baseline GHR) and hourly quarterly ratios (or GHR value).

(ii) Reference data for the fuel flowmeter flow-to-load ratio or gross heat rate evaluation, including:

(A) Completion date and hour of most recent primary element inspection;

(B) Completion date and hour of most recent flowmeter or transmitter accuracy test;

(C) Beginning and hour of baseline period;

(D) Completion date and hour of baseline period;

(E) Average fuel flow rate;

(F) Average load;

(G) Baseline fuel flow-to-load ratio and fuel flow-to-load units of measure;

(H) Baseline GHR and GHR units;

(I) Number of hours excluded due to ramping; and

(J) Number of hours excluded in lower 10.0 percent of range of operation.

(5) For gas-fired peaking units or oil-fired peaking units using the optional procedures of appendix E to this part, for each initial performance, periodic, or quality assurance/quality control-related test:

(i) For each run of emission data;

(A) Run start date and time;

(B) Run end date and time;

(C) Fuel flow rate (lb/hr, gal/hr, scf/hr, bbl/hr, or m^3/hr);

(D) Gross calorific value (heat content) of fuel (Btu/lb or Btu/scf);

(E) Density of fuel, and units of measure for fuel density (if needed to convert mass to volume);

(F) Total heat input during the run (mmBtu);

(G) Hourly heat input rate for run (mmBtu/hr);

(H) Response time of the O2 and NO_X reference method analyzers;

(I) NO_X concentration (ppm);

(J) O_2 concentration (percent O_2);

(K) NO_X emission rate (lb/mmBtu);

(L) Fuel or fuel combination (by heat input fraction) combusted;

(M) Run number;

(N) Operating level;

(O) Elapsed time;

(P) Test number;

(Q) Monitoring system identification code for appendix E system, and oil or fuel flow system;

(R) Heat input from oil and/or gas during the run;

(S) Volumetric flow of oil and/or gas during the run, and units of measure for volumetric flow; and

(T) Mass fuel flow during the run.

(ii) For each unit load and heat input:

(A) Average NO_X emission rate (lb/mmBtu);

(B) F-factor used in calculations;

(C) Average heat input rate (mmBtu/hr);

(D) Unit operating parametric data related to NO_X formation for that unit type (e.g., excess O_2 level, water/fuel ratio);

(E) Fuel or fuel combination (by heat input fraction) combusted;

(F) Completion date and time of last run in level; and

(G) Arithmetic mean of reference method values at this level.

(c) For units with add-on SO_2 and NO_X emission controls following the provisions of § 75.34(a)(1) or (a)(2), the owner or operator shall keep the following records on-site in the quality assurance/quality control plan required by section 1 in appendix B to this part:

(1) A list of operating parameters for the add-on emission controls, including parameters in § 75.55(b), appropriate to the particular installation of add-on emission controls; and

(2) The range of each operating parameter in the list that indicates the add-on emission controls are properly operating.

(d) *Excepted flow monitoring systems under appendix I.* The owner or operator shall record the applicable information in this section for each certified excepted flow monitoring system under appendix I to this part measuring and recording flow from an affected unit.

(1) *Certification test records.* Record the results of the following tests:

(i) For each CO_2 or O_2 component monitor:

(A) 7-day calibration error tests, as specified in paragraph (a)(1) of this section;

(B) Cycle time test, as specified in paragraph (a)(6) of this section; and

(C) Linearity checks, as specified in paragraph (a)(3) of this section.

(ii) For each appendix I flow monitoring system tested in a component by component assessment:

(A) Flowmeter accuracy test data (or a statement of calibration, if the flowmeter meets the accuracy standard by design), as specified in paragraph (b)(1) of this section;

(B) Relative accuracy test and bias data for the CO_2 (or O_2) monitor, as specified in paragraphs (a)(5) and (a)(7) of this section; and

VOL 63 ISS 98 MAY 21 1998 UMI

(C) Fuel sampling and analysis data, as specified in section 2.3 of appendix I to this part.

(iii) For each appendix I flow monitoring system tested in a system relative accuracy assessment:

(A) Relative accuracy test and bias data for the appendix I flow monitoring system, as specified for a flow monitoring system in paragraphs (a)(5) and (a)(7) of this section; and

(B) Fuel sampling and analysis data, as specified in section 2.3 of appendix I to this part.

(2) *Quality assurance/quality control test records.* Record the results of the following tests:

(i) For CO_2 or O_2 monitors:

(A) Daily calibration error tests, as specified in paragraph (a)(1) of this section; and

(B) Quarterly linearity checks, as specified in paragraph (a)(3) of this section.

(ii) For each appendix I flow monitoring system tested in a component-by-component assessment:

(A) Flowmeter accuracy test data, as specified in paragraph (b)(1) or (b)(2) of this section and paragraph (b)(3) or (b)(4) of this section;

(B) Relative accuracy test and bias data for the CO_2 (or O_2) monitor, as specified in paragraphs (a)(5) and (a)(7) of this section; and

(C) Fuel sampling and analysis data, as specified in section 2.3 of appendix I to this part.

(iii) For each appendix I flow monitoring system tested in a system relative accuracy assessment:

(A) Relative accuracy test and bias data for the appendix I flow monitoring system, as specified for a flow monitoring system in paragraphs (a)(5) and (a)(7) of this section; and

(B) Fuel sampling and analysis data, as specified in section 2.3 of appendix I to this part.

(e) *Compliance dates.* Beginning on January 1, 2000, the owner or operator shall comply with this section only. Before January 1, 2000, the owner or operator shall comply with either this section or § 75.56; except that if a regulatory option provided in another section of this part 75 is exercised prior to January 1, 2000, then the owner or operator shall comply with any provisions of this section that support the regulatory option beginning with the date on which the option is exercised.

41. Section 75.60 is amended by revising paragraphs (a), (b)(1), and (b)(2) and by adding new paragraphs (b)(3), (b)(4), (b)(5) and (b)(6) to read as follows:

§ 75.60 General provisions.

(a) The designated representative for any affected unit subject to the requirements of this part shall comply with all reporting requirements in this section and with the requirements of § 72.21 of this chapter for all submissions.

(b) * * *

(1) *Initial certifications.* The designated representative shall submit initial certification applications according to § 75.63.

(2) *Recertifications.* The designated representative shall submit recertification applications according to § 75.63.

(3) *Monitoring plans.* The designated representative shall submit monitoring plans according to § 75.62.

(4) *Electronic quarterly reports.* The designated representative shall submit electronic quarterly reports according to § 75.64.

(5) *Other petitions and communications.* The designated representative shall submit petitions, correspondence, application forms, designated representative signature, and petition-related test results in hardcopy to the Administrator. Additional petition requirements are specified in §§ 75.66 and 75.67.

(6) *Quality assurance RATA reports.* If requested by the applicable EPA Regional Office, appropriate State, and/or appropriate local air pollution control agency, the designated representative shall submit the quality assurance RATA report within 45 days after completing a quality assurance RATA according to section 2.3.1 of appendix B to this part, or within 15 days of receiving the request, whichever is later. The designated representative shall report the hardcopy information required by § 75.59(a)(10) to the applicable EPA Regional Office, appropriate State, and/or appropriate local air pollution control agency that requested the RATA report.

* * * * *

42. Section 75.61 is amended by revising paragraphs (a) introductory text, (a)(1) introductory text, and (b) and by adding a new paragraph (a)(1)(iv) to read as follows:

§ 75.61 Notifications.

(a) *Submission.* The designated representative for an affected unit (or owner or operator, as specified) shall submit notice to the Administrator, to the appropriate EPA Regional Office, and to the applicable State and local air pollution control agencies for the following purposes, as required by this part.

(1) *Initial certification and recertification test notifications.* The owner or operator or designated representative for an affected unit shall submit written notification of initial certification tests, recertification tests, and revised test dates as specified in § 75.20 for continuous emission monitoring systems, for alternative monitoring systems under subpart E of this part, or for excepted monitoring systems under appendix E or I to this part, except as provided in paragraphs (a)(1)(iv) and (a)(4) of this section and except for testing only of the data acquisition and handling system.

* * * * *

(iv) *Waiver from notification requirements.* The Administrator, the appropriate EPA Regional Office, or the applicable State or local air pollution control agency may issue a waiver from the requirement of paragraph (a)(1) of this section to provide it for a unit or a group of units for one or more recertification tests. The Administrator, the appropriate EPA Regional Office, or the applicable State or local air pollution control agency may also discontinue the waiver and enforce the requirement of paragraph (a)(1) of this section to provide it notice of recertification testing for future tests for a unit or a group of units.

* * * * *

(b) The owner or operator or designated representative shall submit notification of certification tests and recertification tests for continuous opacity monitoring systems as specified in § 75.20(c)(8) to the State or local air pollution control agency.

* * * * *

43. Section 75.62 is amended by revising paragraphs (a) and (c) to read as follows:

§ 75.62 Monitoring plan.

(a) *Submission.*—(1) *Electronic.* Using the format specified in paragraph (c) of this section, the designated representative for an affected unit shall submit a complete, electronic, up-to-date monitoring plan file (except for hardcopy portions identified in paragraph (a)(2) of this section) to the Administrator: No later than 45 days prior to the initial certification test; at the time of recertification application submission; and in each electronic quarterly report.

(2) *Hardcopy.* The designated representative shall submit all of the hardcopy information required under § 75.53 to the appropriate EPA Regional Office and the appropriate State and/or local air pollution control agency prior to initial certification. Thereafter, the

designated representative shall submit hardcopy information only if that portion of the monitoring plan is revised. The designated representative shall submit the required hardcopy information: no later than 45 days prior to the initial certification test; with any recertification application, if a hardcopy monitoring plan change is associated with the recertification event; and within 30 days of any other event with which a hardcopy monitoring plan change is associated, pursuant to § 75.53(b).

* * * * *

(c) *Format.* Each monitoring plan shall be submitted in a format specified by the Administrator.

44. Section 75.63 is revised to read as follows:

§ 75.63 Initial certification or recertification application.

(a) *Submission.* The designated representative for an affected unit or a combustion source shall submit applications and reports as follows:

(1) *Initial certifications.* (i) Within 45 days after completing all initial certification tests, submit to the Administrator the electronic information required by paragraph (b)(1) of this section and a hardcopy certification application form (EPA form 7610–14). Except for subpart E applications or unless specifically requested by the Administrator, do not submit a hardcopy of the test data and results to the Administrator.

(ii) Within 45 days after completing all initial certification tests, submit the hardcopy information required by paragraph (b)(2) of this section to the applicable EPA Regional Office and the appropriate State and/or local air pollution control agency.

(iii) For units for which the owner or operator is applying for certification approval of the optional excepted methodology under § 75.19 for low mass emissions units, submit:

(A) To the Administrator, the electronic information required by paragraph (b)(1)(i) of this section, the hardcopy information required by paragraph (b)(3) of this section, and a hardcopy certification application form (EPA form 7610–14) signed by the designated representative.

(B) To the applicable EPA Regional Office and appropriate State and/or local air pollution control agency, the hardcopy information required by paragraphs (b)(2)(i), (iii), and (iv) of this section and by paragraph (b)(3) of this section.

(2) *Recertifications.* (i) Within 45 days after completing all recertification tests, submit to the Administrator the electronic information required by (b)(1) of this section and a hardcopy certification application form (EPA form 7610–14). Except for subpart E applications or unless specifically requested by the Administrator, do not submit a hardcopy of the test data and results to the Administrator.

(ii) Within 45 days after completing all recertification tests, submit the hardcopy information required by paragraph (b)(2) of this section to the applicable EPA Regional Office and the appropriate State and/or local air pollution control agency. The applicable EPA Regional Office or appropriate State or local air pollution control agency may waive the requirement for submission to it of a hardcopy recertification. The applicable EPA Regional Office or the appropriate State or local air pollution control agency may also discontinue the waiver and enforce the requirement of this paragraph (a)(2)(ii) to provide a hardcopy report of the recertification test data and results.

(iii) Notwithstanding the requirements of paragraphs (a)(2)(i) and (a)(2)(ii) of this section, for an event for which the Administrator determines that only diagnostic tests (see § 75.20(b)) are required rather than a RATA, an accuracy test of the fuel flowmeter, or a retest of the appendix E NO_X correlation curve, no hardcopy submittal of any kind is required; however, the results of all diagnostic test(s) shall be submitted in the electronic quarterly report required under § 75.64. For DAHS (missing data and formula) verifications, neither a hardcopy nor an electronic submittal of any kind is required; these test results shall be kept on-site, suitable for inspection.

(b) *Contents.* Each application for initial certification or recertification shall contain the following information, as applicable:

(1) *Electronic.* (i) A complete, up-to-date version of the electronic portion of the monitoring plan, according to § 75.53(c) and (d), or § 75.53(e) and (f), as applicable, in the format specified in § 75.62(c).

(ii) The results of the test(s) required by § 75.20, including the type of test conducted, testing date, information required by § 75.56 or § 75.59, as applicable, and the results of any failed tests that affect data validation.

(2) *Hardcopy.* (i) Any changed portions of the hardcopy monitoring plan information required under § 75.53(c) and (d), or § 75.53(e) and (f), as applicable.

(ii) The results of the test(s) required by § 75.20, including the type of test conducted, testing date, information required by § 75.59(a)(10), and the results of any failed tests that affect data validation.

(iii) Certification or recertification application form (EPA form 7610–14).

(iv) Designated representative signature.

(3) If the owner or operator is applying to use the optional low mass emissions excepted methodology in § 75.19(c) in lieu of a certified monitoring system,

(i) A statement that the unit burns only natural gas or fuel oil and a list of the fuels that are burned or a statement that the unit is projected to burn only natural gas or fuel oil and a list of the fuels that are projected to be burned;

(ii) A statement that the unit meets the applicability requirements in § 75.19(a) and (b); and

(iii) Any unit historical actual and projected emissions data and calculated emissions data demonstrating that the affected unit qualifies as a low mass emissions unit under § 75.19(a) and (b).

(c) *Format.* The electronic portion of each certification or recertification application shall be submitted in a format to be specified by the Administrator. The hardcopy test results shall be submitted in a format suitable for review and shall include the information in § 75.59(a)(10).

45. Section 75.64 is amended by revising paragraphs (a) introductory text, (d), and (e); by redesignating existing paragraphs (a)(1), (a)(2), (a)(3), (a)(4), (a)(5), and (a)(6) as paragraphs (a)(2), (a)(3), (a)(4), (a)(5),(a)(6) and (a)(8), respectively; by revising newly designated paragraphs (a)(2), and (a)(4); by adding new paragraphs (a)(1), (a)(7), (a)(9), (f), and (g); and by removing the third sentence in paragraph (c), to read as follows:

§ 75.64 Quarterly reports.

(a) *Electronic submission.* The designated representative for an affected unit shall electronically report the data and information in paragraphs (a), (b), and (c) of this section to the Administrator quarterly, beginning with the data from the later of: the last (partial) calendar quarter of 1993 (where the calendar quarter data begins at November 15, 1993), the calendar quarter corresponding to the date of provisional certification, or the calendar quarter corresponding to the relevant deadline for initial certification in § 75.4(a), (b), or (c), whichever quarter is earlier (where the report contains hourly data beginning with the hour of provisional certification or the hour corresponding to the relevant certification deadline, whichever is earlier). For an affected unit subject to

§ 75.4(d) that is shutdown on the relevant compliance date in § 75.4(a), the owner or operator shall submit quarterly reports for the unit beginning with the data from the quarter in which the owner or operator recommences commercial operation of the unit (where the report contains hourly data beginning with the first hour of recommenced commercial operation of the unit). For any provisionally-certified monitoring system, § 75.20(a)(3) shall apply for initial certifications, and § 75.20(b)(5) shall apply for recertifications. Each electronic report must be submitted to the Administrator within 30 days following the end of each calendar quarter. Each electronic report shall include the date of report generation, for the information provided in paragraphs (a)(2) through (a)(9) of this section, and shall also include for each affected unit (or group of units using a common stack):

(1) Facility information:

(i) Identification, including:

(A) Facility/ORISPL number;

(B) Calendar quarter and year data contained in the report; and

(C) EDR version used for the report.

(ii) Location, including:

(A) Plant name and facility ID;

(B) EPA AIRS facility system ID;

(C) State facility ID;

(D) Source category/type;

(E) Primary SIC code;

(F) State postal abbreviation;

(G) County code; and

(H) Latitude and longitude.

(2) The information and hourly data required in §§ 75.53 through 75.59, excluding:

(i) Descriptions of adjustments, corrective action, and maintenance;

(ii) Information which is incompatible with electronic reporting (e.g., field data sheets, lab analyses, quality control plan);

(iii) Opacity data listed in § 75.54(f) or § 75.57(f), and in § 75.59(a)(9);

(iv) For units with SO_2 or NO_x add-on emission controls that do not elect to use the approved site-specific parametric monitoring procedures for calculation of substitute data, the information in § 75.55(b)(3) or § 75.58(b)(3);

(v) The information recorded under § 75.56(a)(7) for the period prior to January 1, 2000;

(vi) Information required by § 75.54(g) or § 75.57(h) concerning the causes of any missing data periods and the actions taken to cure such causes; and

(vii) Hardcopy monitoring plan information required by § 75.53 and hardcopy test data and results required by § 75.56 or § 75.59;

(viii) Records of flow polynomial equations and numerical values required by § 75.56(a)(5)(vii) or § 75.59(a)(5)(vi);

(ix) Daily fuel sampling information required by § 75.58(c)(3)(i) for units using assumed values under appendix D;

(x) Information required by §§ 75.59(b)(1)(ii), (iii), (iv), and (x), and (b)(2) concerning fuel flowmeter accuracy tests and transmitter/transducer accuracy tests;

(xi) Stratification test results required as part of the RATA supplementary records under §§ 75.56(a)(7) or 75.59(a)(7);

(xii) Data and results of RATAs that are aborted or invalidated due to problems with the reference method or operational problems with the unit and data and results of linearity checks that are aborted or invalidated due to operational problems with the unit; and

(xiii) The summary of data used to determine the percentage of historical usage of each load level as required under § 75.59(a)(8)(iv).

(xiv) Supplementary RATA information required under §§ 75.59(a)(7)(iv)(A), (U), (V), (W), (X), and (Y).

* * * * *

(4) Average NO_x emission rate (lb/mmBtu, rounded to the nearest hundredth prior to January 1, 2000 and to the nearest thousandth on and after January 1, 2000) during the quarter and cumulative NO_x emission rate for the calendar year.

* * * * *

(7) Unit/stack/pipe operating hours for quarter and cumulative unit/stack/pipe operating hours for calendar year.

* * * * *

(9) For low mass emissions units for which the owner or operator is using the optional low mass emissions methodology in § 75.19(c) to calculate NO_x mass emissions, the designated representative must also report tons (rounded to the nearest tenth) of NO_x emitted during the quarter and cumulative NO_x mass emissions for the calendar year.

* * * * *

(d) *Electronic format.* Each quarterly report shall be submitted in a format to be specified by the Administrator, including both electronic submission of data and electronic or hardcopy submission of compliance certifications.

(e) *Phase I qualifying technology reports.* In addition to reporting the information in paragraphs (a), (b), and (c) of this section, the designated representative for an affected unit on which SO_2 emission controls have been installed and operated for the purpose of meeting qualifying Phase I technology requirements pursuant to § 72.42 of this chapter shall also submit reports documenting the measured percent SO_2 emissions removal to the Administrator on a quarterly basis, beginning the first quarter of 1997 and continuing through the fourth quarter of 1999. Each report shall include all measurements and calculations necessary to substantiate that the qualifying technology achieves the required percent reduction in SO_2 emissions.

(f) *Method of submission.* Beginning with the quarterly report for the first quarter of the year 2000, all quarterly reports shall be submitted to EPA by direct computer-to-computer electronic transfer via modem and EPA-provided software, unless otherwise approved by the Administrator.

(g) Any cover letter text accompanying a quarterly report shall either be submitted in hardcopy to the Agency or be provided in electronic format compatible with the other data required to be reported under this section.

46. Section 75.65 is revised to read as follows:

§ 75.65 Opacity reports.

The owner or operator or designated representative shall report excess emissions of opacity recorded under § 75.54(f) or § 75.57(f), as applicable, to the applicable State or local air pollution control agency.

47. Section 75.66 is amended by revising paragraphs (a) and the first sentence of (e) introductory text; by redesignating paragraph (i) as paragraph (m) and revising it; and by adding paragraphs (i) through (l), to read as follows:

§ 75.66 Petitions to the Administrator.

(a) *General.* The designated representative for an affected unit subject to the requirements of this part may submit a petition to the Administrator requesting that the Administrator exercise his or her discretion to approve an alternative to any requirement prescribed in this part or incorporated by reference in this part. Any such petition shall be submitted in accordance with the requirements of this section. The designated representative shall comply with the signatory requirements of § 72.21 of this chapter for each submission.

* * * * *

(e) *Parametric monitoring procedure petitions.* The designated representative for an affected unit may submit a petition to the Administrator, where each petition shall contain the information specified in § 75.55(b) or

§ 75.58(b), as applicable, for the use of a parametric monitoring method. * * * * * * * * * *

(i) *Emergency fuel petition.* The designated representative for an affected unit may submit a petition to the Administrator to use the emergency fuel provisions in Section 2.1.4 of Appendix E of this part. The designated representative shall include the following information in the petition:

(1) Identification of the affected unit(s);

(2) A procedure for determining the NO_x emission rate for the unit when the emergency fuel is combusted; and

(3) A demonstration that the permit restricts use of the fuel to emergencies only.

(j) *Petition for alternative method of accounting for emissions prior to completion of certification tests.* The designated representative for an affected unit may submit a petition to the Administrator to use an alternative to the procedures in § 75.4 (d)(3), (e)(3), (f)(3) and/or (g)(3) to account for emissions during the period between the compliance date for a unit and the completion of certification testing for that unit. The designated representative shall include:

(1) Identification of the affected unit(s);

(2) A detailed explanation of the alternative method to account for emissions of the following parameters, as applicable: SO_2 mass emissions (in lbs), NO_x emission rate (in lbs/mmbtu), CO_2 mass emissions (in lbs) and, if the unit is subject to the requirements of subpart H of this part, NO_x mass emissions (in lbs); and

(3) A demonstration that the proposed alternative does not underestimate emissions.

(k) *Petition for an alternative to the stabilization criteria for the cycle time test in section 6.4 of Appendix A of this part.* The designated representative for an affected unit may submit a petition to the Administrator to use an alternative stabilization criteria for the cycle time test in section 6.4 of Appendix A of this part, if the installed monitoring system does not record data in 1-minute or 3-minute intervals. The designated representative shall provide a description of the alternative criteria.

(l) *Petition for an alternative to the maximum rated hourly heat input used to determine emissions under the low mass emissions excepted methodology in § 75.19.* The designated representative for an affected unit may submit a petition to the Administrator to use an alternative to the maximum rated hourly heat input to determine emissions under the low mass emissions excepted methodology set forth in § 75.19. The designated representative shall provide the following information:

(1) Identification of the affected unit(s);

(2) Information demonstrating that the maximum rated hourly heat input, as defined in § 72.2 of this chapter, is not representative of the unit's current capabilities because modifications have been made to the unit, limiting its capacity permanently; and

(3) Information documenting that the proposed alternative maximum heat input is representative of the unit's highest potential heat input.

(m) *Any other petitions to the Administrator under this part.* Except for petitions addressed in paragraphs (b) through (l) of this section, any petition submitted under this paragraph shall include sufficient information for the evaluation of the petition, including, at a minimum, the following information:

(1) Identification of the affected unit(s);

(2) A detailed explanation of why the proposed alternative is being suggested in lieu of the requirement;

(3) A description and diagram of any equipment and procedures used in the proposed alternative, if applicable;

(4) A demonstration that the proposed alternative is consistent with the purposes of the requirement for which the alternative is proposed and is consistent with the purposes of this part and of section 412 of the Act and that any adverse effect of approving such alternative will be *de minimis;* and

(5) Any other relevant information that the Administrator may require.

48. Subpart H is added to read as follows:

Subpart H—NO_x Mass Emissions Provisions

Sec.

75.70 NO_x mass emissions provisions.
75.71 Specific provisions for monitoring NO_x emission rate and heat input for the purpose of calculating NO_x mass emissions.
75.72 Determination of NO_x mass emissions.
75.73 Recordkeeping and reporting.

Subpart H—NO_x Mass Emissions Provisions

§ 75.70 NO_x mass emissions provisions.

(a) The owner or operator of a unit shall comply with the requirements of this subpart only if such compliance is required by an applicable state or federal NO_x mass emission reduction program that incorporates by reference, or otherwise adopts the requirements of, this subpart. For purposes of this subpart, the term "affected unit" shall mean any unit that is subject to a state or federal NO_x mass emission reduction program requiring compliance with this subpart, the term "nonaffected unit" shall mean any unit that is not subject to such a program, the term "permitting authority" shall mean the permitting authority under an applicable state or federal NO_x mass emission reduction program that adopts the requirements of this subpart, and the term "designated representative" shall mean the responsible party under the applicable state or federal NO_x mass emission reduction program that adopts the requirements of this subpart. In addition, as set forth in this subpart, the provisions of subparts A, C, D, E, F, and G and appendices A through G applicable to NO_x emission rate and heat input shall apply to the owner or operator of a unit required to meet the requirements of this subpart by a state or federal NO_x mass emission reduction program, except that the term "affected unit" shall mean any unit that is subject to a state or federal NO_x mass emission reduction program requiring compliance with this subpart, the term "permitting authority" shall mean the permitting authority under an applicable state or federal NO_x mass emission reduction program that adopts the requirements of this subpart, and the term "designated representative" shall mean the responsible party under the applicable state or federal NO_x mass emission reduction program that adopts the requirements of this subpart.

(b) *Compliance dates.* The owner or operator of an affected unit shall meet the compliance deadlines established by an applicable state or federal NO_x mass emission reduction program that adopts the requirements of this subpart.

(c) *Prohibitions.* (1) No owner or operator of an affected unit or a non-affected unit under § 75.72(b)(2)(ii) shall use any alternative monitoring system, alternative reference method, or any other alternative for the required continuous emission monitoring system without having obtained prior written approval in accordance with paragraph (g) of this section.

(2) No owner or operator of an affected unit or a non-affected unit under § 75.72(b)(2)(ii) shall operate the unit so as to discharge, or allow to be discharged emissions of NO_x to the atmosphere without accounting for all such emissions in accordance with the applicable provisions of this part.

(3) No owner or operator of an affected unit or a non-affected unit under § 75.72(b)(2)(ii) shall disrupt the continuous emission monitoring system, any portion thereof, or any other

approved emission monitoring method, and thereby avoid monitoring and recording NO_x mass emissions discharged into the atmosphere, except for periods of recertification or periods when calibration, quality assurance testing, or maintenance is performed in accordance with the applicable provisions of this part.

(4) No owner or operator of an affected unit or a non-affected unit under § 75.72(b)(2)(ii) shall retire or permanently discontinue use of the continuous emission monitoring system, any component thereof, or any other approved emission monitoring system under this part, except under any one of the following circumstances:

(i) During the period that the unit is covered by a retired unit exemption under § 96.5 that is in effect;

(ii) The owner or operator is monitoring NO_x mass emissions from the affected unit with another certified monitoring system approved, in accordance with the provisions of paragraph (d) of this section; or

(iii) The designated representative submits notification of the date of certification testing of a replacement monitoring system in accordance with § 75.73(d)(5).

(d) *Initial certification and recertification procedures.* (1) The owner or operator of an affected unit that is subject to an Acid Rain emissions limitation shall comply with the initial certification and recertification procedures of this part except that:

(i) The owner or operator shall meet any additional requirements set forth in an applicable state or federal NO_x mass emission reduction program that adopts the requirements of this subpart.

(ii) For any additional NO_x emission rate CEMS required under the common stack provisions in § 75.72, the owner or operator shall meet the requirements of paragraph (d)(2) of this section.

(2) The owner or operator of an affected unit that is not subject to an Acid Rain emissions limitation shall comply with the initial certification and recertification procedures established by an applicable state or federal NO_x mass emission reduction program that adopts the requirements of this subpart. The owner or operator of an affected unit that is subject to an Acid Rain emissions limitation shall, for any additional NO_x emission rate CEMS required under the common stack provisions in § 75.72, comply with the initial certification and recertification procedures established by an applicable state or federal NO_x mass emission reduction program that adopts the requirements of this subpart.

(e) *Quality assurance and quality control requirements.* The owner or operator shall meet the quality assurance and quality control requirements in § 75.21.

(f) *Missing data procedures.* Except as provided in § 75.34, the owner or operator shall provide substitute data for each affected unit and each non-affected unit under § 75.72(b)(2)(ii) using a continuous emissions monitoring system in accordance with the missing data procedures in subpart D of this part whenever the unit combusts fuel and:

(1) A valid quality assured hour of NO_x emission rate data (in lb/mmBtu) has not been measured and recorded for an affected unit or non-affected unit under § 75.72(b)(2)(ii) by a certified NO_x continuous emission monitoring system or by an approved monitoring system under subpart E of this part;

(2) A valid quality assured hour of flow data (in scfh) has not been measured and recorded for an affected unit or non-affected unit under § 75.72(b)(2)(ii) from a certified flow monitor or by an approved alternative monitoring system under subpart E of this part; or

(3) A valid quality assured hour of heat input data (in mmBtu) has not been measured and recorded for an affected unit from a certified flow monitor and a certified diluent (CO_2 or O_2) monitor or by an approved alternative monitoring system under subpart E of this part or by an accepted monitoring system under appendix D to this part.

(g) *Petitions.* (1) The owner or operator of an affected unit that is subject to an Acid Rain emissions limitation may submit a petition to the Administrator requesting an alternative to any requirement of this subpart. Such a petition shall meet the requirements of § 75.66 and any additional requirements established by an applicable state or federal NO_x mass emission reduction program that adopts the requirements of this subpart. Use of an alternative to any requirement of this subpart is in accordance with this subpart and with such state or federal NO_x mass emission reduction program only to the extent that the petition is approved by the Administrator, in consultation with the permitting authority.

(2) Notwithstanding paragraph (g)(1) of this section, petitions requesting an alternative to a requirement concerning any additional CEMS required solely to meet the common stack provisions of § 75.72, shall be submitted to the permitting authority and the Administrator and shall be governed by paragraph (g)(3)(ii) of this section. Such a petition shall meet the requirements of § 75.66 and any additional requirements established by an applicable state or federal NO_x mass emission reduction program that adopts the requirements of this subpart.

(3)(i) The owner or operator of an affected unit that is not subject to an Acid Rain emissions limitation may submit a petition to the permitting authority and the Administrator requesting an alternative to any requirement of this subpart. Such a petition shall meet the requirements of § 75.66 and any additional requirements established by an applicable state or federal NO_x mass emission reduction program that adopts the requirements of this subpart.

(ii) Use of an alternative to any requirement of this subpart is in accordance with this subpart only to the extent that it is approved by both the permitting authority and the Administrator.

§ 75.71 Specific provisions for monitoring NO_x emission rate and heat input for the purpose of calculating NO_x mass emissions.

(a) *Coal-fired units.* The owner or operator of an affected unit shall meet the general operating requirements in § 75.10 for a NO_x continuous emission monitoring system (including a NO_x pollutant concentration monitor and an O_2- or CO_2-diluent gas monitor) to measure NO_x emission rate and for a continuous flow monitoring system and an O_2- or CO_2-diluent gas monitor to measure heat input, except as provided by the Administrator in accordance with subpart E of this part.

(b) *Moisture correction.* If a correction for the stack gas moisture content is needed to properly calculate the NO_x emission rate in lb/mmBtu (i.e., if the NO_x pollutant concentration monitor measures on a different moisture basis from the diluent monitor), the owner or operator of an affected unit shall install, operate, maintain, and quality assure a continuous moisture monitoring system, as defined in § 75.11(b).

(c) *Gas-fired nonpeaking units or oil-fired non-peaking units.* The owner or operator of an affected unit that qualifies as a gas-fired or oil-fired unit but not as a peaking unit, as defined in § 72.2 of this chapter, based on information submitted by the designated representative in the monitoring plan shall either:

(1) Meet the requirements of paragraph (a) of this section and, if applicable, paragraph (b) of this section; or

(2) Meet the general operating requirements in § 75.10 for a NO_x continuous emission monitoring system, except as provided, where applicable, in paragraph (e)(2) of this section or by the

Administrator in accordance with subpart E of this part, and use the procedures specified in appendix D to this part for determining hourly heat input. However, the heat input apportionment provisions in section 2.1.2 of appendix D to this part shall not be used to meet the NO_X mass reporting provisions of this subpart.

(d) *Peaking units that combust natural gas or fuel oil.* The owner or operator of an affected unit that combusts only natural gas or fuel oil and that qualifies as a peaking unit, as defined in § 72.2 of this chapter, based on information submitted by the designated representative in the monitoring plan shall either:

(1) Meet the requirements of paragraph (c) of this section; or

(2) Use the procedures in appendix D to this part for determining hourly heat input and the procedure specified in appendix E to this part for estimating hourly NO_X emission rate. However, the heat input apportionment provisions in section 2.1.2 of appendix D to this part shall not be used to meet the NO_X mass reporting provisions of this subpart. In addition, if after certification of an excepted monitoring system under appendix E to this part, a unit's operations exceed a capacity factor of 20.0 percent in any calender year or exceed a capacity factor of 10.0 percent averaged over three years, the owner or operator shall meet the requirements of paragraph (c) of this section or, if applicable, paragraph (e) of this section by no later than December 31 of the following calender year.

(e) *Low mass emissions units.* Notwithstanding the requirements of paragraphs (c) and (d) of this section, the owner or operator of an affected unit that qualifies as a low mass emissions unit under § 75.19(a) shall comply with one of the following:

(1) Meet the applicable requirements specified in paragraph (c) or (d) of this section for monitoring NO_X emission rate and heat input; or

(2) Use the low mass emissions excepted methodology in § 75.19(c) for estimating hourly emission rate, hourly heat input, and hourly NO_X mass emissions.

(f) *Other units.* The owner or operator of an affected unit that combusts wood, refuse, or other materials shall comply with the monitoring provisions specified in paragraph (a) of this section and, where applicable, paragraph (b) of this section.

§ 75.72 Determination of NO_X mass emissions.

The owner or operator of an affected unit shall calculate hourly NO_X mass emissions (in lbs) by multiplying the hourly NO_X emission rate (in lbs/mmBtu) by the hourly heat input (in mmBtu/hr) and the hourly operating time (in hr). The owner or operator shall also calculate quarterly and cumulative year-to-date NO_X mass emissions and cumulative NO_X mass emissions for the ozone season (in tons) by summing the hourly NO_X mass emissions according to the procedures in section 8 of appendix F to this part.

(a) *Unit utilizing common stack with other affected unit(s).* When an affected unit utilizes a common stack with one or more affected units, but no nonaffected units, the owner or operator shall either:

(1) Record the combined NO_X mass emissions for the units exhausting to the common stack, install, certify, operate, and maintain a NO_X continuous emissions monitoring system in the common stack and:

(i) Install, certify, operate, and maintain a continuous flow monitoring system at the common stack; or

(ii) If all of the units using the common stack are eligible to use the procedures in appendix D to this part, use the procedures in appendix D to this part to determine heat input for each affected unit and use the combined heat input of all of the units exhausting to the common stack for calculating NO_X mass emissions; however, the heat input apportionment provisions in section 2.1.2 of appendix D to this part shall not be used to meet the NO_X mass reporting provisions of this subpart; or

(2) Install, certify, operate, and maintain a NO_X continuous emissions monitoring system in the duct to the common stack from each affected unit and:

(i) Install, certify, operate, and maintain a flow monitor in the duct to the common stack from each affected unit; or

(ii)(A) For any unit using the common stack and eligible to use the procedures in appendix D to this part, use the procedures in appendix D to determine heat input for that affected unit. However, the heat input apportionment provisions in section 2.1.2 of appendix D to this part shall not be used to meet the mass reporting provisions of this subpart; and

(B) Install, certify, operate, and maintain a flow monitor in the duct to the common stack for each remaining affected unit.

(b) *Unit utilizing common stack with nonaffected unit(s).* When one or more affected units utilizes a common stack with one or more nonaffected units, the owner or operator shall either:

(1) Install, certify, operate, and maintain a NO_X continuous emission monitoring system in the duct to the common stack from each affected unit; and

(i) Install, certify, operate, and maintain a continuous flow monitoring system in the duct to the common stack from each affected unit; or

(ii)(A) For any unit using the common stack and eligible to use the procedures in appendix D to this part, use the procedures in appendix D to determine heat input for that affected unit; however, the heat input apportionment provisions in section 2.1.2 of appendix D to this part shall not be used to meet the mass reporting provisions of this subpart; and

(B) Install, certify, operate, and maintain a flow monitor in the duct to the common stack for each remaining affected unit that exhausts to the common stack; or

(2) Install, certify, operate, and maintain a NO_X continuous emission monitoring system in the common stack; and

(i) Designate the nonaffected units as affected units in accordance with the applicable state or federal NO_X mass emissions reduction program and meet the requirements of paragraph (a)(1) of this section; or

(ii)(A) Install, certify, operate, and maintain a continuous flow monitoring system in the common stack and a NO_X continuous emission monitoring system in the duct to the common stack from each nonaffected unit and either install, certify, operate, and maintain a continuous flow monitoring system in the duct from each nonaffected unit or, for any nonaffected unit exhausting to the common stack and otherwise eligible to use the procedures in appendix D to this part, determine heat input using the procedures in appendix D for that nonaffected unit (however, the heat input apportionment provisions in section 2.1.2 of appendix D to this part shall not be used to meet the NO_X mass reporting provisions of this subpart), and for any remaining nonaffected unit that exhausts to the common stack, install, certify, operate, and maintain a flow monitor in the duct to the common stack; and

(B) Submit a petition to the permitting authority and the Administrator to allow a method of calculating and reporting the NO_X mass emissions from the affected units as the difference between NO_X mass emissions measured in the common stack and NO_X mass emissions measured in the ducts of the nonaffected units, not to be reported as an hourly value less than zero. The permitting authority and the

Administrator may approve such a method whenever the designated representative demonstrates, to the satisfaction of the permitting authority and the Administrator, that the method ensures that the NO_X mass emissions from the affected units are not underestimated; or

(iii) Install a continuous flow monitoring system in the common stack and record the combined emissions from all units as the combined NO_X mass emissions for the affected units for recordkeeping and compliance purposes; or

(iv) Submit a petition to the permitting authority and the Administrator to allow use of a method for apportioning NO_X mass emissions measured in the common stack to each of the units using the common stack and for reporting the NO_X mass emissions. The permitting authority and the Administrator may approve such a method whenever the designated representative demonstrates, to the satisfaction of the permitting authority and the Administrator, that the method ensures that the NO_X mass emissions from the affected units are not underestimated.

(c) *Unit with bypass stack.* Whenever any portion of the flue gases from an affected unit can be routed to avoid the installed NO_X continuous emissions monitoring system, the owner and operator shall either:

(1) Install, certify, operate, and maintain a NO_X continuous emissions monitoring system and a continuous flow monitoring system on the bypass flue, duct, or stack gas stream and calculate NO_X mass emissions for the unit as the sum of the emissions recorded by all required monitoring systems; or

(2) Monitor NO_X mass emissions on the bypass flue, duct, or stack gas stream using the reference methods in § 75.22(b) for NO_X concentration, flow, and diluent and calculate NO_X mass emissions for the unit as the sum of the emissions recorded by the installed monitoring systems on the main stack and the emissions measured by the reference method monitoring systems.

(d) *Unit with multiple stacks.* Notwithstanding § 75.17(c), when the flue gases from an affected unit utilize two or more ducts feeding into two or more stacks (which may include flue gases from other affected or nonaffected unit(s)), or when the flue gases from an affected unit utilize two or more ducts feeding into a single stack and the owner or operator chooses to monitor in the ducts rather than in the stack, the owner or operator shall either:

(1) Install, certify, operate, and maintain a NO_X continuous emission monitoring system and a continuous flow monitoring system in each duct feeding into the stack or stacks and determine NO_X mass emissions from each affected unit using the stack or stacks as the sum of the NO_X mass emissions recorded for each duct; or

(2) Install, certify, operate, and maintain a NO_X continuous emissions monitoring system and a continuous flow monitoring system in each stack, and determine NO_X mass emissions from the affected unit using the sum of the NO_X mass emissions recorded for each stack, except that where another unit also exhausts flue gases to one or more of the stacks, the owner or operator shall also comply with the applicable requirements of paragraphs (a) and (b) of this section to determine and record NO_X mass emissions from the units using that stack; or

(3) If the unit is eligible to use the procedures in appendix D to this part, install, certify, operate, and maintain a NO_X continuous emissions monitoring system in one of the ducts feeding into the stack or stacks and use the procedures in appendix D to this part to determine heat input for the unit, provided that:

(i) There are no add-on NO_X controls at the unit;

(ii) The unit is not capable of emitting solely through an unmonitored stack (i.e., has no dampers); and

(iii) The owner or operator of the unit demonstrates to the satisfaction of the permitting authority and the Administrator that the NO_X emission rate in the monitored duct or stack is representative of the NO_X emission rate in each duct or stack.

§ 75.73 Recordkeeping and reporting.

(a) *General recordkeeping provisions.* The owner or operator of any affected unit shall maintain for each affected unit and each non-affected unit under § 75.72(b)(2)(ii) a file of all measurements, data, reports, and other information required by this part at the source in a form suitable for inspection for at least three (3) years from the date of each record. Except for the certification data required in § 75.57(a)(4) and the initial submission of the monitoring plan required in § 75.57(a)(5), the data shall be collected beginning with the earlier of the date of provisional certification or the deadline in § 75.70. The certification data required in § 75.57(a)(4) shall be collected beginning with the date of the first certification test performed.

The file shall contain the following information:

(1) The information required in §§ 75.57(a)(2), (a)(4), (a)(5), (a)(6), (b), (c)(2), (d), (g), and (h);

(2) The information required in §§ 75.58 (b), (d), and (g);

(3) For each hour when the unit is operating, NO_X mass emissions, calculated in accordance with section 8.1 of appendix F to this part;

(4) During the second and third calendar quarters, cumulative ozone season heat input and cumulative ozone season operating hours;

(5) Heat input and NO_X methodologies for the hour;

(6) *Specific heat input record provisions for gas-fired or oil-fired units using the procedures in appendix D to this part.* In lieu of the information required in § 75.57(c)(2), the owner or operator shall record the following information in this paragraph for each affected gas-fired or oil-fired unit and each non-affected gas-or oil-fired unit under § 75.72(b)(2)(ii) for which the owner or operator is using the procedures in appendix D to this part for estimating heat input:

(i) For each hour when the unit is combusting oil:

(A) Date and hour;

(B) Hourly average flow rate of oil, while the unit combusts oil (in gal/hr, lb/hr, m^3/hr, or bbl/hr, rounded to the nearest tenth) (flag value if derived from missing data procedures);

(C) Method of oil sampling (flow proportional, continuous drip, as delivered, manual from storage tank, or daily manual);

(D) Mass rate of oil combusted each hour (in lb/hr, rounded to the nearest tenth) (flag value if derived from missing data procedures);

(E) For units using volumetric oil flowmeters, density of oil (flag value if derived from missing data procedures);

(F) Gross calorific value (heat content) of oil used to determine heat input (in Btu/mass unit) (flag value if derived from missing data procedures);

(G) Hourly heat input rate from oil, according to procedures in appendix F to this part (in mmBtu/hr, to the nearest tenth);

(H) Fuel usage time for combustion of oil during the hour (rounded up to the nearest fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator)) (flag to indicate multiple/single fuel types combusted); and

(I) Monitoring system identification code;

(ii) For gas-fired units or oil-fired units, using the procedures in appendix D to this part with an assumed density or for as-delivered fuel sampled from each delivery:

(A) Measured GCV and, if applicable, density from each fuel sample; and

(B) Assumed GCV and, if applicable, density used to calculate heat input rate;

(iii) For each hour when the unit is combusting gaseous fuel:

(A) Date and hour;

(B) Hourly heat input rate from gaseous fuel, according to procedures in appendix F to this part (in mmBtu/hr, rounded to the nearest tenth);

(C) Hourly flow rate of gaseous fuel, while the unit combusts gas (in 100 scfh) (flag value if derived from missing data procedures);

(D) Gross calorific value (heat content) of gaseous fuel used to determine heat input rate (in Btu/100 scf) (flag value if derived from missing data procedures);

(E) Heat input rate from gaseous fuel, while the unit combusts gas (in mmBtu/hr, rounded to the nearest tenth);

(F) Fuel usage time for combustion of gaseous fuel during the hour (rounded up to the nearest fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator)) (flag to indicate multiple/single fuel types combusted); and

(G) Monitoring system identification code;

(iv) For each oil sample or sample of diesel fuel:

(A) Date of sampling;

(B) Gross calorific value or heat content (in Btu/lb) (flag value if derived from missing data procedures); and

(C) Density or specific gravity, if required to convert volume to mass (flag value if derived from missing data procedures);

(v) For each sample of gaseous fuel:

(A) Date of sampling; and

(B) Gross calorific value or heat content (in Btu/100 scf) (flag value if derived from missing data procedures);

(vi) For each oil sample or sample of gaseous fuel:

(A) Type of oil or gas; and

(B) Percent carbon or F-factor of fuel;

(7) *Specific NO_X, record provisions for gas-fired or oil-fired units using the optional low mass emissions excepted methodology in § 75.19.* In lieu of recording the information in § 75.57(b), (c)(2), (d), and (g), the owner or operator shall record, for each hour when the unit is operating for any portion of the hour, the following information for each affected low mass emissions unit for which the owner or operator is using the low mass emissions excepted methodology in § 75.19(c):

(i) Date and hour;

(ii) If one type of fuel is combusted in the hour, fuel type (pipeline natural gas, natural gas, residual oil, or diesel fuel) or, if more than one type of fuel is combusted in the hour, the fuel type which results in the highest emission factors for NO_X;

(iii) Average hourly NO_X emission rate (in lb/mmBtu, rounded to the nearest thousandth); and

(iv) Hourly NO_X mass emissions (in lbs, rounded to the nearest tenth).

(b) *Certification, quality assurance and quality control record provisions.* The owner or operator of any affected unit shall record the applicable information in § 75.59 for each affected unit or group of units monitored at a common stack and each non-affected unit under § 75.72(b)(2)(ii).

(c) *Monitoring plan record provisions.* (1) *General provisions.* The owner or operator of an affected unit shall prepare and maintain a monitoring plan for each affected unit or group of units monitored at a common stack and each non-affected unit under § 75.72(b)(2)(ii). Except as provided in paragraph (d) or (f) of this section, a monitoring plan shall contain sufficient information on the continuous emission monitoring systems, excepted methodology under § 75.19, or excepted monitoring systems under appendix D or E to this part and the use of data derived from these systems to demonstrate that all the unit's NO_X emissions are monitored and reported.

(2) Whenever the owner or operator makes a replacement, modification, or change in the certified continuous emission monitoring system, excepted methodology under § 75.19, excepted monitoring system under appendix D or E to this part, or alternative monitoring system under subpart E of this part, including a change in the automated data acquisition and handling system or in the flue gas handling system, that affects information reported in the monitoring plan (e.g., a change to a serial number for a component of a monitoring system), then the owner or operator shall update the monitoring plan.

(3) *Contents of the monitoring plan for units not subject to an Acid Rain emissions limitation.* Each monitoring plan shall contain the information in § 75.53(e)(1) in electronic format and the information in § 75.53(e)(2) in hardcopy format. In addition, to the extent applicable, each monitoring plan shall contain the information in § 75.53(f)(1)(i), (f)(2)(i), and (f)(4) in electronic format and the information in § 75.53(f)(1)(ii) and (f)(2)(ii) in hardcopy format.

(d) *General reporting provisions.* (1) The designated representative for an affected unit shall comply with all reporting requirements in this section and with any additional requirements set forth in an applicable state or Federal NO_X mass emission reduction program that adopts the requirements of this subpart.

(2) The designated representative for an affected unit shall submit the following for each affected unit or group of units monitored at a common stack and each non-affected unit under § 75.72(b)(2)(ii):

(i) Initial certification applications in accordance with § 75.70(d);

(ii) Monitoring plans in accordance with paragraph (e) of this section; and

(iii) Quarterly reports in accordance with paragraph (f) of this section.

(3) *Other petitions and communications.* The designated representative for an affected unit shall submit petitions, correspondence, application forms, and petition-related test results in accordance with the provisions in § 75.70(g).

(4) *Quality assurance RATA reports.* If requested by the permitting authority, the designated representative of an affected unit shall submit the quality assurance RATA report for each affected unit or group of units monitored at a common stack and each non-affected unit under § 75.72(b)(2)(ii) by the later of 45 days after completing a quality assurance RATA according to section 2.3 of appendix B to this part or 15 days of receiving the request. The designated representative shall report the hardcopy information required by § 75.59(a)(10) to the permitting authority.

(5) *Notifications.* The designated representative for an affected unit shall submit written notice to the permitting authority according to the provisions in § 75.61 for each affected unit or group of units monitored at a common stack and each non-affected unit under § 75.72(b)(2)(ii).

(e) *Monitoring plans.* (1) *Submission.*

(i) *Electronic.* The designated representative for an affected unit shall submit a complete, electronic, up-to-date monitoring plan file (except for hardcopy portions identified in paragraph (e)(1)(ii) of this section) for each affected unit or group of units monitored at a common stack and each non-affected unit under § 75.72(b)(2)(ii) as follows:

(A) To the permitting authority, no later than 45 days prior to the initial certification test and at the time of recertification application submission; and

(B) To the Administrator, no later than 45 days prior to the initial certification test, at the time of recertification application submission, and in each electronic quarterly report.

(ii) *Hardcopy.* The designated representative of an affected unit shall

submit all of the hardcopy information required under § 75.53, for each affected unit or group of units monitored at a common stack and each non-affected unit under § 75.72(b)(2)(ii), to the permitting authority prior to initial certification. Thereafter, the designated representative shall submit hardcopy information only if that portion of the monitoring plan is revised. The designated representative shall submit the required hardcopy information: no later than 45 days prior to the initial certification test; with any recertification application, if a hardcopy monitoring plan change is associated with the recertification event; and within 30 days of any other event with which a hardcopy monitoring plan change is associated, pursuant to § 75.53(b).

(2) [Reserved]

(f) *Quarterly reports.* (1) *Electronic submission.* The designated representative for an affected unit shall electronically report the data and information in this paragraph (f)(1) and in paragraphs (f)(2) and (3) of this section to the Administrator quarterly. Each electronic report shall include the date of report generation, for the information provided in paragraphs (f)(1)(ii) through (f)(1)(vi) of this section, and shall also include for each affected unit or group of units monitored at a common stack:

(i) Facility information:

(A) Identification, including:

(*1*) Facility/ORISPL number;

(*2*) Calendar quarter and year data contained in the report; and

(*3*) EDR version used for the report;

(B) Location, including:

(*1*) Plant name and facility ID;

(*2*) EPA AIRS facility system ID;

(*3*) State facility ID;

(*4*) Source category/type;

(*5*) Primary SIC code;

(*6*) State postal abbreviation;

(*7*) County code; and

(*8*) Latitude and longitude;

(ii) The information and hourly data required in paragraph (a) of this section, except for:

(A) Descriptions of adjustments, corrective action, and maintenance;

(B) Information which is incompatible with electronic reporting (e.g., field data sheets, lab analyses, quality control plan);

(C) For units with NO_X add-on emission controls that do not elect to use the approved site-specific parametric monitoring procedures for calculation of substitute data, the information in § 75.58(b)(3);

(D) Information required by § 75.57(h) concerning the causes of any missing data periods and the actions taken to cure such causes;

(E) Hardcopy monitoring plan information required by § 75.53 and hardcopy test data and results required by § 75.59;

(F) Records of flow polynomial equations and numerical values required by § 75.59(a)(5)(vi);

(G) Daily fuel sampling information required by § 75.58(c)(3)(i) for units using assumed values under appendix D;

(H) Information required by § 75.59(b)(2) concerning transmitter/transducer accuracy tests;

(I) Stratification test results required as part of the RATA supplementary records under § 75.56(a)(7) or § 75.59(a)(7);

(J) Data and results of RATAs that are aborted or invalidated due to problems with the reference method or operational problems with the unit and data and results of linearity checks that are aborted or invalidated due to operational problems with the unit; and

(K) The summary of data used to determine the percentage of historical usage of each load level as required under § 75.59(a)(8)(iv);

(iii) Average NO_X emission rate (lb/mmBtu, rounded to the nearest thousandth) during the quarter and cumulative NO_X emission rate for the calendar year;

(iv) Tons of NO_X emitted during quarter, cumulative tons of NO_X emitted during the year, and, during the second and third calender quarters, cumulative tons of NO_X emitted during the ozone season;

(v) During the second and third calender quarters, cummulative heat input for the ozone season; and

(vi) Unit/stack/pipe operating hours for quarter, cumulative unit/stack/pipe operating hours for calendar year, and, during the second and third calender quarters, cumulative operating hours during the ozone season.

(2) The designated representative shall affirm that the component/system identification codes and formulas in the quarterly electronic reports submitted to the Administrator pursuant to paragraph (e) of this section represent current operating conditions.

(3) *Compliance certification.* The designated representative shall submit and sign a compliance certification in support of each quarterly emissions monitoring report based on reasonable inquiry of those persons with primary responsibility for ensuring that all of the unit's emissions are correctly and fully monitored. The certification shall state that:

(i) The monitoring data submitted were recorded in accordance with the applicable requirements of this part, including the quality assurance procedures and specifications; and

(ii) With regard to a unit with add-on emission controls and for all hours where data are substituted in accordance with § 75.34(a)(1), the add-on emission controls were operating within the range of parameters listed in the monitoring plan and the substitute values do not systematically underestimate NO_X emissions.

(4) The designated representative shall comply with all of the quarterly reporting requirements in §§ 75.64(d), (f), and (g).

Appendix A to Part 75—Specifications and Test Procedures

Appendix A—[Amended]

49.–53. Appendix A to part 75 is amended by revising section 2.1 to read as follows:

* * * * *

2. Equipment Specifications

2.1 Instrument Span and Range

In implementing sections 2.1.1 through 2.1.5 of this appendix, set the measurement range for each parameter (SO_2, NO_X, CO_2, O_2, or flow rate) high enough to prevent full-scale exceedances from occurring, yet low enough to ensure good measurement accuracy and to maintain a high signal-to-noise ratio. To meet these objectives, it is recommended that the range be selected such that the readings obtained during typical unit operation are kept, to the extent practicable, between 20.0 and 80.0 percent of full-scale range of the instrument. Note that this guideline does not apply to: (1) SO_2 readings obtained during the combustion of natural gas or fuel with a total sulfur content no greater than the total sulfur content of natural gas; (2) SO_2 or NO_X readings recorded on the high measurement range, for units with SO_2 or NO_X emission controls and two span values; or (3) SO_2 or NO_X readings less than 20.0 percent of full-scale on the low measurement range for a dual span unit with SO_2 or NO_X emission controls, provided that the readings occur during periods of high control device efficiency.

2.1.1 SO_2 Pollutant Concentration Monitors

Determine, as indicated below, the span value(s) and range(s) for an SO_2 pollutant concentration monitor so that all potential and expected concentrations can be accurately measured and recorded. Note that if a unit exclusively combusts fuel(s) with a total sulfur content no greater than the total sulfur content of natural gas (i.e., ≤ 0.05 percent sulfur by weight), the SO_2 monitor span requirements in § 75.11(e)(3)(iv) apply in lieu of the requirements of this section.

2.1.1.1 Maximum Potential Concentration

Make an initial determination of the maximum potential concentration (MPC) of SO_2 by using Equation A–1a or A–1b. Base the MPC calculation on the maximum percent sulfur and the minimum gross calorific value (GCV) for the highest-sulfur

fuel to be burned. The maximum sulfur content and minimum GCV shall be determined from all available fuel sampling and analysis data for that fuel from the previous 12 months (minimum), excluding clearly anomalous fuel sampling results. If the designated representative certifies that the highest-sulfur fuel is never burned alone in the unit during normal operation but is always blended or co-fired with other fuel(s), the MPC may be calculated using a best estimate of the highest sulfur content and lowest gross calorific value expected for the blend or fuel mixture and inserting these values into Equation A–1a or A–1b. Derive the best estimate of the highest percent sulfur and lowest GCV for a blend or fuel mixture from weighted-average values based upon the historical composition of the blend or mixture in the previous 12 (or more) months. If insufficient representative fuel sampling data are available to determine the maximum sulfur content and minimum GCV, use values from contract(s) for the fuel(s) that will be combusted by the unit in the MPC calculation.

Alternatively, if a certified SO_2 CEMS is already installed, the owner or operator may make the initial MPC determination based upon quality assured historical data recorded by the CEMS. If this option is chosen, the MPC shall be the maximum SO_2 concentration observed during the previous 720 (or more) quality assured monitor operating hours when combusting the highest-sulfur fuel (or highest-sulfur blend if fuels are always blended or co-fired) that is to be combusted in the unit or units monitored by the SO_2 monitor. For units with SO_2 emission controls, the certified SO_2 monitor used to determine the MPC must be located at or before the control device inlet. Report the MPC and the method of determination in the monitoring plan required under § 75.53.

When performing fuel sampling to determine the MPC, use ASTM Methods: ASTM D3177–89, "Standard Test Methods for Total Sulfur in the Analysis Sample of Coal and Coke"; ASTM D4239–85, "Standard Test Methods for Sulfur in the Analysis Sample of Coal and Coke Using High Temperature Tube Furnace Combustion Methods"; ASTM D4294–90, "Standard Test Method for Sulfur in Petroleum Products by Energy-Dispersive X-Ray Fluorescence Spectroscopy"; ASTM D1552–90, "Standard Test Method for Sulfur in Petroleum Products (High Temperature Method)"; ASTM D129–91, "Standard Test Method for Sulfur in Petroleum Products (General Bomb Method)"; ASTM D2622–92, "Standard Test Method for Sulfur in Petroleum Products by X-Ray Spectrometry" for sulfur content of solid or liquid fuels; ASTM D3176–89, "Standard Practice for Ultimate Analysis of Coal and Coke"; ASTM D240–87 (Reapproved 1991), "Standard Test Method for Heat of Combustion of Liquid Hydrocarbon Fuels by Bomb Calorimeter"; or ASTM D2015–91, "Standard Test Method for Gross Calorific Value of Coal and Coke by the Adiabatic Bomb Calorimeter" for GCV (incorporated by reference under § 75.6).

$$\text{MPC (or MEC)} = 11.32\times10^{6}\left(\frac{\%S}{GCV}\right)\left(\frac{20.9-\%O_{2w}}{20.9}\right)$$

(Eq. A–1a)

or

$$\text{MPC (or MEC)} = 66.93\times10^{6}\left(\frac{\%S}{GCV}\right)\left(\frac{\%CO_{2w}}{100}\right)$$

(Eq. A–1b)

Where:

MPC=Maximum potential concentration (ppm, wet basis). To convert to dry basis, divide the MPC by 0.9).

MEC=Maximum expected concentration (ppm, wet basis). To convert to dry basis, divide the MEC by 0.9).

%S=Maximum sulfur content of the fuel to be fired, wet basis, weight percent, as determined by ASTM D3177–89, ASTM D4239–85, ASTM D4294–90, ASTM D1552–90, ASTM D129–91, or ASTM D2622–92 for solid or liquid fuels (incorporated by reference under § 75.6).

$\%O_{2w}$=Minimum oxygen concentration, percent wet basis, under typical operating conditions.

$\%CO_{2w}$=Maximum carbon dioxide concentration, percent wet basis, under typical operating conditions.

11.32×10^{6}=Oxygen-based conversion factor in (Btu/lb)(ppm)/%.

66.93×10^{6}=Carbon dioxide-based conversion factor in (Btu/lb)(ppm)/%.

Note: All percentage values to be inserted in the equations of this section are to be expressed as a percentage, not a fractional value (e.g., 3, not .03).

2.1.1.2 Maximum Expected Concentration

Make an initial determination of the maximum expected concentration (MEC) of SO_2 whenever: (a) SO_2 emission controls are used; or (b) both high-sulfur and low-sulfur fuels (e.g., high-sulfur coal and low-sulfur coal or different grades of fuel oil) or high-sulfur and low-sulfur fuel blends are combusted as primary or backup fuels in a unit without SO_2 emission controls. For units with SO_2 emission controls, use Equation A–2 to make the initial MEC determination. When high-sulfur and low-sulfur fuels or blends are burned as primary or backup fuels in a unit without SO_2 controls, use Equation A–1a or A–1b to calculate the initial MEC value for each fuel or blend, except for: (1) the highest-sulfur fuel or blend (for which the MPC was previously calculated in section 2.1.1.1 of this appendix); (2) fuels or blends with a total sulfur content no greater than the total sulfur content of natural gas, i.e., ≤ 0.05 percent sulfur by weight; or (3) fuels or blends that are used only for unit startup.

For each MEC determination, substitute into Equation A–1a or A–1b the highest sulfur content and minimum GCV value for that fuel or blend, based upon all available fuel sampling and analysis results from the previous 12 months (or more), or, if fuel sampling data are unavailable, based upon fuel contract(s).

Alternatively, if a certified SO_2 CEMS is already installed, the owner or operator may make the initial MEC determination(s) based upon historical monitoring data. If this option is chosen for a unit with SO_2 emission controls, the MEC shall be the maximum SO_2 concentration measured downstream of the control device outlet by the CEMS over the previous 720 (or more) quality assured monitor operating hours with the unit and the control device both operating normally. For units that burn high- and low-sulfur fuels or blends as primary and backup fuels and have no SO_2 emission controls, the MEC for each fuel shall be the maximum SO_2 concentration measured by the CEMS over the previous 720 (or more) quality assured monitor operating hours in which that fuel or blend was the only fuel being burned in the unit.

$$\text{MEC} = \text{MPC}\left(\frac{100-RE}{100}\right)$$

(Eq. A–2)

where:

MEC=Maximum expected concentration (ppm).

MPC=Maximum potential concentration (ppm), as determined by Eq. A–1a or A–1b.

RE=Expected average design removal efficiency of control equipment (percent).

2.1.1.3 Span Value(s) and Range(s)

Determine the high span value and the high full-scale range of the SO_2 monitor as follows. (Note: For purposes of this part, the high span and range refer, respectively, either to the span and range of a single span unit or to the high span and range of a dual span unit.) The high span value shall be obtained by multiplying the MPC by a factor no less than 1.00 and no greater than 1.25. Round the

span value upward to the next highest multiple of 100 ppm. If the SO_2 span concentration is ≤ 500 ppm, the span value may be rounded upward to the next highest multiple of 10 ppm, instead of the nearest 100 ppm. The high span value shall be used to determine concentrations of the calibration gases required for daily calibration error checks and linearity tests. Select the full-scale range of the instrument to be consistent with section 2.1 of this appendix and to be greater than or equal to the span value. Report the full-scale range setting and calculations of the MPC and span in the monitoring plan for the unit. Note that for certain applications, a second (low) SO_2 span value may be required (see section 2.1.1.4 of this appendix). If an existing state, local, or federal requirement for span of an SO_2 pollutant concentration monitor requires a span lower than that required by this section or by section 2.1.1.4 of this appendix, the state, local, or federal span value may be used if a satisfactory explanation is included in the monitoring plan, unless span and/or range adjustments become necessary in accordance with section 2.1.1.5 of this appendix. Span values higher than those required by either this section or section 2.1.1.4 of this appendix must be approved by the Administrator.

2.1.1.4 Dual Span and Range Requirements

For most units, the high span value based on the MPC, as determined under section 2.1.1.3 of this appendix will suffice to measure and record SO_2 concentrations (unless span and/or range adjustments become necessary in accordance with section 2.1.1.5 of this appendix). In some instances, however, a second (low) span value based on the MEC may be required to ensure accurate measurement of all possible or expected SO_2 concentrations. To determine whether two SO_2 span values are required, proceed as follows:

(a) For units with SO_2 emission controls, compare the MEC from section 2.1.1.2 of this appendix to the MPC value from section 2.1.1.1 of this appendix. If the MEC is ≥20.0 percent of the MPC, then the high span value and range determined under section 2.1.1.3 of this appendix are sufficient. If the MEC is < 20.0 percent of the MPC, however, a second (low) span value is required.

(b) For units that combust high- and low-sulfur primary and backup fuels (or blends) and have no SO_2 controls, compare the MPC value from section 2.1.1.1 of this appendix (for the highest-sulfur fuel or blend) to the MEC value for each of the other fuels or blends, as determined under section 2.1.1.2 of this appendix. If all of the MEC values are ≥20.0 percent of the MPC, the high span and range determined under section 2.1.1.3 of this appendix are sufficient, regardless of which fuel or blend is burned in the unit. If any MEC value is <20.0 percent of the MPC, however, a second (low) span value must be used when that fuel or blend is combusted.

(c) When two SO_2 spans are required, the owner or operator may either use a single SO_2 analyzer with a dual range (i.e., low- and high-scales) or two separate SO_2 analyzers connected to a common sample probe and sample interface. For units with SO_2 emission controls, the owner or operator may use a low range analyzer and a default high range value, as described in paragraph (f) of this section, in lieu of maintaining and quality assuring a high-scale range. Other monitor configurations are subject to the approval of the Administrator.

(d) The owner or operator shall designate the monitoring systems and components as follows: (1) designate the low and high monitor ranges as separate components of a single, primary monitoring system; or (2) designate the low and high monitor ranges as separate, primary monitoring systems; or (3) designate the normal monitor range as a primary monitoring system and the other monitor range as a non-redundant backup monitoring system; or (4) for units with SO_2 controls, if the default high range value is used, designate the low range analyzer as the primary monitoring system.

(e) Each monitoring system designated as primary shall meet the initial certification and quality assurance requirements for primary monitoring systems in § 75.20(c) and appendices A and B to this part, with one exception: relative accuracy test audits (RATAs) are required only on the normal range (for units with SO_2 emission controls, the low range is considered normal). Each monitoring system designated as a non-redundant backup shall meet the applicable quality assurance requirements in § 75.20(d).

(f) For dual span units with SO_2 emission controls, the owner or operator may, as an alternative to maintaining and quality assuring a high monitor range, use a default high range value. If this option is chosen, the owner or operator shall report a default SO_2 concentration of 200.0 percent of the MPC for each unit operating hour in which the full-scale of the low range SO_2 analyzer is exceeded.

(g) The high span value and range shall be determined in accordance with section 2.1.1.3 of this appendix. The low span value shall be obtained by multiplying the MEC by a factor no less than 1.00 and no greater than 1.25, and rounding the result upward to the next highest multiple of 10 ppm (or 100 ppm, as appropriate). For units that burn high- and low-sulfur primary and backup fuels or blends and have no SO_2 emission controls, select, as the basis for calculating the appropriate low span value and range, the fuel-specific MEC value closest to 20.0 percent of the MPC (from paragraph (b) of this section). The low range must be greater than or equal to the low span value, and the required calibration gases must be selected based on the low span value. For units with two SO_2 spans, use the low range whenever the SO_2 concentrations are expected to be consistently below 20.0 percent of the MPC, i.e., when the MEC of the fuel or blend being combusted is less than 20.0 percent of the MPC. When the full-scale of the low range is exceeded, the high range shall be used to measure and record the SO_2 concentrations; or, if applicable, the default high range value in paragraph (f) of this section shall be reported for each hour of the full-scale exceedance.

2.1.1.5 Adjustment of Span and Range

For each affected unit or common stack, the owner or operator shall make a quarterly evaluation of the MPC, MEC, span, and range values for each SO_2 monitor and shall make any necessary span and range adjustments, with corresponding monitoring plan updates, as described in paragraphs (a) through (e), below. Span and range adjustments may be required as a result of changes in the fuel supply, changes in the manner of operation of the unit, installation or removal of emission controls, etc. In implementing the provisions in paragraphs (a) through (e), below, note that SO_2 data recorded during short-term, non-representative process operating conditions (e.g., a trial burn of a different type of fuel) shall be excluded from the analysis; however, if the high range is exceeded, 200.0 percent of the high range must still be reported as the hourly SO_2 concentration for each hour of the full-scale exceedance, as required by paragraph (c)(1) of this section. The owner or operator shall document all such unrepresentative operating conditions in the quarterly report required under § 75.64 and shall indicate which data (dates and hours) have been excluded from the quarterly span and range evaluation.

Make each required span or range adjustment no later than 45 days after the end of the quarter in which the need to adjust the span or range is identified, except that up to 90 days after the end of that quarter may be taken to implement a span adjustment if the calibration gases currently being used for daily calibration error tests and linearity checks are unsuitable for use with the new span value.

(a) No span or range adjustment is required if, during a calendar quarter, the hourly SO_2 concentration exceeds the MPC but does not exceed the high span value. However, for missing data purposes, if any of the hourly SO_2 concentrations exceed the current MPC by ≥5.0 percent, a new MPC equal to the highest quality assured hourly SO_2 concentration recorded during the quarter must be defined in the monitoring plan. Update the monitoring plan to reflect the new MPC value.

(b) A span adjustment is required if any of the on-scale, quality assured hourly SO_2 concentrations exceed the high span value by ≤ 10.0 percent during a quarter, but do not exceed the high range. Define a new MPC value (as applicable) equal to the highest quality assured on-scale SO_2 concentration recorded during the quarter, and set the new span value according to section 2.1.1.3 of this appendix, using the new MPC value. If the new span value exceeds the current full-scale range, adjust the range setting also. Update the monitoring plan to reflect the new MPC, the new span value, and (if applicable) the new full-scale range. Where separate ranges are used to measure emissions from the combustion of different types of fuel, the low span and MEC shall be increased in the manner described in this paragraph if any on-scale hourly value exceeds the low span value by 10.0 percent or more.

(c) Whenever a full-scale range is exceeded during a quarter and the exceedance is not caused by a monitor out-of-control period, proceed as follows:

(1) For exceedances of the high range, report 200.0 percent of the current full-scale range as the hourly SO_2 concentration for

each hour of the full-scale exceedance and make adjustments to the MPC, span, and range to prevent future full-scale exceedances.

(2) For units with two SO_2 spans and ranges, if the low range is exceeded, no further action is required, provided that the high range is available and is not out-of-control or out-of-service for any reason. However, if the high range is not able to provide quality assured data at the time of the low range exceedance or at any time during the continuation of the exceedance, report the MPC as the SO_2 concentration until the readings return to the low range or until the high range is able to provide quality assured data (unless the reason that the high-scale range is not able to provide quality assured data is because the high-scale range has been exceeded; if the high-scale range is exceeded follow the procedures in paragraph (c)(1) of this section).

(d) If the fuel supply, the composition of the fuel blend(s), the emission controls, or the manner of operation change such that the maximum expected or potential concentration changes significantly, adjust the span and range setting to assure the continued accuracy of the monitoring system. The owner or operator should evaluate whether any planned changes in operation of the unit may affect the concentration of emissions being emitted from the unit or stack and should plan any necessary span and range changes needed to account for these changes, so that they are made in as timely a manner as practicable to coordinate with the operational changes. Determine the adjusted span(s) using the procedures in sections 2.1.1.3 and 2.1.1.4 of this appendix (as applicable). Select the full-scale range(s) of the instrument to be greater than or equal to the new span value(s) and to be consistent with the guidelines of section 2.1 of this appendix.

(e) Whenever changes are made to the MPC, MEC, full-scale range, or span value of the SO_2 monitor, as described in paragraphs (a) through (d) of this section, record and report (as applicable) the new full-scale range setting, the new MPC or MEC and calculations of the adjusted span value in an updated monitoring plan. The monitoring plan update shall be made in the quarter in which the changes become effective. In addition, record and report the adjusted span as part of the records for the daily calibration error test and linearity check specified by appendix B to this part. Whenever the span value is adjusted, use calibration gas concentrations that meet the requirements of section 5.1 of this appendix, based on the adjusted span value. When a span adjustment is so significant that the calibration gases currently being used for daily calibration error tests and linearity checks are unsuitable for use with the new span value, then a diagnostic linearity test using the new calibration gases must be performed and passed. Data from the monitor are considered invalid from the hour in which the span is adjusted until the required linearity check is passed in accordance with section 6.2 of this appendix.

2.1.2 NO_X Pollutant Concentration Monitors

Determine, as indicated below, the span and range value(s) for the NO_X pollutant concentration monitor so that all expected NO_X concentrations can be determined and recorded accurately.

2.1.2.1 Maximum Potential Concentration

The maximum potential concentration (MPC) of NO_X for each affected unit shall be based upon whichever fuel or blend combusted in the unit produces the highest level of NO_X emissions. Make an initial determination of the MPC using the appropriate option below. Note that an initial MPC value determined for a unit that is not equipped with low-NO_X burners must be re-evaluated if a low-NO_X burner system is subsequently installed.

Option 1: Use 800 ppm for coal-fired and 400 ppm for oil-or gas-fired units as the maximum potential concentration of NO_X (if an MPC of 1600 ppm for coal-fired units or 480 ppm for oil-or gas-fired units was previously selected under this part, that value may still be used, provided that the guidelines of section 2.1 of this appendix are met);

Option 2: Use the specific values based on boiler type and fuel combusted, listed in Table 2–1 or Table 2–2;

Option 3: Use NO_X emission test results; or

Option 4: Use historical CEM data over the previous 720 (or more) unit operating hours when combusting the fuel or blend with the highest NO_X emission rate.

For the purpose of providing substitute data during NO_X missing data periods in accordance with §§ 75.31 and 75.33 and as required elsewhere under this part, the owner or operator shall also calculate the maximum potential NO_X emission rate (MER), in lb/mmBtu, by substituting the MPC for NO_X in conjunction with the minimum CO_2 or maximum O_2 concentration (under all unit operating conditions except for unit startup, shutdown, and upsets) and the appropriate F-factor into the applicable equation in appendix F to this part. The diluent cap value of 5.0 percent CO_2 (or 14.0 percent O_2) for boilers or 1.0 percent CO_2 (or 19.0 percent O_2) for combustion turbines may be used in the NO_X MER calculation.

Report the method of determining the initial MPC and the calculation of the maximum potential NO_X emission rate in the monitoring plan for the unit.

For units with add-on NO_X controls, NO_X emission testing may only be used to determine the MPC if testing can be performed on uncontrolled emissions (e.g., measured at or before the control device inlet). If NO_X emission testing is performed, use the following guidelines. Use Method 7E from appendix A to part 60 of this chapter to measure total NO_X concentration. (Note: Method 20 from appendix A to Part 60 may be used for gas turbines, instead of Method 7E.) Operate the unit, or group of units sharing a common stack, at the minimum safe and stable load, the normal load, and the maximum load. If the normal load and maximum load are identical, an intermediate level need not be tested. Operate at the highest excess O_2 level expected under normal operating conditions. Make at least three runs of 20 minutes (minimum) duration with three traverse points per run at each operating condition. Select the highest point NO_X concentration (e.g., the highest one-minute average) from all test runs as the MPC for NO_X.

If historical CEM data are used to determine the MPC, the data must represent a minimum of 720 quality assured monitor operating hours, obtained under various operating conditions, including the minimum safe and stable load, normal load (including periods of high excess air at normal load), and maximum load. For units with add-on NO_X controls, historical CEM data may only be used to determine the MPC if there are 720 quality assured monitor operating hours of CEM data measuring uncontrolled emissions (e.g., the CEM data are collected at or before the control device inlet). The highest hourly NO_X concentration in ppm shall be the MPC.

2.1.2.2 Maximum Expected Concentration

Make an initial determination of the maximum expected concentration (MEC) of NO_X during normal operation for affected units with add-on NO_X controls of any kind (i.e., steam injection, water injection, SCR, or SNCR). Determine a separate MEC value for each type of fuel (or blend) combusted in the unit, except for fuels that are only used for unit startup and/or flame stabilization. Calculate the MEC of NO_X using Equation A–2, if applicable, inserting the maximum potential concentration, as determined using the procedures in section 2.1.2.1 of this appendix. Where Equation A–2 is not applicable, set the MEC either by: (1) measuring the NO_X concentration using the testing procedures in this section; or (2) using historical CEM data over the previous 720 (or more) quality assured monitor operating hours. Include in the monitoring plan for the unit each MEC value and the method by which the MEC was determined.

If NO_X emission testing is used to determine the MEC value(s), the MEC for each type of fuel (or blend) shall be based upon testing at minimum load, normal load, and maximum load. At least three tests of 20 minutes (minimum) duration, using at least 3 traverse points, shall be performed at each load, using Method 7E from appendix A to part 60 of this chapter (Note: Method 20 from appendix A to part 60 may be used for gas turbines instead of Method 7E). The test must be performed at a time when all NO_X control devices and methods used to reduce NO_X emissions are operating properly. The testing shall be conducted downstream of all NO_X controls. The highest point NO_X concentration (e.g., the highest one-minute average) recorded during any of the test runs shall be the MEC.

If historical CEM data are used to determine the MEC value(s), the MEC for each type of fuel shall be based upon 720 (or more) hours of quality assured data representing the entire load range under stable operating conditions. The data base for the MEC shall not include any CEM data recorded during unit startup, shutdown, or malfunction or during any NO_X control device malfunctions or outages. All NO_X control devices and methods used to reduce

NO_x emissions must be operating properly during each hour. The CEM data shall be collected downstream of all NO_x controls. For each type of fuel, the highest of the 720 (or more) quality assured hourly average NO_x concentrations recorded by the CEMS shall be the MEC.

2.1.2.3 Span Value(s) and Range(s)

Determine the high span value of the NO_x monitor as follows. The high span value shall be obtained by multiplying the MPC by a factor no less than 1.00 and no greater than 1.25. Round the span value upward to the next highest multiple of 100 ppm. If the NO_x span concentration is ≤ 500 ppm, the span value may be rounded upward to the next highest multiple of 10 ppm, rather than 100 ppm. The high span value shall be used to determine the concentrations of the calibration gases required for daily calibration error checks and linearity tests. Note that for certain applications, a second (low) NO_x span value may be required (see section 2.1.2.4 of this appendix).

If an existing state, local, or federal requirement for span of an NO_x pollutant concentration monitor requires a span lower than that required by this section or by section 2.1.2.4 of this appendix, the state, local, or federal span value may be used, where a satisfactory explanation is included in the monitoring plan, unless span and/or range adjustments become necessary in accordance with section 2.1.2.5 of this appendix. Span values higher than required by this section or by section 2.1.2.4 of this appendix must be approved by the Administrator.

Select the full-scale range of the instrument to be consistent with section 2.1 of this appendix and to be greater than or equal to the high span value. Include the full-scale range setting and calculations of the MPC and span in the monitoring plan for the unit.

2.1.2.4 Dual Span and Range Requirements

For most units, the high span value based on the MPC, as determined under section 2.1.2.3 of this appendix will suffice to measure and record NO_x concentrations (unless span and/or range adjustments must be made in accordance with section 2.1.2.5 of this appendix). In some instances, however, a second (low) span value based on the MEC may be required to ensure accurate measurement of all expected and potential NO_x concentrations. To determine whether two NO_x spans are required, proceed as follows:

(a) Compare the MEC value(s) determined in section 2.1.2.2 of this appendix to the MPC value determined in section 2.1.2.1 of this appendix. If the MEC values for all fuels (or blends) are ≥ 20.0 percent of the MPC, the high span and range values determined under section 2.1.2.3 of this appendix are sufficient, irrespective of which fuel or blend is combusted in the unit. If any of the MEC values is < 20.0 percent of the MPC, two spans (low and high) are required, one based upon the MPC and the other based on the MEC.

(b) When two NO_x spans are required, the owner or operator may either use a single NO_x analyzer with a dual range (low-and high-scales) or two separate NO_x analyzers connected to a common sample probe and sample interface. For units with add-on NO_x emission controls (i.e., steam injection, water injection, SCR, or SNCR), the owner or operator may use a low range analyzer and a "default high range value," as described in paragraph 2.1.2.4(e) of this section, in lieu of maintaining and quality assuring a high-scale range. Other monitor configurations are subject to the approval of the Administrator.

(c) The owner or operator shall designate the monitoring systems and components as follows: (1) designate the low and high ranges as separate components of a single, primary monitoring system; or (2) designate the low and high ranges as separate, primary monitoring systems; or (3) designate the normal range as a primary monitoring system and the other range as a non-redundant backup monitoring system; or (4) for units with add-on NO_x controls, if the default high range value is used, designate the low range analyzer as the primary monitoring system.

(d) Each monitoring system designated as primary shall meet the initial certification and quality assurance requirements for primary monitoring systems in § 75.20(c) and appendices A and B to this part, with one exception: relative accuracy test audits (RATAs) are required only on the normal range (for dual span units with add-on NO_x emission controls, the low range is considered normal). Each monitoring system designated as non-redundant backup shall meet the applicable quality assurance requirements in § 75.20(d).

(e) For dual span units with add-on NO_x emission controls (i.e., steam injection, water injection, SCR, or SNCR), the owner or operator may, as an alternative to maintaining and quality assuring a high monitor range, use a default high range value. If this option is chosen, the owner or operator shall report a default value of 200.0 percent of the MPC for each unit operating hour in which the full-scale of the low range NO_x analyzer is exceeded.

(f) The high span and range shall be determined in accordance with section 2.1.2.3 of this appendix. The low span value shall be 100.0 to 125.0 percent of the MEC, rounded up to the next highest multiple of 10 ppm (or 100 ppm, if appropriate). If more than one MEC value (as determined in section 2.1.2.2 of this appendix) is <20.0 percent of the MPC, the low span value shall be based upon whichever MEC value is closest to 20.0 percent of the MPC. The low range must be greater than or equal to the low span value, and the required calibration gases for the low range must be selected based on the low span value. For units with two NO_x spans, use the low range whenever NO_x concentrations are expected to be consistently <20.0 percent of the MPC, i.e., when the MEC of the fuel being combusted is <20.0 percent of the MPC. When the full-scale of the low range is exceeded, the high range shall be used to measure and record the NO_x concentrations; or, if applicable, the default high range value in paragraph (e) of this section shall be reported for each hour of the full-scale exceedance.

2.1.2.5 Adjustment of Span and Range

For each affected unit or common stack, the owner or operator shall make a quarterly evaluation of the MPC, MEC, span, and range values for each NO_x monitor and shall make any necessary span and range adjustments, with corresponding monitoring plan updates, as described in paragraphs (a) through (e), below. Span and range adjustments may be required as a result of changes in the fuel supply, changes in the manner of operation of the unit, installation or removal of emission controls, etc. In implementing the provisions in paragraphs (a) through (e), below, note that NO_x data recorded during short-term, non-representative operating conditions (e.g., a trial burn of a different type of fuel) shall be excluded from the analysis; however, if the high range is exceeded, 200.0 percent of the high range must still be reported as the hourly NO_x concentration for each hour of the full-scale exceedance, in accordance with paragraph (c)(1) of this section. The owner or operator shall document all such unrepresentative operating conditions in the quarterly report required under § 75.64 and shall indicate which data have been excluded from the quarterly span and range evaluation.

Make each required span or range adjustment no later than 45 days after the end of the quarter in which the need to adjust the span or range is identified, except that up to 90 days after the end of that quarter may be taken to implement a span adjustment if the calibration gases currently being used for daily calibration error tests and linearity checks are unsuitable for use with the new span value.

(a) No span or range adjustment is required if, during a calendar quarter, the hourly NO_x concentration exceeds the MPC but does not exceed the high span value. However, for missing data purposes, if any of the hourly NO_x concentrations exceed the current MPC by ≥ 5.0 percent, a new MPC equal to the highest quality assured hourly NO_x concentration recorded during the quarter must be defined in the monitoring plan. Update the monitoring plan to reflect the new MPC value.

(b) A span adjustment is required whenever any of the on-scale, quality assured, hourly NO_x concentrations exceed the high span value by ≥ 10.0 percent during a quarter but do not exceed the high range. Define a new MPC value (as applicable) equal to the highest quality assured on-scale NO_x concentration recorded during the quarter, and set the new span value according to section 2.1.2.3 or 2.1.2.4 of this appendix (as applicable), using the new MPC value. If the new span value exceeds the current full-scale range, adjust the range setting also. Update the monitoring plan to reflect the new MPC, the new span value, and (if applicable) the new full-scale range. Where separate ranges are used to measure emissions from different fuels or in different seasons (i.e. where seasonal controls are used), the low span and MEC shall be increased in the manner described in this paragraph if any on-scale hourly value exceeds the low span value by 10.0 percent or more.

(c) Whenever a full-scale range is exceeded during a quarter and the exceedance is not caused by a monitor out-of-control period, proceed as follows:

(1) For exceedances of the high range, report 200.0 percent of the current full-scale

range as the hourly NO_x concentration for each hour of the full-scale exceedance and make adjustments to the MPC, span, and range to prevent future full-scale exceedances.

(2) For units with two NO_x spans and ranges, if the low range is exceeded, no further action is required, provided that the high range is available and is not out-of-control or out-of-service for any reason. However, if the high range is not able to provide quality assured data at the time of the low range exceedance or at any time during the continuation of the exceedance, report the MPC as the NO_x concentration until the readings return to the low range or until the high range is able to provide quality assured data (unless the reason that the high-scale range is not able to provide quality assured data is because the high-scale range has been exceeded; if the high-scale range is exceeded follow the procedures in paragraph (c)(1) of this section).

(d) If the fuel supply, emission controls, or other process parameters change such that the maximum expected concentration or the maximum potential concentration changes significantly, adjust the NO_x pollutant concentration span(s) and (if necessary) monitor range(s) to assure the continued accuracy of the monitoring system. The owner or operator should evaluate whether any planned changes in operation of the unit or stack may affect the concentration of emissions being emitted from the unit and should plan any necessary span and ranges changes needed to account for these changes, so that they are made in as timely a manner as practicable to coordinate with the operational changes. Determine the adjusted span(s) using the procedures in section 2.1.2.3 or 2.1.2.4 of this appendix (as applicable). Select the full-scale range(s) of the instrument to be greater than or equal to the adjusted span value(s) and to be consistent with the guidelines of section 2.1 of this appendix.

(e) Whenever changes are made to the MPC, MEC, full-scale range, or span value of the NO_x monitor as described in paragraphs (a) through (d) of this section, record and report (as applicable) the new full-scale range setting, the new MPC or MEC, maximum potential NO_x emission rate, and the adjusted span value in an updated monitoring plan for the unit. The monitoring plan update shall be made in the quarter in which the changes become effective. In addition, record and report the adjusted span as part of the records for the daily calibration error test and linearity check required by appendix B to this part. Whenever the span value is adjusted, use calibration gas concentrations that meet the requirements of section 5.1 of this appendix, based on the adjusted span value. When a span adjustment is significant enough that the calibration gases currently being used for daily calibration error tests and linearity checks are unsuitable for use with the new span value, a linearity test using the new calibration gases must be performed and passed. Data from the monitor are considered invalid from the hour in which the span is adjusted until the required linearity check is passed in accordance with section 6.2 of this appendix.

2.1.3 CO_2 and O_2 Monitors

For an O_2 monitor (including O_2 monitors used to measure CO_2 emissions or percentage moisture), select a span value between 15.0 and 25.0 percent O_2. For a CO_2 monitor installed on a boiler, select a span value between 14.0 and 20.0 percent CO_2. For a CO_2 monitor installed on a combustion turbine, an alternative span value between 6.0 and 14.0 percent CO_2 may be used. An alternative O_2 span value below 15.0 percent O_2 may be used if an appropriate technical justification is included in the monitoring plan. Select the full-scale range of the instrument to be consistent with section 2.1 of this appendix and to be greater than or equal to the span value. Select the calibration gas concentrations for the daily calibration error tests and linearity checks in accordance with section 5.1 of this appendix, as percentages of the span value. For O_2 monitors with span values ≥21.0 percent O_2, purified instrument air containing 20.9 percent O_2 may be used as the high-level calibration material.

2.1.3.1 Maximum Potential Concentration of CO_2

For CO_2 pollutant concentration monitors, the maximum potential concentration shall be 14.0 percent CO_2 for boilers and 6.0 percent CO_2 for combustion turbines. Alternatively, the owner or operator may determine the MPC based on a minimum of 720 hours of quality assured historical CEM data representing the full operating load range of the unit(s).

2.1.3.2 Adjustment of Span and Range

Adjust the span value and range of a CO_2 or O_2 monitor according to the general guidelines in section 2.1.1.5 of this appendix (insofar as those provisions are applicable), replacing the term "SO_2" with "CO_2 or O_2." Set the new span and range in accordance with section 2.1.3 of this appendix and provide a rationale for the new span value in the monitoring plan.

2.1.4 Flow Monitors

Select the full-scale range of the flow monitor so that it is consistent with section 2.1 of this appendix and can accurately measure all potential volumetric flow rates at the flow monitor installation site.

2.1.4.1 Maximum Potential Velocity and Flow Rate

Make an initial determination of the maximum potential velocity (MPV) using Equation A–3a or A–3b, or determine the MPV (wet basis) from velocity traverse testing using Reference Method 2 (or its allowable alternatives) in appendix A to part 60 of this chapter. If using test values, use the highest average velocity (determined from the Method 2 traverses) measured at or near the maximum unit operating load. Express the MPV in units of wet standard feet per minute (fpm). For the purpose of providing substitute data during periods of missing flow rate data in accordance with §§ 75.31 and 75.33 and as required elsewhere in this part, calculate the maximum potential stack gas flow rate (MPF) in units of standard cubic feet per hour (scfh), as the product of the MPV (in units of wet, standard fpm) times 60, times the cross-sectional area of the stack or duct (in ft^2) at the flow monitor location.

2.1.4.2 Span Values and Range

Determine the span and range of the flow monitor as follows. Convert the MPV, as determined in section 2.1.4.1 of this appendix, to the same units of flow rate that are used for daily calibration error tests (e.g., scfh, kscfh, kacfm, or differential pressure (inches of water)). Next, determine the "calibration span value" by multiplying the MPV (converted to equivalent daily calibration error units) by a factor no less than 1.00 and no greater than 1.25, and rounding up the result to at least 2 significant figures. For calibration span values in inches of water, retain at least 2 decimal places. Select appropriate reference signals for the daily calibration error tests as percentages of the calibration span value. Finally, calculate the "flow rate span value" (in scfh) as the product of the MPF, as determined in section 2.1.4.1 of this appendix, times the same factor (between 1.00 and 1.25) that was used to calculate the calibration span value. Round off the flow rate span value to the nearest 1000 scfh. Select the full-scale range of the flow monitor so that it is greater than or equal to the span value and is consistent with section 2.1 of this appendix. Include in the monitoring plan for the unit: calculations of the MPV, MPF, calibration span value, flow rate span value, and full-scale range (expressed both in units of scfh and, if different, in the units of calibration).

$$MPV = \left(\frac{F_d H_f}{A}\right)\left(\frac{20.9}{20.9 - \%O_{2d}}\right)\left(\frac{100}{100 - \%H_2O}\right)$$

(Eq. A–3a)

or

$$MPV = \left(\frac{F_c H_f}{A}\right)\left(\frac{100}{\%CO_{2d}}\right)\left(\frac{100}{100 - \%H_2O}\right)$$

(Eq. A–3b)

Where:

MPV=maximum potential velocity (fpm, standard wet basis),

F_d=dry-basis F factor (dscf/mmBtu) from Table 1, Appendix F of this part,

F_c=carbon-based F factor (scfCO_2/mmBtu) from Table 1, Appendix F this part,

HF=maximum heat input (mmBtu/minute) for all units, combined, exhausting to the stack or duct where the flow monitor is located,

A=inside cross sectional area (ft2) of the flue at the flow monitor location,

$\%O_{2d}$=maximum oxygen concentration, percent dry basis, under normal operating conditions,

$\%CO_{2d}$=minimum carbon dioxide concentration, percent dry basis, under normal operating conditions,

$\%H_2O$=maximum percent flue gas moisture content under normal operating conditions.

2.1.4.3 Adjustment of Span and Range

For each affected unit or common stack, the owner or operator shall make a quarterly evaluation of the MPV, MPF, span, and range values for each flow rate monitor and shall make any necessary span and range adjustments with corresponding monitoring plan updates, as described in paragraphs (a) through (e), below. Span and range adjustments may be required as a result of changes in the fuel supply, changes in the stack or ductwork configuration, changes in the manner of operation of the unit, installation or removal of emission controls, etc. In implementing the provisions in paragraphs (a) through (e), below, note that flow rate data recorded during short-term, non-representative operating conditions (e.g., a trial burn of a different type of fuel) shall be excluded from the analysis; however, if the high range is exceeded, 200.0 percent of the full-scale range must still be reported as the hourly flow rate for each hour of the full-scale exceedance, in accordance with paragraph (c) of this section. The owner or operator shall document all such unrepresentative operating conditions in the quarterly report required under § 75.64 and shall indicate which data have been excluded from the quarterly span and range evaluation. Make each required span or range adjustment no later than 45 days after the end of the quarter in which the need to adjust the span or range is identified.

(a) No span or range adjustment is required if, during a calendar quarter, the hourly flow rate exceeds the MPF but does not exceed the flow rate span value. However, for missing data purposes, if any of the hourly flow rates exceed the current MPF by ≥5.0 percent, a new MPF equal to the highest quality assured hourly flow rate recorded during the quarter must be defined in the monitoring plan. Update the monitoring plan to reflect the new MPF value.

(b) A span adjustment is required whenever any of the on-scale, quality assured, hourly flow rates exceed the flow rate span value by ≥10.0 percent during a quarter. Define a new MPF equal to the highest on-scale flow rate recorded during the quarter, and set the new flow rate span value according to section 2.1.4.2 of this appendix. Then, calculate the new calibration span value by converting the new flow rate span value from units of scfh to units of daily calibration. If the new flow rate span value exceeds the current full-scale range, adjust the range setting also. Update the monitoring plan to reflect the new span and (if applicable) range values.

(c) Whenever the full-scale range is exceeded during a quarter, provided that the exceedance is not caused by a monitor out-of-control period, report 200.0 percent of the current full-scale range as the hourly flow rate for each hour of the full-scale exceedance. If the range is exceeded, make adjustments to the MPF, flow rate span, and range to prevent future full-scale exceedances. Calculate the new calibration span value by converting the new flow rate span value from units of scfh to units of daily calibration. A calibration error test must be performed and passed to validate data on the new range.

(d) If the fuel supply, stack or ductwork configuration, operating parameters, or other conditions change such that the maximum potential flow rate changes significantly, adjust the span and range to assure the continued accuracy of the flow monitor. The owner or operator should evaluate whether any planned changes in operation of the unit may affect the flow of the unit or stack and should plan any necessary span and range changes needed to account for these changes, so that they are made in as timely a manner as practicable to coordinate with the operational changes. Calculate the adjusted calibration span and flow rate span values using the procedures in section 2.1.4.2 of this appendix.

(e) Whenever changes are made to the MPV, MPF, full-scale range, or span value of the flow monitor, as described in paragraphs (a) through (d) of this section, record and report (as applicable) the new full-scale range setting, calculations of the flow rate span value, calibration span value, MPV, and MPF in an updated monitoring plan for the unit. The monitoring plan update shall be made in the quarter in which the changes become effective. Record and report the adjusted calibration span and reference values as parts of the records for the calibration error test required by appendix B to this part. Whenever the calibration span value is adjusted, use reference values for the calibration error test that meet the requirements of section 2.2.2.1 of this appendix, based on the most recent adjusted calibration span value. Perform a calibration error test according to section 2.1.1 of appendix B to this part whenever making a change to the flow monitor span or range, unless the range change also triggers a recertification under § 75.20(b).

2.1.5 Moisture Sensors

The span value of a continuous moisture sensor shall be equal to the full-scale range of the instrument. The range shall be selected in accordance with the requirements of section 2.1 of this appendix.

* * * * *

54. Section 3 of appendix A to part 75 is amended by revising section 3.1 and the last sentence in the first paragraph of section 3.2; by adding a new section 3.3.6; and by revising section 3.5, to read as follows:

3. Performance Specifications

3.1 Calibration Error

The initial calibration error of SO_2 and NO_x pollutant concentration monitors shall not deviate from the reference value of either the zero or upscale calibration gas by more than 2.5 percent of the span of the instrument, as calculated using Equation A–5 of this appendix. Alternatively, where the span value is less than 200 ppm, calibration error test results are also acceptable if the absolute value of the difference between the monitor response value and the reference value, |R–A| in Equation A–5 of this appendix, is ≥5 ppm. The calibration error of CO_2 or O_2 monitors (including O_2 monitors used to measure CO_2 emissions or percent moisture) shall not deviate from the reference value of the zero or upscale calibration gas by >0.5 percent O_2 or CO_2, as calculated using the term |R–A| in the numerator of Equation A–5 of this appendix. The calibration error of flow monitors shall not exceed 3.0 percent of the calibration span value of the instrument, as calculated using Equation A–6 of this appendix. For differential pressure-type flow monitors, the calibration error test results are also acceptable if |R—A|, the absolute value of the difference between the monitor response and the reference value in Equation A–6, does not exceed 0.01 inches of water. The calibration error of a continuous moisture sensor shall not exceed 3.0 percent of the span value, as calculated using Equation A–5 of this appendix.

3.2 Linearity Check

* * * For CO_2 or O_2 monitors (including O_2 monitors used to measure CO_2 emissions or percent moisture):

* * * * *

3.3 * * *

3.3.6 Relative Accuracy for Moisture Monitoring Systems

The relative accuracy of a moisture monitoring system shall not exceed 10.0 percent. The relative accuracy test results are also acceptable if the mean difference of the reference method measurements (in percent H_2O) and the corresponding moisture monitoring system measurements (in percent H_2O) are within ±1.0 percent H_2O.

* * * * *

3.5 Cycle Time

The cycle time for pollutant concentration monitors, oxygen monitors used to determine percent moisture, and any other continuous emission monitoring system(s) required to perform a cycle time test shall not exceed 15 minutes.

55. Section 4 of appendix A to part 75 is amended by revising the introductory paragraph and paragraph (6) to read as follows:

4. Data Acquisition and Handling Systems

Automated data acquisition and handling systems shall: (1) Read and record the full range of pollutant concentrations and volumetric flow from zero through span; and (2) provide a continuous, permanent record of all measurements and required information as an ASCII flat file capable of transmission both by direct computer-to-computer electronic transfer via modem and EPA-provided software and by an IBM-compatible personal computer diskette.

* * * * *

(6) Provide a continuous, permanent record of all measurements and required information as an ASCII flat file capable of transmission both by direct computer-to-computer electronic transfer via modem and EPA-provided software and by an IBM-compatible personal computer diskette.

56. Section 5 of appendix A to part 75 is amended by revising sections 5.1, 5.2.1, 5.2.2, 5.2.3, and 5.2.4 to read as follows:

5. Calibration Gas

5.1 Reference Gases

For the purposes of part 75, calibration gases include the following:

5.1.1 Standard Reference Materials (SRM)

These calibration gases may be obtained from the National Institute of Standards and Technology (NIST) at the following address: Quince Orchard and Cloppers Road, Gaithersburg, MD 20899–0001.

5.1.2 SRM-Equivalent Compressed Gas Primary Reference Material (PRM)

Contact the Gas Metrology Team, Analytical Chemistry Division, Chemical Science and Technology Laboratory of NIST, at the above address, for a list of vendors and cylinder gases.

5.1.3 NIST Traceable Reference Materials

Contact the Gas Metrology Team, Analytical Chemistry Division, Chemical Science and Technology Laboratory of NIST, at the above address, for a list of vendors and cylinder gases.

5.1.4 EPA Protocol Gases

EPA Protocol gases must be vendor-certified to be within 2.0 percent of the concentration specified on the cylinder label (tag value), using the uncertainty calculation procedure in section 2.1.8 of the "EPA Traceability Protocol for Assay and Certification of Gaseous Calibration Standards," September 1997, EPA–600/R–97/121.

A copy of EPA–600/R–97/121 is available from the National Technical Information Service, 5285 Port Royal Road, Springfield, VA 703–487–4650 and from the Office of Research and Development, (MD–77B), U.S. Environmental Protection Agency, Research Triangle Park, NC 27711, Attn: Berne Bennett, 919–541–2366.

5.1.5 Research Gas Mixtures

Research gas mixtures must be vendor-certified to be within 2.0 percent of the concentration specified on the cylinder label (tag value), using the uncertainty calculation procedure in section 2.1.8 of the "EPA Traceability Protocol for Assay and Certification of Gaseous Calibration Standards," September 1997, EPA–600/R–97/121. Inquiries about the RGM program should be directed to: National Institute of Standards and Technology, Analytical Chemistry Division, Chemical Science and Technology Laboratory, B–324 Chemistry, Gaithersburg, MD 20899.

5.1.6 Zero Air Material

Zero air material is defined in § 72.2 of this chapter.

5.1.7 NIST/EPA-Approved Certified Reference Materials

Existing certified reference materials (CRMs) that are still within their certification period may be used as calibration gas.

5.1.8 Gas Manufacturer's Intermediate Standards

Gas manufacturer's intermediate standards is defined in § 72.2 of this chapter.

* * * * *

5.2.1 Zero-level Concentration

0.0 to 20.0 percent of span, including span for high-scale or both low-and high-scale for SO_2, NO_x, CO_2, and O_2 monitors, as appropriate.

5.2.2 Low-level Concentration

20.0 to 30.0 percent of span, including span for high-scale or both low-and high-scale for SO_2, NO_x, CO_2, and O_2 monitors, as appropriate.

5.2.3 Mid-level Concentration

50.0 to 60.0 percent of span, including span for high-scale or both low-and high-scale for SO_2, NO_x, CO_2, and O_2 monitors, as appropriate.

5.2.4 High-level Concentration

80.0 to 100.0 percent of span, including span for high-scale or both low-and high-scale for SO_2, NO_x, CO_2, and O_2 monitors, as appropriate.

57. Section 6 of appendix A to part 75 is amended by revising sections 6.2, 6.3.1, 6.5, 6.5.1, 6.5.2, 6.5.6, 6.5.7, and 6.5.9 to read as follows:

6. Certification Tests and Procedures

* * * * *

6.2 Linearity Check

For the purposes of initial certification, recertification, and quality assurance, check the linearity of each SO_2, NO_x, CO_2, and O_2 monitor while the unit, or group of units for a common stack, is combusting fuel at conditions of typical stack temperature and pressure; it is not necessary for the unit to be generating electricity during this test. Notwithstanding these requirements, if the SO_2 or NO_x span value for a particular monitor range is ≤30 ppm, that range is exempted from the linearity test requirements of this part.

Challenge each monitor with calibration gas, as defined in section 5.1 of this appendix, at the low-, mid-, and high-range concentrations specified in section 5.2 of this appendix. For units using emission controls and other units using both a high and a low span, perform a linearity check on both the low-and high-scales for initial certification. For on-going quality assurance of the CEMS, perform linearity tests on the range(s) and at the frequency specified in section 2.2.1 of appendix B to this part.

Introduce the calibration gas at the gas injection port, as specified in section 2.2.1 of this appendix. Operate each monitor at its normal operating temperature and conditions. For extractive and dilution type monitors, pass the calibration gas through all filters, scrubbers, conditioners, and other monitor components used during normal sampling and through as much of the sampling probe as is practical. For in-situ type monitors, perform calibration checking all active electronic and optical components, including the transmitter, receiver, and analyzer. Challenge the monitor three times with each reference gas (see example data sheet in Figure 1). Do not use the same gas twice in succession. The linearity check must be done hands-off, as follows. No adjustments other than the calibration adjustments described in section 2.1.3 of appendix B to this part are permitted prior to or during the linearity test period. To the extent practicable, the duration of each linearity test, from the hour of the first injection to the hour of the last injection, shall not exceed 24 unit operating hours. Record the monitor response from the data acquisition and handling system. For each concentration, use the average of the responses to determine the error in linearity using Equation A–4 in this appendix.

Linearity checks are acceptable for monitor or monitoring system certification, recertification, or quality assurance if none of the test results exceed the applicable performance specifications in section 3.2 of this appendix.

The status of emission data from a CEMS prior to and during a linearity test period shall be determined as follows:

(a) For the initial certification of a CEMS, data from the monitoring system are considered invalid until all certification tests, including the linearity test, have been successfully completed, unless the data validation procedures in § 75.20(b)(3) are used. When the procedures in § 75.20(b)(3) are followed, substitute the words "initial certification" for "recertification," and complete all of the initial certification tests by the applicable deadline in § 75.4, rather than within the time periods specified in § 75.20(b)(3)(iv) for the individual tests.

(b) For the routine quality assurance linearity checks required by section 2.2.1 of appendix B to this part, use the data validation procedures in section 2.2.3 of appendix B to this part.

(c) When a linearity test is required as a diagnostic test or for recertification, use the data validation procedures in § 75.20(b)(3).

(d) For linearity tests of non-redundant backup monitoring systems, use the data validation procedures in § 75.20(d)(2)(iii).

(e) For linearity tests performed during a grace period and after the expiration of a grace period, use the data validation procedures in sections 2.2.3 and 2.2.4, respectively, of appendix B to this part.

VOL 63 ISS 98 MAY 21 1998 UMI

6.3 * * *

6.3.1 Pollutant Concentration Monitor and CO_2 or O_2 Monitor 7-day Calibration Error Test

For the purposes of initial certification and recertification, measure the calibration error of each pollutant concentration monitor and CO_2 or O_2 monitor while the unit is combusting fuel at conditions of typical temperature and pressure (but not necessarily generating electricity) once each day for 7 consecutive operating days according to the following procedures. (In the event that extended unit outages occur after the commencement of the test, the 7 consecutive unit operating days need not be 7 consecutive calendar days.) Units using dual span monitors must perform the calibration error test on both high-and low-scales of the pollutant concentration monitor. The daily calibration error test procedures in this section shall also be used to perform the daily assessments and additional calibration error tests required under sections 2.1.1 and 2.1.3 of appendix B to this part.

Do not make manual or automatic adjustments to the monitor settings until after taking measurements at both zero and high concentration levels for that day during the 7-day test. If automatic adjustments are made following both injections, conduct the calibration error test such that the magnitude of the adjustments can be determined and recorded. Record and report test results for each day using the unadjusted concentration measured in the calibration error test prior to making any manual or automatic adjustments (i.e., resetting the calibration).

The calibration error tests should be approximately 24 hours apart, (unless the 7-day test is performed over non-consecutive days). Perform calibration error tests at both the zero-level concentration and either the mid-level or high-level concentration, as specified in section 5.2 of this appendix. In addition, repeat the procedure for SO_2 and NO_X pollutant concentration monitors using the low-scale for units equipped with emission controls or other units with dual span monitors. Use only calibration gas, as specified in section 5.1 of this appendix.

Introduce the calibration gas at the gas injection port, as specified in section 2.2.1 of this appendix. Operate each monitor in its normal sampling mode. For extractive and dilution type monitors, pass the calibration gas through all filters, scrubbers, conditioners, and other monitor components used during normal sampling and through as much of the sampling probe as is practical. For in-situ type monitors, perform calibration, checking all active electronic and optical components, including the transmitter, receiver, and analyzer. Challenge the pollutant concentration monitors and CO_2 or O_2 monitors once with each calibration gas. Record the monitor response from the data acquisition and handling system. Using Equation A–5 of this appendix, determine the calibration error at each concentration once each day (at approximately 24-hour intervals) for 7 consecutive days according to the procedures given in this section.

Calibration error tests are acceptable for monitor or monitoring system certification if none of these daily calibration error test results exceed the applicable performance specifications in section 3.1 of this appendix.

The status of emission data from a CEMS during a 7-day calibration error test period shall be determined as follows:

(a) For the initial certification of a CEMS, data from the monitoring system are considered invalid until all certification tests, including the 7-day calibration error test, have been successfully completed, unless the data validation procedures in § 75.20(b)(3) are used. When the procedures in § 75.20(b)(3) are followed, substitute the words "initial certification" for "recertification," and complete all of the initial certification tests by the applicable deadline in § 75.4, rather than within the time periods specified in § 75.20(b)(3)(iv) for the individual tests.

(b) When a 7-day calibration error test is required as a diagnostic test or for recertification, use the data validation procedures in § 75.20(b)(3).

* * * * *

6.5 Relative Accuracy and Bias Tests

For the purposes of initial certification, recertification, and quality assurance, perform the required relative accuracy test audits as follows for each CO_2 and SO_2 pollutant concentration monitor, each flow monitor, each NO_X continuous emission monitoring system, each O_2 monitor used to calculate heat input or CO_2 concentration, each moisture monitoring system, and each SO_2-diluent continuous emission monitoring system (lb/mmBtu) used by units with a qualifying Phase I technology for the period during which the units are required to monitor SO_2 emission removal efficiency, from January 1, 1997 through December 31, 1999:

(a) All relative accuracy test audits shall be done "hands-off", as follows:

(1) No adjustments, linearizations, or reprogramming of the CEMS, other than the calibration adjustments described in section 2.1.3 of appendix B to this part, are permitted prior to and during the RATA test period.

(2) For 2-level and 3-level flow monitor audits, no re-linearization of the monitor (i.e., changing of the polynomial coefficients) is permitted between load levels.

(b) Except as provided in § 75.21(a)(5), perform each RATA while the unit (or units, if more than one unit exhausts into the flue) is combusting the fuel that is normal for that unit (for some units, more than one type of fuel may be considered normal; e.g., a unit that combusts gas or oil on a seasonal basis). When relative accuracy test audits are performed on continuous emission monitoring systems or component(s) on bypass stacks/ducts, use the fuel normally combusted by the unit (or units, if more than one unit exhausts into the flue) when emissions exhaust through the bypass stack/ducts.

(c) Perform each RATA at the load level(s) specified in section 6.5.1 or 6.5.2 of this appendix or in section 2.3.1.3 of appendix B to this part, as applicable.

(d) For monitoring systems with dual ranges, perform the relative accuracy test on the range normally used for measuring emissions. For units with add-on SO_2 or NO_X controls or for units that need a dual range to record high concentration "spikes" during startup conditions, the low range is considered normal. However, for some dual span units (e.g., for units that switch fuels and have both a high and low span value), either of the two measurement ranges may be considered normal; in such cases, perform the RATA on the range that is in use at the time of the scheduled test.

(e) Record monitor or monitoring system output from the data acquisition and handling system.

(f) For initial certification and recertification RATAs and for the quality assurance RATAs required by § 75.20(d) or by section 2.3.1 of appendix B to this part, complete each single-load relative accuracy test audit within a period of 168 consecutive unit operating hours. For 2-level and 3-level flow monitor RATAs, complete all of the RATAs at all levels, to the extent practicable, within a period of 168 consecutive unit operating hours; however, if this is not possible, up to 720 consecutive unit operating hours may be taken to complete a multiple-load flow RATA.

(g) The status of emission data from the CEMS prior to and during the RATA test period shall be determined as follows:

(1) For the initial certification of a CEMS, data from the monitoring system are considered invalid until all certification tests, including the RATA, have been successfully completed, unless the data validation procedures in § 75.20(b)(3) are used. When the procedures in § 75.20(b)(3) are followed, substitute the words "initial certification" for "recertification," and complete all of the initial certification tests by the applicable deadline in § 75.4, rather than within the time periods specified in § 75.20(b)(3)(iv) for the individual tests.

(2) For the routine quality assurance RATAs required by section 2.3.1 of appendix B to this part, use the data validation procedures in section 2.3.2 of appendix B to this part.

(3) For recertification RATAs, use the data validation procedures in § 75.20(b)(3).

(4) For quality assurance RATAs of non-redundant backup monitoring systems, use the data validation procedures in §§ 75.20(d)(2)(v) and (vi).

(5) For RATAs performed during and after the expiration of a grace period, use the data validation procedures in sections 2.3.2 and 2.3.3, respectively, of appendix B to this part.

(h) For each SO_2 or CO_2 pollutant concentration monitor, each flow monitor, and each NO_X continuous emission monitoring system, calculate the relative accuracy, in accordance with section 7.4 of this appendix. In addition (except for CO_2 monitors), test for bias and determine the appropriate bias adjustment factor, in accordance with sections 7.6.4 and 7.6.5 of this appendix, using the data from the relative accuracy test audits.

6.5.1 Gas Monitoring System RATAs (Special Considerations)

(a) For the purposes of initial certification, recertification, and quality assurance, perform the required relative accuracy test audits for each SO_2 or CO_2 pollutant

concentration monitor, each O_2 monitor, each NO_x continuous emission monitoring system, and each SO_2-diluent continuous emission monitoring system (lb/mmBtu) used by units with a qualifying Phase I technology for the period during which the units are required to monitor SO_2 emission removal efficiency, from January 1, 1997 through December 31, 1999, at the normal load level for the unit (or combined units, if common stack), as defined in section 6.5.2.1 of this appendix. If two load levels have been designated as normal, the RATAs may be done at either load level.

(b) For the initial certification of a gas monitoring system and for recertifications in which, in addition to a RATA, one or more other tests are required (i.e., a linearity test, cycle time test, or 7-day calibration error test), EPA recommends that the RATA not be commenced until the other required tests of the CEMS have been passed.

6.5.2 Flow Monitor RATAs (Special Considerations)

(a) Except for flow monitors on bypass stacks/ducts and peaking units, perform relative accuracy test audits for the initial certification of each flow monitor at three different exhaust gas velocities (low, mid, and high), corresponding to three different load levels within the range of operation, as defined in section 6.5.2.1 of this appendix. For a common stack/duct, the three different exhaust gas velocities may be obtained from frequently used unit/load combinations for the units exhausting to the common stack. Select the three exhaust gas velocities such that the audit points at adjacent load levels (i.e., low and mid or mid and high), in megawatts (or in thousands of lb/hr of steam production), are separated by no less than 25.0 percent of the range of operation, as defined in section 6.5.2.1 of this appendix.

(b) For flow monitors on bypass stacks/ducts and peaking units, the flow monitor relative accuracy test audits for initial certification and recertification shall be single-load tests, performed at the normal load, as defined in section 6.5.2.1 of this appendix.

(c) The semiannual and annual quality assurance flow monitor RATAs required under appendix B to this part shall be done at the load level(s) specified in section 2.3.1.3 of appendix B.

(d) Flow monitor recertification RATAs shall be done at three load level(s), unless otherwise specified in paragraph (b) of this section or unless otherwise approved by the Administrator.

6.5.2.1 Range of Operation and RATA Load Levels (Definitions)

The owner or operator shall determine the upper and lower boundaries of the "range of operation" for each unit (or combination of units, for common-stack configurations) that uses CEMS to account for its emissions. The lower boundary of the range of operation of a unit shall be the minimum safe, stable load (or, for common-stacks, the lowest of the minimum safe, stable loads for any of the units discharging through the stack). The upper boundary of the range of operation of a unit shall be the maximum sustainable load. The "maximum sustainable load" is the higher of: (1) the nameplate or rated capacity of the unit, less any physical or regulatory limitations or other deratings, or (2) the highest sustainable unit load, based on at least four quarters of representative historical operating data. For common-stacks, the maximum sustainable load is the sum of all of the maximum sustainable loads of the individual units discharging through the stack, unless this load is unattainable in practice, in which case use the highest sustainable combined load for the units that discharge through the stack, based on at least four quarters of representative historical operating data. The load values for the unit(s) shall be expressed either in units of megawatts or thousands of lb/hr of steam load.

The operating levels for relative accuracy test audits shall, except for peaking units, be defined as follows: (1) the low operating level shall be the first 30.0 percent of the range of operation; (2) the mid operating level shall be the middle portion (30.0 to 60.0 percent) of the range of operation; and (3) the high operating level shall be the upper end (60.0 to 100.0 percent) of the range of operation. For example, if the upper and lower boundaries of the range of operation are 100 and 1100 megawatts, respectively, then the low, mid, and high operating levels would be 100 to 400 megawatts, 400 to 700 megawatts, and 700 to 1100 megawatts, respectively.

The provisions of this paragraph become effective January 1, 2000. This determination shall be made just prior to conducting the quality assurance RATAs required under section 2.3 of appendix B of this part (in the same calendar quarter in which the RATAs are conducted) but not required more frequently than once a year, if the RATA(s) are conducted semiannually. The owner or operator shall determine, for each unit or common stack (except for peaking units) the load level (low, mid or high) that is the most frequently used. In addition, the owner or operator shall determine which load level is the second most frequently-used. To make the determinations, the owner or operator shall construct a historical load frequency distribution (e.g., histogram), depicting the relative number of operating hours at each of the three load levels, low, mid and high. The frequency distribution shall be based upon all available data from the four most recent QA operating quarters, as defined in section 2.3.1.1 of appendix B of this part. The owner or operator shall use the frequency distribution to determine, to the nearest 0.1 percent, the percentage of the time that each load level (low, mid, high) has been used in the previous four QA operating quarters. A summary of the data used for these determinations shall be kept on-site in a format suitable for inspection and the results of the determinations shall be included in the electronic quarterly report under § 75.64.

Except for peaking units, the owner or operator shall designate the most frequently used load level as the normal load level for each unit (or combination of units, for common stacks). The owner or operator may also, if appropriate, designate the second most frequently used load level as an additional normal load level for the unit or stack. For peaking units, the entire operating load range shall be considered normal.

Beginning on January 1, 2000, the owner or operator shall report the upper and lower boundaries of the range of operation for each unit (or combination of units, for common stacks), in units of megawatts or thousands of lb/hr of steam production, in the electronic quarterly report required under § 75.64. Except for peaking units, the owner or operator shall also indicate in the electronic quarterly report: (1) the two load levels (low, mid, or high) that are the most frequently used, as determined under this section; (2) the relative (percent) historical usage of each load level, as determined under this section; and (3) the load level (or levels) designated as normal under this section.

6.5.2.2 Multi-Load Flow RATA Results

For each multi-load flow RATA, calculate the flow monitor relative accuracy at each operating level. If a flow monitor relative accuracy test is failed or aborted due to a problem with the monitor on any level of a 2-level (or 3-level) relative accuracy test audit, the RATA must be repeated at that load level. However, the entire 2-level (or 3-level) relative accuracy test audit does not have to be repeated unless the flow monitor polynomial coefficients are changed, in which case a 3-level RATA is required.

* * * * *

6.5.6 Reference Method Traverse Point Selection

Select traverse points that ensure acquisition of representative samples of pollutant and diluent concentrations, moisture content, temperature, and flue gas flow rate over the flue cross section. To achieve this, the reference method traverse points shall meet the requirements of section 3.2 of Performance Specification 2 ("PS No. 2") in appendix B to part 60 of this chapter (for SO_2, NO_x, and moisture monitoring system RATAs), Performance Specification 3 in appendix B to part 60 of this chapter (for O_2 and CO_2 monitor RATAs), Method 1 (or 1A) (for volumetric flow rate monitor RATAs), Method 3 (for molecular weight), and Method 4 (for moisture determination) in appendix A to part 60 of this chapter.

The following alternative reference method traverse point locations are permitted for moisture and gas monitor RATAs:

(a) For all moisture determinations, a single reference method point, located at least 1.0 meter from the stack wall, may be used.

(b) For gas monitoring system RATAs, the owner or operator may use any of the following options:

(1) At any location (including locations where stratification is expected), use a minimum of six traverse points along a diameter, in the direction of any expected stratification. The points shall be located in accordance with Method 1 in appendix A to part 60 of this chapter.

(2) At locations where section 3.2 of PS No. 2 allows the use of a short reference method measurement line (with three points located at 0.4, 1.0, and 2.0 meters from the stack wall), the owner or operator may use an alternative 3-point measurement line, locating the three points at 4.4, 14.6, and 29.6 percent of the way across the stack, in

accordance with Method 1 in appendix A to part 60 of this chapter.

(3) At locations where stratification is likely to occur (i.e., following a wet scrubber or when dissimilar gas streams are combined), the short measurement line from section 3.2 of PS No. 2 (or the alternative line described in paragraph (c) of this section) may be used in lieu of the prescribed "long" measurement line in section 3.2 of PS No. 2, provided that the 12-point stratification test described in section 6.5.6.1 of this appendix is performed and passed one time at the location (according to the acceptance criteria of section 6.5.6.3(a) of this appendix) and provided that either the 12-point stratification test or the alternative (abbreviated) stratification test in section 6.5.6.2 of this appendix is performed and passed prior to each subsequent RATA at the location (according to the acceptance criteria of section 6.5.6.3(a) of this appendix).

(4) A single reference method measurement point, located no less than 1.0 meter from the stack wall, may be used at any sampling location if the 12-point stratification test described in section 6.5.6.1 of this appendix is performed and passed one time at the location (according to the acceptance criteria of section 6.5.6.3(b) of this appendix) and provided that either the 12-point stratification test or the alternative (abbreviated) stratification test in section 6.5.6.2 of this appendix is performed and passed prior to each subsequent RATA at the location (according to the acceptance criteria of section 6.5.6.3(b) of this appendix).

6.5.6.1 Stratification Test

(a) With the unit(s) operating under steady-state conditions at normal load, as defined in section 6.5.2.1 of this appendix, use a traversing gas sampling probe to measure the pollutant (SO_2 or NO_X) and diluent (CO_2 or O_2) concentrations at a minimum of twelve (12) points, located according to Method 1 in appendix A to part 60 of this chapter.

(b) Use Methods 6C, 7E, and 3A in appendix A to part 60 of this chapter to make the measurements. Data from the reference method analyzers must be quality assured by performing analyzer calibration error and system bias checks before the series of measurements and by conducting system bias and calibration drift checks after the measurements, in accordance with the procedures of Methods 6C, 7E, and 3A.

(c) Measure for a minimum of 2 minutes at each traverse point. To the extent practicable, complete the traverse within a 2-hour period.

(d) If the load has remained constant (± 3.0 percent) during the traverse and if the reference method analyzers have passed all of the required quality assurance checks, proceed with the data analysis.

(e) Calculate the average NO_X, SO_2, and CO_2 (or O_2) concentrations at each of the individual traverse points. Then, calculate the arithmetic average NO_X, SO_2, and CO_2 (or O_2) concentrations for all traverse points.

6.5.6.2 Alternative (Abbreviated) Stratification Test

(a) With the unit(s) operating under steady-state conditions at normal load, as defined in section 6.5.2.1 of this appendix, use a traversing gas sampling probe to measure the pollutant (SO_2 or NO_X) and diluent (CO_2 or O2) concentrations at three points. The points shall be located according to the specifications for the long measurement line in section 3.2 of PS No. 2 (i.e., locate the points 16.7 percent, 50.0 percent, and 83.3 percent of the way across the stack). Alternatively, the concentration measurements may be made at six traverse points along a diameter. The six points shall be located in accordance with Method 1 in appendix A to part 60 of this chapter.

(b) Use Methods 6C, 7E, and 3A in appendix A to part 60 of this chapter to make the measurements. Data from the reference method analyzers must be quality assured by performing analyzer calibration error and system bias checks before the series of measurements and by conducting system bias and calibration drift checks after the measurements, in accordance with the procedures of Methods 6C, 7E, and 3A.

(c) Measure for a minimum of 2 minutes at each traverse point. To the extent practicable, complete the traverse within a 1-hour period.

(d) If the load has remained constant (± 3.0 percent) during the traverse and if the reference method analyzers have passed all of the required quality assurance checks, proceed with the data analysis.

(e) Calculate the average NO_X, SO_2, and CO_2 (or O_2) concentrations at each of the individual traverse points. Then, calculate the arithmetic average NO_X, SO_2, and CO_2 (or O_2) concentrations for all traverse points.

6.5.6.3 Stratification Test Results and Acceptance Criteria

(a) For each pollutant or diluent gas, the short reference method measurement line described in section 3.2 of PS No. 2 may be used in lieu of the long measurement line prescribed in section 3.2 of PS No. 2, if the results of a stratification test, conducted in accordance with section 6.5.6.1 or 6.5.6.2 of this appendix (as appropriate; see section 6.5.6(b)(3) of this appendix), show that the concentration at each individual traverse point differs by no more than ±10.0 percent from the arithmetic average concentration for all traverse points. The results are also acceptable if the concentration at each individual traverse point differs by no more than ±5 ppm or ±0.5 percent CO_2 (or O_2) from the arithmetic average concentration for all traverse points.

(b) For each pollutant or diluent gas, a single reference method measurement point, located at least 1.0 meter from the stack wall may be used for that pollutant or diluent gas if the results of a stratification test, conducted in accordance with section 6.5.6.1 or 6.5.6.2 of this appendix (as appropriate; see section 6.5.6(b)(4) of this appendix), show that the concentration at each individual traverse point differs by no more than ±5.0 percent from the arithmetic average concentration for all traverse points. The results are also acceptable if the concentration at each individual traverse point differs by no more than ±3 ppm or ±0.3 percent CO_2 (or O_2) from the arithmetic average concentration for all traverse points.

(c) The owner or operator shall keep the results of all stratification tests on-site, suitable for inspection, as part of the supplementary RATA records required under § 75.56(a)(7) or § 75.59(a)(7), as applicable.

6.5.7 Sampling Strategy

Conduct the reference method tests so they will yield results representative of the pollutant concentration, emission rate, moisture, temperature, and flue gas flow rate from the unit and can be correlated with the pollutant concentration monitor, CO_2 or O_2 monitor, flow monitor, and SO_2 or NO_X continuous emission monitoring system measurements. The minimum acceptable time for a gas monitoring system RATA run or for a moisture monitoring system RATA run is 21 minutes. For each run of a gas monitoring system RATA, all necessary pollutant concentration measurements, diluent concentration measurements, and moisture measurements (if applicable) must, to the extent practicable, be made within a 60-minute period. For NO_X-diluent or SO_2-diluent monitoring system RATAs, the pollutant and diluent concentration measurements must be made simultaneously. For flow monitor RATAs, the minimum time per run shall be 5 minutes. Flow rate reference method measurements may be made either sequentially from port to port or simultaneously at two or more sample ports. The velocity measurement probe may be moved from traverse point to traverse point either manually or automatically. If, during a flow RATA, significant pulsations in the reference method readings are observed, be sure to allow enough measurement time at each traverse point to obtain an accurate average reading (e.g., a "sight-weighted" average from a manometer). A minimum of one set of auxiliary measurements for stack gas molecular weight determination (i.e., diluent gas data and moisture data) is required for every clock hour of a flow RATA or for every three test runs (whichever is less restrictive). Successive flow RATA runs may be performed without waiting in-between runs. If an O_2-diluent monitor is used as a CO_2 continuous emission monitoring system, perform a CO_2 system RATA (i.e., measure CO_2, rather than O_2, with the reference method). To properly correlate individual SO_2 or NO_X continuous emission monitoring system data (in lb/mmBtu) and volumetric flow rate data with the reference method data, annotate the beginning and end of each reference method test run (including the exact time of day) on the individual chart recorder(s) or other permanent recording device(s).

* * * * *

6.5.9 Number of Reference Method Tests

Perform a minimum of nine sets of paired monitor (or monitoring system) and reference method test data for every required (i.e., certification, recertification, semiannual, or annual) relative accuracy test audit. For 2-level and 3-level relative accuracy test audits of flow monitors, perform a minimum of nine sets at each of the operating levels.

Note: The tester may choose to perform more than nine sets of reference method tests. If this option is chosen, the tester may reject a maximum of three sets of the test results, as long as the total number of test

results used to determine the relative accuracy or bias is greater than or equal to nine. Report all data, including the rejected CEM data and corresponding reference method test results.

* * * * *

58. Section 7 of appendix A to part 75 is amended by revising the introductory text of section 7.2.1 and the term "R" following equation A–5 and by revising section 7.6.4; and by adding 4 paragraphs at the end of section 7.6.5 and a new section 7.7 to read as follows:

7. Calculations

* * * * *

7.2 * * *

7.2.1 Pollutant Concentration and Diluent Monitors

For each reference value, calculate the percentage calibration error based upon instrument span for daily calibration error tests using the following equation:

* * * * *

(Eq. A–5)

Where:

R=Reference value of zero or upscale (high-level or mid-level, as applicable) calibration gas introduced into the monitoring system.

* * * * *

7.6.4 Bias Test

For gas monitoring systems, if the mean difference, d, is greater than the absolute value of the confidence coefficient, |cc|, the monitor or monitoring system has failed to meet the bias test requirement. For flow monitor bias tests, if the mean difference, d, is greater than |cc| at any load level designated as normal under section 6.5.2.1 of this appendix, the monitor has failed to meet the bias test requirement.

7.6.5 * * *

For single-load RATAs of SO_2-and NO_X-diluent monitoring systems and for single-load flow RATAs required or allowed under section 6.5.2 of this appendix and sections 2.3.1.3(b) and 2.3.1.3(c) of appendix B to this part, the appropriate BAF is determined directly from the RATA results at normal load, using Equation A–12. Notwithstanding, when a NO_X or SO_2 CEMS installed on a low-emitting affected unit (i.e., average SO_2 concentration during the RATA <250 ppm or average NO_X emission rate <0.200 lb/mmBtu) meets the normal 10.0 percent relative accuracy specification (as calculated using Equation A–10) or the alternate relative accuracy specification in section 3.3 of this appendix for low-emitters, but fails the bias test, the BAF may be determined using Equation A–12, or a default BAF of 1.111 may be used.

For a 2-level flow RATA, if the RATA is passed but the bias test is failed at a load level designated as normal under section 6.5.2.1 of this appendix, use Equation A–12 to calculate the bias adjustment factor at both of the operating levels. For a 3-level flow monitor relative accuracy test audit, if the RATA is passed but the bias test is failed at a load level designated as normal under section 6.5.2.1 of this appendix, calculate bias adjustment factors only for the two most-frequently used load levels, as determined in section 6.5.2.1 of this appendix. For both 2-level and 3-level flow RATAs, whenever the bias test is failed at a load level designated as normal under section 6.5.2.1 of this appendix, apply the larger of the two calculated bias adjustment factors to subsequent flow monitor data using Equation A–11.

Each time a RATA is successfully completed and the appropriate bias adjustment factor has been determined, apply the BAF prospectively to all monitoring system data, beginning with the first clock hour following the hour in which the RATA was completed. For a 2-load flow RATA, the "hour in which the RATA was completed" refers to the hour in which the testing at both loads was completed; for a 3-load RATA, it refers to the hour in which the testing at all three loads was completed.

Use the bias-adjusted values in computing substitution values in the missing data procedure, as specified in subpart D of this part, and in reporting the concentration of SO_2, the flow rate, and the average NO_X emission rate, the unit heat input, and the calculated mass emissions of SO_2 and CO_2 during the quarter and calendar year, as specified in subpart G of this part.

7.7 Reference Flow-to-Load Ratio or Gross Heat Rate

The owner or operator shall determine R_{ref}, the reference value of the ratio of flow rate to unit load, each time that a successful flow RATA is performed at a load level designated as normal in section 6.5.2.1 of this appendix. The owner or operator shall report the current value of R_{ref} in the electronic quarterly report required under § 75.64 and shall also report the completion date of the associated RATA. If two load levels have been designated as normal under section 6.5.2.1 of this appendix, the owner or operator shall determine a separate R_{ref} value for each of the normal load levels. The requirements of this section shall become effective as of January 1, 2000. The reference flow-to-load ratio shall be calculated as follows:

$$R_{ref} = \frac{Q_{ref}}{L_{avg}} \times 10^{-5}$$

(Eq. A–13)

Where:

R_{ref}=Reference value of the flow-to-load ratio, from the most recent normal-load flow RATA, scfh/megawatts or scfh/1000 lb/hr of steam.

Q_{ref}=Average stack gas volumetric flow rate measured by the reference method during the normal-load RATA, scfh.

L_{avg}=Average unit load during the normal-load flow RATA, megawatts or 1000 lb/hr of steam.

In Equation A–13, for a common stack, L_{avg} shall be the sum of the operating loads of all units that discharge through the stack. For a unit that discharges its emissions through multiple stacks, Q_{ref} will be the sum of the total volumetric flow rates that discharge through all of the stacks. Round off the value of R_{ref} to 2 decimal places.

In addition to determining R_{ref} or as an alternative to determining R_{ref}, a reference value of the gross heat rate (GHR) may be determined. In order to use this option, quality assured diluent gas (CO_2 or O_2) must be available for each hour of the most recent normal-load flow RATA. The reference value of the GHR shall be determined as follows:

$$(GHR)_{ref} = \frac{(\text{Heat Input})_{avg}}{L_{avg}} \times 1000$$

(Eq. A–13a)

Where:

$(GHR)_{ref}$=Reference value of the gross heat rate at the time of the most recent normal-load flow RATA, Btu/kwh or Btu/lb steam load.

$(\text{Heat Input})_{avg}$=Average hourly heat input during the normal-load flow RATA, as determined using the applicable equation in appendix F to this part, mmBtu/hr.

L_{avg}=Average unit load during the normal-load flow RATA, megawatts or 1000 lb/hr of steam.

In the calculation of $(\text{Heat Input})_{avg}$, use Q_{ref}, the average volumetric flow rate measured by the reference method during the RATA, and use the average diluent gas concentration measured during the flow RATA.

* * * * *

59. Section 1 of appendix B to part 75 is revised as follows:

Appendix B to Part 75—Quality Assurance and Quality Control Procedures

1. Quality Assurance/Quality Control Program

Develop and implement a quality assurance/quality control (QA/QC) program for the continuous emission monitoring systems, excepted monitoring systems approved under appendix D, E, or I to this part, and alternative monitoring systems under subpart E of this part, and their components. At a minimum, include in each QA/QC program a written plan that describes in detail (or that refers to separate documents containing) complete, step-by-step procedures and operations for each of the following activities. Upon request from regulatory authorities, the source shall make all procedures, maintenance records, and ancillary supporting documentation from the manufacturer (e.g., software coefficients and troubleshooting diagrams) available for review during an audit.

1.1 Requirements for All Monitoring Systems

1.1.1 Preventive Maintenance

Keep a written record of procedures needed to maintain the monitoring system in proper operating condition and a schedule for those procedures. This shall, at a minimum, include procedures specified by the manufacturers of the equipment and, if applicable, additional or alternate procedures developed for the equipment.

1.1.2 Recordkeeping and Reporting

Keep a written record describing procedures that will be used to implement the recordkeeping and reporting requirements in subparts E, F, and G and appendices D, E, and I of this part, as applicable.

1.1.3 Maintenance Records

Keep a record of all testing, maintenance, or repair activities performed on any monitoring system or component in a location and format suitable for inspection. A maintenance log may be used for this purpose. The following records should be maintained: date, time, and description of any testing, adjustment, repair, replacement, or preventive maintenance action performed on any monitoring system and records of any corrective actions associated with a monitor's outage period. Additionally, any adjustment that recharacterizes a system's ability to record and report emissions data must be recorded (e.g., changing flow monitor polynomial coefficients, temperature and pressure coefficients, and dilution ratio settings), and a written explanation of the procedures used to make the adjustment(s) shall be kept.

1.2 Specific Requirements for Continuous Emissions Monitoring Systems

1.2.1 Calibration Error Test and Linearity Check Procedures

Keep a written record of the procedures used for daily calibration error tests and linearity checks (e.g., how gases are to be injected, adjustments of flow rates and pressure, introduction of reference values, length of time for injection of calibration gases, steps for obtaining calibration error or error in linearity, determination of interferences, and when calibration adjustments should be made). Identify any calibration error test and linearity check procedures specific to the continuous emission monitoring system that vary from the procedures in appendix A to this part.

1.2.2 Calibration and Linearity Adjustments

Explain how each component of the continuous emission monitoring system will be adjusted to provide correct responses to calibration gases, reference values, and/or indications of interference both initially and after repairs or corrective action. Identify equations, conversion factors, assumed moisture content, and other factors affecting calibration of each continuous emission monitoring system.

1.2.3 Relative Accuracy Test Audit Procedures

Keep a written record of procedures and details peculiar to the installed continuous emission monitoring systems that are to be used for relative accuracy test audits, such as sampling and analysis methods.

1.2.4 Parametric Monitoring for Units with Add-on Emission Controls

The owner or operator shall keep a written (or electronic) record including a list of operating parameters for the add-on SO_2 or NO_X emission controls, including parameters in § 75.55(b) or § 75.58(b), as applicable, and the range of each operating parameter that indicates the add-on emission controls are operating properly. The owner or operator shall keep a written (or electronic) record of the parametric monitoring data during each SO_2 or NO_X missing data period.

1.3 Specific Requirements for Excepted Systems Approved under Appendices D, E, and I

1.3.1 Fuel Flowmeter Accuracy Test Procedures

Keep a written record of the specific fuel flowmeter accuracy test procedures. These may include: standard methods or specifications listed in § 75.20(g) and section 2.1.5.1 of appendix D to this part and incorporated by reference under § 75.6; the procedures of sections 2.1.5.2 or 2.1.7 of appendix D to this part; or other methods approved by the Administrator through the petition process of § 75.66(c).

1.3.2 Transducer or Transmitter Accuracy Test Procedures

Keep a written record of the procedures for testing the accuracy of transducers or transmitters of an orifice-, nozzle-, or venturi-type fuel flowmeter under section 2.1.6 of appendix D to this part. These procedures should include a description of equipment used, steps in testing, and frequency of testing.

1.3.3 Fuel Flowmeter, Transducer, or Transmitter Calibration and Maintenance Records

Keep a record of adjustments, maintenance, or repairs performed on the fuel flowmeter monitoring system. Keep records of the data and results for fuel flowmeter accuracy tests and transducer accuracy tests, consistent with appendix D to this part.

1.3.4 Primary Element Inspection Procedures

Keep a written record of the standard operating procedures for inspection of the primary element (i.e., orifice, venturi, or nozzle) of an orifice-, venturi-, or nozzle-type fuel flowmeter. Examples of the types of information to be included are: what to examine on the primary element; how to identify if there is corrosion sufficient to affect the accuracy of the primary element; and what inspection tools (e.g., boroscope), if any, are used.

1.3.5 Fuel Sampling Method and Sample Retention

Keep a written record of the standard procedures used to perform fuel sampling, either by utility personnel or by fuel supply company personnel. These procedures should specify the portion of the ASTM method used, as incorporated by reference under § 75.6, or other methods approved by the Administrator through the petition process of § 75.66(c). These procedures should describe safeguards for ensuring the availability of an oil sample (e.g., procedure and location for splitting samples, procedure for maintain sample splits on site, and procedure for transmitting samples to an analytical laboratory). These procedures should identify the ASTM analytical methods used to analyze sulfur content, gross calorific value, and density, as incorporated by reference under § 75.6, or other methods approved by the Administrator through the petition process of § 75.66(c).

1.3.6 Appendix E Monitoring System Quality Assurance Information

Identify the unit manufacturer's recommended range of quality assurance- and quality control-related operating parameters. Keep records of these operating parameters for each hour of unit operation (i.e., fuel combustion). Keep a written record of the procedures used to perform NO_X emission rate testing. Keep a copy of all data and results from the initial and from the most recent NO_X emission rate testing, including the values of quality assurance parameters specified in section 2.3 of appendix E to this part.

1.3.7 Appendix I Additional Requirements

1.3.7.1 For all appendix I systems, the fuel sampling and analysis requirements in section 1.3.5 of this appendix shall be met; and, for the diluent monitor, the Calibration Error Test and Linearity Check Procedures requirements in sections 1.2.1 and 1.2.2 of this appendix shall be met.

1.3.7.2 For appendix I systems that are certified according to the system certification procedures, the Relative Accuracy Test Audit Procedures requirement in section 1.2.3 of this appendix shall be met for the annual or semiannual Method 2 flow RATA.

1.3.7.3 For appendix I systems that are certified according to the component-by-component certification procedures, the fuel flowmeter requirements applicable to the type of fuel flowmeter used in sections 1.3.1 through 1.3.5 of this appendix shall be met. The Relative Accuracy Test Audit Procedures requirement in section 1.2.3 of this appendix shall be met for the diluent monitor that is part of the appendix I system.

1.4 Requirements for Alternative Systems Approved under Subpart E

1.4.1 Daily Quality Assurance Tests

Explain how the daily assessment procedures specific to the alternative monitoring system are to be performed.

1.4.2 Daily Quality Assurance Test Adjustments

Explain how each component of the alternative monitoring system will be adjusted in response to the results of the daily assessments.

1.4.3 Relative Accuracy Test Audit Procedures

Keep a written record of procedures and details peculiar to the installed alternative monitoring system that are to be used for relative accuracy test audits, such as sampling and analysis methods.

60. Section 2 of appendix B to part 75 is amended by:

a. Revising sections 2.1.1, 2.1.3, 2.1.4, 2.2, 2.3; revising paragraph (1) of section 2.1.5.1;

b. Redesignating existing section 2.4 as section 2.5; and

c. Adding a new section 2.4, to read as follows:

2. Frequency of Testing

* * * * *

2.1 * * *

2.1.1 Calibration Error Test

Except as provided in section 2.1.1.2 of this appendix, perform the daily calibration error test of each gas monitoring system (including moisture monitoring systems consisting of wet- and dry-basis O_2 analyzers) according to the procedures in section 6.3.1 of appendix A to this part, and perform the daily calibration error test of each flow monitoring system according to the procedure in section 6.3.2 of appendix A to this part. For continuous moisture sensors, follow the manufacturer's recommended procedures for the daily calibration error check. Include the calibration procedures as part of the quality assurance program required under section 1 of this appendix.

* * * * *

2.1.3 Additional Calibration Error Tests and Calibration Adjustments

In addition to the daily calibration error tests required under section 2.1.1 of this appendix, a calibration error test of a CEMS shall be performed in accordance with section 2.1.1 of this appendix, as follows: (1) whenever a daily calibration error test is failed; (2) whenever a monitoring system is returned to service following repair or corrective maintenance that could affect the monitor's ability to accurately measure and record emissions data; and (3) after making certain calibration adjustments, as described in this section. In all cases, data from the CEMS are considered invalid until the required additional calibration error test has been successfully completed.

Routine calibration adjustments of a monitor are permitted after any successful calibration error test. These routine adjustments shall be made so as to bring the monitor readings as close as practicable to the known tag values of the calibration gases or to the actual value of the flow monitor reference signals. An additional calibration error test is required following routine calibration adjustments where the monitor's calibration has been physically adjusted (e.g., by turning a potentiometer) to verify that the adjustments have been made properly. An additional calibration error test is not required, however, if the routine calibration adjustments are made by means of a mathematical algorithm programmed into the data acquisition and handling system. The EPA recommends that routine calibration adjustments be made, at a minimum, whenever the daily calibration error exceeds the limits of the applicable performance specification in appendix A to this part for the pollutant concentration monitor, CO_2 or O_2 monitor, or flow monitor.

Additional (non-routine) calibration adjustments of a monitor are permitted, provided that an appropriate technical justification is included in the quality control program required under section 1 of this appendix. The allowable non-routine adjustments are as follows. The owner or operator may physically adjust the calibration of a monitor (e.g., by means of a potentiometer), provided that the post-adjustment zero and upscale responses of the monitor are within the performance specifications of the instrument given in section 3.1 of appendix A to this part. An additional calibration error test is required following such adjustments to verify that the monitor is operating within the performance specifications.

2.1.4 Data Validation

(a) An out-of-control period occurs when the calibration error of an SO_2 or NO_x pollutant concentration monitor exceeds 5.0 percent of the span value (or exceeds 10 ppm, for span values <200 ppm), when the calibration error of a CO_2 or O_2 monitor (including O_2 monitors used to measure CO_2 emissions or percent moisture) exceeds 1.0 percent O_2 or CO_2, or when the calibration error of a flow monitor or a moisture sensor exceeds 6.0 percent of the span value, which is twice the applicable specification of appendix A to this part. Notwithstanding, a differential pressure-type flow monitor for which the calibration error exceeds 6.0 percent of the span value shall not be considered out-of-control if $|R - A|$, the absolute value of the difference between the monitor response and the reference value in Equation A–6, is ≤0.02 inches of water. The out-of-control period begins with the hour of completion of the failed calibration error test and ends with the hour following the hour of completion of a successful calibration error test. Note, however, that if the failed calibration, corrective action, and successful calibration error test occur within the same hour, emission data for that hour recorded by the monitor after the successful calibration error test may be used for reporting purposes, provided that 2 or more valid readings are obtained as required by § 75.10. A NO_x-diluent continuous emission monitoring system is considered out-of-control if the calibration error of either component monitor exceeds twice the applicable performance specification in appendix A to this part. Emission data shall not be reported from an out-of-control monitor.

(b) An out-of-control period also occurs whenever interference of a flow monitor is identified. The out-of-control period begins with the hour of completion of the failed interference check and ends with the hour of completion of an interference check that is passed.

2.1.5 * * *

2.1.5.1 * * *

(1) Data from a monitoring system are invalid, beginning with the first hour following the expiration of a 26-hour data validation period or beginning with the first hour following the expiration of an 8-hour start-up grace period (as provided under section 2.1.5.2 of this appendix), if the required subsequent daily assessment has not been conducted.

* * * * *

2.2 Quarterly Assessments

For each primary and redundant backup continuous emission monitoring system, perform the following quarterly assessments. This requirement is effective as of the calendar quarter following the calendar quarter in which the monitor or continuous emission monitoring system is provisionally certified.

2.2.1 Linearity Check

Perform a linearity check, in accordance with the procedures in section 6.2 of appendix A to this part, for each primary and redundant backup SO_2 and NO_x pollutant concentration monitor and each primary and redundant backup CO_2 or O_2 monitor (including O_2 monitors used to measure CO_2 emissions or to continuously monitor moisture) at least once during each QA operating quarter. A QA operating quarter is a calendar quarter in which the unit operates (i.e., combusts fuel) for at least 168 hours or, for common stacks and bypass stacks, a calendar quarter in which flue gases are discharged through the stack for at least 168 hours. For units using both a low and high span value, a linearity check is required only on the range(s) used to record and report emission data during the QA operating quarter. Conduct the linearity checks no less than 30 days apart, to the extent practicable. The data validation procedures in section 2.2.3 of this appendix shall be followed.

2.2.2 Leak Check

For differential pressure flow monitors, perform a leak check of all sample lines (a manual check is acceptable) at least once during each QA operating quarter. For this test, the unit does not have to be in operation. Conduct the leak checks no less than 30 days apart, to the extent practicable. If a leak check is failed, follow the applicable data validation procedures in section 2.2.3(f) of this appendix.

2.2.3 Data Validation

(a) A routine quality assurance linearity test shall not be commenced if the monitoring system is operating out-of-control with respect to any of the daily, quarterly, or semiannual quality assurance assessments required by sections 2.1, 2.2, and 2.3 of this appendix or with respect to the additional calibration error test requirements in section 2.1.3 of this appendix.

(b) Linearity checks shall be done hands-off, as follows. No adjustments of the monitor are permitted prior to or during the linearity test period, other than the routine and non-routine calibration adjustments described in section 2.1.3 of this appendix. The non-routine adjustments are permitted only prior to the test, not during the test period.

(c) If a daily calibration error test is failed during a linearity test period, prior to completing the test, the linearity test is invalidated and must be repeated. Data from the monitor are invalidated prospectively from the hour of the failed calibration error test until the hour of completion of a subsequent successful calibration error test. The linearity test shall not be re-commenced until the monitor has successfully completed a calibration error test.

(d) An out-of-control period occurs when a linearity test is failed (i.e., when the error in linearity at any of the three concentrations in the quarterly linearity check (or any of the six concentrations, when both ranges of a single analyzer with a dual range are tested) exceeds the applicable specification in

section 3.2 of appendix A to this part) or when a linearity test is aborted due to a problem with the CEMS. For a NO_x-diluent or SO_2-diluent continuous emission monitoring system, the system is considered out-of-control if either of the component monitors exceeds the applicable specification in section 3.2 of appendix A to this part or if the linearity test of either component is aborted due to a problem with the monitor. The out-of-control period begins with the hour of the failed or aborted linearity check and ends with the hour of completion of a satisfactory linearity check following corrective action and/or monitor repair. Note that a monitor shall not be considered out-of-control when a linearity test is aborted for a reason unrelated to the monitor's performance (e.g., a forced unit outage).

(e) No more than four successive calendar quarters shall elapse after the quarter in which a linearity check of a CEMS (or range of a CEMS) was last performed without a subsequent linearity test having been conducted. If a linearity test has not been completed by the end of the fourth calendar quarter since the last linearity test, then the linearity test must be completed within a 168 unit operating hour "grace period" (as provided in section 2.2.4 of this appendix) following the end of the fourth successive elapsed calendar quarter, or data from the CEMS (or range) will become invalid.

(f) An out-of-control period also occurs when a flow monitor sample line leak is detected. The out-of-control period begins with the hour of the failed leak check and ends with the hour of a satisfactory leak check following corrective action.

(g) For each monitoring system, report the results of all completed and partial linearity tests that affect data validation (i.e., all completed, passed linearity checks; all completed, failed linearity checks; and all linearity checks aborted due to a problem with the monitor) in the quarterly report required under § 75.64. Note that linearity attempts which are aborted or invalidated due to problems with the reference calibration gases or due to operational problems with the affected unit(s) need not be reported. Such partial tests do not affect the validation status of emission data recorded by the monitor. However, a record of all linearity tests and attempts (whether reported or not) must be kept on-site as part of the official test log for each monitoring system.

2.2.4 Linearity and Leak Check Grace Period

When a required linearity test or flow monitor leak check has not been completed by the end of the QA operating quarter in which it is due or if, due to infrequent operation of a unit or infrequent use of a required high range of a CEMS, four successive calendar quarters have elapsed after the quarter in which a linearity check of a CEMS (or range) was last performed without a subsequent linearity test having been done, the owner or operator has a grace period of 168 consecutive unit operating hours in which to perform a linearity test or leak check of that CEMS (or range). The grace period begins with the first unit operating hour following the calendar quarter in which the linearity test was due. Data validation during a linearity or leak check grace period shall be done in accordance with the applicable provisions in section 2.2.3 of this appendix.

If, at the end of the 168 unit operating hour grace period, the required linearity test or leak check has not been completed, data from the monitoring system (or range) shall be invalid, beginning with the hour following the expiration of the grace period. Data from the monitoring system (or range) remain invalid until the hour of completion of a subsequent successful hands-off linearity test or leak check of the CEMS (or range). Note that when a linearity test or a leak check is conducted within a grace period for the purpose of satisfying the linearity test or leak check requirement from a previous QA operating quarter, the results of that linearity test or leak check may only be used to meet the linearity check or leak check requirement of the previous quarter, not the quarter in which the grace period is used.

2.2.5 Flow-to-Load Ratio or Gross Heat Rate Evaluation

For each installed flow rate monitoring system on each unit or common stack, the owner or operator shall evaluate the flow-to-load ratio quarterly, i.e., for each QA operating quarter, as defined in sections 2.2.1 and 2.3.1.1 of this appendix. At the end of each QA operating quarter, the owner or operator shall use Equation B–1 in this appendix to calculate the flow-to-load ratio for every hour during the quarter in which: (1) the unit (or combination of units, for a common stack) operated within ±10.0 percent of L_{avg}, the average load during the most recent normal-load flow RATA; and (2) a quality assured hourly average flow rate was obtained with a certified flow rate monitor.

$$R_h = \frac{Q_h}{L_h} \times 1000$$

(Eq. B–1)

Where:

R_h = Hourly value of the flow-to-load ratio, scfh/megawatts *or* scfh/1000 lb/hr of steam load.

Q_h = Hourly stack gas volumetric flow rate, as measured by the flow rate monitor, scfh.

L_h = Hourly unit load, megawatts or 1000 lb/hr of steam; must be within ±10.0 percent of L_{avg} during the most recent normal-load flow RATA.

In Equation B–1, the owner or operator may use either bias-adjusted flow rates or unadjusted flow rates, provided that all of the ratios are calculated the same way. For a common stack, L_h shall be the sum of the hourly operating loads of all units that discharge through the stack. For a unit that discharges its emissions through multiple stacks or monitors its emissions in multiple breechings, Qh will be the combined hourly volumetric flow rate for all of the stacks or ducts. Round off each value of R_h to 2 decimal places.

Alternatively, the owner or operator may calculate the hourly gross heat rates (GHR) in lieu of the hourly flow-to-load ratios. The hourly GHR shall be determined only for those hours in which quality assured flow rate data and diluent gas (CO_2 or O_2) concentration data are both available from a certified CEMS or reference method. If this option is selected, calculate each hourly GHR value as follows:

$$(GHR)_h = \frac{(\text{Heat Input})_h}{L_h} \times 1000$$

(Eq. B–1a)

Where:

$(GHR)_h$ = Hourly value of the gross heat rate, Btu/kwh or Btu/lb steam load.

$(\text{Heat Input})_h$ = Hourly heat input, as determined from the quality assured flow rate and diluent data, using the applicable equation in appendix F to this part, mmBtu/hr.

L_h = Hourly unit load, megawatts or 1000 lb/hr of steam; must be within ± 10.0 percent of L_{avg} during the most recent normal-load flow RATA.

In Equation B–1a, the owner or operator may either use bias-adjusted flow rates or unadjusted flow rates in the calculation of (Heat Input)h, provided that all of the heat input values are determined in the same manner.

The owner or operator shall evaluate the calculated hourly flow-to-load ratios (or gross heat rates) as follows. A separate data analysis shall be performed for each primary and each redundant backup flow rate monitor used to record and report data during the quarter. Each analysis shall be based on a minimum of 168 hours of data. When two RATA load levels are designated as normal, the analysis shall be performed at the higher load level, unless there are fewer than 168 data points available at that load level, in which case the analysis shall be performed at the lower load level. If, for a particular flow monitor, fewer than 168 hourly flow-to-load ratios (or GHR values) are available at any of the load levels designated as normal, a flow-to-load (or GHR) evaluation is not required for that monitor for that calendar quarter.

For each flow monitor, use Equation B–2 in this appendix to calculate E_h, the absolute percentage difference between each hourly R_h value and R_{ref}, the reference value of the flow-to-load ratio, as determined in accordance with section 7.7 of appendix A to this part. Note that R_{ref} shall always be based upon the most recent normal-load RATA, even if that RATA was performed in the calendar quarter being evaluated.

$$E_h = \frac{|R_{ref} - R_h|}{R_{ref}} \times 100$$

(Eq. B–2)

Where:

E_h = Absolute percentage difference between the hourly average flow-to-load ratio and the reference value of the flow-to-load ratio at normal load.

R_h = The hourly average flow-to-load ratio, for each flow rate recorded at a load level within ± 10.0 percent of L_{avg}.

R_{ref} = The reference value of the flow-to-load ratio from the most recent normal-load flow RATA, determined in accordance with section 7.7 of appendix A to this part.

Equation B–2 shall be used in a consistent manner. That is, use R_{ref} and R_h if the flow-to-load ratio is being evaluated, and use $(GHR)_{ref}$ and $(GHR)_h$ if the gross heat rate is being evaluated. Finally, calculate E_f, the arithmetic average of all of the hourly E_h values. The owner or operator shall report the results of each quarterly flow-to-load (or gross heat rate) evaluation, as determined from Equation B–2, in the electronic quarterly report required under § 75.64.

The results of a quarterly flow-to-load (or gross heat rate) evaluation are acceptable, and no further action is required, if the calculated value of E_f is less than or equal to: (i) 15.0 percent, if L_{avg} for the most recent normal-load flow RATA is ≥50 megawatts (or ≥500 klb/hr of steam) and if unadjusted flow rates were used in the calculations; (ii) 10.0 percent, if L_{avg} for the most recent normal-load flow RATA is ≥50 megawatts (or ≥500 klb/hr of steam) and if bias-adjusted flow rates were used in the calculations; (iii) 20.0 percent, if L_{avg} for the most recent normal-load flow RATA is <50 megawatts (or <500 klb/hr of steam) and if unadjusted flow rates were used in the calculations; or (iv) 15.0 percent, if L_{avg} for the most recent normal-load flow RATA is <50 megawatts (or <500 klb/hr of steam) and if bias-adjusted flow rates were used in the calculations.

If E_f is above these limits, the owner or operator shall: (a) implement Option 1 in section 2.2.5.1 of this appendix; (b) perform a RATA in accordance with Option 2 in section 2.2.5.2 of this appendix; or (c) re-examine the hourly data used for the flow-to-load or GHR analysis and recalculate E_f, after excluding all non-representative hourly flow rates.

If the owner or operator chooses to recalculate E_f, the flow rates for the following hours are considered non-representative and may be excluded from the data analysis:

(1) Any hour in which the type of fuel combusted was different from the fuel burned during the most recent normal-load RATA. For purposes of this determination, the type of fuel is different if the fuel is in a different state of matter (i.e., solid, liquid, or gas) than is the fuel burned during the RATA or if the fuel is a different classification of coal (e.g., bituminous versus sub-bituminous);

(2) Any hour in which an SO_2 scrubber was bypassed;

(3) Any hour in which "ramping" occurred, i.e., the hourly load differed by more than ±15.0 percent from the load during the preceding hour or the subsequent hour;

(4) If a normal-load flow RATA was performed and passed during the quarter being analyzed, any hour prior to completion of that RATA; and

(5) If a problem with the accuracy of the flow monitor was discovered during the quarter and was corrected (as evidenced by passing the abbreviated flow-to-load test in section 2.2.5.3 of this appendix), any hour prior to completion of the abbreviated flow-to-load test.

After identifying and excluding all non-representative hourly data in accordance with (1) through (5) above, the owner or operator may analyze the remaining data a second time. At least 168 representative hourly ratios or GHR values must be available to perform the analysis; otherwise, the flow-to-load (or GHR) analysis is not required for that monitor for that calendar quarter.

If, after re-analyzing the data, E_f meets the applicable limit in (i),(ii), (iii), or (iv), above, no further action is required. If, however, E_f is still above the applicable limit, the monitor shall be declared out-of-control, beginning with the first hour of the quarter following the quarter in which E_f exceeded the applicable limit. The owner or operator shall then either implement Option 1 in section 2.2.5.1 of this appendix or Option 2 in section 2.2.5.2 of this appendix.

2.2.5.1 Option 1

Within one week of the end of the calendar quarter for which the flow-to-load (or GHR) evaluation indicates noncompliance, investigate and troubleshoot each flow monitor for which E_f has been found to be above the applicable limit. Evaluate the results of each investigation as follows:

(a) If the investigation fails to uncover a problem with the flow monitor, a RATA shall be performed in accordance with Option 2 in section 2.2.5.2 of this appendix.

(b) If a problem with the flow monitor is identified through the investigation (including the need to re-linearize the monitor by changing the polynomial coefficients), corrective actions shall be taken. All corrective actions (e.g., non-routine maintenance, repairs, major component replacements, re-linearization of the monitor, etc.) shall be documented in the operation and maintenance records for the monitor. Data from the monitor shall remain invalid until a probationary calibration error test of the monitor is passed following completion of all corrective actions, at which point data from the monitor are conditionally valid. The owner or operator shall then either: (1) complete the abbreviated flow-to-load test in section 2.2.5.3 of this appendix; or (2) perform a 3-level recertification RATA according to the recertification test period and data validation procedures of § 75.20(b)(3), if the corrective action has affected the linearity of the flow monitor (e.g., by requiring changes to the flow monitor polynomial coefficients).

2.2.5.2 Option 2

Perform a single-load RATA (at a load designated as normal under section 6.5.2.1 of appendix A to this part) of each flow monitor for which E_f is outside of the applicable limit. Data from the monitor remain invalid until the required RATA has been successfully completed.

2.2.5.3 Abbreviated Flow-to-Load Test

The following abbreviated flow-to-load test may be performed after any documented repair, component replacement, or other corrective maintenance to a flow monitor (except for changes affecting the linearity of the flow monitor, such as adjusting the flow monitor coefficients) to demonstrate that the repair, replacement, or other maintenance has not significantly affected the monitor's ability to accurately measure the stack gas volumetric flow rate. Data from the monitoring system are considered invalid from the hour of commencement of the repair, replacement, or maintenance until the hour in which a probationary calibration error test is passed following completion of the repair, replacement, or maintenance and any associated adjustments to the monitor. The abbreviated flow-to-load test shall be completed within 168 unit operating hours of the probationary calibration error test (or, for peaking units, within 30 unit operating days, if that is less restrictive). Data from the monitor are considered to be conditionally valid (as defined in § 72.2 of this chapter), beginning with the hour of the probationary calibration error test.

Operate the unit(s) in such a way as to reproduce, as closely as practicable, the exact conditions at the time of the most recent normal-load flow RATA. To achieve this, it is recommended that the load be held constant to within ±5.0 percent of the average load during the RATA and that the diluent gas (CO_2 or O_2) concentration be maintained within ±0.5 percent CO_2 or O_2 of the average diluent concentration during the RATA. For common stacks, to the extent practicable, use the same combination of units and load levels that were used during the RATA. When the process parameters have been set, record a minimum of 6 and a maximum of 12 consecutive hourly average flow rates, using the flow monitor(s) for which E_f was outside the applicable limit. For peaking units, a minimum of 3 and a maximum of 12 consecutive hourly average flow rates are required. Also record the corresponding hourly load values and, if applicable, the hourly diluent gas concentrations. Calculate the flow-to-load ratio (or GHR) for each hour in the test hour period, using Equation B–1 or B–1a. Determine E_h for each hourly flow-to-load ratio (or GHR), using Equation B–2 of this appendix and then calculate E_f, the arithmetic average of the E_h values.

The results of the abbreviated flow-to-load test shall be considered acceptable, and no further action is required if the value of E_f does not exceed the applicable limit specified in section 2.2.5.1 of this appendix. All conditionally valid data recorded by the flow monitor shall be considered quality assured, beginning with the hour of the probationary calibration error test that preceded the abbreviated flow-to-load test. However, if E_f is outside the applicable limit, all conditionally valid data recorded by the flow monitor shall be considered invalid back to the hour of the probationary calibration error test that preceded the abbreviated flow-to-load test, and a single-load RATA is required in accordance with section 2.2.5.2 of this appendix. If the flow monitor must be re-linearized, however, a 3-load RATA is required, in accordance with the recertification test period and data validation procedures of § 75.20(b)(3).

2.3 Semiannual and Annual Assessments

For each primary and redundant backup continuous emission monitoring system, perform relative accuracy assessments either

semiannually or annually, as specified in subsection 2.3.1.1 or 2.3.1.2, below, for the type of test and the performance achieved. This requirement is effective as of the calendar quarter following the calendar quarter in which the continuous emission monitoring system is provisionally certified. A summary chart showing the frequency with which a relative accuracy test audit must be performed, depending on the accuracy achieved, is located at the end of this appendix in Figure 2.

2.3.1 Relative Accuracy Test Audit (RATA)

2.3.1.1 Standard RATA Frequencies

Except as otherwise specified in § 75.21(a)(6) or (a)(7) or in section 2.3.1.2 of this appendix, perform relative accuracy test audits semiannually, i.e., once every two successive QA operating quarters for each primary and redundant backup SO_2 pollutant concentration monitor, flow monitor, CO_2 pollutant concentration monitor (including O2 monitors used to determine CO_2 emissions), moisture monitoring system, NO_X-diluent continuous emission monitoring system, or SO_2-diluent continuous emission monitoring system used by units with a Phase I qualifying technology for the period during which the units are required to monitor SO_2 emission removal efficiency, from January 1, 1997 through December 31, 1999. A QA operating quarter is a calendar quarter in which the unit operates for at least 168 hours or, for a common stack or bypass stack, a calendar quarter in which flue gases are discharged through the stack for at least 168 hours. A calendar quarter that does not qualify as a QA operating quarter shall be excluded in determining the deadline for the next RATA. No more than eight successive calendar quarters shall elapse after the quarter in which a RATA was last performed without a subsequent RATA having been conducted. If a RATA has not been completed by the end of the eighth calendar quarter since the quarter of the last RATA, then the RATA must be completed within a 720 unit operating hour grace period (as provided in section 2.3.3 of this appendix) following the end of the eighth successive elapsed calendar quarter, or data from the CEMS will become invalid.

The relative accuracy test audit frequency of a CEMS may be reduced, as specified in subsection 2.3.1.2, below, for primary or redundant backup monitoring systems which qualify for less frequent testing. Perform all required RATAs in accordance with the applicable procedures and provisions in sections 6.5 through 6.5.2.2 of appendix A to this part and subsections 2.3.1.3 and 2.3.1.4 of this appendix.

2.3.1.2 Reduced RATA Frequencies

Relative accuracy test audits of primary and redundant backup SO_2 pollutant concentration monitors, CO_2 pollutant concentration monitors (including O2 monitors used to determine CO_2 emissions), moisture monitors, flow monitors, or NO_X-diluent or SO_2-diluent monitoring systems may be performed annually (i.e., once every four successive QA operating quarters, rather than once every two successive QA operating quarters) if any of the following conditions are met for the specific monitoring system involved: (1) the relative accuracy during the audit of an SO_2 or CO_2 pollutant concentration monitor (including an O2 pollutant monitor used to measure CO_2 using the procedures in appendix F to this part) or of a NO_X-diluent or SO_2-diluent continuous emissions monitoring system is ≤7.5 percent; (2) prior to January 1, 2000, the relative accuracy during the audit of a flow monitor is ≤10.0 percent at each operating level tested; (3) on and after January 1, 2000, the relative accuracy during the audit of a flow monitor is ≤7.5 percent at each operating level tested; (4) on low flow (≤10.0 fps) stacks/ducts, when flow monitor achieves a relative accuracy ≤7.5 percent (10.0 percent if prior to January 1, 2000) during the audit or when the monitor mean, calculated using Equation A–7 in appendix A to this part, is within ±1.5 fps of the reference method mean; (5) on low SO_2 emitting units (average SO_2 concentrations 250 ppm, or average SO_2 emission rate 0.500 lb/mmBtu for SO_2-diluent continuous emission monitoring systems), when the CEMS achieves a relative accuracy ≤7.5 percent during the audit or when the monitor mean value from the RATA is within ± 12 ppm (or 0.025 lb/mmBtu for SO_2-diluent continuous emission monitoring systems) of the reference method mean value; (6) on low NO_X emitting units (average NO_X emission rate ≤0.200 lb/mmBtu), when the NO_X continuous emission monitoring system achieves a relative accuracy ≤7.5 percent or when the monitoring system mean value from the RATA, calculated using Equation A–7 in appendix A to this part, is within ± 0.015 lb/mmBtu of the reference method mean value; (7) for a CO_2 or O2 monitor, when the mean difference between the reference method values from the RATA and the corresponding monitor values is within ±0.7 percent CO_2 or O2; and (8) when the relative accuracy of a continuous moisture monitoring system is ≤7.5 percent or when the mean difference between the reference method values from the RATA and the corresponding monitoring system values is within ±0.7 percent H2O.

2.3.1.3 RATA Load Levels

(a) For SO_2 pollutant concentration monitors, CO_2 pollutant concentration monitors (including O_2 monitors used to determine CO_2 emissions), moisture monitoring systems, and SO_2-diluent and NO_X-diluent monitoring systems, the required RATA tests shall be done at the load level designated as normal under section 6.5.2.1 of appendix A to this part. If two load levels are designated as normal, the required RATA(s) may be done at either load level.

(b) For flow monitors installed on peaking units and bypass stacks, all required relative accuracy test audits shall be single-load audits at the normal load, as defined in section 6.5.2.1 of appendix A to this part.

(c) For all other flow monitors, the RATAs shall be performed as follows. When a flow monitor qualifies for an annual RATA frequency under section 2.3.1.2 of this appendix, the annual RATA shall be done at the two most frequently used load levels, as determined under section 6.5.2.1 of appendix A to this part. The annual 2-load flow RATA may be performed alternately with a single-load flow RATA at the most frequently used (normal) load level if the flow monitor is on a semiannual RATA frequency. In addition, a single-load flow RATA, at the most frequently used load level, may be performed in lieu of the 2-load RATA if, for the four QA operating quarters prior to the quarter in which the RATA is performed, the historical load frequency distribution determined under section 6.5.2.1 of appendix A to this part shows that the unit has operated at the most frequently used load level for ≤85.0 percent of the time. Finally, a 3-load RATA, at the low-, mid-, and high-load levels, determined under section 6.5.2.1 of appendix A to this part, shall be performed at least once in every period of five consecutive calendar years, and a 3-load RATA is required whenever a flow monitor is re-linearized, i.e., when one or more of its polynomial coefficients are changed. For all multi-level flow audits, the audit points at adjacent load levels (e.g., mid and high) shall be separated by no less than 25.0 percent of the "range of operation," as defined in section 6.5.2.1 of appendix A to this part.

2.3.1.4 Number of RATA Attempts

The owner or operator may perform as many RATA attempts as are necessary to achieve the desired relative accuracy test audit frequencies and/or bias adjustment factors. However, the data validation procedures in section 2.3.2 of this appendix must be followed.

2.3.2 Data Validation

(a) A routine quality assurance RATA shall not commence if the monitoring system is operating out-of-control with respect to any of the daily and quarterly quality assurance assessments required by sections 2.1 and 2.2 of this appendix or with respect to the additional calibration error test requirements in section 2.1.3 of this appendix.

(b) All RATAs must be done hands-off, as follows. No adjustment of the monitor's calibration is permitted prior to or during the RATA test period, other than the adjustments described in section 2.1.3 of this appendix. The non-routine calibration adjustments described in section 2.1.3 of this appendix are permitted only prior to the RATA, not during the test period. For 2-level and 3-level flow monitor audits, no linearization of the monitor is permitted in-between load levels.

(c) For single-load RATAs, if a daily calibration error test is failed during a RATA test period, prior to completing the test, the RATA is invalidated and must be repeated. Data from the monitor are invalidated prospectively from the hour of the failed calibration error test until the hour of completion of a subsequent successful RATA. The subsequent RATA shall not be re-commenced until the monitor has successfully passed a calibration error test in accordance with section 2.1.3 of this appendix. For multiple-load flow RATAs, each load level is treated as a separate RATA (i.e., when a calibration error test is failed prior to completing the RATA at a particular load level, only the RATA at that load level is invalidated; the results of any previously-passed RATA(s) at the other load level(s) are unaffected).

(d) If a RATA is failed (that is, if the relative accuracy exceeds the applicable

specification in section 3.3 of appendix A to this part) or if the RATA is aborted prior to completion due to a problem with the CEMS, then all emission data from the CEMS are invalidated prospectively from the hour in which the RATA is failed or aborted. Data from the CEMS remain invalid until the hour of completion of a subsequent RATA that meets the applicable specification in section 3.3 of appendix A to this part. Note that a monitoring system shall not be considered out-of-control when a RATA is aborted for a reason other than monitoring system malfunction (see paragraph (g) of this section).

(e) For a 2-level or 3-level flow RATA, if, at any load level, a RATA is failed or aborted due to a problem with the CEMS, the RATA at that load level must be repeated. Data from the flow monitor are invalidated from the hour in which the test is failed or aborted and remain invalid until the successful completion of a RATA at the failed load level. RATA(s) that were previously passed at the other load level(s) do not have to be repeated unless the flow monitor must be re-linearized following the failed or aborted test. If the monitor is re-linearized, a subsequent 3-load RATA is required.

(f) For a CO_2 pollutant concentration monitor (or an O_2 monitor used to measure CO_2 emissions) which also serves as the diluent component in a NO_X-diluent (or SO_2-diluent) monitoring system, if the CO_2 (or O_2) RATA is failed, then both the CO_2 (or O_2) monitor and the associated NO_X-diluent (or SO_2-diluent) system are considered out-of-control until the hour of completion of subsequent hands-off RATAs which demonstrate that both systems have met the applicable relative accuracy specifications in sections 3.3.2 and 3.3.3 of appendix A to this part. The out-of-control period for each monitoring system begins with the hour of completion of the failed CO_2 (or O_2) monitor RATA.

(g) For each monitoring system, report the results of all completed and partial RATAs that affect data validation (i.e., all completed, passed RATAs; all completed, failed RATA; and all RATAs aborted due to a problem with the CEMS) in the quarterly report required under § 75.64. Note that RATA attempts that are aborted or invalidated due to problems with the reference method or due to operational problems with the affected unit(s) need not be reported. Such runs do not affect the validation status of emission data recorded by the CEMS. In addition, aborted RATA attempts that are part of the process of optimizing a monitoring system's performance do not have to be reported, provided that, in the period extending from the hour in which the test is aborted to the hour of commencement of the next RATA attempt: (1) no corrective maintenance or reprogramming of the monitoring system is done; and (2) only the calibration adjustments allowed under section 2.1.3 of this appendix are made. However, a record of all RATAs and RATA attempts (whether reported or not) must be kept on-site as part of the official test log for each monitoring system.

(h) Each time that a hands-off RATA of an SO_2 pollutant concentration monitor, a NO_X-diluent monitoring system, or a flow monitor is successfully completed, perform a bias test in accordance with section 7.6.4 of appendix A to this part. Apply the appropriate bias adjustment factor to the reported SO_2, NO_X, or flow rate data, in accordance with section 7.6.5 of appendix A to this part.

(i) Failure of the bias test does not result in the monitoring system being out-of-control.

2.3.3 RATA Grace Period

The owner or operator has a grace period of 720 consecutive unit operating hours in which to complete the required RATA for a particular CEMS, whenever: (a) a required RATA has not been performed by the end of the QA operating quarter in which it is due; (b) five consecutive calendar years have elapsed without a required 3-load flow RATA having been conducted; (c) an SO_2 RATA has not been completed by the end of the calendar quarter in which the annual usage of fuel(s) with a total sulfur content greater than the total sulfur content of natural gas exceeds 480 hours, for a unit which is conditionally exempted under § 75.21(a)(7) from the SO_2 RATA requirements of this part; or (d) eight successive calendar quarters have elapsed, following the quarter in which a RATA was last performed, without a subsequent RATA having been done, due to: (1) infrequent operation of the unit(s); (2) frequent combustion of fuel(s) with a total sulfur content no greater than the total sulfur content of natural gas (i.e., ≤0.05 percent sulfur by weight) (SO_2 monitors, only); or (3) a combination of factors (1) and (2).

Except for SO_2 monitoring system RATAs, the grace period shall begin with the first unit operating hour following the calendar quarter in which the required RATA was due. For SO_2 monitor RATAs, the grace period shall begin with the first unit operating hour in which fuel with a total sulfur content greater than the total sulfur content of natural gas (i.e., >0.05 percent sulfur by weight) is burned in the unit(s), following the quarter in which the required RATA is due. Data validation during a RATA grace period shall be done in accordance with the applicable provisions in section 2.3.2 of this appendix.

If, at the end of the 720 unit operating hour grace period, the RATA has not been completed, data from the monitoring system shall be invalid, beginning with the first unit operating hour following the expiration of the grace period. Data from the CEMS remain invalid until the hour of completion of a subsequent hands-off RATA. Note that when a RATA (or RATAs, if more than one attempt is made) is done during a grace period in order to satisfy a RATA requirement from a previous quarter (i.e., for reasons (a), (b), or (d) in this section), the deadline for the next RATA shall be determined from the quarter in which the RATA was due, not from the quarter in which the grace period is used.

2.3.4 Bias Adjustment Factor

Except as otherwise specified in section 7.6.5 of appendix A to this part, if an SO_2 pollutant concentration monitor, flow monitor, or NO_X continuous emission monitoring system fails the bias test specified in section 7.6 of appendix A to this part, use the bias adjustment factor given in Equations A–11 and A–12 of appendix A to this part to adjust the monitored data.

2.4 Recertification, Quality Assurance, and RATA Deadlines

When a significant change is made to a monitoring system such that recertification of the monitoring system is required in accordance with § 75.20(b), a recertification test (or tests) must be performed to ensure that the CEMS continues to generate valid data. In many instances, a required recertification test is the same type of test as one of the routine, periodic quality assurance tests required by this appendix (e.g., a linearity test or a RATA). When this occurs, the recertification test may be used to satisfy the quality assurance test requirement of this appendix. For example, if, for a particular change made to a CEMS, one of the required recertification tests is a linearity check and the linearity test is successful, then, unless another recertification event occurs in that same QA operating quarter, it would not be necessary to perform a subsequent linearity test of the CEMS in that quarter. For this reason, EPA recommends that owners or operators coordinate component replacements, system upgrades, and other events that may require recertification, to the extent practicable, with the periodic quality assurance testing required by this appendix. When a quality assurance test is done for the dual purpose of recertification and routine quality assurance, the applicable data validation procedures in § 75.20(b)(3) shall be followed in lieu of the procedures in this appendix.

Except as provided in section 2.3.3 of this appendix, whenever a successful RATA of a gas monitor or a successful 2-load or 3-load RATA of a flow monitor is performed (irrespective of whether the RATA is done to satisfy a recertification requirement or to meet the quality assurance requirements of this appendix, or both), the deadline for the next RATA shall be established based upon the date and time of completion of the RATA and the relative accuracy percentage obtained. For 2-load and 3-load flow RATAs, use the highest percentage relative accuracy at any of the loads to determine the deadline for the next RATA. The results of a single-load flow RATA may be used to establish a RATA deadline when: (1) the single-load flow RATA is specifically required under section 2.3.1.3(b) of this appendix (for flow monitors installed on peaking units and bypass stacks); or (2) the single-load RATA is allowed for a unit that has operated at the most frequently used load level for ≥85.0 percent of the time, under section 2.3.1.3(c) of this appendix. No other single-load flow RATA may be used to establish an annual RATA frequency; however, a 2-load flow RATA may be performed in place of any required single-load RATA, in order to establish an annual RATA frequency.

2.5 Other Audits

* * * * *

61. Figures 1 and 2 at the end of appendix B are revised to read as follows:

FIGURE 1.—QUALITY ASSURANCE TEST REQUIREMENTS

Test	QA test frequency requirements		
	Daily*	Quarterly*	Semiannual*
Calibration Error (2 pt.)	✔		
Interference (flow)	✔		
Flow-to-Load Ratio		✔	
Leak Check (DP flow monitors)		✔	
Linearity (3 pt.)		✔	
RATA (SO_2, NO_X, CO_2, percent H_2O) [1]		✔	
RATA (flow) [1,2]			✔

*For monitors on bypass stack/duct, "daily" means bypass operating days, only. "Quarterly" means once every QA operating quarter. "Semiannual" means once every two QA operating quarters.

[1] Conduct RATA annually (i.e., once every four QA operating quarters), if monitor meets accuracy requirements to qualify for less frequent testing.

[2] For flow monitors installed on peaking units and bypass stacks, conduct all RATAs at a single, normal load. For other flow monitors, conduct RATAs at the two most frequently used loads. Alternating single-load and 2-load RATAs may be done if a monitor is on a semiannual frequency. A single-load RATA may be done in lieu of a 2-load RATA if, in the past four QA operating quarters, the unit has operated at one load level for ≥ 85.0 percent of the time. A 3-load RATA is required at least once in every period of five consecutive calendar years and whenever a flow monitor is re-linearized.

FIGURE 2.—RELATIVE ACCURACY TEST FREQUENCY INCENTIVE SYSTEM

RATA	Semiannual[1] (percent)	Annual[1]
SO_2	7.5% < RA ≤ 10.0% or ± 15.0 ppm [2]	RA ≤ 7.5.% or ± 12.0 ppm [2]
SO_2/diluent	7.5% < RA ≤ 10.0% or ± 0.030 lb/mmBtu [2]	RA ≤ 7.5% or ± 0.025 lb/mmBtu [2]
NO_X/diluent	7.5% < RA ≤ 10.0% or ± 0.020 lb/mmBtu [2]	RA ≤ 7.5% or ±0.015 lb/mmBtu [2]
Flow (Phase I)	10.0% < RA ≤ 15.0% or ± 1.5 fps [2]	RA ≤ 10.0%
Flow (Phase II)	7.5% < RA ≤ 10.0% or ± 1.5 fps [2]	RA ≤ 7.5%
CO_2/O_2	7.5% < RA ≤ 10.0% or ± 1.0% CO_2/O_2 [2]	RA ≤ 7.5% or ± 0.7% CO_2/O_2 [2]
Moisture	7.5% < RA ≤ 10.0% or ± 1.0% H_2O_2	RA ≤ 7.5% or ± 0.7% H_2O_2

[1] The deadline for the next RATA is the end of the second (if semiannual) or fourth (if annual) successive QA operating quarter following the quarter in which the CEMS was last tested. Exclude calendar quarters in which the unit operates for < 168 hours (or, for common stacks and bypass stacks, exclude quarters in which gases discharge through the stack for < 168 hours) in determining the RATA deadline. For SO_2 monitors, QA operating quarters in which only fuel with a total sulfur content no greater than the total sulfur content of natural gas (i.e., ≤ 0.05 percent sulfur by weight) is combusted may also be excluded. However, the exclusion of calendar quarters is limited as follows: the deadline for the next RATA shall be no more than 8 calendar quarters after the quarter in which a RATA was last performed.

[2] The difference between monitor and reference method mean values applies to moisture monitors, CO_2, and O_2 monitors, low emitters, or low flow, only.

62. Section 2 of appendix C to part 75 is amended by revising sections 2.1 and 2.2.1 and by revising Table C–1 to read as follows:

Appendix C to Part 75—Missing Data Estimation Procedures

* * * * *

2. Load-Based Procedure for Missing Flow Rate and NO_X Emission Rate Data

2.1 Applicability

This procedure is applicable for data from all affected units for use in accordance with the provisions of this part to provide substitute data for volumetric flow rate (scfh) and NO_X emission rate (in lb/mmBtu).

2.2 * * *

2.2.1 For a single unit, establish 10 operating load ranges defined in terms of percent of the maximum hourly average gross load of the unit, in gross megawatts (MWge), as shown in Table C–1. (Do not use integrated hourly gross load in MW-hr.) For units sharing a common stack monitored with a single flow monitor, the load ranges for flow (but not for NO_X) may be broken down into 20 operating load ranges in increments of 5.0 percent of the combined maximum hourly average gross load of all units utilizing the common stack. If this option is selected, the twentieth (uppermost) operating load range shall include all values greater than 95.0 percent of the maximum hourly average gross load. For a cogenerating unit or other unit at which some portion of the heat input is not used to produce electricity or for a unit for which hourly average gross load in MWge is not recorded separately, use the hourly gross steam load of the unit, in pounds of steam per hour at the measured temperature (°F) and pressure (psia) instead of MWge. Indicate a change in the number of load ranges or the units of loads to be used in the precertification section of the monitoring plan.

TABLE C–1.—DEFINITION OF OPERATING LOAD RANGES FOR LOAD-BASED SUBSTITUTION DATA PROCEDURES

Operating load range	Hourly gross load*
1	0–10
2	>10–20
3	>20–30
4	>30–40
5	>40–50
6	>50–60
7	>60–70
8	>70–80
9	>80–90
10	>90

*Percent of maximum hourly gross load or maximum hourly gross steam load (percent).

* * * * *

63. Section 1 of appendix D to part 75 is amended by revising section 1.1 to read as follows:

Appendix D to Part 75—Optional SO_2 Emissions Data Protocol for Gas-Fired and Oil-Fired Units

1. Applicability

1.1 This protocol may be used in lieu of continuous SO_2 pollutant concentration and flow monitors for the purpose of determining hourly SO_2 emissions and heat input from:

(1) gas-fired units, as defined in § 72.2 of this chapter; or (2) oil-fired units, as defined in § 72.2 of this chapter. This optional SO_2 emissions data protocol contains procedures for conducting oil sampling and analysis in section 2.2 of this appendix; the procedures for oil sampling may be used for any gas-fired unit or oil-fired unit. In addition, this optional SO_2 emissions data protocol contains three procedures for determining SO_2 emissions due to the combustion of gaseous fuels having a total sulfur content no greater than 20 grains per 100 standard cubic foot.

* * * * *

64. Section 2 of appendix D to part 75 is amended by:

a. Revising section 2.1 *Flowmeter Measurements*;

b. Revising sections 2.2, 2.2.1, 2.2.3, 2.2.4, 2.2.6, and 2.2.8; and removing and reserving section 2.2.2;

c. Revising sections 2.3, 2.3.1, 2.3.1.3, 2.3.2; redesignating section 2.3.1.4 as 2.3.1.4.1 and revising it; and adding sections 2.3.1.4.1, 2.3.1.4.2, 2.3.1.4.3, and 2.3.3; and

d. Revising section 2.4.1; removing section 2.4.2; redesignating sections 2.4.3, 2.4.3.1, 2.4.3.2, and 2.4.3.3 as 2.4.2, 2.4.2.1, 2.4.2.2, and 2.4.2.3, respectively; revising newly designated sections 2.4.2, 2.4.2.1, and 2.4.2.3; and redesignating section 2.4.4 as 2.4.3.

2. Procedure

2.1 Flowmeter Measurements

For each hour when the unit is combusting fuel, measure and record the flow rate of fuel combusted by the unit, except as provided for gas in section 2.1.4.1 of this appendix. Measure the flow rate of fuel with an in-line fuel flowmeter, and automatically record the data with a data acquisition and handling system, except as provided in section 2.1.4 of this appendix.

2.1.1 Measure the flow rate of each fuel entering and being combusted by the unit. If a portion of the flow greater than 5.0 percent of the annual average flow rate from the main pipe is diverted from the unit without being burned and that diversion occurs downstream of the fuel flowmeter, an additional in-line fuel flowmeter is required to account for the unburned fuel. In this case, record the flow rate of each fuel combusted by the unit as the difference between the flow measured in the pipe leading to the unit and the flow in the pipe diverting fuel away from the unit. The hourly average proportion of flow rate from the pipe diverting fuel away from the unit to total fuel usage by the unit may be determined by using fuel usage data from fuel flowmeters in a previous year or by using a method approved by the Administrator under the provisions of § 75.66(i).

2.1.2 Install and use fuel flowmeters meeting the requirements of this appendix in a pipe going to each unit, or install and use a fuel flowmeter in a common pipe header (i.e., a pipe carrying fuel for multiple units). However, the use of a fuel flowmeter in a common pipe header and the provisions of sections 2.1.2.1 and 2.1.2.2 of this appendix are not applicable to any unit that is using the provisions of subpart H of this part to monitor, record, and report NO_X mass emissions under a state or federal NO_X mass emission reduction program. For all other units, if the fuel flowmeter is installed in a common pipe header, do one of the following:

2.1.2.1 Measure the fuel flow rate in the common pipe, and combine SO_2 mass emissions for the affected units for recordkeeping and compliance purposes; or

2.1.2.2 Provide information satisfactory to the Administrator on methods for apportioning SO_2 mass emissions and heat input to each of the affected units demonstrating that the method ensures complete and accurate accounting of the actual emissions from each of the affected units included in the apportionment and all emissions regulated under this part. The information shall be provided to the Administrator through a petition submitted by the designated representative under § 75.66. Satisfactory information includes apportionment, using fuel flow measurements, the ratio of hourly integrated gross load (in MWe-hr) in each unit to the total load for all units receiving fuel from the common pipe header, or the ratio of hourly steam flow (in 1000 lb) at each unit to the total steam flow for all units receiving fuel from the common pipe header, and documentation that shows the provisions of sections 2.1.5 and 2.1.6 of this appendix have been met for the fuel flowmeter used in the apportionment.

2.1.3 For a gas-fired unit or an oil-fired unit that continuously or frequently combusts a supplemental fuel for flame stabilization or safety purposes, measure the flow rate of the supplemental fuel with a fuel flowmeter meeting the requirements of this appendix.

2.1.4 Situations in Which Certified Flowmeter Is Not Required

2.1.4.1 Start-up or Ignition Fuel

For an oil-fired unit that uses gas solely for start-up or burner ignition or a gas-fired unit that uses oil solely for start-up or burner ignition, a flowmeter for the start-up fuel is not required. Estimate the volume of oil combusted for each start-up or ignition either by using a fuel flowmeter or by using the dimensions of the storage container and measuring the depth of the fuel in the storage container before and after each start-up or ignition. A fuel flowmeter used solely for start-up or ignition fuel is not subject to the calibration requirements of sections 2.1.5 and 2.1.6 of this appendix. Gas combusted solely for start-up or burner ignition does not need to be measured separately.

2.1.4.2 Gas Flowmeter Used for Commercial Billing

A gas flowmeter used for commercial billing of pipeline natural gas may be used to measure, record, and report hourly fuel flow rate. A gas flowmeter used for commercial billing of pipeline natural gas is not required to meet the certification requirements of section 2.1.5 of this appendix or the quality assurance requirements of section 2.1.6 of this appendix under the following circumstances: (1) the gas flowmeter is used for commercial billing under a contract, provided that the company providing the gas under the contract and each unit combusting the gas do not have any common owners and are not owned by subsidiaries or affiliates of the same company; (2) the designated representative reports hourly records of gas flow rate, heat input rate, and emissions due to combustion of pipeline natural gas; (3) the designated representative also reports hourly records of heat input rate for each unit, if the gas flowmeter is on a common pipe header, consistent with section 2.1.2 of this appendix; (4) the designated representative reports hourly records directly from the gas flowmeter used for commercial billing if these records are the values used, without adjustment, for commercial billing, or reports hourly records using the missing data procedures of section 2.4 of this appendix if these records are not the values used, without adjustment, for commercial billing; and (5) the designated representative identifies the gas flowmeter in the unit's monitoring plan.

2.1.5 For the purposes of initial certification, each fuel flowmeter used to meet the requirements of this protocol shall meet a flowmeter accuracy of ± 2.0 percent of the upper range value (i.e, maximum calibrated fuel flow rate) across the range of fuel flow rate to be measured at the unit. Flowmeter accuracy may be determined under section 2.1.5.1 of this appendix for initial certification either by design or by measurement under laboratory conditions by the manufacturer, by an independent laboratory, or by the owner or operator, or may be determined under section 2.1.5.2 of this appendix by measurement against a NIST traceable reference method.

2.1.5.1 Use the procedures in the following standards to verify flowmeter accuracy or design, as appropriate to the type of flowmeter: ASME MFC–3M–1989 with September 1990 Errata ("Measurement of Fluid Flow in Pipes Using Orifice, Nozzle, and Venturi"); ASME MFC–4M–1986 (Reaffirmed 1990), "Measurement of Gas Flow by Turbine Meters"; American Gas Association Report No. 3, "Orifice Metering of Natural Gas and Other Related Hydrocarbon Fluids Part 1: General Equations and Uncertainty Guidelines" (October 1990 Edition), Part 2: "Specification and Installation Requirements" (February 1991 Edition), and Part 3: "Natural Gas Applications" (August 1992 edition) (excluding the modified flow-calculation method in Part 3); Section 8, Calibration from American Gas Association Transmission Measurement Committee Report No. 7: Measurement of Gas by Turbine Meters (1985 Edition); ASME MFC–5M–1985 ("Measurement of Liquid Flow in Closed Conduits Using Transit-Time Ultrasonic Flowmeters"); ASME MFC–6M–1987 with June 1987 Errata ("Measurement of Fluid Flow in Pipes Using Vortex Flow Meters"); ASME MFC–7M–1987 (Reaffirmed 1992), "Measurement of Gas Flow by Means of Critical Flow Venturi Nozzles"; ISO 8316: 1987(E) "Measurement of Liquid Flow in Closed Conduits—Method by Collection of

the Liquid in a Volumetric Tank"; American Petroleum Institute (API) Section 2, "Conventional Pipe Provers," from Chapter 4 of the Manual of Petroleum Measurement Standards, October 1988 (Reaffirmed 1993); or MFC–9M–1988 with December 1989 Errata ("Measurement of Liquid Flow in Closed Conduits by Weighing Method") for all other flowmeter types (incorporated by reference under § 75.6). The Administrator may also approve other procedures that use equipment traceable to National Institute of Standards and Technology standards. Document such procedures, the equipment used, and the accuracy of the procedures in the monitoring plan for the unit, and submit a petition signed by the designated representative under § 75.66(c). If the flowmeter accuracy exceeds ±2.0 percent of the upper range value, the flowmeter does not qualify for use under this part.

2.1.5.2 Alternatively, determine the flowmeter accuracy of a fuel flowmeter used for the purposes of this part by comparing it to the measured flow from a reference flowmeter which has been either designed according to the specifications of American Gas Association Report No. 3 or ASME MFC–3M–1989, as cited in section 2.1.5.1 of this appendix, or tested for accuracy during the previous 365 days, using a standard listed in section 2.1.5.1 of this appendix or other procedure approved by the Administrator under § 75.66 (all standards incorporated by reference under § 75.6). Any secondary elements, such as pressure and temperature transmitters, must be calibrated immediately prior to the comparison. Perform the comparison over a period of no more than seven consecutive unit operating days. Compare the average of three fuel flow rate readings over 20 minutes or longer for each meter at each of three different flow rate levels. The three flow rate levels shall correspond to: (1) normal full unit operating load, (2) normal minimum unit operating load, and (3) a load point approximately equally spaced between the full and minimum unit operating loads. Calculate the flowmeter accuracy at each of the three flow levels using the following equation:

$$ACC = \frac{|R - A|}{URV} \times 100$$

(Eq. D–1)

Where:

ACC = Flowmeter accuracy as a percentage of the upper range value, including all error from all parts of both flowmeters.

R = Average of the three flow measurements of the reference flowmeter.

A = Average of the three measurements of the flowmeter being tested.

URV = Upper range value of fuel flowmeter being tested (i.e. maximum measurable flow).

Notwithstanding the requirement for calibration of the reference flowmeter within 365 days prior to an accuracy test, when an in-place reference meter or prover is used, the reference meter calibration requirement may be waived if, during the previous in-place accuracy test with that reference meter, the reference flowmeter and the flowmeter being tested agreed to within ± 1.0 percent of each other at all levels tested. This exception to calibration and flowmeter accuracy testing requirements for the reference flowmeter shall apply for periods of no longer than five consecutive years (i.e., 20 consecutive calendar quarters).

2.1.5.3 If the flowmeter accuracy exceeds the specification in section 2.1.5 of this appendix, the flowmeter does not qualify for use for this appendix. Either recalibrate the flowmeter until the flowmeter accuracy is within the performance specification, or replace the flowmeter with another one that is demonstrated to meet the performance specification. Substitute for fuel flow rate using the missing data procedures in section 2.4.2 of this appendix until quality assured fuel flow data become available.

2.1.5.4 For purposes of initial certification, when a flowmeter is tested against a reference fuel flow rate (i.e., fuel flow rate from another fuel flowmeter under section 2.1.5.2 of this appendix or flow rate from a procedure according to a standard incorporated by reference under section 2.1.5.1 of this appendix), report the results of flowmeter accuracy tests using Table D–1 below.

TABLE D–1.—TABLE OF FLOWMETER ACCURACY RESULTS

Measurement level (percent of URV)	Run No.	Time of run (HHMM)	Candidate flowmeter reading	Reference flow reading	Percent accuracy (percent of URV)
Test number:__ Test completion date [1]:__ Test completion time [1]: __					
Reinstallation date [2] (for testing under 2.1.5.1 only):__ Reinstallation time [2]:__					
Unit or pipe ID: Component/System ID :					
Flowmeter serial number: Upper range value:					
Units of measure for flowmeter and reference flow readings:					
Low (Minimum) level	1				
__ percent [3] of URV	2				
	3				
	Average				
Mid-level	1				
__ percent [3] of URV	2				
	3				
	Average				
High (Maximum) level	1				
__ percent [3] of URV	2				
	3				
	Average				

[1] Report the date, hour, and minute that all test runs were completed.
[2] For laboratory tests not performed inline, report the date, hour, and minute that the fuel flowmeter was reinstalled following the test.
[3] It is required to test at least at three different levels, from minimum to maximum.

2.1.6 Quality Assurance

Test the accuracy of each fuel flowmeter prior to use under this part and at least once every four fuel flowmeter QA operating quarters thereafter. A "fuel flowmeter QA operating quarter" is a unit operating quarter in which the unit combusts the fuel measured by the fuel flowmeter for more than 168 hours. Notwithstanding these requirements, no more than 20 successive calendar quarters shall elapse after the quarter in which a fuel flowmeter was last tested for accuracy without a subsequent flowmeter accuracy test having been conducted. Test the flowmeter accuracy more frequently if required by manufacturer specifications.

Except for orifice-, nozzle-, and venturi-type flowmeters, perform the required flowmeter accuracy testing using the procedures in either section 2.1.5.1 or section 2.1.5.2 of this appendix. Each fuel flowmeter

must meet the accuracy specification in section 2.1.5 of this appendix.

For orifice-, nozzle-, and venturi-type flowmeters (that are designed according to the specifications of American Gas Association Report No. 3 or ASME MFC–3M–1989, as cited in section 2.1.5.1 of this appendix (both standards incorporated by reference under § 75.6) or that have satisfied the initial certification test requirement by meeting an accuracy of 2.0 percent of the upper range value or less by comparison with another fuel flowmeter, following the procedures of section 2.1.5.2 of this appendix), perform a transmitter accuracy test once every four flowmeter QA operating quarters and a primary element visual inspection once every 12 calendar quarters, according to the procedures in sections 2.1.6.1 through 2.1.6.6 of this appendix for periodic quality assurance.

Notwithstanding the requirements of this section, if the procedures of section 2.1.7 of this appendix are performed during each fuel flowmeter QA operating quarter, subsequent to a required flowmeter accuracy test or transmitter accuracy test and primary element inspection, where applicable, those procedures may be used to meet the requirement for periodic quality assurance testing for a period of up to 20 calendar quarters from the previous accuracy test or transmitter accuracy test and primary element inspection, where applicable.

2.1.6.1 Transmitter or Transducer Accuracy Test for Orifice-, Nozzle-, and Venturi-Type Flowmeters

Calibrate the differential pressure transmitter or transducer, static pressure transmitter or transducer, and temperature transmitter or transducer, as applicable, using equipment that has a current certificate of traceability to NIST standards. Check the calibration of each transmitter or transducer by comparing its readings to that of the NIST traceable equipment at least once at each of the following levels: the zero-level and at least two other levels across the range of readings on the transmitter or transducer corresponding to normal unit operation. Determine either the accuracy of each individual transmitter or transducer of the orifice-, nozzle-, or venturi-type flowmeter according to section 2.1.6.2 of this appendix, or determine the accuracy of the entire orifice-, nozzle-, or venturi-type flowmeter according to section 2.1.6.3 of this appendix.

2.1.6.2 Transmitter or Transducer Accuracy Calculation

Calculate the flowmeter accuracy at each level across the range of readings on the transmitter or transducer corresponding to normal unit operation by using the following equation:

$$ACC = \frac{|R - T|}{FS} \times 100$$

(Eq. D–1a)

Where:

ACC=Accuracy of the transmitter or transducer as a percentage of full-scale.

R=Reading of the NIST-traceable reference value (in milliamperes, inches of water, psi, or degrees).

T=Reading of the transmitter or transducer being tested (in milliamperes, inches of water, psi, or degrees, consistent with the units of measure of the NIST-traceable reference value).

FS = Full-scale range of the transmitter or transducer being tested.

2.1.6.3 Total Flowmeter Accuracy Calculation

Use the transmitter or transducer accuracy calculated from Equation D–1a to determine if each individual transmitter or transducer meets an accuracy of ± 1.0 percent of its full-scale range at each level. If one or more of the transmitters or transducers does not meet this accuracy at each level, then either: (1) follow the data validation procedures in section 2.1.6.5 of this appendix, or (2) determine the total flowmeter accuracy at each level, i.e. error in the volumetric flow rate, including all transmitters or transducers and the primary element, using the following equation:

$$\frac{dq_v}{q_v} = \left(K^2 + \left[\frac{-dP_f}{2P_f} \right]^2 + \left[\frac{d\Delta P}{2\Delta P} \right]^2 + \left[\frac{dT_f}{2T_f} \right] \right)^{1/2}$$

(Eq. D–1b)

Where:

dq_v/q_v=Error in the volumetric flow rate due to transmitter drift at a given level.

K=Original error resulting from installation of orifice (including all other variables). For an orifice-, nozzle-, or venturi-type flowmeter that was originally installed to the specifications of AGA Report No. 3 or ASME MFC–3M, as cited in section 2.1.5.1 of this appendix, an assumed value of 1.0 percent of the upper range value may be used for "K" if original error data or dimensional information from installation of the meter or other information on total installation error are not available.

dP_f=Average difference between static pressure transmitter reading(s) and reference static pressure reading(s) at a given level.

P_f=Average reference static pressure reading at a given level.

$d\Delta P$=Average difference between differential pressure transmitter reading(s) and reference differential pressure reading(s) at a given level.

ΔP = Average reference differential pressure reading at a given level.

dT_f=Average difference between temperature transmitter reading(s) and reference temperature reading(s) at a given level.

T_f=Average reference temperature reading at a given level.

Note: For gases, overall flow rate is directly related to pressure and is inversely related to temperature. Therefore, when performing this test on a gas fuel flowmeter, it is recommended that readings be entered into the equation at the following levels:

TABLE D–2—RECOMMENDED LEVELS FOR USING TRANSMITTER TEST RESULTS TO CALCULATE OVERALL GAS FLOWMETER ACCURACY

Level of total flow calculation	Level of static pressure reading	Level of differential pressure reading	Level of temperature reading
Low	Low	Low	High.
Mid	Mid	Mid	Mid.
High	High	High	Low.

If the overall flowmeter accuracy at each flow rate level is less than or equal to ± 2.0 percent of the upper range value of the fuel flowmeter, then the fuel flow rate data remain valid, and the data invalidation procedures of section 2.1.6.5 of this appendix are not required. If the overall flowmeter accuracy at any flow rate level is greater than ± 2.0 percent of the upper range value of the

fuel flowmeter, then data from the fuel flowmeter are considered invalid, beginning with the date and hour of a failed accuracy test and continuing until the date and hour of a successful accuracy test for all transmitters or transducers; during the period when data from the fuel flowmeter are considered invalid, provide data from another fuel flowmeter that meets the requirements of § 75.20(d) and section 2.1.5 of this appendix, or substitute for fuel flow rate using the missing data procedures in section 2.4.2 of this appendix.

2.1.6.4 Recordkeeping and Reporting of Transmitter or Transducer Accuracy Results

Record the accuracy of the orifice, nozzle, or venturi meter or its individual transmitters or transducers and keep this information in a file at the site or other location suitable for inspection. When testing individual orifice, nozzle, or venturi meter transmitters or transducers for accuracy, include the information displayed in Table D–3 below. At a minimum, record results for each transmitter or transducer at the zero-level and at least two other levels across the range of the transmitter or transducer readings that correspond to normal unit operation.

TABLE D–3.—TABLE OF FLOWMETER TRANSMITTER OR TRANSDUCER ACCURACY RESULTS

Measurement level (percent of full-scale)	Run number (if multiple runs) [2]	Run time (HHMM)	Transmitter/ Transducer input (pre-calibration)	Expected transmitter/ transducer output (reference)	Actual transmitter/ transducer output [3]	Percent accuracy (percent of full-scale)
Test number: __ Test completion date: __ Unit or pipe ID: __						
Flowmeter serial number: Component/System ID:						
Full-scale value: Units of measure [3]:						
Transducer/Transmitter Type (check one): __ Differential Pressure __ Static Pressure __ Temperature						
Low (Minimum) level. __ percent [1] of full-scale.						
Mid-level. __ percent [1] of full-scale. (If tested at more than 3 levels).						
2nd Mid-level. __ percent [1] of full-scale. (If tested at more than 3 levels).						
High (Maximum) level. __ percent [1] of full-scale.						

[1] At a minimum, it is required to test at zero-level and at least two other levels across the range of the transmitter or transducer readings corresponding to normal unit operation.
[2] It is required to test at least once at each level.
[3] Use the same units of measure for all readings (e.g., use degrees (°), inches of water (in H_2O), pounds per square inch (psi), or milliamperes (ma) for both transmitter or transducer readings and reference readings).

In addition, when testing the whole orifice, nozzle, or venturi meter for accuracy, record the information displayed in Table D–1 above. At a minimum, record the overall flowmeter accuracy results for the entire fuel flowmeter at the zero-level and at least two other levels across the range of normal unit operation.

Report the final result of the accuracy test (pass or fail) for the combination of all transmitters or transducers of the orifice, nozzle or venturi meter in the emissions report of the quarter in which the accuracy is determined, using the electronic format specified by the Administrator under § 75.64.

2.1.6.5 Failure of Transducer or Transmitter

Except as provided in section 2.1.6.3 of this appendix, if the accuracy during a calibration or test of an individual transmitter or transducer is greater than ±1.0 percent of the full-scale range for that transmitter or transducer at any level or if the individual transmitter or transducer fails to operate properly, recalibrate the transmitter or transducer or replace the transmitter or transducer with another one until the transmitter or transducer accuracy is less than or equal to ±1.0 percent of the full-scale range for that transmitter or transducer, consistent with sections 2.1.6.1 and 2.1.6.2 of this appendix. Data from the fuel flowmeter are considered invalid, beginning with the date and hour of a failed accuracy test (or a failure to operate properly) for any transmitter or transducer and continuing until the date and hour of an accuracy test for all transmitters or transducers in which all transmitters or transducers meet an accuracy of ±1.0 percent of the full-scale range for that transducer or transmitter. During this period, provide data from another fuel flowmeter that meets the requirements of § 75.20(d) and section 2.1.5 of this appendix, or substitute for fuel flow rate using the missing data procedures in section 2.4.2 of this appendix. Record and report test data and results, consistent with section 2.1.6.4 of this appendix and § 75.56 or § 75.59, as applicable.

2.1.6.6 Primary Element Inspection

Conduct a visual inspection of the orifice, nozzle, or venturi at least once every twelve calendar quarters. Notwithstanding this requirement, the procedures of section 2.1.7 of this appendix may be used to reduce the inspection frequency of the orifice, nozzle, or venturi to at least once every twenty calendar quarters. The inspection may be performed using a boroscope. If the visual inspection indicates that the orifice, nozzle, or venturi has become damaged or corroded, then: (1) replace the primary element with another primary element meeting the requirements of American Gas Association Report No. 3 or ASME MFC–3M–1989, as cited in section 2.1.5.1 of this appendix (both standards incorporated by reference under § 75.6); (2) replace the primary element with another primary element, and demonstrate that the overall flowmeter accuracy meets the accuracy specification in section 2.1.5 of this appendix under the procedures of section 2.1.5.2 of this appendix; or (3) restore the damaged or corroded primary element to "as new" condition; determine the overall accuracy of the flowmeter, using either the specifications of American Gas Association Report No. 3 or ASME MFC–3M–1989, as cited in section 2.1.5.1 of this appendix (both standards incorporated by reference under § 75.6); and retest the transmitters or transducers prior to providing quality assured data from the flowmeter. If the primary element size is changed, calibrate the transmitter or transducers consistent with the new primary element size. Data from the fuel flowmeter are considered invalid, beginning with the date and hour of a failed visual inspection and continuing until the date and hour when: (1) the damaged or corroded primary element is replaced with another primary element meeting the requirements of American Gas Association Report No. 3 or ASME MFC–3M–1989, as cited in section 2.1.5.1 of this appendix (both standards incorporated by reference under § 75.6); (2) the damaged or corroded primary element is replaced, and the overall accuracy of the flowmeter is demonstrated to meet the accuracy specification in section 2.1.5 of this

appendix under the procedures of section 2.1.5.2 of this appendix; or (3) the restored primary element is installed to meet the requirements of American Gas Association Report No. 3 or ASME MFC–3M–1989, as cited in section 2.1.5.1 of this appendix (both standards incorporated by reference under § 75.6) and its transmitters or transducers are retested to meet the accuracy specification in section 2.1.6.4 of this appendix. During this period, provide data from another fuel flowmeter that meets the requirements of § 75.20(d) and section 2.1.5 of this appendix, or substitute for fuel flow rate using the missing data procedures in section 2.4.2 of this appendix.

2.1.7 Fuel Flow-to-Load Quality Assurance Testing for Certified Fuel Flowmeters

The procedures of this section may be used as an optional supplement to the quality assurance procedures in section 2.1.5.1, 2.1.5.2, 2.1.6.1, or 2.1.6.6 of this appendix when conducting periodic quality assurance testing of a certified fuel flowmeter. Note, however, that these procedures may not be used unless the 168 hour baseline data requirement of 2.1.7.2 has been met. If, following a flowmeter accuracy test or flowmeter transmitter test and primary element inspection, where applicable, the procedures of this section are performed during each subsequent flowmeter QA operating quarter, as defined in section 2.1.6 of this appendix (excluding the quarter(s) in which the baseline data are collected), then these procedures may be used to meet the requirement for periodic quality assurance for a period of up to 20 calendar quarters from the previous periodic quality assurance procedure(s) performed according to sections 2.1.5.1, 2.1.5.2, or 2.1.6.1 through 2.1.6.6 of this appendix. The procedures of this section are not required for any quarter in which a flowmeter accuracy test or a transmitter accuracy test and a primary element inspection, where applicable, are conducted. Notwithstanding the requirements of § 75.54(a) or § 75.57(a), as applicable, when using the procedures of this section, keep records of the test data and results from the previous flowmeter accuracy test under section 2.1.5.1 or 2.1.5.2 of this appendix, records of the test data and results from the previous transmitter or transducer accuracy test under section 2.1.6.1 of this appendix for orifice-, nozzle-, and venturi-type fuel flowmeters, and records of the previous visual inspection of the primary element required under section 2.1.6.6 of this appendix for orifice-, nozzle-, and venturi-type fuel flowmeters until the next flowmeter accuracy test, transmitter accuracy test, or visual inspection is performed, even if the previous flowmeter accuracy test, transmitter accuracy test, or visual inspection was performed more than three years previously.

2.1.7.1 Baseline Flow Rate-to-Load Ratio or Heat Input-to-Load Ratio

Determine R_{base}, the baseline value of the ratio of fuel flow rate to unit load, following each successful periodic quality assurance procedure performed according to section 2.1.5.1, 2.1.5.2, or 2.1.6.1 and 2.1.6.6 of this appendix. Establish a baseline period of data consisting, at a minimum, of 168 hours of quality assured fuel flowmeter data taken immediately after the most recent quality assurance procedure(s), during which only the fuel measured by the fuel flowmeter is combusted (i.e. only gas, only residual oil, or only diesel fuel is combusted by the unit). During the baseline data collection period, the owner or operator may exclude the following data as non-representative: (1) any hour in which the unit is "ramping" up or down, i.e., the load during the hour differs by more than 15.0 percent from the load in the previous or subsequent hour; and (2) any hour in which the unit load is in the lower 10.0 percent of the range of operation, as defined in section 6.5.2.1 of appendix A to this part, unless operation in this lower portion of the range is considered normal for the unit. The baseline data must be obtained no later than the end of the second calendar quarter following the calendar quarter of the most recent quality assurance procedure for that fuel flowmeter. For orifice-, nozzle-, and venturi-type fuel flowmeters, if the fuel flow-to-load ratio is to be used as a supplement both to the transmitter accuracy test under section 2.1.6.1 of this appendix and to primary element inspections under section 2.1.6.6 of this appendix, then the baseline data must be obtained after both procedures are completed and no later than the end of the second calendar quarter following the calendar quarter of both the most recent transmitter or transducer test and the most recent primary element inspection for that fuel flowmeter. From these 168 (or more) hours of baseline data, calculate the baseline fuel flow rate-to-load ratio as follows:

$$R_{base} = \frac{Q_{base}}{L_{avg}}$$

(Eq. D–1c)

Where:

R_{base}=Value of the fuel flow rate-to-load ratio during the baseline period; 100 scfh/MWe or 100 scfh/klb per hour steam load for gas-firing; (lb/hr)/MWe or (lb/hr)/klb per hour steam load for oil-firing.

Q_{base}=Average fuel flow rate measured by the fuel flowmeter during the baseline period, 100 scfh for gas-firing and lb/hr for oil-firing.

L_{avg}=Average unit load during the baseline period, megawatts or 1000 lb/hr of steam.

In Equation D–1c, for a common pipe header, L_{avg} is the sum of the operating loads of all units that receive fuel through the common pipe header. For a unit that receives its fuel through multiple pipes, Q_{base} is the sum of the fuel flow rates for a particular fuel (i.e., gas, diesel fuel, or residual oil) from each of the pipes. Round off the value of R_{base} to the nearest tenth.

Alternatively, a baseline value of the gross heat rate (GHR) may be determined in lieu of R_{base}. The baseline value of the GHR, GHR_{base}, shall be determined as follows:

$$(GHR)_{base} = \frac{(\text{Heat Input})_{avg}}{L_{avg}} \times 1000$$

(Eq. D–1d)

Where:

$(GHR)_{base}$=Baseline value of the gross heat rate during the baseline period, Btu/kwh or Btu/lb steam load.

$(\text{Heat Input})_{avg}$=Average (mean) hourly heat input rate recorded by the fuel flowmeter during the baseline period, as determined using the applicable equation in appendix F to this part, mmBtu/hr.

L_{avg}=Average (mean) unit load during the baseline period, megawatts or 1000 lb/hr of steam.

Report the current value of R_{base} (or GHR_{base}) and the completion date of the associated quality assurance procedure in each electronic quarterly report required under § 75.64.

2.1.7.2 Data Preparation and Analysis

Evaluate the fuel flow rate-to-load ratio (or GHR) for each flowmeter QA operating quarter, as defined in section 2.1.6 of this appendix. At the end of each flowmeter QA operating quarter, use Equation D–1e in this appendix to calculate R_h, the hourly fuel flow-to-load ratio, for every quality assured hourly average fuel flow rate obtained with a certified fuel flowmeter.

$$R_h = \frac{Q_h}{L_h}$$

(Eq. D–1e)

Where:

R_h=Hourly value of the fuel flow rate-to-load ratio; 100 scfh/MWe, (lb/hr)/MWe, 100 scfh/1000 lb/hr of steam load, or (lb/hr)/1000 lb/hr of steam load.

Q_h = Hourly fuel flow rate, as measured by the fuel flowmeter, 100 scfh for gas-firing or lb/hr for oil-firing.

L_h = Hourly unit load, megawatts or 1000 lb/hr of steam.

For a common pipe header, L_h shall be the sum of the hourly operating loads of all units that receive fuel through the common pipe header. For a unit that receives its fuel through multiple pipes, Q_h will be the sum of the fuel flow rates for a particular fuel (i.e., gas, diesel fuel, or residual oil) from each of the pipes. Round off each value of R_h to the nearest tenth.

Alternatively, calculate the hourly gross heat rates (GHR) in lieu of the hourly flow-to-load ratios. If this option is selected, calculate each hourly GHR value as follows:

$$(GHR)_h = \frac{(\text{Heat Input})_h}{L_h} \times 1000$$

(Eq. D–1f)

Where:

$(GHR)_h$ = Hourly value of the gross heat rate, Btu/kwh or Btu/lb steam load.

$(\text{Heat Input})_h$ = Hourly heat input rate, as determined using the applicable equation in appendix F to this part, mmBtu/hr.

L_h = Hourly unit load, megawatts or 1000 lb/hr of steam.

Evaluate the calculated flow rate-to-load ratios (or gross heat rates) as follows. Perform a separate data analysis for each fuel flowmeter following the procedures of this

section. Base each analysis on a minimum of 168 hours of data. If, for a particular fuel flowmeter, fewer than 168 hourly flow-to-load ratios (or GHR values) are available, a flow-to-load (or GHR) evaluation is not required for that flowmeter for that calendar quarter.

For each hourly flow-to-load ratio or GHR value, calculate the percentage difference (percent D_h) from the baseline fuel flow-to-load ratio using Equation D–1g.

$$\%D_h = \frac{|R_{base} - R_h|}{R_{base}} \times 100$$

(Eq. D–1g)

Where:

$\%D_h$ = Absolute value of the percentage difference between the hourly fuel flow rate-to-load ratio and the baseline value of the fuel flow rate-to-load ratio (or hourly and baseline GHR).

R_h = The hourly fuel flow rate-to-load ratio (or GHR).

R_{base} = The value of the fuel flow rate-to-load ratio (or GHR) from the baseline period, determined in accordance with section 2.1.7.1 of this appendix.

Consistently use R_{base} and R_h in Equation D–1g if the fuel flow-to-load ratio is being evaluated, and consistently use $(GHR)_{base}$ and $(GHR)_h$ in Equation D–1g if the gross heat rate is being evaluated.

Next, determine the arithmetic average of all of the hourly percent difference (percent D_h) values using Equation D–1h, as follows:

$$SO_{2_c} = \sum_{q=1}^{\text{the current quarter}} SO_{2_q}$$

(Eq. D–1h)

Where:

E_f = Quarterly average percentage difference between hourly flow rate-to-load ratios and the baseline value of the fuel flow rate-to-load ratio (or hourly and baseline GHR).

$\%D_h$ = Percentage difference between the hourly fuel flow rate-to-load ratio and the baseline value of the fuel flow rate-to-load ratio (or hourly and baseline GHR).

q = Number of hours used in fuel flow-to-load (or GHR) evaluation.

When the quarterly average load value used in the data analysis is greater than 50 MWe (or 500 klb steam per hour), the results of a quarterly fuel flow rate-to-load (or GHR) evaluation are acceptable and no further action is required, if the quarterly average percentage difference (E_f) is no greater than 10.0 percent. When the arithmetic average of the hourly load values used in the data analysis is ≤ 50 MWe (or 500 klb steam per hour), the results of the analysis are acceptable if the value of E_f is no greater than 15.0 percent.

2.1.7.3 Optional Data Exclusions

If E_f is outside the limits in section 2.1.7.2 of this appendix, the owner or operator may re-examine the hourly fuel flow rate-to-load ratios (or GHRs) that were used for the data analysis and identify and exclude fuel flow-to-load ratios or GHR values for any non-representative fuel flow-to-load ratios or GHR values. Specifically, the R_h or $(GHR)_h$ values for the following hours shall be considered non-representative: (1) any hour in which the unit combusted another fuel in addition to the fuel measured by the fuel flowmeter being tested; (2) any hour for which the load differed by more than ± 15.0 percent from the load during either the preceding hour or the subsequent hour; and (3) any hour for which the unit load was in the lower 10.0 percent of the range of operation, as defined in section 6.5.2.1 of appendix A to this part, unless operation in this lower portion of the range is considered normal for the unit.

After identifying and excluding all non-representative hourly fuel flow-to-load ratios or GHR values, analyze the quarterly fuel flow rate-to-load data a second time.

2.1.7.4 Consequences of Failed Fuel Flow-to-Ratio Test

If E_f is outside the applicable limit in section 2.1.7.2 of this appendix (after analysis using any optional data exclusions under section 2.1.7.3 of this appendix), perform transmitter accuracy tests according to section 2.1.6.1 of this appendix for orifice-, nozzle-, and venturi-type flowmeters, or perform a fuel flowmeter accuracy test, in accordance with section 2.1.5.1 or 2.1.5.2 of this appendix, for each fuel flowmeter for which E_f is outside of the applicable limit. In addition, for an orifice-, nozzle-, or venturi-type fuel flowmeter, repeat the fuel flow-to-load ratio comparison of section 2.1.7.2 of this appendix using six to twelve hours of data following a passed transmitter accuracy test in order to verify that no significant corrosion has affected the primary element. If, for the abbreviated 6–to–12 hour test, the orifice-, nozzle-, or venturi-type fuel flowmeter is not able to meet the limit in section 2.1.7.2 of this appendix, then perform a visual inspection of the primary element according to section 2.1.6.6 of this appendix, and repair or replace the primary element, as necessary.

Substitute for fuel flow rate, for any hour when that fuel is combusted, using the missing data procedures in section 2.4.2 of this appendix, beginning with the first hour of the calendar quarter following the quarter for which E_f was found to be outside the applicable limit and continuing until quality assured fuel flow data become available. Following a failed flow rate-to-load or GHR evaluation, data from the flowmeter shall not be considered quality assured until the hour in which all required flowmeter accuracy tests, transmitter accuracy tests, visual inspections and diagnostic tests have been passed. Additionally, a new value of R_{base} or $(GHR)_{base}$ shall be established no later than two flowmeter QA operating quarters after the quarter in which the required quality assurance tests are completed (for orifice-, nozzle-, or venturi-type fuel flowmeters, a new value of R_{base} or $(GHR)_{base}$ shall only be established if both a transmitter accuracy test and a primary element inspection have been performed).

2.1.7.5 Test Results

Report the results of each quarterly flow rate-to-load (or GHR) evaluation, as determined from Equation D–1h, in the electronic quarterly report required under § 75.64. Table D–4 is provided as a reference on the type of information to be recorded under § 75.59 and reported under § 75.64.

TABLE D–4.—BASELINE INFORMATION AND TEST RESULTS FOR FUEL FLOW-TO-LOAD TEST

Time period	
Baseline period	Quarter

Plant name:_____ State:_____ ORIS code:_____

Unit/pipe ID #:_____ Fuel flowmeter component and system ID #s:___–___

Calendar quarter (1st, 2nd, 3rd, 4th) and year:_____

Range of operation:_____ to_____ MWe or klb steam/hr (indicate units)

Completion date and time of most recent primary element inspection (orifice-, nozzle-, and venturi-type flowmeters only). ___/___/___ ___:___	Number of hours excluded from quarterly average due to co-firing different fuels:_____hrs.
Completion date and time of most recent flowmeter or transmitter accuracy test. ___/___/___ ___:___	Number of hours excluded from quarterly average due to ramping load:_____hrs.
Beginning date and time of baseline period	Number of hours in the lower 10.0 percent of the range of operation excluded from quarterly average:_____hrs.

TABLE D–4.—BASELINE INFORMATION AND TEST RESULTS FOR FUEL FLOW-TO-LOAD TEST—Continued

Number of hours in the lower 10.0 percent of the range of operation excluded from baseline ratio or GHR:_____ hrs.	

2.2 Oil Sampling and Analysis

Perform sampling and analysis of oil to determine the percentage of sulfur by weight in the oil combusted by the unit. Calculate SO_2 mass emissions and heat input rate using the sulfur content, density, and gross calorific value (heat content), as described in the sections below and in Table D–5.

TABLE D–5.—OIL SAMPLING METHODS AND SULFUR, DENSITY AND GROSS CALORIFIC VALUE USED IN CALCULATIONS

Parameter	Sampling technique/frequency	Value used in calculations
Oil Sulfur Content..	Daily manual sampling	Highest sulfur content from previous 30 daily samples.
	Flow proportional/weekly composite..	Actual measured value.
	In storage tank (after addition of fuel to tank)	Actual measured value OR highest of all sampled values in previous calendar year OR maximum value allowed by contract.[1]
	As delivered (in delivery truck or barge).[1]	Highest of all sampled values in previous calendar year OR maximum value allowed by contract.[1]
Oil Density	Daily manual sampling	Actual measured value.
	Flow proportional/weekly composite..	Actual measured value.
	In storage tank (after addition of fuel to tank)	Actual measured value OR highest of all sampled values in previous calendar year OR maximum value allowed by contract.[1]
	As delivered (in delivery truck or barge).[1]	Highest of all sampled values in previous calendar year OR maximum value allowed by contract.[1]
Oil GCV	Daily manual sampling	Actual measured value.
	Flow proportional/weekly composite	Actual measured value.
	In storage tank (after addition of fuel to tank)	Actual measured value OR highest of all sampled values in previous calendar year OR maximum value allowed by contract.[1]
	As delivered (in delivery truck or barge).[1]	Highest of all sampled values in previous calendar year OR maximum value allowed by contract.[1]

[1] Assumed values may only be used if sulfur content, gross calorific value, or density of each sample is no greater than the assumed value used to calculate emissions or heat input.

2.2.1 When combusting oil, sample the oil: (1) from the storage tank for the unit after each addition of oil to the storage tank, in accordance with section 2.2.4.2 of this appendix; (2) from the fuel lot in the shipment tank or container upon receipt of each oil delivery or from the fuel lot in the oil supplier's storage container, in accordance with section 2.2.4.3 of this appendix; (3) following the flow proportional sampling methodology in section 2.2.3 of this appendix; or (4) following the daily manual sampling methodology in section 2.2.4.1 of this appendix. For purposes of this appendix, a fuel lot of oil is the mass or volume of product oil from one source (supplier or pretreatment facility), intended as one shipment or delivery (ship load, barge load, group of trucks, discrete purchase of diesel fuel through pipeline, etc.), which meets the fuel purchase specifications for sulfur content and GCV. A storage tank is a container at a plant holding oil that is actually combusted by the unit, such that

blending of any other fuel with the fuel in the storage tank occurs from the time that the fuel lot is transferred to the storage tank to the time when the fuel is combusted in the unit.

2.2.2 [Reserved]

2.2.3 Flow Proportional Sampling

Conduct flow proportional oil sampling or continuous drip oil sampling in accordance with ASTM D4177–82 (Reapproved 1990), "Standard Practice for Automatic Sampling of Petroleum and Petroleum Products" (incorporated by reference under § 75.6), every day the unit is combusting oil. Extract oil at least once every hour and blend into a composite sample. The sample compositing period may not exceed 7 calendar days (168 hr). Use the actual sulfur content (and where density data are required, the actual density) from the composite sample to calculate the hourly SO_2 mass emission rates for each operating day represented by the composite sample. Calculate the hourly heat input rates for each operating day represented by the composite sample, using the actual gross calorific value from the composite sample.

2.2.4 Manual Sampling

2.2.4.1 Daily Samples

Representative oil samples may be taken from the storage tank or fuel flow line manually every day that the unit combusts oil according to ASTM D4057–88, "Standard Practice for Manual Sampling of Petroleum and Petroleum Products" (incorporated by reference under § 75.6), provided that the highest fuel sulfur content recorded at that unit from the most recent 30 daily samples is used for the purpose of calculating SO_2 emissions under section 3 of this appendix. Use the gross calorific value measured from that day's samples to calculate heat input. If oil supplies with different sulfur contents are combusted on the same day, sample the highest sulfur fuel combusted that day.

2.2.4.2 Sampling from a Unit's Storage Tank

Take a manual sample after each addition of oil to the storage tank. No additional fuel shall be blended with the sampled fuel prior to combustion. Sample according to the single tank composite sampling procedure or all-levels sampling procedure in ASTM D4057–88, "Standard Practice for Manual Sampling of Petroleum and Petroleum Products" (incorporated by reference under § 75.6). Use the sulfur content (and where required, the density) of either the most recent sample or one of the conservative assumed values described in section 2.2.4.3 of this appendix, to calculate SO_2 mass emission rate. Calculate heat input rate using the gross calorific value from either: (1) the most recent oil sample taken or (2) one of the conservative assumed values described in section 2.2.4.3 of this appendix.

2.2.4.3 Sampling from Each Delivery

Alternatively, an oil sample may be taken from the shipment tank or container upon receipt of each lot of fuel oil or from the supplier's storage container which holds the lot of fuel oil. For the purpose of this section, a lot is defined as a shipment or delivery (e.g., ship load, barge load, group of trucks, discrete purchase of diesel fuel through a pipeline, etc.) which meets the fuel purchase specifications for sulfur content and GCV. Oil sampling may be performed either by the owner or operator of an affected unit, an outside laboratory, or a fuel supplier, provided that samples are representative and that sampling is performed according to either the single tank composite sampling procedure or the all-levels sampling procedure in ASTM D4057–88, "Standard Practice for Manual Sampling of Petroleum and Petroleum Products" (incorporated by reference under § 75.6). Except as otherwise provided in this section 2.2.4.3, calculate SO_2 mass emission rate using the sulfur content (and where required, the density) from one of the two values below, and calculate heat input using the gross calorific value from one of the two following values: (1) the highest value sampled during the previous calendar year or (2) the maximum value indicated in the contract with the fuel supplier unit. Continue to use this assumed value unless and until the actual sampled sulfur content, density, or gross calorific value of a delivery exceeds the assumed value.

If the actual sampled sulfur content, gross calorific value, or density of an oil sample is greater than the assumed value for that parameter, then use the actual sampled value for sulfur content, gross calorific value, or density of fuel to calculate SO_2 mass emission rate or heat input rate as the new assumed sulfur content, gross calorific value, or density. Continue to use this new assumed value to calculate SO_2 mass emission rate or heat input rate unless and until: (1) it is superseded by a higher value from an oil sample; (2) a new contract with a higher maximum sulfur content, gross calorific value, or density is adopted, in which case the new contract value becomes the assumed value; or (3) both the calendar year in which the sampled value exceeded the assumed value and the subsequent calendar year have elapsed.

* * * * *

2.2.6 Where the flowmeter records volumetric flow rate rather than mass flow rate, analyze oil samples to determine the density or specific gravity of the oil.

* * * * *

2.2.8 Results from the oil sample analysis must be available no later than thirty calendar days after the sample is composited or taken. However, during an audit, the Administrator may require that the results of the analysis be available as soon as practicable, and no later than 5 business days after receipt of a request from the Administrator.

2.3 SO_2 Emissions from Combustion of Gaseous Fuels

Account for the hourly SO_2 mass emissions due to combustion of gaseous fuels for each day when gaseous fuels are combusted by the unit using the procedures in either section 2.3.1 or 2.3.2. The procedures in section 2.3.1 may be used for accounting for SO_2 mass emissions from any gaseous fuel with a total sulfur content ≤20.0 gr/100 scf. The procedures in section 2.3.2 may be used for pipeline natural gas or for any gaseous fuel for which the designated representative demonstrates to the satisfaction of the Administrator, in a petition to the Administrator under § 75.66(i), that the fuel has an SO_2 emission rate no greater than 0.0006 lb/mmBtu. Values used for calculations of SO_2 mass emission rates are summarized in Table D–6, below.

TABLE D–6.—GAS SAMPLING METHODS AND SULFUR AND HEAT CONTENT (GCV) VALUES USED IN CALCULATIONS

Parameter	Sampling technique/frequency	Value used in calculations
Gas Sulfur Content	Gaseous fuel in lots—as-delivered sampling [1]	Highest of all sampled values in previous calendar year OR maximum value allowed by contract [1]
	Any gaseous fuel—daily sampling [2]	Highest sulfur in previous 30 daily samples.
	Any gaseous fuel—continuous sampling (at least hourly) with a gas chromatograph.	Actual measured hourly average sulfur content.
Gas GCV/heat content	Gaseous fuel in lots—as-delivered sampling [1]	Highest of all sampled values in previous calendar year OR maximum value allowed by contract.[1]
	Gaseous fuels other than pipeline natural gas that are sampled for sulfur content—daily sampling.	Highest GCV in previous 30 daily samples.
	Gaseous fuels other than pipeline natural gas that are sampled for sulfur content—continuous sampling (at least hourly).	Actual measured hourly average GCV or highest GCV in previous 30 unit operating days.
	Pipeline natural gas—monthly sampling for GCV only.	Actual measured GCV OR highest of all sampled values in previous calendar year OR maximum value allowed by contract.[3]

[1] Assumed sulfur and GCV values may only continue to be used if sulfur content and gross calorific value of each as-delivered sample is no greater than the assumed value used to calculate emissions or heat input.

[2] Continuous sampling (at least hourly) may be required if the sulfur content exhibits too much variability (see section 2.3.3.4, below).
[3] Assumed GCV values of the highest sampled value in the previous calendar year or the maximum value allowed by contract may only continue to be used if gross calorific value of each monthly sample is no greater than the assumed value used to calculate heat input.

2.3.1 For gaseous fuels received in shipments or lots, sample each shipment or lot of fuel. A fuel lot for gaseous fuel is the volume of product gas from one source (supplier or pretreatment facility), intended as one shipment or delivery, which meets the fuel purchase specifications for sulfur content and GCV. For gaseous fuels, other than pipeline natural gas, that are not delivered in discrete lots or shipments, sample the gaseous fuel at least daily. Continuous sampling (at least hourly) with a gas chromatograph may be required if the sulfur content exhibits too much variability (see section 2.3.3.4, below). For gaseous fuel meeting the definition of pipeline natural gas in § 72.2 of this chapter, either use the procedures of section 2.3.2 of this appendix or sample the gaseous fuel at least daily. Sampling may be performed by either the owner or operator or by the fuel supplier.

* * * * *

2.3.1.3 Determine the heat content or gross calorific value for a sample using the procedures of section 5.5 of appendix F to this part to determine the heat input rate for each hour the unit combusted gaseous fuel. Calculate heat input using the appropriate GCV from sections 2.3.1.4.1 through 2.3.1.4.3 of this appendix.

2.3.1.4 Calculate the hourly SO_2 mass emission rate, in lb/hr, using Equation D–4 of this appendix. Multiply the hourly metered volumetric flow rate of gas combusted (in 100 scfh) by the appropriate sulfur content from sections 2.3.1.4.1 through 2.3.1.4.2 of this appendix.

2.3.1.4.1 For gaseous fuels received in shipments or lots, use one of the following values: (1) the highest sulfur content and GCV from all shipments in the previous calendar year or (2) the maximum sulfur content and maximum GCV values established by agreement with the fuel supplier through a contract. Continue to use this assumed value until and unless the actual sampled sulfur content or gross calorific value of a delivery exceeds the previously reported assumed value.

If the actual sampled sulfur content or gross calorific value of a gas sample is greater than the assumed value for that parameter, then use the actual sampled value for sulfur content or gross calorific value of gas to calculate SO_2 mass emission rate or heat input rate as the new assumed sulfur content or gross calorific value. Continue to use this sampled value to calculate SO_2 mass emission rate or heat input rate until: (1) it is superseded by a new, higher value from a gas sample; (2) a new contract with a higher maximum sulfur content or gross calorific value is adopted, in which case the new contract value becomes the new assumed value; or (3) both the calendar year in which the sampled value exceeded the assumed value and the subsequent calendar year have elapsed.

2.3.1.4.2 For gaseous fuels other than pipeline natural gas that are not received in shipments or lots that are transmitted by pipeline and sampled daily, use the highest sulfur content and GCV from the previous 30 daily gas samples. When continuous gas sampling (at least hourly) is required, use the actual measured hourly average sulfur content for each hour that the gaseous fuel is combusted.

2.3.1.4.3 For pipeline natural gas, use the highest sulfur content in the previous 30 daily gas samples, and the GCV from: (1) one or more samples taken during the most recent month when the unit burned gas for at least 48 hours; (2) the highest GCV from all samples in the previous calendar year; or (3) the maximum GCV values established by agreement with the fuel supplier through a contract. Continue to use this assumed value unless and until the actual sampled sulfur content or gross calorific value of a delivery exceeds the previously reported assumed value.

If the actual sampled sulfur content or gross calorific value of a gas sample is greater than the assumed value for that parameter, use the actual sampled value for sulfur content or gross calorific value of gas to calculate SO_2 mass emission rate or heat input rate as the new assumed sulfur content or gross calorific value. Continue to use this sampled value to calculate SO_2 mass emission rate or heat input rate until: (1) it is superseded by a new, higher value from a gas sample; (2) a new contract with a higher maximum sulfur content or gross calorific value is adopted, in which case the new contract value becomes the new assumed value; or (3) both the calendar year in which the sampled value exceeded the assumed value and the subsequent calendar year have elapsed.

2.3.2 If the fuel is pipeline natural gas, as defined in § 72.2 of this chapter, calculate SO_2 emissions under this section using a default SO_2 emission rate of 0.0006 lb/mmBtu.

2.3.2.1 Use the default SO_2 emission rate of 0.0006 lb/mmBtu and the hourly heat input rate from pipeline natural gas in mmBtu/hr, as determined using the procedures in section 5.5 of appendix F to this part. Calculate SO_2 mass emission rate using Equation D–5 of this appendix. Determine the heat content or gross calorific value for at least one sample each month that the gaseous fuel is combusted using the procedures in section 5.5 of appendix F to this part.

2.3.2.2 The procedures in this section 2.3.2 may also be used for a gaseous fuel other than pipeline natural gas if the Administrator approves a petition under § 75.66(i) in which the designated representative demonstrates that the gaseous fuel combusted at the unit has an SO_2 emission rate no greater than 0.0006 lb/mmBtu. To demonstrate this, the petition shall include at least 720 hours of fuel sampling data, indicating the total sulfur content and GCV of the fuel for each hour. Each hourly value of the total sulfur content in the gas or blend (in gr/100 scf) shall be converted to a "fuel sulfur-to-heating value ratio," by dividing the total sulfur content by the gross calorific value of the fuel (in Btu/100 scf) and then multiplying by a conversion factor of 10^6 Btu/mmBtu. The mean value of the fuel sulfur-to-heating value ratios shall then be calculated. If the mean value of the ratios does not exceed 2.0 grains of sulfur per mmBtu, then the default SO_2 emission rate of 0.0006 lb/mmBtu may be used to account for SO_2 mass emissions under this part, whenever the gaseous fuel is combusted.

2.3.3 For all types of gaseous fuels, the owner or operator shall provide, in the monitoring plan for the unit, historical fuel sampling information on the sulfur content of the gaseous fuel sufficient to demonstrate that use of this appendix is applicable because the gas has a total sulfur content of 20.0 grain/100 scf or less. Provide this information with the initial monitoring plan for the unit and following any significant changes in gas contract or source of supply. However, for units combusting pipeline natural gas that have gas flowmeters certified prior to the effective date of this rule, this information may be retained on site in a form suitable for inspection, rather than submitted as an update to the monitoring plan. In addition, provide the following specific information in the monitoring plan required under § 75.53, depending on the type of gaseous fuel:

2.3.3.1 For pipeline natural gas, provide information demonstrating that the definition of pipeline natural gas in § 72.2 of this chapter has been met. This demonstration must be made using one of the following sources of information: (1) the gas quality characteristics specified by a purchase contract or by a pipeline transportation contract; (2) a certification of the gas vendor, based on routine vendor sampling and analysis; or (3) at least one year's worth of analytical data on the fuel hydrogen sulfide content from samples taken monthly or more frequently.

2.3.3.2 For gaseous fuel other than pipeline natural gas for which a petition has been submitted and approved under section 2.3.2.2 of this appendix, provide the information required to be included in the petition pursuant to section 2.3.2.2.

2.3.3.3 For liquefied petroleum gas and other gaseous fuels provided in batches or lots having uniform sulfur content, provide either contractual information from the fuel supplier or provide historical information on each lot of liquefied petroleum gas from at least one year.

2.3.3.4 For any other gaseous fuel or blend, including gas produced by a variable process (e.g., digester gas or landfill gas), provide data on the fuel sulfur content, as follows. Provide a minimum of 720 hours of data, indicating the total sulfur content of the gas or blend (in gr/100 scf). The data shall be obtained with a gas chromatograph, and, for gaseous fuel produced by a variable process, the data shall be representative of all process operating conditions. The data shall be reduced to hourly averages and shall be

used to determine whether daily sampling of the sulfur content of the gas or blend is sufficient or whether sampling, at least hourly, with a gas chromatograph is required. Specifically, daily gas sampling shall be sufficient, provided that either: (1) the mean value of the total sulfur content of the gas or blend is ≤7 grains per 100 scf; or (2) the standard deviation of the hourly average values from the mean does not exceed 5 grains per 100 scf. If the gas or blend does not meet requirement (1) or (2), then sampling, at least hourly, of the fuel with a gas chromatograph (GCH) and hourly reporting of the hourly average sulfur content of the fuel is required. If sampling, at least hourly, from a gas chromatograph is required, the owner or operator shall develop and implement a program to quality assure the data from the GCH, in accordance with the manufacturer's recommended procedures. The quality assurance procedures shall be kept on-site, in a form suitable for inspection.

2.4 * * *

2.4.1 Missing Data for Oil and Gas Samples

When oil sulfur content, density, or gross calorific value data are missing or invalid for an oil or gas sample taken according to the procedures in section 2.2.3, 2.2.4.1, 2.2.4.2, 2.2.4.3, 2.3.1, 2.3.1.1, 2.3.1.2, or 2.3.1.3 of this appendix, then substitute the maximum potential sulfur content, density, or gross calorific value of that fuel from Table D–7 of this appendix.

TABLE D–7.—MISSING DATA SUBSTITUTION PROCEDURES FOR SULFUR, DENSITY, AND GROSS CALORIFIC VALUE

Parameter	Data Missing data substitution maximum potential value
Oil Sulfur Content	3.5 percent for residual oil, or. 1.0 percent for diesel fuel.
Oil Density	8.5 lb/gal for residual oil, or 7.4 lb/gal for diesel fuel.
Oil GCV	19,500 Btu/lb for residual oil, or 20,000 Btu/lb for diesel fuel.
Gas Sulfur Content	0.30 gr/100 scf for pipeline natural gas, or 20.0 gr/100 scf for other gaseous fuel.
Gas GCV/Heat Content	1100 Btu/scf for pipeline natural gas, or 2100 Btu/scf for other gaseous fuel.

2.4.2 Whenever data are missing from any fuel flowmeter that is part of an excepted monitoring system under appendix D or E to this part, where the fuel flowmeter data are required to determine the amount of fuel combusted by the unit, use the procedures in sections 2.4.2.2 and 2.4.2.3 of this appendix to account for the flow rate of fuel combusted at the unit for each hour during the missing data period. In addition, a fuel flowmeter used for measuring fuel combusted by a peaking unit may use the simplified fuel flow missing data procedure in section 2.4.2.1 of this appendix.

2.4.2.1 Simplified Fuel Flow Missing Data for Peaking Units.

If no fuel flow rate data are available for a fuel flowmeter system installed on a peaking unit (as defined in § 72.2 of this chapter), then substitute for each hour of missing data using the maximum potential fuel flow rate. The maximum potential fuel flow rate is the lesser of the following: (1) the maximum fuel flow rate the unit is capable of combusting or (2) the maximum flow rate that the flowmeter can measure (i.e, upper range value of flowmeter leading to a unit).

2.4.2.2 * * *

2.4.2.3 For hours where two or more fuels are combusted, substitute the maximum hourly fuel flow rate measured and recorded by the flowmeter (or flowmeters, where fuel is recirculated) for the fuel for which data are missing at the corresponding load range recorded for each missing hour during the previous 720 hours when the unit combusted that fuel with any other fuel. For hours where no previous recorded fuel flow rate data are available for that fuel during the missing data period, calculate and substitute the maximum potential flow rate of that fuel for the unit as defined in section 2.4.2.2 of this appendix.

2.4.3 * * *

65. Section 3 of appendix D to part 75 is amended by:

a. Revising sections 3, 3.1, 3.2, 3.2.1, 3.2.3, 3.2.4, and 3.3;

b. Redesignating section 3.4 as section 3.5 and revising the introductory text; and

c. Adding a new section 3.4, to read as follows:

3. Calculations

Use the calculation procedures in section 3.1 of this appendix to calculate SO_2 mass emission rate. Where an oil flowmeter records volumetric flow rate, use the calculation procedures in section 3.2 of this appendix to calculate the mass flow rate of oil. Calculate hourly SO_2 mass emission rate from gaseous fuel using the procedures in section 3.3 of this appendix. Calculate hourly heat input rate for oil and for gaseous fuel using the equations in section 5.5 of appendix F to this part. Calculate total SO_2 mass emissions and heat input as provided under section 3.4 of this appendix.

3.1 SO_2 Mass Emission Rate Calculation for Oil

3.1.1 Use the following equation to calculate SO_2 mass emissions per hour (lb/hr):

$$M_{SO_2} = 2.0 \times M_{oil} \times \frac{\%S_{oil}}{100.0}$$

(Eq. D–2)

where:

MSO_2 = Hourly mass emission rate of SO_2 emitted from combustion of oil, lb/hr.

M_{oil} = Mass rate of oil consumed per hr, lb/hr.

$\%S_{oil}$ = Percentage of sulfur by weight measured in the sample.

2.0 = Ratio of lb SO_2/lb S.

3.1.2 Record the SO_2 mass emission rate from oil for each hour that oil is combusted.

3.2 Mass Flow Rate Calculation for Oil Using Volumetric Flow Rate

3.2.1 Where the oil flowmeter records volumetric flow rate rather than mass flow rate, calculate and record the oil mass flow rate for each hourly period using hourly oil flow rate measurements and the density or specific gravity of the oil sample.

* * * * *

3.2.3 Where density of the oil is determined by the applicable ASTM procedures from section 2.2.5 of this appendix, use the following equation to calculate the rate of the mass of oil consumed (in lb/hr):

$M_{oil} = V_{oil} \times D_{oil}$

(Eq. D–3)

Where:

M_{oil} = Mass rate of oil consumed per hr, lb/hr.

V_{oil} = Volume rate of oil consumed per hr, measured in scf, gal, barrels, or m^3.

D_{oil} = Density of oil, measured in lb/scf, lb/gal, lb/barrel, or lb/m^3.

3.2.4 Calculate the hourly heat input rate to the unit from oil (mmBtu/hr) by multiplying the heat content of the daily oil sample by the hourly oil mass rate.

3.3 SO_2 Mass Emissions Rate Calculation for Gaseous Fuels

3.3.1 Use the following equation to calculate the SO_2 emission rate using the gas sampling and analysis procedures in section 2.3.1 of this appendix:

$$M_{(SO_2)g} = \left(\frac{2.0}{7000}\right) \times Q_g \times S_g$$

(Eq. D–4)

Where:

$M_{(SO2)g}$ = Hourly mass rate of SO_2 emitted due to combustion of gaseous fuel, lb/hr.

Q_g = Hourly metered flow rate of gaseous fuel combusted, 100 scf/hr.

S_g = Sulfur content of gaseous fuel, in grain/100 scf.

2.0 = Ratio of lb SO_2/lb S.

7000 = Conversion of grains/100 scf to lb/100 scf.

3.3.2 Use the following equation to calculate the SO_2 emission rate using the

0.0006 lb/mmBtu emission rate in section 2.3.2 of this appendix:

$M_{(SO2)g} = ER \times HI_g$

(Eq. D–5)

Where:

$M_{(SO2)g}$ = Hourly mass rate of SO_2 emissions from combustion of pipeline natural gas, lb/hr.

ER = SO_2 emission rate of 0.0006 lb/mmBtu for pipeline natural gas.

Hi_g = Hourly heat input rate of pipeline natural gas, calculated using procedures in appendix F to this part, in mmBtu/hr.

3.3.3 Record the SO_2 mass emission rate for each hour when the unit combusts gaseous fuel.

3.4 Conversion of Rates to Totals and Summation of Quarterly and Cumulative Values

3.4.1 SO_2 Mass Emissions Conversions and Summations.

For a unit or for a common pipe, calculate total quarterly SO_2 mass emissions (using Equation D–6) and total cumulative SO_2 mass emissions (using Equation D–7). First convert hourly SO_2 mass emission rates for each fuel to total hourly SO_2 mass emissions, by multiplying the hourly rates by the fuel usage time. Second, sum the total hourly SO_2 mass emissions from all fuels for the quarter. Third, convert the quarterly SO_2 mass emission total to tons. Finally, for cumulative emissions, sum the quarterly SO_2 mass emission totals, in tons, for each quarter in the year to date.

$$SO_{2_q} = \frac{1}{2000} \sum_{\text{first fuel}}^{\text{last fuel}} \sum_{\text{hour}=1}^{n} \sum_{\text{first system}}^{\text{last system}} SO_{2i\ \text{fuel system}}\, t_i$$

(Eq. D–6)

Where:

SO_{2q} = Total SO_2 mass emissions for the quarter, tons.

$SO_{2i\ \text{fuel system}}$ = SO_2 mass emission rate for a given fuel for a particular fuel flow system, lb/hr.

t_i = Fuel usage time for the fuel and system, hour or fraction of an hour.

$$SO_{2_c} = \sum_{q=1}^{\text{the current quarter}} SO_{2_q}$$

(Eq. D–7)

Where:

SO_{2c} = Total SO_2 mass emissions for the year to date, tons.

SO_{2q} = Total SO_2 mass emissions for the quarter, tons.

3.4.2 Heat Input Conversions and Summations

$$HI_q = \sum_{\text{first fuel}}^{\text{last fuel}} \sum_{\text{hour}=1}^{n} \sum_{\text{first system}}^{\text{last system}} HI_{i\ \text{fuel system}}\, t_i$$

(Eq. D–8)

Where:

HI_q = Total heat input for the quarter, mmBtu.

$HI_{i\ \text{fuel system}}$ = Heat input rate during fuel usage for a given fuel for a particular fuel flow system, using Equation F–19 or F–20, mmBtu/hr.

t_i = Fuel usage time for the fuel and system, hour or fraction of an hour.

$$HI_c = \sum_{q=1}^{\text{the current quarter}} HI_q$$

(Eq. D–9)

Where:

HI_c=Total heat input for the year to date, mmBtu.

HI_q=Total heat input for the quarter, mmBtu.

3.5 Records and Reports

Calculate and record quarterly and cumulative SO_2 mass emissions and heat input for each calendar quarter using the procedures and equations of section 3.4 of this appendix.

* * * * *

Calculate total quarterly (using Equation D–8) and total cumulative (using Equation D–9) heat input for a unit or common pipe with fuel flow systems.

APPENDIX E TO PART 75—OPTIONAL NO_X EMISSIONS ESTIMATION PROTOCOL FOR GAS-FIRED PEAKING UNITS AND OIL-FIRED PEAKING UNITS

* * * * *

66. Section 2 of appendix E to part 75 is amended by revising sections 2.5.4 and 2.5.5 to read as follows:

2. Procedure

* * * * *

2.5 Missing Data Procedures

* * * * *

2.5.4 Substitute missing data from a fuel flowmeter using the procedures in section 2.4.2 of appendix D to this part.

2.5.5 Substitute missing data for gross calorific value of fuel using the procedures in sections 2.4.1 of appendix D to this part.

67. Section 3 of Appendix E to part 75 is amended by revising sections 3.1, 3.3.1, and 3.3.4 to read as follows:

3. Calculations

3.1 Heat Input

Calculate the total heat input by summing the product of heat input rate and fuel usage time of each fuel, as in the following equation:

$H_T = HI_{fuel\ 1} t_1 + HI_{fuel\ 2} t_2 + HI_{fuel\ 3} t_3 + \ldots + HI_{last\ fuel} t_{last}$

(Eq. E–1)

Where:

H_T=Total heat input of fuel flow or a combination of fuel flows to a unit, mmBtu.

$HI_{fuel\ 1,2,3,....last}$=Heat input rate from each fuel, in mmBtu/hr as determined using Equation F–19 or F–20 in section 5.5 of appendix F to this part, mmBtu/hr.

$t_{1,2,3,....last}$=Fuel usage time for each fuel (rounded up to the nearest fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator)).

* * * * *

3.3 * * *

3.3.1 Conversion from Concentration to Emission Rate.

Convert the NO_X concentrations (ppm) and O_2 concentrations to NO_X emission rates (to the nearest 0.01 lb/mmBtu for tests performed prior to January 1, 2000 or to the nearest 0.001 lb/mmBtu for tests performed on and after January 1, 2000), according to the appropriate one of the following equations: F–5 in appendix F to this part for dry basis concentration measurements or 19–3 in Method 19 of appendix A to part 60 of this chapter for wet basis concentration measurements.

* * * * *

3.3.4 Average NO_X Emission Rate During Co-firing of Fuels.

$$E_h = \frac{\sum_{f=1}^{\text{all fuels}} \left(E_f \times HI_f t_f\right)}{H_T}$$

(Eq. E–2)

Where:

E_h=NO_X emission rate for the unit for the hour, lb/mmBtu.

E_f=NO_X emission rate for the unit for a given fuel at heat input rate HI_f, lb/mmBtu.

HI_f=Heat input rate for the hour for a given fuel, during the fuel usage time, as determined using Equation F–19 or F–20 in section 5.5 of appendix F to this part, mmBtu/hr

H_T=Total heat input for all fuels for the hour from Equation E–1.

t_f=Fuel usage time for each fuel (rounded up to the nearest fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator)).

Note: For hours where a fuel is combusted for only part of the hour, use the fuel flow rate or mass flow rate during the fuel usage time, instead of the total fuel flow or mass flow during the hour, when calculating heat input rate using Equation F–19 or F–20.

68. Section 2 of appendix F to part 75 is revised to read as follows:

Appendix F to Part 75—Conversion Procedures

* * * * *

2. Procedures for SO_2 Emissions

Use the following procedures to compute hourly SO_2 mass emission rate (in lb/hr) and quarterly and annual SO_2 total mass emissions (in tons). Use the procedures in Method 19 in appendix A to part 60 of this chapter to compute hourly SO_2 emission rates (in lb/mmBtu) for qualifying Phase I technologies. When computing hourly SO_2 emission rate in lb/mmBtu, a minimum concentration of 5.0 percent CO_2 and a maximum concentration of 14.0 percent O_2 may be substituted for measured diluent gas concentration values at boilers during hours when the hourly average concentration of CO_2 is less than 5.0 percent CO_2 or the hourly average concentration of O_2 is greater than 14.0 percent O_2.

2.1 When measurements of SO_2 concentration and flow rate are on a wet basis, use the following equation to compute hourly SO_2 mass emission rate (in lb/hr):

$$E_h = KC_hQ_h$$

(Eq. F–1)

Where:

E_h = Hourly SO_2 mass emission rate during unit operation, lb/hr.

$K = 1.660 \times 10^{-7}$ for SO_2, (lb/scf)/ppm.

C_h = Hourly average SO_2 concentration during unit operation, stack moisture basis, ppm.

Q_h = Hourly average volumetric flow rate during unit operation, stack moisture basis, scfh.

2.2 When measurements by the SO_2 pollutant concentration monitor are on a dry basis and the flow rate monitor measurements are on a wet basis, use the following equation to compute hourly SO_2 mass emission rate (in lb/hr):

$$E_h = KC_{hp}Q_{hs}\frac{(100 - \%H_2O)}{100}$$

(Eq. F–2)

Where:

E_h = Hourly SO_2 mass emission rate during unit operation, lb/hr.

$K = 1.660 \times 10^{-7}$ for SO_2, (lb/scf)/ppm.

C_{hp} = Hourly average SO_2 concentration during unit operation, ppm (dry).

Q_{hs}= Hourly average volumetric flow rate during unit operation, scfh as measured (wet).

$\%H_2O$ = Hourly average stack moisture content during unit operation, percent by volume.

2.3 Use the following equations to calculate total SO_2 mass emissions for each calendar quarter (Equation F–3) and for each calendar year (Equation F–4), in tons:

$$E_q = \frac{\sum_{h=i}^{n} E_h t_h}{2000}$$

(Eq. F–3)

Where:

E_q = Quarterly total SO_2 mass emissions, tons.

E_h = Hourly SO_2 mass emission rate, lb/hr.

t_h = Unit operating time, hour or fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator).

n = Number of hourly SO_2 emissions values during calendar quarter.

2000 = Conversion of 2000 lb per ton.

$$E_a = \sum_{q=1}^{4} E_q$$

(Eq. F–4)

Where:

E_a = Annual total SO_2 mass emissions, tons.

E_q = Quarterly total SO_2 mass emissions, tons.

q = Quarters for which E_q are available during calendar year.

2.4 Round all SO_2 mass emission rates and totals to the nearest tenth.

69. Section 3 of appendix F to part 75 is amended by revising sections 3.3.2, 3.3.3, 3.3.4, 3.4, and 3.5 to read as follows:

3. Procedures for NO_X Emission Rate

* * * * *

3.3 * * *

3.3.2 E = Pollutant emissions during unit operation, lb/mmBtu.

3.3.3 C_h = Hourly average pollutant concentration during unit operation, ppm.

3.3.4 $\%O_2$, $\%CO_2$ = Oxygen or carbon dioxide volume during unit operation (expressed as percent O_2 or CO_2). A minimum concentration of 5.0 percent CO_2 and a maximum concentration of 14.0 percent O_2 may be substituted for measured diluent gas concentration values at boilers during hours when the hourly average concentration of CO_2 is <5.0 percent CO_2 or the hourly average concentration of O_2 is >14.0 percent O_2. A minimum concentration of 1.0 percent CO_2 and a maximum concentration of 19.0 percent O_2 may be substituted for measured diluent gas concentration values at stationary gas turbines during hours when the hourly average concentration of CO_2 is <1.0 percent CO_2 or the hourly average concentration of O_2 is >19.0 percent O_2.

* * * * *

3.4 Use the following equations to calculate the average NO_X emission rate for each calendar quarter (Equation F–9) and the average emission rate for the calendar year (Equation F–10), in lb/mmBtu:

$$E_q = \sum_{i=1}^{n} \frac{E_i}{n}$$

(Eq. F–9)

Where:

E_q = Quarterly average NO_X emission rate, lb/mmBtu.

E_i = Hourly average NO_X emission rate during unit operation, lb/mmBtu.

n = Number of hourly rates during calendar quarter.

$$E_a = \sum_{i=1}^{m} \frac{E_i}{m}$$

(Eq. F–10)

Where:

E_a = Average NO_X emission rate for the calendar year, lb/mmBtu.

E_i = Hourly average NO_X emission rate during unit operation, lb/mmBtu.
m = Number of hourly rates for which E_i is available in the calendar year.

3.5 Round all NO_X emission rates to the nearest 0.01 lb/mmBtu prior to January 1, 2000 and to the nearest 0.001 lb/mmBtu on and after January 1, 2000.

70. Section 4 of appendix F to part 75 is amended by revising sections 4.1, 4.2, 4.3, and 4.4.1 to read as follows:

4. Procedures for CO_2 Mass Emissions

* * * * *

4.1 When CO_2 concentration is measured on a wet basis, use the following equation to calculate hourly CO_2 mass emissions rates (in tons/hr):

$E_h = KC_hQ_h$

(Eq. F–11)

Where:

E_h = Hourly CO_2 mass emission rate during unit operation, tons/hr.
$K = 5.7 \times 10^{-7}$ for CO_2, (tons/scf) /%CO_2.
C_h = Hourly average CO_2 concentration during unit operation, wet basis, percent CO_2. For boilers, a minimum concentration of 5.0 percent CO_2 may be substituted for the measured concentration when the hourly average concentration of CO_2 is < 5.0 percent CO_2, provided that this minimum concentration of 5.0 percent CO_2 is also used in the calculation of heat input for that hour. For stationary gas turbines, a minimum concentration of 1.0 percent CO_2 may be substituted for measured diluent gas concentration values during hours when the hourly average concentration of CO_2 is < 1.0 percent CO_2, provided that this minimum concentration of 1.0 percent CO_2 is also used in the calculation of heat input for that hour.
Q_h = Hourly average volumetric flow rate during unit operation, wet basis, scfh.

4.2 When CO_2 concentration is measured on a dry basis, use Equation F–2 to calculate the hourly CO_2 mass emission rate (in tons/hr) with a K-value of 5.7×10^{-7} (tons/scf) percent CO_2, where E_h = hourly CO_2 mass emission rate, tons/hr and C_{hp} = hourly average CO_2 concentration in flue, dry basis, percent CO_2.

4.3 Use the following equations to calculate total CO_2 mass emissions for each calendar quarter (Equation F–12) and for each calendar year (Equation F–13):

$$E_{CO_2q} = \sum_{h=1}^{H_R} E_h t_h$$

(Eq. F–12)

Where:

$E_{(CO_2)q}$ = Quarterly total CO_2 mass emissions, tons.
E_h = Hourly CO_2 mass emission rate, tons/hr.
t_h = Unit operating time, in hours or fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator).
H_R = Number of hourly CO_2 mass emission rates available during calendar quarter.

* * * * *

4.4 * * *

4.4.1 Use appropriate F and F_c factors from section 3.3.5 of this appendix in the following equation to determine hourly average CO_2 concentration of flue gases (in percent by volume):

$$CO_{2d} = 100\frac{F_c}{F}\frac{20.9 - O_{2d}}{20.9}$$

(Eq. F–14a)

Where:

CO_{2d} = Hourly average CO_2 concentration during unit operation, percent by volume, dry basis.
F, F_c = F-factor or carbon-based F_c-factor from section 3.3.5 of this appendix.
20.9 = Percentage of O_2 in ambient air.
O_{2d} = Hourly average O2 concentration during unit operation, percent by volume, dry basis. For boilers, a maximum concentration of 14.0 percent O_2 may be substituted for the measured concentration when the hourly average concentration of O_2 is > 14.0 percent O_2, provided that this maximum concentration of 14.0 percent O_2 is also used in the calculation of heat input for that hour. For stationary gas turbines, a maximum concentration of 19.0 percent O_2 may be substituted for measured diluent gas concentration values during hours when the hourly average concentration of O_2 is > 19.0 percent O_2, provided that this maximum concentration of 19.0 percent O_2 is also used in the calculation of heat input for that hour.

$$CO_{2w} = \frac{100}{20.9}\frac{F_c}{F}\left[20.9\left(\frac{100 - \%H_2O}{100}\right) - O_{2w}\right]$$

or

(Eq. F–14b)

Where:

CO_{2w} = Hourly average CO_2 concentration during unit operation, percent by volume, wet basis.
O_{2w} = Hourly average O_2 concentration during unit operation, percent by volume, wet basis. For boilers, a maximum concentration of 14.0 percent O_2 may be substituted for the measured concentration when the hourly average concentration of O_2 is > 14.0 percent O_2, provided that this maximum concentration of 14.0 percent O_2 is also used in the calculation of heat input for that hour. For stationary gas turbines, a maximum concentration of 19.0 percent O_2 may be substituted for measured diluent gas concentration values during hours when the hourly average concentration of O_2 is > 19.0 percent O_2, provided that this maximum concentration of 19.0 percent O_2 is also used in the calculation of heat input for that hour.
F, F_c = F-factor or carbon-based F_c-factor from section 3.3.5 of this appendix.
20.9 = Percentage of O_2 in ambient air.
%H_2O = Moisture content of gas in the stack, percent.

* * * * *

71. Section 5 of appendix F to part 75 is amended by revising sections 5, 5.1, 5.2, 5.5, 5.5.1, and 5.5.2 and by adding new sections 5.3, 5.6, and 5.7 to read as follows:

5. Procedures for Heat Input

Use the following procedures to compute heat input rate to an affected unit (in mmBtu/hr or mmBtu/day):

5.1 Calculate and record heat input rate to an affected unit on an hourly basis, except as provided below. The owner or operator may choose to use the provisions specified in § 75.16(e) or in section 2.1.2 of appendix D to this part in conjunction with the procedures provided below to apportion heat input among each unit using the common stack or common pipe header.

5.2 For an affected unit that has a flow monitor (or approved alternate monitoring system under subpart E of this part for measuring volumetric flow rate) and a diluent gas (O_2 or CO_2) monitor, use the recorded data from these monitors and one of the following equations to calculate hourly heat input rate (in mmBtu/hr).

5.2.1 When measurements of CO_2 concentration are on a wet basis, use the following equation:

$$HI = Q_w \frac{1}{F_c} \frac{\%CO_{2w}}{100}$$

(Eq. F–15)

Where:

HI = Hourly heat input rate during unit operation, mmBtu/hr.

Q_w = Hourly average volumetric flow rate during unit operation, wet basis, scfh.

F_c = Carbon-based F-factor, listed in section 3.3.5 of this appendix for each fuel, scf/mmBtu.

$\%CO_{2w}$ = Hourly concentration of CO_2 during unit operation, percent CO_2 wet basis. For boilers, a minimum concentration of 5.0 percent CO_2 may be substituted for the measured concentration when the hourly average concentration of CO_2 is < 5.0 percent CO_2, provided that this minimum concentration of 5.0 percent CO_2 is also used in the calculation of CO_2 mass emissions for that hour. For stationary gas turbines, a minimum concentration of 1.0 percent CO_2 may be substituted for measured diluent gas concentration values during hours when the hourly average concentration of CO_2 is < 1.0 percent CO_2, provided that this minimum concentration of 1.0 percent CO_2 is also used in the calculation of CO_2 mass emissions for that hour.

5.2.2 When measurements of CO_2 concentration are on a dry basis, use the following equation:

$$HI = Q_h \left[\frac{(100 - \%H_2O)}{100 F_c} \right] \left(\frac{\%CO_2 d}{100} \right)$$

(Eq. F–16)

Where:

HI = Hourly heat input rate during unit operation, mmBtu/hr.

Q_h = Hourly average volumetric flow rate during unit operation, wet basis, scfh.

F_c = Carbon-based F-Factor, listed above in section 3.3.5 of this appendix for each fuel, scf/mmBtu.

$\%CO_{2d}$ = Hourly concentration of CO_2 during unit operation, percent CO_2 dry basis. For boilers, a minimum concentration of 5.0 percent CO_2 may be substituted for the measured concentration when the hourly average concentration of CO_2 is < 5.0 percent CO_2, provided that this minimum concentration of 5.0 percent CO_2 is also used in the calculation of CO_2 mass emissions for that hour. For stationary gas turbines, a minimum concentration of 1.0 percent CO_2 may be substituted for measured diluent gas concentration values during hours when the hourly average concentration of CO_2 is < 1.0 percent CO_2, provided that this minimum concentration of 1.0 percent CO_2 is also used in the calculation of CO_2 mass emissions for that hour.

$\%H_2O$ = Moisture content of gas in the stack, percent.

5.2.3 When measurements of O_2 concentration are on a wet basis, use the following equation:

$$HI = Q_w \frac{1}{F} \frac{\left[(20.9/100)(100 - \%H_2O) - \%O_2 w \right]}{20.9}$$

(Eq. F–17)

Where:

HI = Hourly heat input rate during unit operation, mmBtu/hr.

Q_w = Hourly average volumetric flow rate during unit operation, wet basis, scfh.

F = Dry basis F-Factor, listed above in section 3.3.5 of this appendix for each fuel, dscf/mmBtu.

$\%O_{2w}$ = Hourly concentration of O_2 during unit operation, percent O_2 wet basis. For boilers, a maximum concentration of 14.0 percent O_2 may be substituted for the measured concentration when the hourly average concentration of O_2 is > 14.0 percent O_2, provided that this maximum concentration of 14.0 percent O_2 is also used in the calculation of CO_2 mass emissions for that hour. For stationary gas turbines, a maximum concentration of 19.0 percent O_2 may be substituted for measured diluent gas concentration values during hours when the hourly average concentration of O_2 is > 19.0 percent O_2, provided that this maximum concentration of 19.0 percent O_2 is also used in the calculation of CO_2 mass emissions for that hour.

$\%H_2O$ = Hourly average stack moisture content, percent by volume.

5.2.4 When measurements of O_2 concentration are on a dry basis, use the following equation:

$$HI = Q_w \left[\frac{(100 - \%H_2O)}{100 F} \right] \left[\frac{(20.9 - \%O_{2d})}{20.9} \right]$$

(Eq. F–18)

Where:

HI = Hourly heat input rate during unit operation, mmBtu/hr.

Qw = Hourly average volumetric flow during unit operation, wet basis, scfh.

F = Dry basis F-factor, listed above in section 3.3.5 of this appendix for each fuel, dscf/mmBtu.

$\%H_2O$ = Moisture content of the stack gas, percent.

$\%O_{2d}$ = Hourly concentration of O_2 during unit operation, percent O_2 dry basis. For boilers, a maximum concentration of 14.0 percent O_2 may be substituted for the measured concentration when the hourly average concentration of O_2 is > 14.0 percent O_2, provided that this maximum concentration of 14.0 percent O_2 is also used in the calculation of CO_2 mass emissions for that hour.. For stationary gas turbines, a maximum concentration of 19.0 percent O_2 may be substituted for measured diluent gas concentration values during hours when the hourly average concentration of O_2 is > 19.0 percent O_2, provided that this maximum concentration of 19.0 percent O_2 is also used in the calculation of CO_2 mass emissions for that hour.

5.3 Heat Input Summation (for Heat Input Determined Using a Flow Monitor and Diluent Monitor)

5.3.1 Calculate total quarterly heat input for a unit or common stack using a flow monitor and diluent monitor to calculate heat input, using the following equation:

$$HI_q = \sum_{hour=1}^{n} HI_i t_i$$

(Eq. F–18a)

Where:

HI_q = Total heat input for the quarter, mmBtu.

HI_i = Hourly heat input rate during unit operation, using Equation F–15, F–16, F–17, or F–18, mmBtu/hr.

t_i = Hourly operating time for the unit or common stack, hour or fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator).

5.3.2 Calculate total cumulative heat input for a unit or common stack using a flow monitor and diluent monitor to calculate heat input, using the following equation:

$$HI_c = \sum_{q=1}^{\text{the current quarter}} HI_q$$

(Eq. F–18b)

Where:

HI_c = Total heat input for the year to date, mmBtu.

HI_q = Total heat input for the quarter, mmBtu.

5.4 [Reserved]

5.5 For a gas-fired or oil-fired unit that does not have a flow monitor and is using the procedures specified in appendix D to this part to monitor SO_2 emissions or for any unit using a common stack for which the owner or operator chooses to determine heat input by fuel sampling and analysis, use the following procedures to calculate hourly heat input rate in mmBtu/hr. The procedures of section 5.5.3 of this appendix shall not be used to determine heat input from a coal unit that is required to comply with the provisions of this part for monitoring, recording, and reporting NO_X mass emissions under a state or federal NO_X mass emission reduction program.

5.5.1 When the unit is combusting oil, use the following equation to calculate hourly heat input rate:

$$HI_o = M_o \frac{GCV_o}{10^6}$$

(Eq. F–19)

Where:

HI_o = Hourly heat input rate from oil, mmBtu/hr.

M_o = Mass rate of oil consumed per hour, as determined using procedures in appendix D to this part, in lb/hr, tons/hr, or kg/hr.

GCV_o = Gross calorific value of oil, as measured by ASTM D240–87 (Reapproved 1991), ASTM D2015–91, or ASTM D2382–88 for each oil sample under section 2.2 of appendix D to this part, Btu/unit mass (incorporated by reference under § 75.6).

10_6 = Conversion of Btu to mmBtu. When performing oil sampling and analysis solely for the purpose of the missing data procedures in § 75.36, oil samples for measuring GCV may be taken weekly, and the procedures specified in appendix D to this part for determining the mass rate of oil consumed per hour are optional.

5.5.2 When the unit is combusting gaseous fuels, use the following equation to calculate heat input rate from gaseous fuels for each hour:

$$HI_g = \frac{(Q_g \times GCV_g)}{10^6}$$

(Eq. F–20)

Where:

HI_g=Hourly heat input rate from gaseous fuel, mmBtu/hour.

Q_g=Metered flow rate of gaseous fuel combusted during unit operation, hundred cubic feet.

GCV_g=Gross calorific value of gaseous fuel, as determined by sampling (for each delivery for gaseous fuel in lots, for each daily gas sample for gaseous fuel delivered by pipeline, for each hourly average for gas measured hourly with a GCH, or for each monthly sample of pipeline natural gas, or as verified by the contractual supplier at least once every month pipeline natural gas is combusted, as specified in section 2.3 of appendix D to this part) using ASTM D1826–88, ASTM D3588–91, ASTM D4891–89, GPA Standard 2172–86 "Calculation of Gross Heating Value, Relative Density and Compressibility Factor for Natural Gas Mixtures from Compositional Analysis," or GPA Standard 2261-90 "Analysis for Natural Gas and Similar Gaseous Mixtures by Gas Chromatography," Btu/100 scf (incorporated by reference under § 75.6).

10^6=Conversion of Btu to mmBtu.

* * * * *

5.6 Heat Input Rate Apportionment for Units Sharing a Common Stack or Pipe

5.6.1 Where applicable, the owner or operator of an affected unit that determines heat input rate at the unit level by apportioning the heat input monitored at a common stack or common pipe using megawatts should apportion the heat input rate using the following equation:

$$HI_i = HI_{CS}\left(\frac{t_{CS}}{t_i}\right)\left[\frac{MW_i t_i}{\sum_{i=1}^{n} MW_i t_i}\right]$$

(Eq. F–21a)

Where:

HI_i=Heat input rate for a unit, mmBtu/hr.

HI_{CS}=Heat input rate at the common stack or pipe; mmBtu/hr.

MW_i=Gross electrical output, MWe.

t_i=Operating time at a particular unit, hour or fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator).

t_{CS}=Operating time at common stack, hour or fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator).

n=Total number of units using the common stack.

i=Designation of a particular unit.

5.6.2 Where applicable, the owner or operator of an affected unit that determines the heat input rate at the unit level by apportioning the heat input rate monitored at a common stack or common pipe using steam load should apportion the heat input rate using the following equation:

$$HI_i = HI_{CS}\left(\frac{t_{CS}}{t_i}\right)\left[\frac{SF_i t_i}{\sum_{i=1}^{n} SF_i t_i}\right]$$

(Eq. F–21b)

Where:

HI_i=Heat input rate for a unit, mmBtu/hr.

HI_{CS}=Heat input rate at the common stack or pipe, mmBtu/hr.

SF=Gross steam load, lb/hr.

t_i=Operating time at a particular unit, hour or fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator).

t_{CS}=Operating time at common stack, hour or fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator).

n=Total number of units using the common stack.

i=Designation of a particular unit.

5.7 Heat Input Rate Summation for Units with Multiple Stacks or Pipes

The owner or operator of an affected unit that determines the heat input rate at the unit level by summing the heat input rates monitored at multiple stacks or multiple pipes should sum the heat input rates using the following equation:

$$HI_{Unit} = \frac{\sum_{s=1}^{n} HI_s t_s}{t_{Unit}}$$

(Eq. F–21c)

Where:

HI_{Unit}=Heat input rate for a unit, mmBtu/hr.

HI_s=Heat input rate for each stack or duct leading from the unit, mmBtu/hr.

t_{Unit}=Operating time for the unit, hour or fraction of the hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator).

t_s=Operating time during which the unit is exhausting through the stack or duct, hour or fraction of the hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator).

72. Section 8 of appendix F to part 75 is added to read as follows:

8. Procedures for NO_X Mass Emissions

The owner or operator of a unit that is required to monitor, record, and report NO_X mass emissions under a state or federal NO_X mass emission reduction program must use the procedures in section 8.1 to account for hourly NO_X mass emissions, and the procedures in section 8.2 to account for quarterly, seasonal, and annual NO_X mass emissions if the provisions of subpart H of this part are adopted as requirements under such a program.

8.1 Use the following procedures to calculate hourly NO_X mass emissions in lbs for the hour.

8.1.1 If both NO_X emission rate and heat input are monitored at the same unit or stack level (e.g, the NO_X emission rate value and heat input value both represent all of the units exhausting to the common stack), use the following equation:

$$M_{NO_{X_h}} = E_h HI_h t_h$$

(Eq. F–23)

Where:

$M_{NOx(h)}$=NO_X mass emissions in lbs for the hour.

E_h=Hourly average NO_X emission rate for hour h, lb/mmBtu.

H_{ih}=Hourly average heat input rate for hour h, mmBtu/hr.

t_h=Monitoring location operating time for hour h, in hours or fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator). If the combined NO_X emission rate and heat input are monitored for all of the units in a common stack, the monitoring location operating time is equal to the total time when any of those units was exhausting through the common stack.

8.1.2 If NO_X emission rate is measured at a common stack and heat input is measured at the unit level, sum the hourly heat inputs at the unit level according to the following formula:

$$HI_{CS} = \frac{\sum_{u=1}^{p} HI_u t_u}{t_{CS}}$$

(Eq. F–24)

Where:

HI_{CS}=Hourly average heat input rate for hour h for the units at the common stack, mmBtu/hr.

t_{CS}=Common stack operating time for hour h, in hours or fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator)(e.g., total time when any of the units which exhaust through the common stack are operating).

HI_u=Hourly average heat input rate for hour h for the unit, mmBtu/hr.

t_u=Unit operating time for hour h, in hours or fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator). Use the hourly heat input rate at the common stack level and the hourly average NO_X emission rate at the common stack level and the procedures in section 8.1.1 of this appendix to determine the hourly NO_X mass emissions at the common stack.

8.1.3 If a unit has multiple ducts and NO_X emission rate is only measured at one duct, use the NO_X emission rate measured at the duct, the heat input measured for the unit, and the procedures in section 8.1.1 of this appendix to determine NO_X mass emissions.

8.1.4 If a unit has multiple ducts and NO_X emission rate is measured in each duct, heat input shall also be measured in each duct and the procedures in section 8.1.1 of this appendix shall be used to determine NO_X mass emissions.

8.2 Use the following procedures to calculate quarterly, cumulative ozone season, and cumulative yearly NO_X mass emissions, in tons:

$$M_{(NO_X)_{time\ period}} = \frac{\sum_{h=1}^{p} M_{(NO_X)_h}}{2000}$$

(Eq. F–25)

Where:

$M_{(NOX)time\ period}$=NO_X mass emissions in tons for the given time period (quarter, cumulative ozone season, cumulative year-to-date).

$M_{(NOX)h}$=NO_X mass emissions in lbs for the hour.

p=The number of hours in the given time period (quarter, cumulative ozone season, cumulative year-to-date).

8.3 Specific provisions for monitoring NO_X mass emissions from common stacks. The owner or operator of a unit utilizing a common stack may account for NO_X mass emissions using either of the following methodologies, if the provisions of subpart H are adopted as requirements of a state or federal NO_X mass reduction program:

8.3.1 The owner or operator may determine both NO_X emission rate and heat input at the common stack and use the procedures in section 8.1.1 of this appendix to determine hourly NO_X mass emissions.

8.3.2 The owner or operator may determine the NO_X emission rate at the common stack and the heat input at each of the units and use the procedures in section 8.1.2 of this appendix to determine the hourly NO_X mass emissions.

APPENDIX G TO PART 75—DETERMINATION OF CO_2 EMISSIONS

* * * * *

73. Section 2 of appendix G to part 75 is amended by revising the term "Wc" that follows Equation G–1 to read as follows:

2. Procedures for Estimating CO_2 Emissions From Combustion

2.1 * * *

(Eq. G–1)

Where:

* * * * *

W_C=Carbon burned, lb/day, determined using fuel sampling and analysis and fuel feed rates. Collect at least one fuel sample during each week that the unit combusts coal, one sample per each shipment for oil and diesel fuel, and one fuel sample for each delivery for gaseous fuel in lots, for each daily gas sample for gaseous fuel delivered by pipeline, or for each monthly sample of pipeline natural gas. Collect coal samples from a location in the fuel handling system that provides a sample representative of the fuel bunkered or consumed during the week. Determine the carbon content of each fuel sampling using one of the following methods: ASTM D3178–89 or ASTM D5373–93 for coal; ASTM D5291–92 "Standard Test Methods for Instrumental Determination of Carbon, Hydrogen, and Nitrogen in Petroleum Products and Lubricants," ultimate analysis of oil, or computations based upon ASTM D3238–90 and either ASTM D2502–87 or ASTM D2503–82 (Reapproved 1987) for oil; and computations based on ASTM D1945–91 or ASTM D1946–90 for gas. Use daily fuel feed rates from company records for all fuels and the carbon content of the most recent fuel sample under this section to determine tons of carbon per day from combustion of each fuel. (All ASTM methods are incorporated by reference under § 75.6). Where more than one fuel is combusted during a calendar day, calculate total tons of carbon for the day from all fuels.

* * * * *

74. Appendix G to part 75 is amended by adding a new section 5 and Table G–1 to read as follows:

5. Missing Data Substitution Procedures for Fuel Analytical Data

Use the following procedures to substitute for missing fuel analytical data used to calculate CO_2 mass emissions under this appendix.

5.1 Missing Carbon Content Data Prior to 1/1/2000

Prior to January 1, 2000, follow either the procedures of this section or the procedures of section 5.2 of this appendix to substitute for missing carbon content data. On and after January 1, 2000, use the procedures of section 5.2 of this appendix to substitute for missing carbon content data, not the procedures of this section.

5.1.1 Most Recent Previous Data

Substitute the most recent, previous carbon content value available for that fuel type (gas, oil, or coal) of the same grade (for oil) or rank (for coal). To the extent practicable, use a carbon content value from the same fuel supply. Where no previous carbon content data are available for a particular fuel type or rank of coal, substitute the default carbon content from Table G–1 below.

5.1.2 [Reserved]

5.2 Missing Carbon Content Data on and After 1/1/2000

Prior to January 1, 2000, follow either the procedures of this section or the procedures of section 5.1 of this appendix to substitute for missing carbon content data. On and after January 1, 2000, use the procedures of this section to substitute for missing carbon content data.

5.2.1 Missing Weekly Samples

If carbon content data are missing for weekly coal samples or composite oil samples from continuous sampling, substitute the highest carbon content from the previous four carbon samples available. If no previous carbon content data are available, use the default carbon content from Table G–1, below.

5.2.2 Manual Sample From Storage Tank

If carbon content data are missing for manual oil or diesel fuel samples taken from the storage tank after transfer of a new delivery of fuel, substitute the highest carbon content from all samples in the previous calendar year. If no previous carbon content data are available from the previous calendar year, use the default carbon content from Table G–1, below.

5.2.3 As-Delivered Sample

If carbon content data are missing for as-delivered samples of oil, diesel fuel, or gaseous fuel delivered in lots, substitute the highest carbon content from all deliveries of that fuel in the previous calendar year. If no previous carbon content data are available for that fuel from the previous calendar year, use the default carbon content from Table G–1, below.

5.2.4 Sample of Gaseous Fuel Supplied by Pipeline

If carbon content data are missing for a gaseous fuel that is supplied by a pipeline and sampled on either a monthly or a daily basis for sulfur and gross calorific value, substitute the highest carbon content available for that fuel from the previous calendar year. If no previous carbon content data are available for that fuel from the previous calendar year, use the default carbon content from Table G–1, below.

TABLE G–1.—MISSING DATA SUBSTITUTION PROCEDURES FOR MISSING CARBON CONTENT DATA

Parameter	Sampling technique/frequency	Missing data substitution procedure
Oil and coal carbon content	All oil and coal samples, prior to January 1, 2000	Most recent, previous carbon content value available for that grade of oil.
	Weekly coal sample or Flow proportional/weekly composite oil sample (beginning no later than January 1, 2000).	Highest carbon in previous 4 weekly samples.
	In storage tank (after addition of fuel to tank) (beginning no later than January 1, 2000).	Maximum carbon content from all samples in previous calendar year.
	As delivered (in delivery truck or barge) (beginning no later than January 1, 2000).	Maximum carbon content from all deliveries in previous calendar year.
Gas carbon content	All gaseous fuel samples, prior to January 1, 2000	Most recent, previous carbon content value available for that type of gaseous fuel.
	Gaseous fuel in lots—as-delivered sampling (beginning no later than January 1, 2000).	Maximum carbon content of all samples in previous calendar year.
	Gaseous fuel delivered by pipeline that is sampled for sulfur content—daily sampling (beginning no later than January 1, 2000).	Maximum carbon content of all samples in previous calendar year.
	Pipeline natural gas that is not sampled for sulfur content—monthly sampling for GCV and carbon only (beginning no later than January 1, 2000).	Maximum carbon content of all samples in previous calendar year.
Default coal carbon content	All	Anthracite: 90.0 percent. Bituminous: 85.0 percent. Subbituminous/Lignite: 75.0 percent.
Default oil carbon content	All	90.0 percent.

TABLE G–1.—MISSING DATA SUBSTITUTION PROCEDURES FOR MISSING CARBON CONTENT DATA—Continued

Parameter	Sampling technique/frequency	Missing data substitution procedure
Default gas carbon content ..	All	Natural gas: 75.0 percent. Other gaseous fuels: 90.0 percent.

5.3 Gross Calorific Value Data

For a gas-fired unit using the procedures of section 2.3 of this appendix to determine CO_2 emissions, substitute for missing gross calorific value data used to calculate heat input by following the missing data procedures for gross calorific value in section 2.4 of appendix D to this part.

Appendix H To Part 75—Revised Traceability Protocol No. 1

75. Appendix H to part 75 is removed and reserved.

76. Appendix I to part 75 is added as follows:

Appendix I To Part 75—Optional F-Factor/Fuel Flow Method

1. Applicability

1.1 This procedure may be used in lieu of continuous flow monitors for the purpose of determining volumetric flow from gas-fired units, as defined in § 72.2 of this chapter, or oil-fired units, as defined in § 72.2 of this chapter, provided that the units burn only pipeline natural gas, natural gas, and/or fuel oil. These procedures use fuel flow measurement, fuel sampling data, CO_2 (or O_2) CEMS data, and F-factors to determine the flow rate of the stack gas. These procedures may only be used during those hours when only one type of fuel is combusted.

1.2 Apply to the Administrator, in a certification application, for approval to use this method in lieu of a continuous flow monitor, no later than the deadlines for the certification of continuous emission monitoring systems specified in §§ 75.20 and 75.63.

2. Procedure

2.1 Initial Certification and Recertification Testing

Either of the following procedures may be used to perform initial certification and recertification testing of the appendix I excepted flow monitoring system:

2.1.1 Component-by-Component Certification Testing

Test both the fuel flowmeter component and the CO_2 (or O_2) monitor component separately, following the procedures of this part. Determine BAF_{System} and BAF_{CO2} or BAF_{O2}, using the procedures in section 3.7 of this appendix.

2.1.1.1 Certification of the Fuel Flowmeter

Test the fuel flowmeter according to the procedures and performance specifications in section 2.1.5 of appendix D to this part.

2.1.1.2 Certification of the CO_2 (or O_2) Monitor

Test the CO_2 or O_2 monitor according to the procedures and performance specifications in appendix A to this part. Notwithstanding the requirements of appendix A to this part, calculate the BAF of the CO_2 or O_2 monitor according to section 3.7 of this appendix.

2.1.2 System Certification Testing

Test the entire appendix I flow monitoring system to meet the relative accuracy requirements for flow, as found in section 3.3.4 of appendix A to this part, using the applicable procedures in sections 6.5 through 6.5.2.2 of appendix A to this part. Use the fuel sampling data for density and carbon content to calculate the hourly volumetric flow rate according to section 2.3 of this appendix. Perform the bias test and, if necessary, calculate a bias adjustment factor for the appendix I flow monitoring system using the procedures in section 7.6 of appendix A to this part. Also perform the 7-day calibration error test, cycle time test, and linearity check on the CO_2-or O_2-diluent monitor.

2.2 On-Going Quality Assurance Testing

2.2.1 Daily Assessments

The CO_2 or O_2 monitor shall meet the daily assessment requirements in section 2.1 of appendix B to this part.

2.2.2 Quarterly Assessments

The CO_2 or O_2 monitor shall meet the quarterly assessment requirements in section 2.2 of appendix B to this part.

2.2.3 Semiannual or Annual Assessments

2.2.3.1 Component-by-Component Assessments

Test both the fuel flowmeter and the CO_2 (or O_2) monitor separately. Determine BAF_{System} and BAF_{CO2} or BAF_{O2} using the procedures in section 3.7 of this appendix.

2.2.3.1.1 Assessment of the Fuel Flowmeter

The fuel flowmeter shall meet the periodic quality assurance requirements in section 2.1.6 of appendix D to this part. The fuel flowmeter shall meet the flowmeter accuracy specification in section 2.1.5 of appendix D to this part.

2.2.3.1.2 Relative Accuracy Assessment of the CO_2 (or O_2) Monitor

Test the CO_2 or O_2 monitor for relative accuracy according to the applicable procedures in sections 6.5 through 6.5.2.2 of appendix A to this part. Determine the relative accuracy test frequency (i.e., semiannual or annual) using section 2.3.1 and figure 2 in appendix B to this part. Perform the bias test and calculate any bias adjustment factor, as specified in section 3.7.1 of this appendix for the CO_2 monitor or as specified in section 3.7.2 of this appendix for the O_2 monitor.

2.2.3.2 System Relative Accuracy Assessment

Test the entire appendix I flow monitoring system to meet the relative accuracy requirements for flow, as found in section 3.3.4 of appendix A to this part, using the procedures in section 6.5.2 of appendix A to this part. Use Reference Method 2 (or its allowable alternatives) in appendix A to part 60 of this chapter to obtain the reference method flow rate value for each run. Use the appropriate equation selected from Eq. I–1 through Eq. I–9 to calculate the Appendix I flow rate value for each RATA run. Base the fuel sampling on section 2.3 of this appendix. Determine the schedule for future relative accuracy tests using the provisions of section 2.3.1 and figure 2 of appendix B to this part for a flow monitoring system. Perform the bias test and, if necessary, calculate a bias adjustment factor for the appendix I flow monitoring system using the procedures in section 7.6 of appendix A to this part.

2.3 Fuel Sampling and Analysis

2.3.1 Carbon Content of Oil

Determine carbon content of the oil by using the following procedures. Collect at least one sample per each shipment for oil and diesel fuel. Determine the carbon content of the fuel sampling using one of the following methods: ASTM D5291–92 "Standard Test Methods for Instrumental Determination of Carbon, Hydrogen, and Nitrogen in Petroleum Products and Lubricants," ultimate analysis of oil, or computations based upon ASTM D3238–90 and either ASTM D2502–87 or ASTM D2503–82 (Reapproved 1987) for oil.

2.3.2 Density of Oil

Determine the density of oil using the procedures in section 2.2 of appendix D to this part.

2.3.3 Gross Calorific Value of Natural Gas

Determine gross calorific value of natural gas by using the procedures in section 5.5.2 of appendix F to this part.

3. Calculations

3.1 Hourly Volumetric Flow during Combustion of Oil Only for Systems that Use a CO_2 Monitor and a Volumetric Oil Flowmeter

$$Q_s = \frac{32.08 \times V \times \rho \times \%C}{\%CO_2}$$

(Eq. I–1)

Where:

Q_s=Volumetric stack flow rate, adjusted for bias, in scfh.

BAF_{system}=Bias adjustment factor for the system, as determined by Equation I–10A or I–10B (for component-by-component testing) in section 3.7 of this appendix or by Equation I–11 (for system testing) in section 3.8 of this appendix.

V=Volumetric oil flow rate, gal/hr.

ρ=Oil density, lb/gal.

%C=Percent carbon by weight.

$\%CO_2$=CO_2 concentration, percent by volume.

32.08=Conversion factor, 385 scf CO_2/12 lb C, volume of CO_2 emitted for each pound carbon in oil.

3.2 Hourly Volumetric Flow during Combustion of Oil Only for Systems that Use an O_2 Monitor and a Volumetric Oil Flowmeter

3.2.1 If relative accuracy is determined on a system basis, use the following equation to determine the volumetric stack flow rate:

$$Q_s = \frac{207.6379 \times BAF_{system} \times V \times \rho \times \%C \times (20.9)(100)}{(20.9 - \%O_{2d}) \times (100 - \%H_2O)}$$

(Eq. I–2)

Where:

Q_s=Volumetric stack flow rate, adjusted for bias, in scfh.

BAF_{system}=Bias adjustment factor for the system, as determined by Equation I–11 (for system testing) in section 3.8 of this appendix.

V=Volumetric oil flow rate, gal/hr.

ρ=Oil density, lb/gal.

%C=Percent carbon by weight.

$\%O_{2d}$=Dry basis O_2 concentration, percent by volume.

$\%H_2O$=Percent moisture in the flue gas.

207.6379=Conversion factor, 385 scf CO_2/12 lb C×9190 dscf O_2/1420 scf CO_2, volume of O_2 emitted for each pound carbon in oil.

3.2.2 If relative accuracy is determined on a component by component basis, use the following equation to determine the volumetric stack flow rate:

$$Q_s = \frac{207.6379 \times 1.12 \times V \times \rho \times \%C \times (20.9)(100)}{\left[20.9 - (BAF_{O2} \times \%O_{2d})\right] \times (100 - \%H_2O)}$$

(Eq. I–3)

Where:

Q_s Volumetric stack flow rate, adjusted for bias, in scfh.

BAF_{O2}=Bias adjustment factor for the O_2 monitor, as determined by section 3.7.2 of this appendix.

V=Volumetric oil flow rate, gal/hr.

ρ=Oil density, lb/gal.

%C=Percent carbon by weight.

$\%O_{2d}$=Dry basis O_2 concentration, percent by volume.

$\%H_2O$=Percent moisture in the flue gas.

1.12=Default multiplier used to compensate for systematic error in the demonstration data.

207.6379=Conversion factor, 385 scf CO_2/12 lb C×9190 dscf O_2/1420 scf CO_2, volume of O_2 emitted for each pound carbon in oil.

3.3 Hourly Volumetric Flow during Combustion of Oil Only for Systems that Use a CO_2 Monitor and a Mass Oil Flowmeter

$$Q_s = \frac{32.08 \times BAF_{system} \times M \times \%C}{\%CO_2}$$

(Eq. I–4)

Where:

Q_s=Volumetric stack flow rate, adjusted for bias, in scfh.

BAF_{system}=Bias adjustment factor for the system, as determined by Equation I–10A or I–10B (for component by component testing) in section 3.7 of this appendix or by Equation I–11 (for system testing) in section 3.8 of this appendix.

M=Oil mass flow rate, lb/hr.

%C=Percent carbon by weight.

$\%CO_2$=CO_2 concentration, percent by volume.

32.08=Conversion factor, 385 scf CO_2/12 lb C, volume of CO_2 emitted for each pound carbon in oil.

3.4 Hourly Volumetric Flow during Combustion of Oil Only for Systems that Use an O_2 Monitor and a Mass Oil Flowmeter

3.4.1 If relative accuracy is determined on a system basis, use the following equation to determine the volumetric stack flow rate:

$$Q_s = \frac{207.6379 \times BAF_{system} \times M \times \%C \times (20.9)(100)}{(20.9 - \%O_{2d}) \times (100 - \%H_2O)}$$

(Eq. I–5)

Where:

Q_s=Volumetric stack flow rate, adjusted for bias, in scfh.

BAF_{system}=Bias adjustment factor for the system, as determined by Equation I–11 (for system testing) in section 3.8 of this appendix.

M=Oil mass flow rate, lb/hr.

%C=Percent carbon by weight.

$\%O_{2d}$=Dry basis O_2 concentration, percent by volume.

$\%H_2O$=Percent moisture in the flue gas.

207.6379=Conversion factor, 385 scf CO_2/12 lb C×9190 dscf O_2/1420 scf CO_2, volume of O_2 emitted for each pound carbon in oil.

3.4.2 If relative accuracy is determined on a component by component basis, use the following equation to determine the volumetric stack flow rate:

$$Q_s = \frac{207.6379 \times 1.12 \times M \times \%C \times (20.9)(100)}{\left[20.9 - (BAF_{O2} \times \%O_{2d})\right] \times (100 - \%H_2O)}$$

(Eq. I–6)

Where:

Q_s=Volumetric stack flow rate, adjusted for bias, in scfh.

BAF_{O2}=Bias adjustment factor for the O2 monitor, as determined by section 3.7.2 of this appendix.

M=Oil mass flow rate, lb/hr.

%C=Percent carbon by weight.

$\%O_{2d}$=Dry basis O_2 concentration, percent by volume.

$\%H_2O$=Percent moisture in the flue gas.

1.12=Default multiplier used to compensate for systematic error in the demonstration data.

207.6379=Conversion factor, 385 scf CO_2/12 lb C×9190 dscf O_2/1420 scf CO_2, volume of O_2 emitted for each pound carbon in oil.

3.5 Hourly Volumetric Flow during Combustion of Natural Gas Only for Systems that Use a CO_2 Monitor and a Volumetric Gas Flowmeter

$$Q_s = \frac{0.01 \times BAF_{system} \times V \times GCV \times F_c}{\%CO_2}$$

(Eq. I–7)

Where:

Q_s=Volumetric stack flow rate, adjusted for bias, in scfh.

BAF_{system}=Bias adjustment factor for the system, as determined by Equation I–10A or I-10B (for component by component testing) in section 3.7 of this appendix or by Equation I–11 (for system testing) in section 3.8 of this appendix.

V=Volumetric gas flow rate, 100 scfh.

GCV=Gross calorific value of the gaseous fuel, Btu/scf.

F_c=Carbon-based F-factor of 1040 scf CO_2/mmBtu for natural gas, from section 3 of appendix F to this part.

$\%CO_2$=CO_2 concentration, percent by volume.

0.01=Conversion factor, 10^{-6} mmBtu/Btu×10^2 scf/100 scf×10^2 (conversion of fraction to percentage).

3.6 Hourly Volumetric Flow during Combustion of Natural Gas Only for Systems that Use an O_2 Monitor and a Volumetric Gas Flowmeter

3.6.1 Determining Flow for Systems that Are Tested on a System Basis

$$Q_s = \frac{0.01 \times BAF_{system} \times V \times GCV \times F_d \times (20.9)(100)}{(20.9 - \%O_{2d}) \times (100 - \%H_2O)}$$

(Eq. I–8)

Where:

Q_s=Volumetric stack flow rate, adjusted for bias, in scfh.

BAF_{system}=Bias adjustment factor for the system, as determined by Equation I–11 (for system testing) in section 3.8 of this appendix.

V=Volumetric gas flow rate, 100 scfh.

GCV=Gross calorific value of the natural gas, Btu/scf.

F_d=Dry basis, O_2-based F-factor for natural gas, 8,710 dscf/mmBtu.

$\%O_{2d}$=Dry basis O_2 concentration, percent by volume.

$\%H_2O$=Percent moisture in the flue gas.

0.01=Conversion factor, 10^{-6} mmBtu/Btu x 10^2 scf/100 scf×10^2 (conversion of fraction to percentage).

3.6.2 Determining Flow for Systems that are Tested on a Component-by-Component Basis

$$Q_s = \frac{0.01 \times 1.12 \times V \times GCV \times F_d \times (20.9)(100)}{[20.9 - (BAF_{O2} \times \%O_{2d})] \times (100 - \%H_2O)}$$

(Eq. I–9)

Where:

Q_s=Volumetric stack flow rate, adjusted for bias, in scfh.

BAF_{O2}=Bias adjustment factor for the O_2 monitor, as determined by section 3.7.2 of this appendix.

V=Volumetric gas flow rate, 100 scfh.

GCV=Gross calorific value of the natural gas, Btu/scf.

F_d=Dry basis, O_2-based F-factor for natural gas, 8,710 dscf/mmBtu.

$\%O2_{2d}$=Dry basis O_2 concentration, percent by volume.

$\%H_d2O$=Percent moisture in the flue gas.

1.12=Default multiplier used to compensate for systematic error in the demonstration data.

0.01=Conversion factor, 10^{-6} mmBtu/Btu x 10^2 scf/100 scf x 10^2 (conversion of fraction to percentage).

3.7 Bias Adjustment Factor for a System Tested Component-by-Component

3.7.1 Calculation of the System Bias Adjustment Factor, BAF_{system}, for CO_2 Monitor

Calculate the mean difference of the relative accuracy test data for the CO_2 monitor, $\bar{d}$, using Equation A–7 in section 7.3.1 of appendix A to this part. Calculate the confidence coefficient (cc) using Equation A–9 in section 7.3.3 of appendix A to this part.

If $\bar{d}$ < -cc, where $\bar{d}$ is defined by Equation A–7, calculate the bias adjustment factor for a system tested component by component, as follows:

$$BAF_{system} = \frac{1.12}{\left(1 + \frac{\bar{d}}{\overline{CEM}}\right)}$$

(Eq. I–10A)

If $\bar{d} \geq$ -cc, then

BAF_{system}=1.12

(Eq. I–10B)

Where:

BAF_{system}=Overall bias adjustment factor for the appendix I flow monitoring system.

1.12=Default multiplier used to compensate for systematic error in the demonstration data.

$\bar{d}$=Mean difference between the reference method and continuous emission monitoring system (RM_i-CEM_i) as defined in Equation A–7 in section 7.3.1 of appendix A to this part.

$\overline{CEM}$=Mean of the data values provided by the CO_2 monitor during the relative accuracy test audit.

3.7.2 Calculation of the Component Bias Adjustment Factor, BAF_{O2}, for O_2 Monitor

Perform the bias test for the O_2 monitor using the procedures in section 7.6 of appendix A to this part and, if necessary, calculate a bias adjustment factor.

3.8 Bias Adjustment Factor for a System Tested on a System Level

Calculate the bias adjustment factor for a system tested on a system level, as follows:

BAF_{System}=$GAF_{flow\ rate}$

(Eq. I–11)

Where:

BAF_{system}=Overall bias adjustment factor for the appendix I flow monitoring system.

$BAF_{flow\ rate}$=Bias adjustment factor from relative accuracy testing using Reference Method 2 for volumetric flow rate.

4. Missing Data

4.1 The owner or operator shall provide substitute volumetric flow data using the flow missing data procedures in subpart D of this part.

4.2 [Reserved]

5. Recordkeeping and Reporting

Follow the applicable monitoring plan provisions of § 75.53, the applicable general recordkeeping provisions of § 75.57, the specific recordkeeping provisions of § 75.58(g), the certification recordkeeping provisions of § 75.59(d)(1), and the quality assurance test recordkeeping provisions of § 75.59(d)(2). Maintain a quality assurance/quality control plan, as specified in appendix

B to this part. Follow the reporting provisions of §§ 75.60 through 75.67.

77. Appendix J to part 75 is removed and reserved.

[FRL–6007–7]

RIN 2060–AH64

Acid Rain Program: Determinations under EPA Study of Bias Test and Relative Accuracy and Availability Analysis

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of proposed determinations and proposed rulemakings.

SUMMARY: Title IV of the Clean Air Act Amendments of 1990 (the Act) authorizes EPA to establish a program to reduce the adverse effects of acidic deposition. The Act requires electric utilities affected by the Acid Rain Program to install continuous emission monitoring systems (CEMS) to measure emissions of sulfur dioxide (SO_2), nitrogen oxides (NO_X), and carbon dioxide (CO_2). On January 11, 1993, Continuous Emission Monitoring regulations were published. They established procedures and requirements for installing, certifying, operating, and quality assuring CEMS at Acid Rain affected utility units. In response to comments and litigation from representatives of the electric utility industry and environmental advocacy groups, provisions were incorporated in the CEMS regulations requiring EPA to conduct studies, reach determinations, and, if necessary, initiate rulemakings on the appropriateness of retaining or revising three elements in the CEMS regulations: the bias test, relative accuracy test, and the availability trigger conditions of the Missing Data Substitution Procedure. This Notice of Proposed Rulemaking presents EPA's proposed determinations and consequent proposed rule revisions.

DATES: *Comments.* Comments on the proposed determinations and rule revisions must be received on or before July 6, 1998.

Public Hearing. Anyone requiring a public hearing must contact EPA no later than June 1, 1998. If a hearing is held, it will take place June 5, 1998, beginning at 10:00 a.m.

ADDRESSES: *Comments.* All written comment must be identified with the appropriate docket number (Docket No. A–97–56) and must be submitted in duplicate to EPA Air Docket Section (6102), Waterside Mall, Room M1500, 1st Floor, 401 M Street, SW, Washington, D.C. 20460.

Public Hearing. If a public hearing is requested, it will be held at the Environmental Protection Agency, 401 M Street, SW, Washington, D.C. 20460, in the Education Center Auditorium. Refer to the Acid Rain homepage at www.epa.gov/acidrain for more information or to determine if a public hearing has been requested and will be held.

Docket. Docket No. A–97–56, containing supporting information used to develop the proposed determinations and rule revisions is available for public inspection and copying from 8:00 a.m. to 5:30 p.m., Monday through Friday, excluding legal holidays, at EPA's Air Docket Section at the above address.

FOR FURTHER INFORMATION CONTACT: Elliot Lieberman at (202) 564 9136, Acid Rain Division (6204J), U.S. Environmental Protection Agency, 401 M St., S.W., Washington, D.C. 20460; or the Acid Rain Hotline at (202) 564 9620. Electronic copies of this notice and technical support documents can be accessed through the Acid Rain Division website at http://www.epa.gov/acidrain.

I. EPA Studies Under 40 CFR 75.7

A. Background

To ensure a consistent level of precision and accuracy in the emission measurements obtained across the Acid Rain Program, Part 75 of the Acid Rain regulations requires a series of performance tests to be conducted on each CEMS both at initial certification and periodically thereafter. Among the required performance tests is the relative accuracy test audit (RATA) in which a minimum of nine simultaneous measurements are taken from a unit's installed CEMS and an EPA approved reference method. The paired RATA data are then subjected to two statistical tests: The relative accuracy test, which establishes the degree of accuracy of the CEMS relative to the reference method; and the bias test, which uses a t-statistic to determine if the CEMS measurements are consistently lower than the reference method measurements. *See* 40 CFR Part 75, Appendix A and B.

As stated in the preamble of the January 1993 regulations, EPA found that "both statistical theory and field test results show that the bias test is a sound and effective statistical procedure for detecting consistent measurement error in the long-term operation of a CEMS" (58 FR 3590, 3627 (1993)). However, at the time of promulgation of the Acid Rain regulations, although utilities had extensive experience with the relative accuracy test, they had virtually no previous experience with the bias test. This unfamiliarity led to several concerns with the bias test. Thus, the January 1993 regulations committed EPA to conduct field studies to determine "whether there are statistically significant variances" in the EPA-approved reference methods that utilities use to test the performance of the CEMS installed under the Acid Rain Program and "whether the bias test should be adjusted to compensate for statistical variances in the reference method" (58 FR 3628).

In particular, EPA was required to:

1. Investigate whether there are statistically significant variances in the EPA reference methods (Issue #1);

2. Distinguish between the variability in reference monitor readings attributable to measurement error and the variability due to the choice of reference monitor among those certified by the Agency (Issue #2);

3. Investigate possible differences in bias test failure rates by emission levels (Issue #3); and

4. Assess whether any adjustments are necessary to properly determine measurement bias (Issue #4).

The regulations called for the completion of a study addressing these issues by October 31, 1993. In response, EPA conducted two studies. The first was a collaborative field study, involving four independent reference method test teams, at Big Rivers Electric Corporation's Green Generating Station, Unit 2, in Sebree, Kentucky. This location was specifically selected for testing because its relatively low range of SO_2 emission concentrations (from 56 ppm to 231 ppm) would allow EPA to examine bias test failure rates at SO_2 emission levels different from those prevailing in previous field studies and consider an industry concern that

contradictory bias test results were more likely to occur at low, than at high, emission concentrations. Field work for this study was completed from August 16–31, 1993. Separate data summary (Docket Item, A–97–56, II–A–1) and statistical analyses reports summary (Docket Item, A–97–56, II–A–2) were completed in March 1994 and September 1996 respectively.

The second study involved collection and analysis of bias test results from the field tests conducted by affected units under Part 75 for certification of their CEMS. The certification test data, including the bias test, were submitted to EPA from November 1993 to September 1996. The study results reported here (and contained in Docket Item, A–97–56, II–A–3) were available in 1997 only after the CEMS at the majority of both Phase I and Phase II (lower emitting) units had been received and certified by EPA.

B. Collaborative Field Study

In the collaborative field study at Unit 2 of Big Rivers Electric Corporation's Green Generating Station ("Green Unit 2"), four labs (i.e., test teams) simultaneously performed Reference Methods 6C (for SO_2), 7E (for NO_X), and 3A (for CO_2). To test the two general monitoring technologies available for performing the reference methods, two of the teams used "wet-basis" sampling techniques and two used "dry-basis" techniques. In the "wet-basis" sampling techniques, a dilution probe is used to extract a diluted sample of the effluent from the stack gas. The diluted gas sample is then analyzed using an ambient-level analyzer (e.g., pulsed fluorescence for SO_2, chemiluminescence for NO_X, and infrared absorption for CO_2), which does not require removal of moisture from the gas sample. In the "dry-basis" sampling techniques, a gas sample is extracted from the effluent stream without dilution. Moisture is condensed from the gas sample and the resulting dry sample is then analyzed using a source-level analyzer (infrared or ultraviolet for SO_2, chemiluminescence for NO_X, and infrared for CO_2).

Seventy-two runs of usable data (out of 76 total runs) were collected by the four labs. Concurrent measurements were also collected from Green Unit 2's SO_2, NO_X, and CO_2 continuous emissions monitoring systems, previously certified under the Acid Rain Program. On 36 of the runs, each lab and the unit's CEMS used separate calibration gases as required under 40 CFR Part 75. On the other 36 runs, all labs and the plant's CEMS shared common gases when calibrating.

Issues #1 and #2 involve evaluation of the sources of variability inherent in EPA's reference methods. In the consideration of these two issues only the reference method measurements were analyzed, not the unit's CEMS. Issues #3 and #4 involve a comparison of the CEMS and the reference method measurements to determine if bias (systematic error) is detected in the CEMS measurement. In the consideration of these two issues, the unit's CEMS measurements were paired with each of the four lab's concurrent reference method measurements. This produced four sets of concurrent Relative Accuracy Test Audits (RATA's) which could be used in evaluating bias test result consistency across the four labs.

To address the first two issues concerning the sources and extent of variability inherent in the reference methods, the collaborative field study employed an experimental design (technically known as a "randomized complete block design") which allowed the quantification of the relative variability associated with (i) among-laboratory variation, (ii) variation between monitoring technologies (i.e., "wet-basis" or "dry-basis" sampling techniques), (iii) the variability associated with different calibration gas scenarios (i.e., separate or shared calibration gases), and (iv) random error.

Applying an analysis of variance (ANOVA) statistical procedure to the field study data, EPA found that the overall variation in the reference methods, considering all the monitoring technologies and calibration gas scenarios, was 2.93%RSD (Relative Standard Deviation) for SO_2, 2.01%RSD for NO_X, and 1.59%RSD for CO_2. Reference method variations below approximately 3%RSD are consistent with the findings of an earlier collaborative field study, reported in Docket Item, A–97–56, II–A–5, where variations of 1.4%RSD and 2.9%RSD were found for SO_2 and NO_X respectively. (The variation for CO_2 is not available from the earlier study since that study did not include CO_2 reference method measurements.) Based on these findings, with respect to Issue #1 EPA believes that the statistically significant variances in the EPA reference methods are small.

The analysis in the most recent collaborative study also revealed that the range in the Relative Standard Deviation due to the choice of reference method monitor (i.e., different analyzers using "wet-basis" or "dry-basis" technology) among allowable reference method technologies was very small (below 1%RSD) whether the labs used separate or shared calibration gases. Consequently, EPA believes with respect to Issue #2 that the variability due to the choice of reference method monitor among those available is very small.

As noted earlier, Issues #3 and #4 require consideration of simultaneous measurements by the unit's CEMS along with the four test labs. To respond to Issue #3, concerning the consistency of the bias test results, the field test data were analyzed to determine how much agreement was found among the four labs as to whether the CEM was biased or not biased when current provisions of Part 75 are followed. In particular, the consistency in bias test results was evaluated by counting the number of concurrent RATA's in which agreement among the four test teams was 100% (all four labs agree), 75% (three out of four labs agree) and 50% (two labs find bias and two find no bias). For each pollutant there was never less than 75% agreement among the test teams when the reference methods and the installed CEMS were each calibrated using independently selected calibration gases, as is required under 40 CFR Part 75. For NO_X and CO_2 there was always 100% agreement. For SO_2 there was 100% agreement in bias test results in more than 76% of the concurrent RATA's.

These test results lead EPA to believe that even at a site exhibiting low SO_2 emission concentrations, there is a high degree of consistency in bias test results.

C. Certification Test Study

To respond further to Issue #3, EPA analyzed the consistency in bias test results across the universe of affected units, by conducting a study of the bias test results for all CEMS for which certification tests data were submitted under Part 75 between November 1993 and September 1996. To see how test results were affected by emission levels, the pass/fail rates at different concentrations (SO_2) and emission rates (NO_X) were compared for 1023 SO_2 and 1293 NO_X bias tests submitted under the Acid Rain Program. This analysis was not performed on CO_2 monitors, because under Part 75 units are not required to perform the bias test on their CO_2 monitors.

Grouping monitors according to the average concentration level (for SO_2 CEMS) and average emission rate (for NO_X CEMS), reported by the CEMS during the RATA, the pass/fail rates were plotted at regular increasing SO_2 emission concentration levels and NO_X emission rates. The resulting graphs revealed that the percentage of passes and fails remained relatively consistent

across concentration and emission rate categories. For example, for all SO_2 monitors, 73% (750 out of a total of 1023 monitors) passed the bias test. Assigning each tested monitor to one of fourteen 100 ppm categories, beginning at 0–100 ppm and ending at above 1300 ppm, showed that the percent of passing monitors in all but three of the concentration categories fell between 70 and 90%. The three categories whose passing rates were outside this range were 400–500 ppm (56% passing), 600–700 ppm (69%), and above 1300 ppm (63%). Thus, there was little or no apparent correlation between concentration level and bias test failure rates.

The graphical analysis for SO_2 monitors was confirmed by calculation of the r-squared value for the data. The r-squared value is a measure of the strength of the linear relationship between two data sets. R-squared can take on values from zero to one. A high r-squared value, i.e., closer to 1 than to 0, would suggest that the bias test pass/fail rate is highly correlated with the emission concentration level, e.g., that bias test failure is more likely with low emission concentration as suggested by utilities. A low r-squared value, i.e., closer to 0 than to 1, would suggest the absence of correlation between the bias pass/fail rate and the emission concentration level. For the plotted SO_2 data, the r-squared value was low: 0.0109.

The same graphical and statistical analysis was performed on the certification test data submitted for NO_X CEMS. Bias test pass/fail rates for 1293 NO_X monitors were divided into sixteen 0.1 lb/mmBTU categories. Considering all these categories, 67% (866 out of a total of 1293 monitors) passed the bias test. A plot of the data by emission category showed the bias test passing rate fell between 65% and 85% in all but of 3 of the 16 NO_X emission categories. The three emission rate categories whose passing rates were outside this range were not correlated to the measured NO_X emission rate: 0.1–0.2 lb/mmBTU (47% passing), 0.4–0.5 lb/mmBTU (59%), and 1.4–1.5 lb/mmBTU (50%). Again, there was little or no apparent correlation between bias test pass/fail rates and emission rate, and this was confirmed by the statistical analysis. The r-squared value for the NO_X data was low: 0.1109.

Thus, the graphical and statistical analysis performed in the certification test study indicates consistent bias test results across emission levels.

D. Proposed Findings and Conclusions

Based on the analyses performed to address Issues #1–3 in the collaborative and certification field studies, EPA considered Issue #4, concerning the necessity and feasibility of adjustments to the bias test. EPA currently believes that the small variability in the reference methods (less than 3%RSD across all gas scenarios and monitor technologies) indicates that there is very low probability that a continuous emission monitoring system will fail the bias test for reasons other than the presence of true measurement bias in the CEMS. The high level of consistency in bias test results seems to support this view.

Based on these studies, EPA proposes to find that:

1. The variability attributable to measurement error and to the choice of reference monitor technology in the Agency's approved test methods for SO_2, NO_X, and CO_2 is low (below 3.0% Relative Standard Deviation).

2. Differences in measurement variability among different allowable reference method technologies are small (below 1.0% RSD).

3. There is a high occurrence of consistency in bias test results.

4. There is no evidence that bias test failure rates are significantly influenced by emission levels.

Documentation of these proposed findings can be found in four docket items: A Collaborative Field Evaluation of EPA Test Methods 6C, 7E, and 3A (March 1994) (Docket Item, A–97–56, II–A–1) gives a detailed description of the collaborative field test activities, site characteristics, and equipment employed, presents data obtained in the field study, and discusses preliminary findings on the variability of the reference methods. A second report, An Operator's Guide to Eliminating Bias in CEM System (November 1994) (Docket Item, A–97–56, II–A–6) is an independent technical guidance document advising environmental technicians on procedures for detecting and correcting engineering problems that could produce measurement bias in CEM systems. A third report, Statistical Analysis of Reference Method Variability and Bias Test Consistency in the Collaborative Field Study of EPA Test Methods 6C, 7E, and 3A at Big Rivers Electric Corporation, Green Generating Station, Unit 2 (September 1996) ((Docket Item, A–97–56, II–A–2), focuses on the analysis of the collaborative study field data, reports the results of this analysis with respect to the four issues that the study was designed to address, and, based on this analysis, makes recommendations concerning whether adjustments are needed to the bias test. Finally, the graphs and supporting data from the certification test study can be found in "Bias Test Pass/Fail Rates at Different SO_2 and NO_X Emission Levels as Reported in Certification Relative Accuracy Test Audits (RATA's) submitted through September 1996 under 40 CFR Part 75." (December 1997) (Docket Items, A–97–56, II–A–3 and II–A–4).

Based on the proposed findings enumerated above, EPA proposes to determine that adjustments to the equations in the bias test are technically unnecessary to properly determine measurement bias. EPA therefore proposes not to initiate a rulemaking to change the bias test under § 75.7.

II. EPA Analyses in Response to 40 CFR 75.8

A. Background

In accordance with a settlement agreement, signed on April 17, 1995 in *Environmental Defense Fund v. Browner*, No. 93–1203 and consolidated cases (D.C. Cir., 1993), which addressed various CEMS issues, § 75.8 was adopted as part of the direct final rule, dated May 17, 1995, amending the January 11, 1993 rule's CEM provisions. Section 75.8 required EPA to evaluate the appropriateness of the current relative accuracy and availability trigger conditions for missing data substitution for SO_2, NO_X, and CO_2 CEMS and flow monitors. This evaluation was to be based on initial certification test data and quarterly report data for the 1993–1996 period. Using the evaluation, EPA was to determine whether to retain the current specifications or propose alternative performance specifications. A report evaluating this data was to be prepared by July 1, 1997, and EPA is to issue either a notice determining that the current rule provisions are appropriate or a notice proposing revisions. Any proposal revising the current rule is to be issued by October 31, 1997 and finalized by October 31, 1998. The results of EPA's evaluations of the current relative accuracy and availability trigger conditions are described below.

B. Relative Accuracy

Relative accuracy is a statistical indicator of how closely the measurements by an installed CEM approximate those obtained by a concurrently used EPA reference method during a 9–12 run field demonstration (known as the relative accuracy test audit (RATA)) that must

VOL 63 ISS 98 MAY 21 1998 UMI

be performed periodically for each CEMS under Part 75. Relative accuracy is expressed as a percent deviation of the CEMS results from the reference method results. The lower the relative accuracy value for a CEMS, the closer its measurements are to the reference method. Under 40 CFR Part 75, Appendix A, § 3, and Appendix B, § 2.3.1, all SO_2, NO_X, and CO_2 CEMS are required to have in a RATA a relative accuracy of 10%. Those that have a superior relative accuracy of 7.5% or less have one year to undergo their next RATA. Those that have a relative accuracy equal to or less than the required 10% but greater than 7.5% must undergo their next RATA within six months. The tighter specification of 7.5% is referred to as the "reduced frequency standard," while the 10% specification is known as the "normal frequency standard." For flow monitors the normal frequency standard is 15%, while the reduced frequency standard is 10%. On January 1, 2000 the normal and reduced frequency standards for flow monitors will be lowered to correspond to the standards for the pollutant CEMS, i.e., 10% and 7.5% respectively.

The evaluation of initial certification test data submitted for 1993–1996 showed that the average relative accuracy was 3.42% for the 965 SO_2 CEMS installed under the Acid Rain Program, 3.62% for 1272 NO_X CEMS, 3.28% for 1097 CO_2 CEMS., and 6.88% for 1070 flow monitors. This means that for all pollutants and flow, the average relative accuracy was below the reduced frequency standard. Furthermore, 91.3% of all SO_2 CEMS, 94.1% of all NOx CEMS, 96.3% of all CO_2 CEMS, and 91.9% of all flow monitors met their respective reduced frequency standard. See Docket Item, A–97–56, II–A–7 for a complete analysis of the certification test relative accuracy results.

A similar evaluation was performed on the relative accuracy test results reported in quarterly reports for the 1994–1996 period. This analysis showed that the average relative accuracy over the three years of data was 3.49% on 2802 SO_2 RATAs, 3.67% on 3935 NO_X RATAs, 3.06% on 2736 CO_2 RATAs, and 5.78% on 3019 flow RATAs. Like the certification test results, the data in the quarterly reports indicate that for each type of monitor, the average relative accuracy was below the reduced frequency standard. In addition, on 96.2% of the SO_2 RATAs, 96.0% of the NO_X RATAs, 97.9% of the CO_2 RATAs, and 93.5% of flow RATAs, the monitors met their respective reduced frequency standard. A complete analysis of the quarterly report relative accuracy test results can be found in Docket Item, A–97–56, II–A–8.

The relative accuracy test results obtained by these installed CEMS imply that no appreciable improvement in achieved relative accuracies could be expected unless the relative accuracy standard were brought down to or below these currently achieved average relative accuracies. However, studies cited above (Docket Item, A–97–56, II–A–2 and II–A–5) of the variability of the reference methods for SO_2, NO_X, and CO_2 suggest that such reduced relative accuracy standards might be beyond the technological limits of current monitoring technology since they approach the variability inherent in the reference methods themselves. Thus, tightening the relative accuracy standards further for these CEMS is unlikely to produce a corresponding improvement in the achievable relative accuracy.

Moreover, the existing regulations already provide that the normal and reduced frequency relative accuracy standards for flow monitors will be tightened to the same levels as for the other CEMS beginning in the year 2000. In light of the already low average relative accuracy (reflecting high monitor accuracy) for flow monitors, there is little or no basis at this time for concluding that any further tightening would be appropriate. In addition, EPA believes that the results of the tightening in 2000 should be evaluated before any further tightening is contemplated.

Therefore, based on the evaluation required under § 75.8, the Agency proposes to conclude that the current performance specifications for relative accuracy are appropriate at this time.

C. Availability Trigger Conditions for Missing Data Substitution Procedure

In 40 CFR 75.30–75.38 (Subpart D) a missing data procedure is prescribed for calculating emissions when valid data are not being supplied by a unit's continuous emissions monitoring system. The missing data procedure is a multi-tiered computational routine for deriving a substitution value from values previously recorded, or the highest potential values, by the monitor. The procedure is based on the premise that the lower the annual monitor availability and/or the longer the gap in recorded data, the more conservative the value to be substituted.

In concert, two trigger conditions determine the conservativeness of the substituted value. The first trigger condition is annualized monitor availability, i.e., the percentage of the immediately preceding 8760 unit operating hours in which valid, quality assured data was obtained. The second trigger condition is the length of the current period during which valid data are not being produced. Current availability trigger conditions include three tiers: (1) less than 90% availability, (2) equal to or greater than 90% but less than 95% availability, and (3) 95% or greater availability.

To determine if retaining the current availability trigger conditions is appropriate, the Agency analyzed the annual percent monitor availability (PMA) as reported in the 1994–1996 quarterly emission reports. The PMA indicates the proportion of the operating hours in each year that the monitor was providing valid, quality assured measurements. High PMAs would indicate that current trigger conditions are providing a sufficient incentive for keeping monitors operating properly.

The evaluation of the quarterly report data for 1994–1996 showed that the average PMA for SO_2 CEMS was 94.7% in 1994, 96.7% in 1995, and 97.2% in 1996. For the same three year period it was 91.8%, 94.1%, and 95.8% for NOx CEMS, and 95.0%, 96.3%, and 97.0% for flow monitors. As a rule, separate percent monitor availabilities for the CO_2 CEMS are not routinely reported, since CO_2 CEMS usually serve as diluent components in NO_X systems. However, the average PMA for CO2 CEMS in a given year must be at least as good as the corresponding average of the reported NO_X PMAs. Not only are the average PMAs above the 95% availability trigger level, but they have also consistently increased in each successive year of the Acid Rain Program. To appreciably improve monitor availabilities would require increasing the third tier availability trigger up to or above the high average availabilities currently being achieved. EPA believes that such an increase in the required availabilities would be close to or beyond the limits of what is reasonable to expect from current CEMS technology when properly operated under the conditions prevailing in utility stacks. A complete summary of the PMA's submitted in the 1994–1996 quarterly reports can be found in Docket Item, A–97–56, II–A–9.

Moreover, any tightening of the availability trigger conditions would require reprogramming of most affected units' data acquisition and handling systems, which automatically calculate and record the appropriate substitution values for periods when valid CEMS data are not available. Given the current high levels of monitor availability, there is little or no basis for finding that adjusting the trigger conditions would improve availability sufficiently to

justify the reprogramming costs that such a change would impose.

Therefore, based on the evaluation required under § 75.8, the Agency proposes to determine that retaining the current performance specifications for availability trigger conditions is appropriate at this time.

III. Proposed Rule Revisions

Having completed the studies and evaluations required in 40 CFR 75.7 and 75.8 and in light of EPA's determinations proposed above for retaining current rule provisions for the bias test, relative accuracy, and availability trigger conditions, EPA proposes revising Part 75 to delete §§ 75.7 and 75.8.

IV. Administrative Requirements

A. Executive Order 12866

Under Executive Order 12866, 58 FR 51735 (1993), the Administrator must determine whether the regulatory action is "significant" and therefore subject to Office of Management and Budget (OMB) review and the requirements of the Executive Order. The Order defines "significant regulatory action" as one that is likely to result in a rule that may:

(1) Have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities;

(2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

Pursuant to the terms of Executive Order 12866, it has been determined that this proposed rule is a "significant regulatory action" because the rule seems to raise novel legal or policy issues. As such, this action was submitted to OMB for review. Any written comments from OMB to EPA, any written EPA response to those comments, and any changes made in response to OMB suggestions or recommendations are included in the docket. The docket is available for public inspection at the EPA's Air Docket Section, which is listed in the **ADDRESSES** section of this preamble.

B. Unfunded Mandates Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), Pub. L. 104–4, establishes requirements for federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments and the private sector. Under section 202 of the UMRA, EPA generally must prepare a written statement, including a cost-benefit analysis, before promulgating a proposed or final rule that includes a federal mandate that may result in expenditure by State, local, and tribal governments, in aggregate, or by the private sector, of $100 million or more in any one year. Section 205 generally requires that, before promulgating a rule for which a written statement must be prepared, EPA identify and consider a reasonable number of regulatory alternatives and adopt the least costly, most cost-effective, or least burdensome alternative that achieves the objectives of the rule. The provisions of section 205 do not apply when they are inconsistent with applicable law. Moreover, section 205 allows EPA to adopt an alternative other than the least costly, most cost-effective, or least burdensome alternative if the Administrator explains why that alternative was not adopted. Finally, section 203 requires that, before establishing any regulatory requirements that may significantly or uniquely affect small governments, EPA must have developed a small government agency plan. The plan must provide for notifying any potentially affected small governments, enabling officials of affected small governments to have meaningful and timely input in the development of EPA regulatory proposals with significant federal intergovernmental mandates, and informing, educating, and advising small governments on compliance with the regulatory requirements.

Because this proposed rule is estimated to result in the expenditure by State, local, and tribal governments or the private sector of less than $100 million in any one year, the Agency has not prepared a budgetary impact statement or specifically addressed the selection of the least costly, most cost-effective, or least burdensome alternative. Because small governments will not be significantly or uniquely affected by this rule, the Agency is not required to develop a plan with regard to small governments.

As discussed above, the proposed rule would eliminate two sections requiring studies and evaluations by EPA of certain existing regulatory provisions and would not include any other changes to the existing regulations. The proposed rule therefore would not change in any way the expenditure by State, local, and tribal governments or the private sector, or the effect on small governments, resulting from the existing regulations.

C. Paperwork Reduction Act

This action proposing revisions to the continuous emission monitoring regulations would not impose any new information collection burden. OMB has previously approved the information collection requirements contained in the continuous emission monitoring regulations, 40 CFR part 75, under the provisions of the Paperwork Reduction Act, 44 U.S.C. 3501, *et seq.* Note, however, that the Agency is proposing other revisions to the continuous emission monitoring regulations in a separate action in today's **Federal Register** and that those revisions would result in a change to the current information collection burden.

Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

D. Regulatory Flexibility

The Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.*, generally requires federal agencies to conduct a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements unless the agency certifies that the proposed rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and small governmental jurisdictions.

As discussed above, the proposed rule would eliminate two sections requiring studies and evaluations by EPA and would not include any other changes to the existing regulations. The proposed rule therefore does not change in any way the potential impacts on small entities resulting from the existing regulations. Therefore, I hereby certify

that this action will not have a significant economic impact on a substantial number of small entities.

List of Subjects in 40 CFR Part 75

Environmental protection, Air pollution control, Carbon dioxide, Continuous emissions monitors, Electric utilities, Nitrogen oxides, Reporting and recordkeeping requirements, Sulfur dioxide.

Dated: April 27, 1998.

Carol M. Browner,

Administrator.

For the reasons set out in the preamble, part 75 of title 40, chapter 1 of the Code of Federal Regulations is proposed to be amended as follows:

PART 75—[AMENDED]

1. The authority citation for part 75 continues to read as follows:

Authority: 42 U.S.C. 7601 and 7651, *et seq.*

2. Section 75.7 is removed and reserved.

3. Section 75.8 is removed and reserved.

Part III

United States Sentencing Commission

Amendments to the Sentencing Guidelines for United States Courts; Notice

UNITED STATES SENTENCING COMMISSION

Amendments to the Sentencing Guidelines for United States Courts

AGENCY: United States Sentencing Commission.

ACTION: Notice of submission to Congress of amendments to the sentencing guidelines, policy statements, and official commentary; notice of proposed amendment for public comment.

SUMMARY: Pursuant to its authority under section 994(p) of title 28, United States Code, the United States Sentencing Commission, on May 1, 1998, submitted to the Congress amendments to the sentencing guidelines, policy statements, and official commentary together with reasons for the amendments. The amendments submitted to Congress are set forth in Part I of this notice.

In addition, pursuant to its authority under section 994(a), (o), and (p) of such title and section 2(g) of the No Electronic Theft Act of 1997, Pub. L. 105–147, the Commission is considering promulgating an amendment to the guidelines and commentary in order to implement directives to the Commission contained in the No Electronic Theft Act. The proposed amendment and a synopsis of the issues addressed are set forth in Part II of this notice. The Commission seeks comment on the proposed amendment, as well as alternative proposed amendments. Bracketed text within a proposal indicates alternative proposals and that the Commission invites comment and suggestions for appropriate policy choices.

DATES: Pursuant to 28 U.S.C. 994(p), the Commission has specified an effective date of November 1, 1998, for the amendments submitted to Congress, subject to their acceptability to Congress.

Written public comment on the amendments proposed to implement the directives in the No Electronic Theft Act of 1997 should be submitted not later than August 31, 1998.

ADDRESSES: Public comment on the amendment proposed to implement the directives in the No Electronic Theft Act of 1997 should be sent to: United States Sentencing Commission, One Columbus Circle, N.E., Suite 2–500, Washington, D.C. 20002–8002, Attention: Public Information.

FOR FURTHER INFORMATION CONTACT: Mike Courlander, Public Affairs Officer, telephone: (202) 273–4590.

SUPPLEMENTARY INFORMATION: The United States Sentencing Commission, an independent agency in the judicial branch of the U.S. Government, is empowered by 28 U.S.C. 994(a) to promulgate sentencing guidelines and policy statements for federal sentencing courts. The statute further directs the Commission to review periodically and revise guidelines previously promulgated and authorizes it to submit guideline amendments to the Congress not later than the first day of May each year. See 28 U.S.C. 994(o), (p). Additionally, a number of the amendments included in Part I of this report are authorized and directed by, or otherwise respond to, a variety of enactments of the 105th Congress. Absent action of Congress to the contrary, the amendments become effective on the date specified by the Commission (i.e., November 1, 1998) by operation of law.

Notice of the amendments submitted to the Congress on May 1, 1998, was first published in the **Federal Register** of January 6, 1998 (63 FR 602). Public hearings on the proposed amendments were held in San Francisco, CA, on March 5, 1998, and in Washington, DC, on March 12, 1998. After review of the hearing testimony and additional public comment, the Commission promulgated the amendments set forth in Part I below, each having been approved by at least four voting Commissioners.

In the **Federal Register** of January 6, 1998, the Commission also published a proposal from the Department of Justice on the implementation of the directives contained in the No Electronic Theft Act, as well as a general issue for comment on how these directives might best be carried out. The Commission heard testimony on these directives at the public hearing in Washington, DC, on March 12, 1998, and reviewed additional written public comment received on this issue in response to the **Federal Register** notice. The Commission also informally solicited and received the input of parties interested in copyright and trademark infringement sentencing issues, such as representatives of the Department of Justice, the defense bar, and other key groups, in an effort to determine how best to implement the directives. As a result of this input and after reviewing the hearing testimony and additional written public comment, the Commission voted, on April 23, 1998, to publish for comment the three proposals contained in Part II, below.

In connection with its ongoing process of guideline review, the Commission welcomes comment on any aspect of the sentencing guidelines, policy statements, and official commentary.

Authority: 28 U.S.C. 994(a), (o), (p).

Richard P. Conaboy
Chairman.

Part I—Amendments Submitted to Congress on May 1, 1998

1. *Amendment:* Section 2B1.1(b) is amended by adding at the end the following new subdivision:

"(8) If the offense involved theft of property from a national cemetery, increase by 2 levels.".

The Commentary to § 2B1.1 captioned "Application Notes" is amended in Note 1 by adding at the end the following new paragraph:

"*National cemetery* means a cemetery (A) established under section 2400 of title 38, United States Code, or (B) under the jurisdiction of the Secretary of the Army, the Secretary of the Navy, the Secretary of the Air Force, or the Secretary of the Interior.".

The Commentary to § 2B1.1 captioned "Background" is amended by adding at the end the following new paragraph:

"Subsection (b)(8) implements the instruction to the Commission in Section 2 of Public Law 105–101.".

Section 2B1.3(b) is amended by adding at the end the following new subdivision:

"(4) If property of a national cemetery was damaged or destroyed, increase by 2 levels.".

The Commentary to § 2B1.3 captioned "Application Notes" is amended in Note 1 by adding at the end the following new paragraph:

"*National cemetery* means a cemetery (A) established under section 2400 of title 38, United States Code, or (B) under the jurisdiction of the Secretary of the Army, the Secretary of the Navy, the Secretary of the Air Force, or the Secretary of the Interior.".

The Commentary to § 2B1.3 captioned "Background" is amended by inserting before the first paragraph the following:

"Subsection (b)(4) implements the instruction to the Commission in Section 2 of Public Law 105–101.".

Section 2K1.4(b) is amended by striking "Characteristic" and inserting "Characteristics"; and by adding at the end the following new subdivision:

"(2) If the base offense level is not determined under (a)(4), and the offense occurred on a national cemetery, increase by 2 levels.".

The Commentary to § 2K1.4 is amended by adding at the end the following new application note and background commentary:

"4. *National cemetery* means a cemetery (A) established under section

2400 of title 38, United States Code, or (B) under the jurisdiction of the Secretary of the Army, the Secretary of the Navy, the Secretary of the Air Force, or the Secretary of the Interior.

Background: Subsection (b)(2) implements the directive to the Commission in Section 2 of Public Law 105–101.".

Reason for Amendment: The purpose of this amendment is to provide an increase for property offenses committed against national cemeteries. This amendment implements the directive to the Commission in the Veterans' Cemetery Protection Act of 1997, Pub. L. 105–101, § 2, 111 Stat. 2202, 2202 (1997). This Act directs the Commission to provide a sentence enhancement of not less than two levels for any offense against the property of a national cemetery. In response to the legislation, this amendment adds a two-level enhancement to §§ 2B1.1 (Theft), 2B1.3 (Property Destruction), and 2K1.4 (Arson). *National cemetery* is defined in the same way as that term is defined in the statute.

2. *Amendment:* Section 2F1.1(b) is amended by striking subdivision (5) in its entirety and inserting the following:

"(5) (A) If the defendant relocated, or participated in relocating, a fraudulent scheme to another jurisdiction to evade law enforcement or regulatory officials; (B) if a substantial part of a fraudulent scheme was committed from outside the United States; or (C) if the offense otherwise involved sophisticated concealment, increase by 2 levels. If the resulting offense level is less than level 12, increase to level 12.".

Section 2F1.1(b) is amended by adding at the end the following new subdivision:

"(7) If the offense was committed through mass-marketing, increase by 2 levels.".

The Commentary to § 2F1.1 captioned "Application Notes" is amended by redesignating Notes 14 through 18, as Notes 15 through 19, respectively; and by inserting after Note 13 the following new Note 14:

"14. For purposes of subsection (b)(5)(B), *United States* means each of the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, the United States Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa.

For purposes of subsection (b)(5)(C), *sophisticated concealment* means especially complex or especially intricate offense conduct in which deliberate steps are taken to make the offense, or its extent, difficult to detect. Conduct such as hiding assets or transactions, or both, through the use of fictitious entities, corporate shells, or offshore bank accounts ordinarily indicates sophisticated concealment.".

The Commentary to § 2F1.1 captioned "Application Notes" is amended by adding at the end the following new note:

"20. *Mass-marketing,* as used in subsection (b)(7), means a plan, program, promotion, or campaign that is conducted through solicitation by telephone, mail, the Internet, or other means to induce a large number of persons to (A) purchase goods or services; (B) participate in a contest or sweepstakes; or (C) invest for financial profit. The enhancement would apply, for example, if the defendant conducted or participated in a telemarketing campaign that solicited a large number of individuals to purchase fraudulent life insurance policies.".

Section 2T1.1(b) is amended by striking subdivision (2) in its entirety and inserting the following:

"(2) If the offense involved sophisticated concealment, increase by 2 levels.".

The Commentary to § 2T1.1 captioned "Application Notes" is amended by striking Note 4 in its entirety and inserting the following:

"4. For purposes of subsection (b)(2), *sophisticated concealment* means especially complex or especially intricate offense conduct in which deliberate steps are taken to make the offense, or its extent, difficult to detect. Conduct such as hiding assets or transactions, or both, through the use of fictitious entities, corporate shells, or offshore bank accounts ordinarily indicates sophisticated concealment.".

Section 2T1.4(b) is amended by striking subdivision (2) in its entirety and inserting the following:

"(2) If the offense involved sophisticated concealment, increase by 2 levels.".

The Commentary to § 2T1.4 captioned "Application Notes" is amended by striking Note 3 in its entirety and inserting the following:

"3. For purposes of subsection (b)(1), *sophisticated concealment* means especially complex or especially intricate offense conduct in which deliberate steps are taken to make the offense, or its extent, difficult to detect. Conduct such as hiding assets or transactions, or both, through the use of fictitious entities, corporate shells, or offshore bank accounts ordinarily indicates sophisticated concealment.".

Section 2T3.1(b) is amended by striking subdivision (1) in its entirety and inserting the following:

"(1) If the offense involved sophisticated concealment, increase by 2 levels.".

The Commentary to § 2T3.1 captioned "Application Notes" is amended by adding at the end the following new note:

"3. For purposes of subsection (b)(1), *sophisticated concealment* means especially complex or especially intricate offense conduct in which deliberate steps are taken to make the offense, or its extent, difficult to detect. Conduct such as hiding assets or transactions, or both, through the use of fictitious entities, corporate shells, or offshore bank accounts ordinarily indicates sophisticated concealment.".

Reason for Amendment: This amendment has three purposes: (1) to provide an increase for fraud offenses that use mass-marketing to carry out the fraud; (2) to provide an increase for fraud offenses that involve conduct, such as sophisticated concealment, that makes it difficult for law enforcement authorities to discover the offense or apprehend the offender; and (3) to clarify and conform an existing enhancement that provides an increase for tax offenses that similarly involve sophisticated concealment.

First, this amendment adds a two-level enhancement in the fraud guideline for offenses that are committed through mass-marketing. The Commission identified mass-marketing as a central component of telemarketing fraud and also determined that there were other fraudulent schemes that relied on mass-marketing to perpetrate the offense (for example, Internet fraud). Accordingly, rather than provide a limited enhancement for telemarketing fraud only, the Commission determined that a generally applicable specific offense characteristic in the fraud guideline would better provide consistent and proportionate sentencing increases for similar types of fraud, while also ensuring increased sentences for persons who engage in mass-marketed telemarketing fraud.

Second, this amendment provides an increase for fraud offenses that involve conduct, such as sophisticated concealment, that makes it difficult for law enforcement authorities to discover the offense or apprehend the offenders. The new enhancement provides a two-level increase and a "floor" offense level of level 12 in the fraud guideline and replaces the current enhancement for "the use of foreign bank accounts or transactions to conceal the true nature or extent of fraudulent conduct." There are three alternative provisions to the enhancement. The first two prongs address conduct that the Commission

has been informed often relates to telemarketing fraud, although the conduct also may occur in connection with fraudulent schemes perpetrated by other means. Specifically, the Commission has been informed that fraudulent telemarketers increasingly are conducting their operations from Canada and other locations outside the United States. Additionally, testimony offered at a Commission hearing on telemarketing fraud indicated that telemarketers often relocate their schemes to other jurisdictions once they know or suspect that enforcement authorities have discovered the scheme. Both types of conduct are specifically covered by the new enhancement. The third prong provides an increase if any offense covered by the fraud guideline otherwise involves sophisticated concealment. This prong addresses cases in which deliberate steps are taken to make the offense, or its extent, difficult to detect.

Third, this amendment provides a two-level enhancement for conduct related to sophisticated concealment of a tax offense. The primary purpose of this amendment is to conform the language of the current enhancement for "sophisticated means" in the tax guidelines to the essentially equivalent language of the new sophisticated concealment enhancement provided in the fraud guideline. Additionally, the amendment resolves a circuit conflict regarding whether the enhancement applies based on the personal conduct of the defendant or the overall offense conduct for which the defendant is accountable. Consistent with the usual relevant conduct rules, application of this new enhancement for sophisticated concealment accordingly is based on the overall offense conduct for which the defendant is accountable.

3. *Amendment:* Section 2K2.1(a) is amended in subdivision (4) by striking "the defendant" after "20, if"; in subdivision (4)(A) by inserting "the defendant" before "had one"; in subdivision (4)(B) by striking "is a prohibited person, and"; and in subdivision (4)(B) by inserting "; and the defendant (i) is a prohibited person; or (ii) is convicted under 18 U.S.C. 922(d)" after "' 921(a)(30)".

Section 2K2.1(a)(6) is amended by inserting "(A)" after "defendant"; and by inserting "; or (B) is convicted under 18 U.S.C. 922(d)" after "person".

The Commentary to § 2K2.1 captioned "Application Notes" is amended in Note 6 by striking "or" before "(vi)"; and by inserting "; or (vii) has been convicted in any court of a misdemeanor crime of domestic violence as defined in 18 U.S.C. 921(a)(33)" after "922(d)(8)".

The Commentary to § 2K2.1 captioned "Application Notes" is amended in Note 12 in the first paragraph by striking "924(j) or (k), or 26 U.S.C. 5861(g) or (h)" and inserting "924 (l) or (m)"; and in the second paragraph by striking "only" after "if the"; and by inserting "or 26 U.S.C. 5861(g) or (h)" after "922(k)".

Reason for Amendment: This amendment has three purposes: (1) to change the definition of "prohibited person" in the firearms guideline so that it includes a person convicted of a misdemeanor crime of domestic violence; (2) to provide the same base offense levels for both a prohibited person and a person who is convicted under 18 U.S.C. 922(d) of transferring a firearm to a prohibited person; and (3) to make several technical and conforming changes to the firearms guideline.

The first part of the amendment amends Application Note 6 of § 2K2.1 (Unlawful Receipt, Possession, or Transportation of Firearms or Ammunition; Prohibited Transactions Involving Firearms or Ammunition) to include a person convicted of a misdemeanor crime of domestic violence within the scope of "prohibited person" for purposes of that guideline. It also defines "misdemeanor crime of domestic violence" by reference to the new statutory definition of that term in 18 U.S.C. 921(a).

This part of the amendment addresses section 658 of the Treasury, Postal Service, and General Government Appropriations Act, Pub. L. 104–208, 110 Stat. 3009 (1996) (contained in the Omnibus Consolidated Appropriations Act for Fiscal Year 1997). Section 658 amended 18 U.S.C. 922(d) to prohibit the sale of a firearm or ammunition to a person who has been convicted in any court of a misdemeanor crime of domestic violence. It also amended 18 U.S.C. 922(g) to prohibit a person who has been convicted in any court of a misdemeanor crime of domestic violence from transporting or receiving a firearm or ammunition. Section 922(s)(3)(B)(i), which lists the information a person not licensed under 18 U.S.C. 923 must include in a statement to the handgun importer, manufacturer, or dealer, was amended to require certification that the person to whom the gun is transferred was not convicted in any court of a misdemeanor crime of domestic violence. Section 658 also amended 18 U.S.C. 921(a) to define "misdemeanor crime of domestic violence".

Violations of 18 U.S.C. 922(d) and (g) are covered by § 2K2.1. The new provisions at § 922(d) (sale of a firearm to a "prohibited person") and § 922(g) (transporting, possession, and receipt of a firearm by a "prohibited person") affect Application Note 6 of § 2K2.1, which defines "prohibited person". This part of the amendment conforms Application Note 6 of § 2K2.1 to the new statutory provisions.

The second part of this amendment increases the base offense level for a defendant who is convicted under 18 U.S.C. 922(d), which prohibits the transfer of a firearm to a prohibited person. Specifically, this part amends the two alternative base offense levels that pertain to prohibited persons in the firearms guideline in order to make those offense levels applicable to the person who transfers the firearm to the prohibited person. A person who is convicted under 18 U.S.C. 922(d) has been shown beyond a reasonable doubt either to have known, or to have had reasonable cause to believe, that the transferee was a prohibited person.

This part of the amendment derives from a recommendation by the United States Department of Justice and is generally consistent with a proposed directive contained in juvenile justice legislation approved by the Senate Judiciary Committee in 1997.

The third part of this amendment makes two technical and conforming changes in Application Note 12 of § 2K2.1. First, the amendment corrects statutory references to 18 U.S.C. 924(j) and (k), which were added as a result of the Violent Crime Control and Law Enforcement Act of 1994, Pub. L. 103–322, 108 Stat. 1796 (1994). In the Economic Espionage Act of 1996, Pub. L. 104–294, 110 Stat. 3488 (1996), Congress again amended 18 U.S.C. 924 and redesignated the provisions as subsections (l) and (m). The amendment conforms Application Note 12 to that redesignation. Second, the amendment corrects the misplacement of the reference to 26 U.S.C. 5861(g) and (h).

4. *Amendment:* The Commentary to § 2J1.6 captioned "Application Notes" is amended in Note 3 in the first paragraph by striking "3D1.2" and inserting "3D1.1"; and by striking the second paragraph in its entirety and inserting the following as the new second paragraph:

"In the case of a conviction on both the underlying offense and the failure to appear, the failure to appear is treated under § 3C1.1 (Obstructing or Impeding the Administration of Justice) as an obstruction of the underlying offense, and the failure to appear count and the count or counts for the underlying

offense are grouped together under § 3D1.2(c). (Note that 18 U.S.C. 3146(b)(2) does not require a sentence of imprisonment on a failure to appear count, although if a sentence of imprisonment on the failure to appear count is imposed, the statute requires that the sentence be imposed to run consecutively to any other sentence of imprisonment. Therefore, unlike a count in which the statute mandates both a minimum and a consecutive sentence of imprisonment, the grouping rules of §§ 3D1.1–3D1.5 apply. See § 3D1.1(b), comment. (n.1), and § 3D1.2, comment. (n.1).) The combined sentence will then be constructed to provide a 'total punishment' that satisfies the requirements both of § 5G1.2 (Sentencing on Multiple Counts of Conviction) and 18 U.S.C. 3146(b)(2). For example, if the combined applicable guideline range for both counts is 30–37 months and the court determines that a 'total punishment' of 36 months is appropriate, a sentence of 30 months for the underlying offense plus a consecutive six months' sentence for the failure to appear count would satisfy these requirements. (Note that the combination of this instruction and increasing the offense level for the obstructive, failure to appear conduct has the effect of ensuring an incremental, consecutive punishment for the failure to appear count, as required by 18 U.S.C. 3146(b)(2).)".

The Commentary to § 2J1.6 captioned "Application Notes" is amended by redesignating Note 4 as Note 5; and by inserting the following as new Note 4:

"4. If a defendant is convicted of both the underlying offense and the failure to appear count, and the defendant committed additional acts of obstructive behavior (e.g., perjury) during the investigation, prosecution, or sentencing of the instant offense, an upward departure may be warranted. The upward departure will ensure an enhanced sentence for obstructive conduct for which no adjustment under § 3C1.1 (Obstruction of Justice) is made because of the operation of the rules set out in Application Note 3.".

The Commentary to § 2P1.2 captioned "Application Notes" is amended in Note 2 by striking "as amended," after "18 U.S.C. 1791(c),"; and by inserting "by the inmate" after "served".

The Commentary to § 2P1.2 captioned "Application Notes" is amended in Note 2 by inserting before the first paragraph the following:

"In a case in which the defendant is convicted of the underlying offense and an offense involving providing or possessing a controlled substance in prison, group the offenses together under § 3D1.2(c). (Note that 18 U.S.C. 1791(b) does not require a sentence of imprisonment, although if a sentence of imprisonment is imposed on a count involving providing or possessing a controlled substance in prison, section 1791(c) requires that the sentence be imposed to run consecutively to any other sentence of imprisonment for the controlled substance. Therefore, unlike a count in which the statute mandates both a minimum and a consecutive sentence of imprisonment, the grouping rules of §§ 3D1.1–3D1.5 apply. See § 3D1.1(b), comment. (n.1), and § 3D1.2, comment. (n.1).) The combined sentence will then be constructed to provide a 'total punishment' that satisfies the requirements both of § 5G1.2 (Sentencing on Multiple Counts of Conviction) and 18 U.S.C. 1791(c). For example, if the combined applicable guideline range for both counts is 30–37 months and the court determines a 'total punishment' of 36 months is appropriate, a sentence of 30 months for the underlying offense plus a consecutive six months' sentence for the providing or possessing a controlled substance in prison count would satisfy these requirements.".

The Commentary to § 3C1.1 captioned "Application Notes" is amended in Note 6 by striking "Where" and inserting "If"; and by striking "where" both places it appears and inserting "if".

The Commentary to § 3C1.1 captioned "Application Notes" is amended in Note 7 in the first sentence by striking "Where" and inserting "If"; by striking "both of the" and inserting "both of an"; by inserting "(e.g., 18 U.S.C. § 3146 (Penalty for failure to appear); 18 U.S.C. § 1621 (Perjury generally))" after "obstruction offense" the first place it appears; and by striking "the underlying" the first place it appears and inserting "an underlying".

Section 3D1.1(b) is amended by striking the first sentence in its entirety and inserting the following:

"Exclude from the application of §§ 3D1.2–3D1.5 any count for which the statute (1) specifies a term of imprisonment to be imposed; and (2) requires that such term of imprisonment be imposed to run consecutively to any other term of imprisonment.".

The Commentary to § 3D1.1 captioned "Application Notes" is amended by striking Note 1 in its entirety and inserting the following:

"1. Subsection (b) applies if a statute (A) specifies a term of imprisonment to be imposed; and (B) requires that such term of imprisonment be imposed to run consecutively to any other term of imprisonment. See, e.g., 18 U.S.C. 924(c) (requiring mandatory term of five years to run consecutively). The multiple count rules set out under this Part do not apply to a count of conviction covered by subsection (b). However, a count covered by subsection (b) may affect the offense level determination for other counts. For example, a defendant is convicted of one count of bank robbery (18 U.S.C. 2113), and one count of use of a firearm in the commission of a crime of violence (18 U.S.C. 924(c)). The two counts are not grouped together pursuant to this guideline, and, to avoid unwarranted double counting, the offense level for the bank robbery count under § 2B3.1 (Robbery) is computed without application of the enhancement for weapon possession or use as otherwise required by subsection (b)(2) of that guideline. Pursuant to 18 U.S.C. 924(c), the mandatory five-year sentence on the weapon-use count runs consecutively to the guideline sentence imposed on the bank robbery count. See § 5G1.2(a).

Unless specifically instructed, subsection (b) does not apply when imposing a sentence under a statute that requires the imposition of a consecutive term of imprisonment only if a term of imprisonment is imposed (i.e., the statute does not otherwise require a term of imprisonment to be imposed). See, e.g., 18 U.S.C. 3146 (Penalty for failure to appear); 18 U.S.C. 924(a)(4) (regarding penalty for 18 U.S.C. 922(q) (possession or discharge of a firearm in a school zone)); 18 U.S.C. 1791(c) (penalty for providing or possessing a controlled substance in prison). Accordingly, the multiple count rules set out under this Part do apply to a count of conviction under this type of statute.".

The Commentary to § 3D1.2 captioned "Application Notes" is amended in Note 1 in the third sentence by striking "mandates imposition of a consecutive sentence" and inserting "(A) specifies a term of imprisonment to be imposed; and (B) requires that such term of imprisonment be imposed to run consecutively to any other term of imprisonment"; and by inserting "; id., comment. (n.1)" after "§ 3D1.1(b)".

Section 5G1.2(a) is amended by striking "mandates a consecutive sentence" and inserting "(1) specifies a term of imprisonment to be imposed; and (2) requires that such term of imprisonment be imposed to run consecutively to any other term of imprisonment"; and by inserting "by that statute" after "determined".

The Commentary to § 5G1.2 is amended in the last paragraph by striking the first three sentences and inserting:

"Subsection (a) applies if a statute (1) specifies a term of imprisonment to be imposed; and (2) requires that such term of imprisonment be imposed to run consecutively to any other term of imprisonment. See, e.g., 18 U.S.C. § 924(c) (requiring mandatory term of five years to run consecutively to any other term of imprisonment). The term of years to be imposed consecutively is determined by the statute of conviction, and is independent of a guideline sentence on any other count.".

The Commentary to § 5G1.2 is amended in the last paragraph in the fourth sentence by inserting ", e.g.," after "See"; and by adding at the end the following new sentence:

"Subsection (a) also applies in certain other instances in which an independently determined and consecutive sentence is required. See, e.g., Application Note 3 of the Commentary to § 2J1.6 (Failure to Appear by Defendant), relating to failure to appear for service of sentence.".

Reason for Amendment: The purpose of this amendment is to clarify how several guideline provisions, including those on grouping multiple counts of conviction, work together to ensure an incremental, consecutive penalty for a failure to appear count. This amendment addresses a circuit conflict regarding whether the guideline procedure of grouping the failure to appear count of conviction with the count of conviction for the underlying offense violates the statutory mandate of imposing a consecutive sentence. *Compare United States* v. *Agoro*, 996 F.2d 1288 (1st Cir. 1993) (grouping rules apply), and *United States* v. *Flores*, No. 93–3771, 1994 WL 163766 (6th Cir. May 2, 1994) (unpublished) (same), with *United States* v. *Packer*, 70 F.3d 357 (5th Cir. 1995) (grouping rules defeat statutory purposes of 18 U.S.C. § 3146), cert. denied, 117 S. Ct. 75 (1996). The amendment maintains the current grouping rules for failure to appear and obstruction of justice, but addresses internal inconsistencies among different guidelines and explains how the guideline provisions work together to ensure an incremental, consecutive penalty for the failure to appear count. Specifically, the amendment (1) more clearly distinguishes between statutes that require imposition of a consecutive term of imprisonment only if imprisonment is imposed (e.g., 18 U.S.C. § 3146 (Penalty for failure to appear); 18 U.S.C. § 1791(b), (c) (Penalty for providing or possessing contraband in prison)), and statutes that require both a minimum term of imprisonment and a consecutive sentence (e.g., 18 U.S.C. § 924(c) (Use of a firearm in relation to crime of violence or drug trafficking offense)); (2) states that the method outlined for determining a sentence for failure to appear and similar statutes ensures an incremental, consecutive punishment; (3) adds an upward departure provision if offense conduct involves multiple obstructive acts; (4) makes conforming changes in § 2P1.2 (Providing or Possessing Contraband in Prison) because the relevant statute, 18 U.S.C. 1791, is similar to 18 U.S.C. 3146; and (5) makes conforming changes in §§ 3C1.1, 3D1.1, 3D1.2, and 5G1.2.

5. *Amendment:* The Commentary to § 3B1.3 captioned "Application Notes" is amended in the first paragraph of Note 1 in the third sentence by inserting "public or private" after "position of"; in the fourth sentence by striking "would apply" and inserting "applies"; and in the last sentence by striking "would" and inserting "does.".

The Commentary to § 3B1.3 captioned "Application Notes" is amended by redesignating Note 2 as Note 3; and by inserting the following as new Note 2:

"2. This enhancement also applies in a case in which the defendant provides sufficient indicia to the victim that the defendant legitimately holds a position of private or public trust when, in fact, the defendant does not. For example, the enhancement applies in the case of a defendant who (A) perpetrates a financial fraud by leading an investor to believe the defendant is a legitimate investment broker; or (B) perpetrates a fraud by representing falsely to a patient or employer that the defendant is a licensed physician. In making the misrepresentation, the defendant assumes a position of trust, relative to the victim, that provides the defendant with the same opportunity to commit a difficult-to-detect crime that the defendant would have had if the position were held legitimately.".

The Commentary to § 3B1.3 captioned "Background" is amended by inserting after the first sentence the following:

"The adjustment also applies to persons who provide sufficient indicia to the victim that they legitimately hold a position of public or private trust when, in fact, they do not.".

Reason for Amendment: The purpose of this amendment is to establish that the two-level increase for abuse of a position of trust applies to a defendant who is an imposter, as well as to a person who legitimately holds and abuses a position of trust. This amendment resolves a circuit conflict on that issue. Compare *United States* v. *Gill*, 99 F.3d 484 (1st Cir. 1996) (adjustment applied to defendant who posed as licensed psychologist), and *United States* v. *Queen*, 4 F.3d 925 (10th Cir. 1993) (adjustment applied to defendant who posed as financial broker), cert. denied, 510 U.S. 1182 (1994), with *United States* v. *Echevarria*, 33 F.3d 175 (2d Cir. 1994) (defendant who poses as physician does not occupy a position of trust). The amendment adopts the majority appellate view and provides that the abuse of position of trust adjustment applies to an imposter who pretends to hold a position of trust when in fact he does not. The Commission has determined that, particularly from the perspective of the crime victim, an imposter who falsely assumes and takes advantage of a position of trust is as culpable and deserving of increased punishment as is a defendant who abuses an actual position of trust.

6. *Amendment:* Section 3C1.1 is amended by inserting "(A)" after "If"; by inserting "the course of" after "during"; and by inserting "of conviction, and (B) the obstructive conduct related to (i) the defendant's offense of conviction and any relevant conduct; or (ii) a closely related offense" after "instant offense".

The Commentary to § 3C1.1 captioned "Application Notes" is amended in Note 2 in the second sentence by striking "Note 3" and inserting "Note 4"; in the third sentence by striking "Note 4" and inserting "Note 5"; and in the fourth sentence by striking "Notes 3 and 4" and inserting "Notes 4 and 5".

The Commentary to § 3C1.1 captioned "Application Notes" is amended in Note 4 in the first paragraph by striking "Note 7" and inserting "Note 8".

The Commentary to § 3C1.1 captioned "Application Notes" is amended by redesignating Notes 1 through 8, as Notes 2 through 9, respectively; and by inserting the following as new Note 1:

"1. This adjustment applies if the defendant's obstructive conduct (A) occurred during the course of the investigation, prosecution, or sentencing of the defendant's instant offense of conviction, and (B) related to (i) the defendant's offense of conviction and any relevant conduct; or (ii) an otherwise closely related case, such as that of a co-defendant.".

Reason for Amendment: The purpose of this amendment is to clarify what the term *instant offense* means in the obstruction of justice guideline, § 3C1.1. This amendment resolves a circuit conflict on the issue of whether the adjustment applies to obstructions that occur in cases closely related to the defendant's case or only those specifically related to the offense of which the defendant convicted. Compare *United States* v. *Powell*, 113

F.3d 464 (3d Cir.) (adjustment applies if defendant attempts to impede the prosecution of a co-defendant who is charged with the same offense for which defendant was convicted), cert. denied, 118 S. Ct. 454 (1997), *United States* v. *Walker*, 119 F.3d 403 (6th Cir.) (same), cert. denied, 118 S. Ct. 643 (1997), *United States* v. *Acuna*, 9 F.3d 1442 (9th Cir. 1993) (adjustment applies if defendant attempts to obstruct justice in a case closely related to his own), and *United States* v. *Bernaugh*, 969 F.2d 858 (10th Cir. 1992) (adjustment applies when defendant testifies falsely at his own hearing about co-defendants' roles in the offense), with *United States* v. *Perdomo*, 927 F.2d 111 (2d Cir. 1991) (cannot apply adjustment based on obstructive conduct outside the scope of charged offense), and *United States* v. *Partee*, 31 F.3d 529 (7th Cir. 1994) (same). The amendment, which adopts the majority view, instructs that the obstruction must relate either to the defendant's offense of conviction (including any relevant conduct) or to a closely related case. The amendment also clarifies the temporal element of the obstruction guideline (i.e., that the obstructive conduct must occur during the investigation, prosecution, or sentencing of the defendant's offense of conviction).

7. Amendment: The Commentary to § 3C1.1 captioned "Application Notes" is amended in Note 4 in the first sentence of the first paragraph by striking "enhancement" and inserting "adjustment"; and by inserting "or affect the determination of whether other guideline adjustments apply (e.g., § 3E1.1 (Acceptance of Responsibility))" after "guideline range"; in the second sentence by striking "enhancement" and inserting "adjustment"; in subdivision (d) by striking the period at the end and inserting a semicolon; and by adding at the end the following new subdivision:

"(e) lying to a probation or pretrial services officer about defendant's drug use while on pre-trial release, although such conduct may be a factor in determining whether to reduce the defendant's sentence under § 3E1.1 (Acceptance of Responsibility).".

Reason for Amendment: The purpose of this amendment is to establish that lying to a probation officer about drug use while released on bail does not warrant an obstruction of justice adjustment under § 3C1.1. This amendment resolves a circuit conflict on that issue. Compare *United States* v. *Belletiere*, 971 F.2d 961 (3d Cir. 1992) (lying about drug use is not obstructive conduct that impedes government's investigation of instant offense), and *United States* v. *Thompson*, 944 F.2d 1331 (7th Cir. 1991) (same), cert. denied, 502 U.S. 1097 (1992), with *United States* v. *Garcia*, 20 F.3d 670 (6th Cir. 1994) (falsely denying drug use, while not outcome-determinative, is relevant), cert. denied, 513 U.S. 1159 (1995). The amendment, which adopts the majority view, excludes from application of § 3C1.1 a defendant's denial of drug use while on pre-trial release, although the amendment provides that such conduct may be relevant in determining the application of other guidelines, such as § 3E1.1 (Acceptance of Responsibility).

8. *Amendment:* Section 5K2.13 is amended by striking the text in its entirety and inserting:

"A sentence below the applicable guideline range may be warranted if the defendant committed the offense while suffering from a significantly reduced mental capacity. However, the court may not depart below the applicable guideline range if (1) the significantly reduced mental capacity was caused by the voluntary use of drugs or other intoxicants; (2) the facts and circumstances of the defendant's offense indicate a need to protect the public because the offense involved actual violence or a serious threat of violence; or (3) the defendant's criminal history indicates a need to incarcerate the defendant to protect the public. If a departure is warranted, the extent of the departure should reflect the extent to which the reduced mental capacity contributed to the commission of the offense.

Commentary

Application Note:

1. For purposes of this policy statement—

Significantly reduced mental capacity means the defendant, although convicted, has a significantly impaired ability to (A) understand the wrongfulness of the behavior comprising the offense or to exercise the power of reason; or (B) control behavior that the defendant knows is wrongful.".

Reason for Amendment: The purpose of this amendment is to allow (except under certain circumstances) a diminished capacity departure if there is sufficient evidence that the defendant committed the offense while suffering from a significantly reduced mental capacity. This amendment addresses a circuit conflict regarding whether the diminished capacity departure is precluded if the defendant committed a "crime of violence" as that term is defined in the career offender guideline. Compare *United States* v. *Poff*, 926 F.2d 588 (7th Cir.) (en banc) (definition of "non-violent offense" necessarily excludes a crime of violence), cert. denied, 502 U.S. 827 (1991), *United States* v. *Maddalena*, 893 F.2d 815 (6th Cir. 1989) (same), *United States* v. *Mayotte*, 76 F.3d 887 (8th Cir. 1996) (same), *United States* v. *Borrayo*, 898 F.2d 91 (9th Cir. 1989) (same), and *United States* v. *Dailey*, 24 F.3d 1323 (11th Cir. 1994) (same), with *United States* v. *Chatman*, 986 F.2d 1446 (D.C. Cir. 1993) (court must consider all the facts and circumstances to determine whether offense was non-violent; terms are not mutually exclusive), *United States* v. *Weddle*, 30 F.3d 532 (4th Cir. 1994) (same), and *United States* v. *Askari*, F.3d, 1998 WL 164561 (3d Cir. 1998) (en banc) ("non-violent offenses" are those that do not involve a reasonable perception that force against persons may be used in committing the offense), abrogating *United States* v. *Rosen*, 896 F.2d 789 (3d Cir. 1990) (non-violent offense means the opposite of crime of violence). The amendment replaces the current policy statement with a new provision that essentially represents a compromise approach to the circuit conflict. The new policy statement allows a diminished capacity departure if there is sufficient evidence that the defendant committed the offense while suffering from a significantly reduced mental capacity, except under the following three circumstances: (1) the significantly reduced mental capacity was caused by the voluntary use of drugs or other intoxicants; (2) the facts and circumstances of the defendant's offense indicate a need to protect the public because the offense involved actual violence or a serious threat of violence; or (3) the defendant's criminal history indicates a need to incarcerate the defendant to protect the public. The amendment also adds an application note that defines "significantly reduced mental capacity" in accord with the decision in *United States* v. *McBroom*, 124 F.3d 533 (3d Cir. 1997). The McBroom court concluded that "significantly reduced mental capacity" included both cognitive impairments (i.e., an inability to understand the wrongfulness of the conduct or to exercise the power of reason) and volitional impairments (i.e., an inability to control behavior that the person knows is wrongful). The application note specifically includes both types of impairments in the definition of "significantly reduced mental capacity".

9. *Amendment:* Section 5B1.3(d) is amended by adding at the end the following new subdivision:

"(6) Deportation

If (A) the defendant and the United States entered into a stipulation of

UMI
VOL
63
ISS
98
MAY
21
1998
UMI

deportation pursuant to section 238(c)(5) of the Immigration and Nationality Act (8 U.S.C. § 1228(c)(5)); or (B) in the absence of a stipulation of deportation, if, after notice and hearing pursuant to such section, the Attorney General demonstrates by clear and convincing evidence that the alien is deportable—a condition ordering deportation by a United States district court or a United States magistrate judge.".

Section 5D1.3(d) is amended by adding at the end the following new subdivision:

"(6) Deportation

If (A) the defendant and the United States entered into a stipulation of deportation pursuant to section 238(c)(5) of the Immigration and Nationality Act (8 U.S.C. § 1228(c)(5)); or (B) in the absence of a stipulation of deportation, if, after notice and hearing pursuant to such section, the Attorney General demonstrates by clear and convincing evidence that the alien is deportable—a condition ordering deportation by a United States district court or a United States magistrate judge.".

Section 5D1.3(e)(5) is amended by striking "to provide just punishment for the offense,".

Section 5B1.3(c) is amended by inserting "(Policy Statement)" before "The following".

Section 5B1.3(d) is amended by inserting "(Policy Statement)" before "The following".

Section 5B1.3(e) is amended in the title by adding "(Policy Statement)" at the end.

Section 5D1.3(c) is amended by inserting "(Policy Statement)" before "The following".

Section 5D1.3(d) is amended by inserting "(Policy Statement)" before "The following".

Section 5D1.3(e) is amended in the title by adding "(Policy Statement)" at the end.

Reason for Amendment: The purpose of this amendment is to make several technical and conforming changes to the guidelines relating to conditions of probation and supervised release. The amendment has three parts. First, the amendment adds to § 5B1.3 a condition of probation regarding deportation, in response to section 374 of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996, Pub. L 104–208, 110 Stat. 3009 (1996). That section amended 18 U.S.C. § 3563(b) to add a new discretionary condition of probation with respect to deportation. Second, this amendment deletes the reference in the supervised release guideline to "just punishment" as a reason for the imposition of curfew as a condition of supervised release. The need to provide "just punishment" is not included in 18 U.S.C. § 3583(c) as a permissible factor to be considered in imposing a term of supervised release. Third, this amendment amends the guidelines pertaining to conditions of probation and supervised release to indicate that discretionary (as opposed to mandatory) conditions are advisory policy statements of the Commission, not binding guidelines.

10. *Amendment:* Section 5K2.0 is amended in the first paragraph in the first sentence by inserting a comma after "3553(b)"; by striking "guideline" and inserting "guidelines"; in the second sentence by striking "guidelines" and inserting "guideline range"; in the third sentence by striking "controlling" after "The"; by striking "can only be made by the courts" and inserting "rests with the sentencing court on a case-specific basis"; in the last sentence by inserting "determining" after "consideration in"; by striking "guidelines" and inserting "guideline range"; by striking "guideline level" and inserting "weight"; by inserting "under the guidelines" after "factor"; and by inserting before the period at the end "or excessive".

Section 5K2.0 is amended in the last paragraph by striking "An" and inserting "Finally, an"; by striking "not ordinarily relevant" and inserting ", in the Commission's view, 'not ordinarily relevant' "; and by striking "in a way that is important to the statutory purposes of sentencing".

The Commentary to § 5K2.0 is amended by inserting before the first paragraph the following:

"The United States Supreme Court has determined that, in reviewing a district court's decision to depart from the guidelines, appellate courts are to apply an abuse of discretion standard, because the decision to depart embodies the traditional exercise of discretion by the sentencing court. *Koon* v. *United States*, 116 S. Ct. 2035 (1996). Furthermore, '[b]efore a departure is permitted, certain aspects of the case must be found unusual enough for it to fall outside the heartland of cases in the Guideline. To resolve this question, the district court must make a refined assessment of the many facts bearing on the outcome, informed by its vantage point and day-to-day experience in criminal sentencing. Whether a given factor is present to a degree not adequately considered by the Commission, or whether a discouraged factor nonetheless justifies departure because it is present in some unusual or exceptional way, are matters determined in large part by comparison with the facts of other Guidelines cases. District Courts have an institutional advantage over appellate courts in making these sorts of determinations, especially as they see so many more Guidelines cases than appellate courts do.' Id. at 2046–47.".

Reason for Amendment: The purpose of this amendment is to reference specifically in the general departure policy statement the United States Supreme Court's decision in *United States* v. *Koon*, 116 S. Ct. 2035 (1996). This amendment (1) incorporates the principal holding and key analytical points from the Koon decision into the general departure policy statement, § 5K2.0; (2) deletes language inconsistent with the holding of Koon; and (3) makes minor, non-substantive changes that improve the precision of the language of § 5K2.0.

11. *Amendment:* Section 2B3.2(b) is amended in subdivision (2) by striking "(b)(6)" and inserting "(b)(7)".

The Commentary to § 2K2.1 captioned "Application Notes" is amended in Note 5 in the first sentence by striking "subsections (1) and (2)" and inserting "subsections (a)(1), (a)(2), and (b)".

The Commentary to § 6A1.3 is amended in the third paragraph by striking "117 U.S." after "Watts," both places it appears and inserting "117 S. Ct.".

Reason for Amendment: This amendment corrects technical errors in §§ 2B3.1, 2K2.1, and 6A1.3.

Part II—Proposed Amendment in Response to the No Electronic Theft Act of 1997

Synopsis of Proposed Amendment: In section 2(g) of the No Electronic Theft Act of 1997, Pub. L. 105B147, Congress directed the Commission to (1) "ensure that the applicable guideline range for a defendant convicted of a crime against intellectual property (including offenses set forth at section 506(a) of title 17, United States Code, and sections 2319, 2319A, and 2329 of title 18, United States Code) is sufficiently stringent to deter such a crime and to adequately reflect the additional considerations set forth in paragraph (2)"; and (2) "ensure that the guidelines provide for consideration of the retail value and quantity of the items with respect to which the crime against intellectual property was committed."

Three possible approaches for implementing these directives are set forth below. Option One is the result of the Commission's review and consideration of the directives, after taking into account pertinent hearing testimony, written public comment, and

other input of interested parties. Upon the Commission's request for input from the Department of Justice, the Department proposed Options Two and Three as possible approaches for carrying out the statutory directives. The Commission invites comment on each of these three proposals, as well as any other comment on how the congressional directives might best be implemented. Additionally, the Commission invites comment on whether the Commission can and should promulgate any of these proposed amendments (or any other amendments to the guidelines, policy statements, and official commentary to carry out these directives) pursuant to the emergency amendment authority of section 21 of the Sentencing Act of 1987.

Note: Persons commenting on this issue may wish to consider whether the authority of the Commission to adopt emergency amendments to the guidelines in order to implement the directives is sufficiently clear inasmuch as the authority to act on an emergency basis under section 21 of the Sentencing Act of 1987, which was cited in section 2(g) of the No Electronic Theft Act of 1997, has expired and may not have been revived adequately by that section.

Proposed Amendment:

Option One [Commission Proposal]:

Strike § 2B5.3 and insert the following:

§ 2B5.3. Criminal Infringement of Copyright or Trademark

(a) Base Offense Level: 6

(b) Specific Offense Characteristics

(1) If (A) the offense involved (i) the infringement of a copyright other than a copyright violation under 18 U.S.C. 2319A, (ii) the infringement of both a copyright and a trademark, or (iii) palmed-off counterfeit goods; and (B) the infringed value exceeded $2,000, increase by the number of levels from the monetary table in § 2F1.1 (Fraud and Deceit) corresponding to that value.

(2) If (A) subsection (b)(1) does not apply; and (B) the infringing value exceeded $2,000, increase by the number of levels from the monetary table in § 2F1.1 corresponding to that value.

[(3) If the offense involved online electronic infringement, increase by 2 levels.]

[(4) If the offense was not committed for commercial advantage or private financial gain, decrease by [2] levels, but not below level 6.]

[(5) If the offense involved the conscious or reckless risk of serious bodily injury or death, increase by [2] levels. If the resulting offense level is less than level [13][14], increase to level [13][14]].

Commentary

Application Notes:

1. For purposes of this guideline—

Infringed value means the average retail value of the infringed-upon item multiplied by the number of infringing items. *Infringed-upon item* means the legitimate item with respect to which or against which the crime against intellectual property was committed. *Average retail value of the infringed-upon item* generally means the average price that a well-informed consumer typically would pay for the legitimate item (which may be less than the Manufacturer's Suggested Retail Price). In cases involving the interception of a communication in violation of 18 U.S.C. § 2511, the *average retail value of the infringed-upon item* means the price the user would have paid if that communication had been obtained lawfully.

Infringing value means the average retail value of the infringing item multiplied by the number of infringing items.

Infringing item means the item that violates the copyright or trademark laws.

Palmed-off counterfeit goods means counterfeit goods that a consumer reasonably would believe are the legitimate items, because of price comparability and apparent substitutability.

Online electronic infringement includes the unlawful producing, reproducing, distributing, selling, performing, or trafficking in copyrighted or trademarked articles or services via an electronic bulletin board, a worldwide web site, or any online facility.

Commercial advantage or private financial gain includes receipt, or expectation of receipt, of anything of value, including the receipt of other protected works.

2. The enhancement in subsection (b)(2) applies to any infringement case not covered by subsection (b)(1) and in which the infringing value exceeded $2,000. The types of cases to which subsection (b)(2) is intended to apply include, for example, most cases involving trademark infringement, as well as cases involving the unlawful recording of a musical performance in violation of 18 U.S.C. § 2319A.

3. There may be cases in which the offense level substantially understates or overstates the seriousness of the offense or the culpability of the defendant. In such cases, an upward or downward departure, as appropriate, may be warranted.

Background: This guideline treats copyright and trademark violations much like fraud. The enhancements in subsections (b)(1) and (2) are intended as an approximate determination of the aggregate pecuniary harm resulting from trafficking in goods or services that violate the copyright or trademark laws.

The Electronic Communications Privacy Act of 1986 prohibits the interception of satellite transmission for purposes of direct or indirect commercial advantage or private financial gain. Such violations are similar to copyright offenses and are therefore covered by this guideline.".

Option Two [Department of Justice Proposal]:

Strike § 2B5.3 and insert the following:

"§ 2B5.3. Criminal Infringement of Copyright or Trademark

(a) Base Offense Level: 6

(b) Specific Offense Characteristics

(1) If the economic harm exceeded $2,000, increase by the corresponding number of levels from the table in § 2F 1.1 (Fraud and Deceit).

(2) If the offense involved online electronic infringement, increase by 2 levels.

(3) If the offense posed a threat to public health and safety, increase by 2 levels.

Commentary

Statutory Provisions: 17 U.S.C. § 506(a); 18 U.S.C. 2318, 2319, 2319A, 2320, 2511. For additional statutory provision(s), see Appendix A (Statutory Index).

Application Notes:

1. For purposes of this guideline—

Infringed upon items means the items (including phonorecords and computer programs) with respect to which or against which the crime against intellectual property was committed.

Infringing items means the items that violate the copyright or trademark laws; often, infringing trademarks, and the items bearing them, are referred to as *counterfeit* and items that infringe copyrights are referred to as *pirated*.

Retail value means the Manufacturer's Suggested Retail Price (MSRP).

Copies means both copies and phonorecords.

Trafficked in includes transported, transferred, distributed, sold or otherwise disposed of.

2. *Economic harm* in 2318, 2319 (506(a)), and 2320 cases is the retail value of the infringed upon items, multiplied by the number of copies produced and trafficked in. This recognizes that infringement causes losses not only for the trademark and copyright owners, but for others in the distribution chains of legitimate articles, and for members of the public who are

UMI
VOL
63
ISS
98
MY
21
1998
UMI

deceived into buying what they may believe are legitimate articles.

A single copy that is produced and then sold by a single defendant counts as one copy.

3. *Economic harm* in 2319A cases is the retail value of the infringing items, multiplied by the number of copies produced (including the number of primary unlawful fixations, i.e., 'masters,' from which those copies are made) and/or transmissions and/or the number of copies sold, offered for sale, distributed, offered for distribution, rented, offered for rent, and trafficked in. The value of infringing items is the standard in these cases because merchandise that violates § 2319A has no legitimate counterpart. A single copy that is produced and then sold by a single defendant counts as one copy.

4. *Online electronic infringement* includes the producing, reproducing, distributing, selling, performing, or trafficking in copyrighted or trademarked articles or services via an electronic bulletin board, a worldwide web site, or any online *facility*. The ease with which infringers can operate in the online environment and the access they have to limitless numbers of customers gives them the capability of causing substantial harm. For example, a defendant may post copyrighted material to an electronic bulletin board, making it accessible for others to illegally obtain, copy, and further distribute. In such an instance, it may not be possible to determine precisely the number of items (copies) downloaded by persons who access the facility, but it is reasonable to assure, based on the worldwide possibility for distribution and the number of items offered at the facility, that the harm is substantial.

5. In many instances, items that violate the trademark and copyright laws also present public health and safety hazards. These hazards can appear in many contexts. For example, counterfeit products, such as automotive parts, airplane parts, foodstuffs, pharmaceuticals, and electrical devices, place members of the public in danger. The enhancement shall apply in cases in which the products, if used in their intended manner, would threaten public health and safety.

6. An upward departure may be warranted in cases in which the economic harm underrepresents the actual harm or would lead to an unfair result. This Application Note applies in infringement situations, other than those referred to in Application Note 4, in which the number of copies produced and trafficked in is impossible to calculate and the harm to the copyright or trademark owner, others in the legitimate distribution chains, and the public is substantial. For example, rather than operate as an individual, a defendant may be part of a distribution or manufacturing network in which he or she supplies other distributors with unlawful products or parts of products, such as counterfeit handbags or watches or their parts or pirated sound recordings or motion pictures. In such an instance, it may not be possible to determine precisely the number of items (copies) provided to other persons for distribution, but it is reasonable, based on the available facts (including the number of persons in the distribution network), that the number is large enough to create substantial harm. The upward departure provided for in this Application Note is available regardless of whether the conduct was for financial gain.

7. A downward departure may be warranted in cases in which the retail price of the infringing items is less than 30% of the retail value of the infringed upon item. In such cases, it may not be reasonable to conclude that each sale of an infringing item represents a lost sale for the copyright or trademark owner or others in the distribution chain. For example, a counterfeit watch may retail for $15, while the infringed upon watch may retail for $5,000. A sentencing calculation based on the retail value of the infringed items may lead to an unfair result.

Background: This guideline treats copyright and trademark violations much like fraud.

The Electronic Communications Privacy Act of 1986 prohibits the interception of satellite transmission for purposes of direct or indirect commercial advantage or private financial gain. Such violations are similar to copyright offenses and are, therefore, covered by this guideline.".

Option Three [Department of Justice Proposal]:

Strike § 2B5.3 and insert the following:

§ 2B5.3. Criminal Infringement of Copyright or Trademark

(a) Base Offense Level: 6

(b) Specific Offense Characteristics

(1) If the economic harm exceeded $2,000, increase by the corresponding number of levels from the table in § 2F1.1 (Fraud and Deceit).

(2) If the offense involved online electronic infringement, increase by 2 levels.

(3) If the retail price of the infringing items is less than 50% of the manufacturer's suggested retail price of the infringed upon items, decrease by 2 levels; if the retail price of the infringing items is less than 30% of the manufacturer's suggested retail price of the infringed upon items, decrease by 4 levels.

Commentary

Statutory Provisions: 17 U.S.C. § 506(a), 18 U. S. C. 2318, 2319, 2319A, 2320, 2511. For additional statutory provision(s), see Appendix A (Statutory Index).

Application Notes:

1. For purposes of this guideline

Infringed upon items means the legitimate items (including phonorecords and computer programs) with respect to which or against which the crime against intellectual property was committed.

Infringing items means the items that violate the copyright or trademark laws; often, infringing trademarks, and the items bearing them, are referred to as *counterfeit* and items that infringe copyrights are referred to as *pirated*.

Copies means both copies and phonorecords.

2. *Economic harm* in section 2318, 2319 (506(a)), and 2320 cases is the manufacturer's suggested retail price (msrp) of the infringed upon items, multiplied by the number of copies involved in the offense. This recognizes that the economic harm caused by infringement affects not only the trademark and copyright owners, but also others in the distribution chains of legitimate articles, and members of the public who are deceived into buying what they may believe are legitimate articles.

Because there is no infringed upon item in section 2319A cases, 'economic harm' in those cases is the retail price of the infringing items, multiplied by the number of copies involved in the offense (including the number of primary unlawful recordings, i.e., 'masters,' from which those copies are made).

Economic harm in section 2511 caves is the price the user or users would have paid if the service had been obtained lawfully.

3. *Online electronic infringement* includes the producing, reproducing, distributing, selling, performing, or trafficking in copyrighted or trademarked articles or services via an electronic bulletin board, a worldwide web site, or any online *facility*. The ease with which infringers can operate in the online environment and the access they have to limitless numbers of customers gives them the capability of causing substantial harm.

4. An upward departure may he warranted in cases in which the unlawful conduct presents a reasonably

foreseeable risk to public health or safety. These hazards appear in many contexts. For example, counterfeit products, such as automotive parts, airplane parts, foodstuffs, pharmaceuticals, and electrical devices, place members of the public in danger.

5. An upward departure may be warranted in cases in which the standard calculation of economic harm under-represents the actual harm or would lead to an unfair result. This Application Note applies in infringement situations, other than those referred to in Application Note 3, in which the number of copies involved in the offense is impossible to calculate and the harm to the copyright or trademark owner, others in the legitimate distribution chain, and the public is substantial. For example, rather that operate as an individual, a defendant may be part of a distribution or manufacturing network in which he or she supplies other distributors with unlawful products or parts of products, such as counterfeit handbags or watches or their parts or pirated sound recordings or motion pictures or their packaging, In such cases, it may not be possible to determine precisely the number of items (copies) provided to other persons for distribution, but it is reasonable, based on the available facts (including the number of persons in the distribution network), that the number is large enough to create substantial harm. The upward departure provided for in this Application Note is available regardless of whether the conduct was for commercial advantage or financial gain.

Background: This guideline treats copyright and trademark violations much like fraud.

The Electronic Communications Privacy Act of 1986 prohibits the interception of satellite transmission for purposes of direct or indirect commercial advantage or private financial gain. Such violations are similar to copyright offenses and are, therefore, covered by this guideline.".

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–4347–N–01]

Notice and Request for Comments on HUD's Implementation of the Small Business Regulatory Enforcement Fairness Act of 1996

AGENCY: Office of the Secretary, HUD.

ACTION: Notice.

SUMMARY: This notice solicits comments on HUD's implementation of the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA). The notice describes HUD's implementation to date of SBREFA and additional implementation plans.

DATES: COMMENT DUE DATE: July 20, 1998.

ADDRESSES: Interested persons are invited to submit comments regarding this document to the Regulations Division, Office of the General Counsel, Room 10276, Department of Housing and Urban Development, 451 Seventh Street, SW, Washington, DC 20410–0500. Communications should refer to the above docket number and title and to the specific sections in the regulation. Facsimile (FAX) comments are not acceptable. A copy of each communication submitted will be available for public inspection and copying during regular business hours at the above address.

FOR FURTHER INFORMATION CONTACT: Casimir Bonkowski, Director, Office of Small and Disadvantaged Businesses, Department of Housing and Urban Development, Room 3130 451 Seventh Street, S.W., Washington, DC 20410, telephone 202–708–1428. Hearing- or speech-impaired persons may use the telecommunications system for the hearing-impaired (TTY) by contacting the Federal Information Relay Service on 1–800–877-TTY (1–800–877–8339) or (202) 708–9300. (Other than the "800" TTY number, telephone numbers are not toll-free.)

SUPPLEMENTARY INFORMATION:

I. The Small Business Regulatory Enforcement Fairness Act

The Small Business Regulatory Enforcement Fairness Act of 1996 (Pub.L. 104–121, 110 Stat. 847, approved March 29, 1996) ("SBREFA") provides, among other things, for agencies to establish specific policies or programs to assist small entities. Small entities include small businesses, nonprofit organizations, and small governmental jurisdictions.

Section 213 of SBREFA requires each covered agency to establish a program to answer inquiries concerning information and advice about compliance with statutes and regulations within the agency's jurisdiction. The agency must use information received during these inquiries to help small entities interpret and apply the regulations to specific facts.

Section 223 of SBREFA requires each covered agency to establish a policy or program to reduce or waive civil penalties when a small entity violates a statute or regulation. Under appropriate circumstances, an agency may consider ability to pay when it assesses a penalty against a small entity. [1]

II. Identification of HUD Regulations That May Have a Significant Economic Impact on a Substantial Number of Small Entities

Although HUD is not generally regarded as a "regulatory agency", HUD has important regulatory responsibilities, including oversight and enforcement of the Real Estate Settlement Procedures Act (RESPA) and the Interstate Land Sales Full Disclosure Act; oversight over certain activities of government-sponsored enterprises (GSEs); oversight and enforcement of FHA mortgage insurance programs; and the establishment and enforcement of lead-based paint hazard control standards and manufactured housing standards.

HUD has long had in place a systematic process for determining whether newly developed rules are likely to have a significant economic impact on a substantial number of small entities. The typical HUD rule implements statutory directions for the administration of grant programs. Rules of this type are intended to reflect Congressional mandates that, by their nature, have universal applicability to the portion of the public affected by the rule. These rules generally do not lend themselves to the provision of special procedures, or exemptions from requirements, applicable to small entities. Although HUD Rules are generally not the type to lend themselves to special procedures or exemptions for small entities, HUD nevertheless has developed a process intended to introduce additional scrutiny to existing procedures for safeguarding the interests of small entities during development and following implementation of regulations.

To ensure that there is a meaningful assessment of HUD rules to determine which rules, if any, will have a significant economic impact on substantial number of small businesses, HUD:

(1) Targets regulations that may impact small businesses at the earliest opportunity in the development process; and

(2) Assigns oversight responsibility to HUD's Office of Small and Disadvantaged Business Utilization (OSDBU) to review:

(i) the HUD program office's assessment of any significant economic impact on a substantial number of small entities;

(ii) the HUD program office's assessment and disposition of all alternative rule implementation strategies submitted by small entities, and

(iii) the small entity compliance guides prepared by the program offices, where applicable.

III. Guidance to Small Entities

To help small entities understand their obligations under the regulations administered by HUD, HUD provides both general guidance and individualized advice. OSDBU maintains the requirements of the SBREFA and Regulatory Flexibility Act on the HUD web site with instructions to small entities on the OSDBU role as small business Ombudsman, as well as copies of compliance guides, names of HUD staff with familiarity in HUD programs that may impact small businesses, to answer questions, and a users forum where representatives of small entities can ask questions on a specific rule as a means of providing a fast means of clarifying issues. Additionally, small entities can download regulations, forms, and documentation from the HUD web pages. If a small entity does not have access to a computer, HUD will mail this information on request.

To ensure that we evaluate and update our small entity assistance program periodically, HUD works with the Small Business Administration to identify small business concerns in the housing industry.

IV. Rights of Small Entities in Enforcement Actions

Section 223 of SBREFA requires agencies that regulate the activities of small entities to establish a policy or program to reduce or, under appropriate circumstances, waive civil penalties when a small entity violates a statute or

[1] The applicable procurement statutes and regulations do not provide for special consideration of or rights for small governmental entities. SBREFA did not make statutory changes that would result in changes to the Federal Acquisition Regulation to address small entities.

regulation. (For purposes of brevity, this policy or program is referred to as the "small entity compliance policy.")

Section 223 also requires an agency's small entity compliance policy to contain conditions or exclusions (subject to any restrictions or limitations that may be imposed on the agency by other statutes), which conditions or exclusions may include, but are not limited to the following:

(1) Requiring small entities to correct the violation within a reasonable correction period;

(2) Limiting applicability of the small entity compliance policy to violations discovered when small entities participate in a compliance assistance or audit program operated by the agency;

(3) Excluding from applicability of the small entity compliance policy those small entities that have been subject to multiple enforcement actions by the agency;

(4) Excluding from applicability of the small entity compliance policy violations involving willful or criminal conduct or that pose serious health, safety, or environmental threats, safety, or requiring a good-faith effort to comply with the law.

Federal statutes and regulations authorize HUD to impose civil penalties in conjunction with regulatory and enforcement issues. Under these authorities, HUD has authority to issue civil money penalties for violations of requirements governing its grant, mortgage insurance, and the regulatory programs, identified earlier in this notice.

In establishing its policy for implementation of SBREFA, following enactment of SBREFA, HUD reported to President Clinton and the Congress that, under appropriate circumstances, HUD may consider ability to pay in determining penalty assessments on small entities. HUD notes that the ability to pay is a legislative directive for many programs under the Department of Housing and Urban Development Reform Act of 1989 (Pub. L. 101–235, approved December 15, 1989). HUD's policy to date has been to assist regulated entities in achieving compliance with requirements in order to avoid any penalty process.

Where penalties are determined appropriate, HUD's policy is to consider: (1) the nature of the violation (the violation must not be one that is repeated or multiple, willful, criminal or poses health or safety risks), (2) whether the entity has shown a good faith effort to comply with the regulations; and (3) the resources of the regulated entity. Depending upon the circumstances surrounding the violation, it is not HUD's intent to put any individual or entity out of business by the penalties or settlement amounts paid to the Federal Government.

V. Small Entities' Comments on Agencies Enforcement Activities

Section 222 of SBREFA requires the Small Business and Agriculture Regulatory Enforcement Ombudsman to "work with each agency with regulatory authority over small businesses to ensure that small business concerns that receive or are subject to an audit, on-site inspection, compliance assistance effort other enforcement related communication or contact by agency personnel are provided with a means to comment on the enforcement activity conducted by this personnel.

To implement this statutory provision, the Small Business Administration has requested that agencies include the following language on agency publications and notices which are provided to small businesses concerns at the time the enforcement action is undertaken. The language is as follows:

Your Comments Are Important

The Small Business and Agriculture Regulatory Enforcement Ombudsman and 10 Regional Fairness Boards were established to receive comments from small businesses about federal agency enforcement actions. The Ombudsman will annually evaluate the enforcement activities and rate each agency's responsiveness to small business. If you wish to comment on the enforcement actions of [insert agency name], call [provide telephone number].

HUD intends to work with the Small Business Administration to provide small entities with information on the Fairness Boards and National Ombudsman program, at the time enforcement actions are taken, to ensure that small entities have the full means to comment on the enforcement activity conducted by HUD. HUD intends to include this language in HUD general circulation issuances and publications regarding enforcement actions. HUD welcomes comments on the manner in which it has implemented SBREFA to date, and the additional action intended to be taken as described in this notice.

Dated: May 14, 1998.

Andrew Cuomo,

Secretary.

Briefings on how to use the Federal Register
For information on briefings in Washington, DC, and Chicago, IL, see announcement on the inside cover of this issue.

Now Available Online via
GPO Access

Free online access to the official editions of the *Federal Register, the Code of Federal Regulations* and other Federal Register publications is available on *GPO Access*, a service of the U.S. Government Printing Office at:

http://www.access.gpo.gov/nara/index.html

For additional information on ***GPO Access*** products, services and access methods, see page II or contact the *GPO Access* User Support Team via:

- ★ Phone: toll-free: 1-888-293-6498
- ★ Email: gpoaccess@gpo.gov

VOL 63 ISS 99 MAY 22 1998 UMI

The **FEDERAL REGISTER** is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see http://www.nara.gov/fedreg.

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge as one of the databases on GPO Access, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the **Federal Register** is published and it includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward.

GPO Access users can choose to retrieve online **Federal Register** documents as TEXT (ASCII text, graphics omitted), PDF (Adobe Portable Document Format, including full text and all graphics), or SUMMARY (abbreviated text) files. Users should carefully check retrieved material to ensure that documents were properly downloaded.

On the World Wide Web, connect to the **Federal Register** at http://www.access.gpo.gov/nara. Those without World Wide Web access can also connect with a local WAIS client, by Telnet to swais.access.gpo.gov, or by dialing (202) 512-1661 with a computer and modem. When using Telnet or modem, type swais, then log in as guest with no password.

For more information about GPO Access, contact the GPO Access User Support Team by E-mail at gpoaccess@gpo.gov; by fax at (202) 512–1262; or call (202) 512–1530 or 1–888–293–6498 (toll free) between 7 a.m. and 5 p.m. Eastern time, Monday–Friday, except Federal holidays.

The annual subscription price for the **Federal Register** paper edition is $555, or $607 for a combined **Federal Register**, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the Federal Register Index and LSA is $220. Six month subscriptions are available for one-half the annual rate. The charge for individual copies in paper form is $8.00 for each issue, or $8.00 for each group of pages as actually bound; or $1.50 for each issue in microfiche form. All prices include regular domestic postage and handling. International customers please add 25% for foreign handling. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard or Discover. Mail to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250–7954.

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 63 FR 12345.

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: Sponsored by the Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:
1. The regulatory process, with a focus on the Federal Register system and the public's role in the development regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

Federal Aviation Administration

14 CFR Part 39

[Docket No. 97–NM–251–AD; Amendment 39–10537; AD 98–11–10]

RIN 2120–AA64

Airworthiness Directives; McDonnell Douglas Model DC–9 and DC–9–80 Series Airplanes, Model MD–88 Airplanes, and C–9 (Military) Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain McDonnell Douglas Model DC–9 and DC–9–80 series airplanes, Model MD–88 airplanes, and C–9 (military) series airplanes, that requires an inspection to determine if the latching lever pin of the speed brake passes an axial force check, and a visual inspection to determine if the staking of the latching lever pin is acceptable; and follow-on corrective action, if necessary. This amendment is prompted by reports that the speed brake handle jammed in the ground spoiler position. The actions specified by this AD are intended to prevent a jammed speed brake handle pin, which could result in retraction of the spoilers and full advancement of the left throttle during a go-around.

DATES: Effective June 26, 1998.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of June 26, 1998.

ADDRESSES: The service information referenced in this AD may be obtained from The Boeing Company, Douglas Products Division, 3855 Lakewood Boulevard, Long Beach, California 90846, Attention: Technical Publications Business Administration, Dept. C1–L51 (2–60). This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the FAA, Transport Airplane Directorate, Los Angeles Aircraft Certification Office, 3960 Paramount Boulevard, Lakewood, California; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Walter Eierman, Aerospace Engineer, Systems and Equipment Branch, ANM–130L, FAA, Los Angeles Aircraft Certification Office, 3960 Paramount Boulevard, Lakewood, California 90712; telephone (562) 627–5336; fax (562) 627–5210.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to certain McDonnell Douglas Model DC–9 and DC–9–80 series airplanes, Model MD–88 airplanes, and C–9 (military) series airplanes was published in the **Federal Register** on February 19, 1998 (63 FR 8371). That action proposed to require an inspection to determine if the latching lever pin of the speed brake passes an axial force check, and a visual inspection to determine if the staking of the latching lever pin is acceptable; and follow-on corrective action, if necessary.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the single comment received.

The commenter supports the proposed rule.

Conclusion

After careful review of the available data, including the comment noted above, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed.

Cost Impact

There are approximately 2,050 McDonnell Douglas Model DC–9 and DC–9–80 series airplanes, Model MD–88 airplanes, and C–9 (military) series airplanes of the affected design in the worldwide fleet. The FAA estimates that 1,250 airplanes of U.S. registry will be affected by this AD, that it will take approximately 5 work hours per airplane to accomplish the required actions, and that the average labor rate is $60 per work hour. Based on these figures, the cost impact of the AD on U.S. operators is estimated to be $375,000, or $300 per airplane.

The cost impact figure discussed above is based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

98–11–10 McDonnell Douglas: Amendment 39–10537. Docket 97–NM–251–AD.

Applicability: Model DC–9–10, –20, –30, –40, and –50, and DC–9–81 (MD–81), DC–9–82 (MD–82), DC–9–83 (MD–83), and DC–9–87 (MD–87) series airplanes; Model MD–88 airplanes; and C–9 (military) series airplanes; as listed in McDonnell Douglas Service Bulletin DC9–27–346, Revision 01, dated July 29, 1997; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (b) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent a jammed speed brake handle pin, which could result in retraction of the spoilers and full advancement of the left throttle during a go-around, accomplish the following:

(a) Within 12 months after the effective date of this AD, perform an inspection to determine if the latching lever pin of the speed brake passes an axial force check, and a visual inspection to determine if the staking of the latching lever pin is "acceptable", in accordance with McDonnell Douglas Service Bulletin DC9–27–346, Revision 01, dated July 29, 1997.

Note 2: The criteria for determining whether the staking is "acceptable" are defined in Figure 1 of the service bulletin.

(1) Condition 1. If the pin passes the axial force check and the staking is found to be acceptable, no further action is required by this AD.

(2) Condition 2. If the pin passes the axial force check and the staking is found to be unacceptable, accomplish the actions specified in Condition 2, Option 1, or Condition 2, Option 2 of the Accomplishment Instructions of the service bulletin. These actions shall be accomplished at the times specified in paragraph E. "Compliance" of the service bulletin. Accomplishment of the replacement of the speed brake latching lever constitutes terminating action for the repetitive inspection requirements of this AD.

(3) Condition 3. If the pin fails the axial force check and the staking is found to be unacceptable, accomplish the actions specified in Condition 3, Option 1, or Condition 3, Option 2 of the Accomplishment Instructions of the service bulletin. These actions shall be accomplished at the times specified in paragraph E. "Compliance" of the service bulletin. Accomplishment of the replacement of the speed brake latching lever constitutes terminating action for the repetitive inspection requirements of this AD.

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Los Angeles Aircraft Certification Office (ACO), FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Los Angeles ACO.

Note 3: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Los Angeles ACO.

(c) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(d) The actions shall be done in accordance with McDonnell Douglas Service Bulletin DC9–27–346, Revision 01, dated July 29, 1997. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from The Boeing Company, Douglas Products Division, 3855 Lakewood Boulevard, Long Beach, California 90846, Attention: Technical Publications Business Administration, Dept. C1–L51 (2–60). Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the FAA, Transport Airplane Directorate, Los Angeles Aircraft Certification Office, 3960 Paramount Boulevard, Lakewood, California; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(e) This amendment becomes effective on June 26, 1998.

Issued in Renton, Washington, on May 14, 1998.

John J. Hickey,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[FR Doc. 98–13407 Filed 5–21–98; 8:45 am]

Airworthiness Directives; Raytheon Model Hawker 800XP Series Airplanes, and Hawker 800 (U–125A Military Derivative) Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule; request for comments.

SUMMARY: This amendment adopts a new airworthiness directive (AD) that is applicable to certain Raytheon Model Hawker 800XP series airplanes and Hawker 800 (U–125A military derivative) airplanes. This action requires removal of the sealant from the firewall mounting flanges and mounting points of the fire extinguisher assemblies; removal of sealant obstructing the discharge tubes of the fire extinguisher assemblies; cleaning and flushing of the mounting flanges, mounting points, and discharge tubes with solvent; and installation of new gaskets on the firewall mounting flanges and mounting points. This amendment is prompted by reports of excessive sealant applied during manufacture of the firewall mounting flanges and mounting points of the fire extinguisher assemblies, which subsequently entered and obstructed the discharge tubes. The actions specified in this AD are intended to prevent obstructions of the discharge tubes of the fire extinguisher assemblies, which could result in improper distribution of the fire extinguishing agent within the nacelle in the event of a fire.

DATES: Effective June 8, 1998.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of June 8, 1998.

Comments for inclusion in the Rules Docket must be received on or before July 21, 1998.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 98–NM–165–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056.

The service information referenced in this AD may be obtained from Raytheon Aircraft Company, Manager Service

Engineering, Hawker Customer Support Department, P.O. Box 85, Wichita, Kansas 67201–0085. This information may be examined at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the FAA, Small Airplane Directorate, Wichita Aircraft Certification Office, 1801 Airport Road, Room 100, Mid-Continent Airport, Wichita, Kansas; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Randy Griffith, Aerospace Engineer, Systems and Propulsion Branch, ACE–116W, FAA, Small Airplane Directorate, Wichita Aircraft Certification Office, 1801 Airport Road, Room 100, Mid-Continent Airport, Wichita, Kansas 67209; telephone (316) 946–4145; fax (316) 946–4407.

SUPPLEMENTARY INFORMATION: The FAA has received a report indicating that, during manufacture testing of the fire suppression system on a Raytheon Model Hawker 800XP series airplane, the system failed to operate properly. Investigation has revealed that the discharge tubes of the fire extinguisher assemblies were obstructed. Testing of other Model Hawker 800XP series airplanes and a Hawker 800 (U–125A military derivative) airplane revealed similar obstructions of the discharge tubes of the fire extinguisher assemblies. The cause of the obstructions has been attributed to excessive sealant applied during manufacture of the firewall mounting flanges and mounting points of the fire extinguisher assemblies, which subsequently entered and obstructed the discharge tubes. This condition, if not corrected, could result in improper distribution of the fire extinguishing agent within the nacelle in the event of a fire.

Explanation of Relevant Service Information

The FAA has reviewed and approved Raytheon Service Bulletin SB.26–3197, dated April 1998, which describes procedures for removal of the sealant from the firewall mounting flanges and mounting points of the fire extinguisher assemblies; removal of sealant obstructing the discharge tubes of the fire extinguisher assemblies; cleaning and flushing of the mounting flanges, mounting points, and discharge tubes with solvent; and installation of new gaskets on the firewall mounting flanges and mounting points. Accomplishment of the actions specified in the service bulletin is intended to adequately address the identified unsafe condition.

Explanation of the Requirements of the Rule

Since an unsafe condition has been identified that is likely to exist or develop on other airplanes of the same type design, this AD is being issued to prevent obstructions of the discharge tubes of the fire extinguisher assemblies, which could result in improper distribution of the fire extinguishing agent within the nacelle in the event of a fire. This AD requires removal of the sealant from the firewall mounting flanges and mounting points of the fire extinguisher assemblies; removal of sealant obstructing the discharge tubes of the fire extinguisher assemblies; cleaning and flushing of the mounting flanges, mounting points, and discharge tubes with solvent; and installation of new gaskets on the firewall mounting flanges and mounting points.

Determination of Rule's Effective Date

Since a situation exists that requires the immediate adoption of this regulation, it is found that notice and opportunity for prior public comment hereon are impracticable, and that good cause exists for making this amendment effective in less than 30 days.

Comments Invited

Although this action is in the form of a final rule that involves requirements affecting flight safety and, thus, was not preceded by notice and an opportunity for public comment, comments are invited on this rule. Interested persons are invited to comment on this rule by submitting such written data, views, or arguments as they may desire. Communications shall identify the Rules Docket number and be submitted in triplicate to the address specified under the caption **ADDRESSES**. All communications received on or before the closing date for comments will be considered, and this rule may be amended in light of the comments received. Factual information that supports the commenter's ideas and suggestions is extremely helpful in evaluating the effectiveness of the AD action and determining whether additional rulemaking action would be needed.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the rule that might suggest a need to modify the rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report that summarizes each FAA-public contact concerned with the substance of this AD will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this rule must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 98–NM–165–AD." The postcard will be date stamped and returned to the commenter.

Regulatory Impact

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

The FAA has determined that this regulation is an emergency regulation that must be issued immediately to correct an unsafe condition in aircraft, and that it is not a "significant regulatory action" under Executive Order 12866. It has been determined further that this action involves an emergency regulation under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979). If it is determined that this emergency regulation otherwise would be significant under DOT Regulatory Policies and Procedures, a final regulatory evaluation will be prepared and placed in the Rules Docket. A copy of it, if filed, may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

UMI
VOL
63
ISS
99
MY
22
1998

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

98–11–13 Raytheon Aircraft Company (Formerly Beech): Amendment 39–10540. Docket 98–NM–165–AD.

Applicability: Model Hawker 800XP series airplanes and Hawker 800 (U–125A military derivative) airplanes, as listed in Raytheon Service Bulletin SB.26–3197, dated April 1998; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (b) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent obstructions of the discharge tubes of the fire extinguisher assemblies, which could result in improper distribution of the fire extinguishing agent within the nacelle in the event of a fire, accomplish the following:

(a) Within 25 days after the effective date of this AD, accomplish paragraphs (a)(1), (a)(2), (a)(3), and (a)(4) of this AD, in accordance with Raytheon Service Bulletin SB.26–3197, dated April 1998.

(1) Remove the sealant from the firewall mounting flanges and mounting points of the fire extinguisher assemblies;

(2) Remove all sealant obstructing the discharge tubes of the fire extinguisher assemblies;

(3) Clean and flush the mounting flanges, mounting points, and discharge tubes with solvent; and

(4) Install new gaskets on the firewall mounting flanges and mounting points.

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Wichita Aircraft Certification Office (ACO), FAA, Small Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Wichita ACO.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Wichita ACO.

(c) Special flight permits may be issued in accordance with §§ 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(d) The actions shall be done in accordance with Raytheon Service Bulletin SB.26–3197, dated April 1998. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Raytheon Aircraft Company, Manager Service Engineering, Hawker Customer Support Department, P.O. Box 85, Wichita, Kansas 67201–0085. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the FAA, Small Airplane Directorate, Wichita Aircraft Certification Office, 1801 Airport Road, Room 100, Mid-Continent Airport, Wichita, Kansas; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(e) This amendment becomes effective on June 8, 1998.

Issued in Renton, Washington, on May 15, 1998.

John J. Hickey,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

14 CFR Part 97

[Docket No. 29226; Amdt. No. 1869]

RIN 2120–AA65

Standard Instrument Approach Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs) for operations at certain airports. These regulatory actions are needed because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, addition of new obstacles, or changes in air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: An effective date for each SIAP is specified in the amendatory provisions.

Incorporation by reference—approved by the Director of the Federal Register on December 31, 1980, and reapproved as of January 1, 1982.

ADDRESSES: Availability of matter incorporated by reference in the amendment is as follows:

For Examination—

1. FAA Rules Docket, FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591;

2. The FAA Regional Office of the region in which affected airport is located; or

3. The Flight Inspection Area Office which originated the SIAP.

For Purchase—Individual SIAP copies may be obtained from:

1. FAA Public Inquiry Center (APA–200), FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591; or

2. The FAA Regional Office of the region in which the affected airport is located.

By Subscription—Copies of all SIAPs, mailed once every 2 weeks, are for sale by the Superintendent of Documents, US Government Printing Office, Washington, DC 20402.

FOR FURTHER INFORMATION CONTACT: Donald P. Pate, Flight Procedure Standards Branch (AMCAFS–420), Flight Technologies and Programs Division, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd. Oklahoma City, OK. 73169 (Mail Address: P.O. Box 25082 Oklahoma City, OK. 73125) telephone: (405) 954–4164.

SUPPLEMENTARY INFORMATION: This amendment to part 97 of the Federal Aviation Regulations (14 CFR part 97) establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs). The complete regulatory description on each SIAP is contained in the appropriate FAA Form 8620 and the National Flight Data Center (FDC)/Permanent (P) Notices to Airmen (NOTAM) which are incorporated by reference in the amendment under 5 U.S.C. 552(a), 1 CFR part 51, and § 97.20 of the Federal Aviation's Regulations (FAR). Materials incorporated by reference are available for examination or purchase as stated above.

The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the **Federal Register** expensive and impractical. Further, airmen do not use the regulatory text of the SIAPs, but refer to their graphic depiction of charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained in FAA form documents is unnecessary. The provisions of this amendment state the affected CFR (and FAR) sections, with

the types and effective dates of the SIAPs. This amendment also identifies the airport, its location, the procedure identification and the amendment number.

The Rule

This amendment to part 97 of the Federal Aviation Regulations (14 CFR part 97) establishes, amends, suspends, or revokes SIAPs. For safety and timeliness of change considerations, this amendment incorporates only specific changes contained in the content of the following FDC/P NOTAM for each SIAP. The SIAP information in some previously designated FDC/Temporary (FDC/T) NOTAMs is of such duration as to be permanent. With conversion to FDC/P NOTAMs, the respective FDC/T NOTAMs have been canceled.

The FDC/P NOTAMs for the SIAPs contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Approach Procedures (TERPS). In developing these chart changes to SIAPs by FDC/P NOTAMs, the TERPS criteria were applied to only these specific conditions existing at the affected airports. All SIAP amendments in this rule have been previously issued by the FAA in a National Flight Data Center (FDC) Notice to Airmen (NOTAM) as an emergency action of immediate flight safety relating directly to published aeronautical charts. The circumstances which created the need for all these SIAP amendments requires making them effective in less than 30 days.

Further, the SIAPs contained in this amendment are based on the criteria contained in the TERPS. Because of the close and immediate relationship between these SIAPs and safety in air commerce, I find that notice and public procedure before adopting these SIAPs are impracticable and contrary to the public interest and, where applicable, that good cause exists for making these SIAPs effective in less than 30 days.

Conclusion

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 97

Air Traffic Control, Airports, Navigation (Air).

Issued in Washington, DC on May 15, 1998.

Tom E. Stuckey,

Acting Director, Flight Standards Service.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 97 of the Federal Aviation Regulations (14 CFR part 97) is amended by establishing, amending, suspending, or revoking Standard Instrument Approach Procedures, effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

1. The authority citation for part 97 is revised to read as follows:

Authority: 49 U.S.C. 40103, 40113, 40120, 44701; 49 U.S.C. 106(g); and 14 CFR 11.49(b)(2).

2. Part 97 is amended to read as follows:

§ 97.23, 97.25, 97.27, 97.29, 97.31, 97.33, 97.35 [Amended]

By amending: § 97.23 VOR, VOR/DME, VOR or TACAN and VOR/DME or TACAN; § 97.25 LOC, LOC/DME, LDA, LDA/DME, SDF, SDF/DME; § 97.27 NDB, NDB/DME; § 97.29 ILS, ILS/DME, ISMLS, MLS, MLS/DME, MLS/RNAV; § 97.31 RADAR SIAPs; § 97.33 RNAV SIAPs; and § 97.35 COPTER SIAPs, identified as follows:

* * * Effective Upon Publication.

[Docket No. 29227; Admt. No. 1870]

RIN 2120–AA65

Standard Instrument Approach Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAP's) for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, addition of new obstacles, or changes in air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: An effective date for each SIAP is specified in the amendatory provisions.

Incorporation by reference-approved by the Director of the Federal Register on December 31, 1980, and reapproved as of January 1, 1982.

ADDRESSES: Availability of matters incorporated by reference in the amendment is as follows:

For Examination—

1. FAA Rules Docket, FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591;

2. The FAA Regional Office of the region in which the affected airport is located; or

3. The Flight Inspection Area Office which originated the SIAP.

For Purchase—Individual SIAP copies may be obtained from:

1. FAA Public Inquiry Center (APA–200), FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591; or

2. The FAA Regional Office of the region in which the affected airport is located.

By Subscription—Copies of all SIAP's mailed once every 2 weeks, are for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

FOR FURTHER INFORMATION CONTACT: Donald P. Pate, Flight Procedure Standards Branch (AMCAFS–420), Flight Technologies and Programs Division, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 (Mail Address: P.O. Box 25082 Oklahoma City, OK 73125) telephone: (405) 954–4164.

SUPPLEMENTARY INFORMATION: This amendment to part 97 of the Federal Aviation Regulations (14 CFR part 97) establishes, amends, suspends, or revoke SIAP's. The complete regulatory description of each SIAP is contained in official FAA form documents which are incorporated by reference in this amendment under 5 U.S.C. 552(a), 1 CFR part 51, and 14 CFR 97.20 of the Federal Aviation Regulations (FAR). The applicable FAA Forms are identified as FAA Form 8260–5. Materials incorporated by reference are available for examination or purchase as stated above.

The large number of SIAP's, their complex nature, and the need for a special format make their verbatim publication in the **Federal Register** expensive and impractical. Further, airmen do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained in FAA form documents is unnecessary. The provisions of this amendment state the affected CFR sections, with the types and effective dates of the SIAPs. This amendment also identifies the airport, its location, the procedure identification and the amendment number.

This amendment to part 97 is effective upon publication of each separate SIAP as contained in the transmittal. The SIAP's contained in this amendment are based on the criteria contained in the United States Standard for Terminal Instrument Approach Procedures (TERPS). In developing these SIAPs, the TERPS criteria were applied to the conditions existing or anticipated at the affected airports.

The FAA has determined through testing that current non-localizer type, non-precision instrument approaches developed using the TERPS criteria can be flown by aircraft equipped with a Global Positioning System (GPS) and or Flight Management System (FMS) equipment. In consideration of the above, the applicable SIAP's will be altered to include "or GPS or FMS" in the title without otherwise reviewing or modifying the procedure. (Once a stand alone GPS or FMS procedure is developed, the procedure title will be altered to remove "or GPS or FMS" from these non-localizer, non-precision instrument approach procedure titles.)

The FAA has determined through extensive analysis that current SIAP's intended for use by Area Navigation (RNAV) eqipped aircraft can be flown by aircraft utilizing various other types of navigational equipment. In consideration of the above, those SIAP's currently designated as "RNAV" will be redesignated as "VOR/DME RNAV"

without otherwise reviewing or modifying the SIAP's.

Because of the close and immediate relationship between these SIAP's and safety in air commerce, I find that notice and public procedure before adopting these SIAPs are, impracticable and contrary to the public interest and, where applicable, that good cause exists for making some SIAPs effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 97

Air traffic control, Airports, Navigation (air).

Issued in Washington, DC, on May 15, 1998.

Tom E. Stuckey,

Acting Director, Flight Standards Service.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 97 of the Federal Aviation Regulations (14 CFR part 97) is amended as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

1. The authority citation for part 97 continues to read:

Authority: 49 U.S.C. 106(g), 40103, 40106, 40113–40114, 40120, 44502, 44514, 44701, 44719, 44721–44722.

§§ 97.23, 97.27, 97.33, 97.35 [Amended]

2. Amend 97.23, 97.27, 97.33, and 97.35, as appropriate, by adding, revising, or removing the following SIAP's, effective at 0901 UTC on the dates specified:

[Docket No. 29225; Amdt. No. 1868]

RIN 2120–AA65

Standard Instrument Approach Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs) for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, addition of new obstacles, or changes in air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: An effective date for each SIAP is specified in the amendatory provisions.

Incorporation by reference-approved by the Director of the Federal Register on December 31, 1980, and reapproved as of January 1, 1982.

ADDRESSES: Availability of matters incorporated by reference in the amendment is as follows:

For Examination—

1. FAA Rules Docket, FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591;

2. The FAA Regional Office of the region in which the affected airport is located; or

3. The Flight Inspection Area Office Office which originated the SIAP.

For Purchase—Individual SIAP copies may be obtained from:

1. FAA Public Inquiry Center (APA–200), FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591; or

2. The FAA Regional Office of the region in which the affected airport is located.

By Subscription—Copies of all SIAPs, mailed once every 2 weeks, are for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

FOR FURTHER INFORMATION CONTACT: Donald P. Pate, Flight Procedure Standards Branch (AMCAFS–420), Flight Technologies and Programs Division, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd. Oklahoma City, OK. 73169 (Mail Address: P.O. Box 25082 Oklahoma City, OK. 73125) telephone: (405) 954–4164.

SUPPLEMENTARY INFORMATION: This amendment to part 97 of the Federal Aviation Regulations (14 CFR part 97) establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs). The complete regulatory description of each SIAP is contained in official FAA form documents which are incorporated by reference in this amendment under 5 U.S.C. 552(a), 1 CFR part 51, and § 97.20 of the Federal Aviation Regulations (FAR). The applicable FAA Forms are identified as FAA Forms 8260–3, 8260–4, and 8260–5. Materials incorporated by reference are available for examination or purchase as stated above.

The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the **Federal Register** expensive and impractical. Further, airmen do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained in FAA form documents is unnecessary. The provisions of this amendment state the affected CFR (and FAR) sections, with the types and effective dates of the SIAPs. This amendment also identifies the airport, its location, the procedure identification and the amendment number.

The Rule

This amendment to part 97 is effective upon publication of each separate SIAP as contained in the transmittal. Some SIAP amendments may have been previously issued by the FAA in a National Flight Data Center (NFDC) Notice to Airmen (NOTAM) as an emergency action of immediate flight safety relating directly to published aeronautical charts. The circumstances which created the need for some SIAP amendments may require making effective in less than 30 days. For the remaining SIAPs, an effective date at least 30 days after publication is provided.

Further, the SIAPs contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Approach Procedures (TERPS). In developing these SIAPs, the TERPS criteria were applied to the conditions existing or anticipated at the affected airports. Because of the close and immediate relationship between these SIAPs and safety in air commerce, I find that notice and public procedure before adopting these SIAPs are impracticable and contrary to the public interest and, where applicable, that good cause exists for making some SIAPs effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 97

Air traffic control, Airports, Navigation (air).

Issued in Washington, DC on May 15, 1998.

Tom E. Stuckey,

Acting Director, Flight Standards Service.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 97 of the

Federal Aviation Regulations (14 CFR part 97) is amended by establishing, amending, suspending, or revoking Standard Instrument Approach Procedures, effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

1. The authority citation for part 97 is revised to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120, 44701; and 14 CFR 11.49(b)(2).

2. Part 97 is amended to read as follows:

§§ 97.23, 97.25, 97.27, 97.29, 97.31, 97.33, 97.35 [Amended]

By amending § 97.23 VOR, VOR/DME, VOR or TACAN, and VOR/DME, or TACAN; § 97.25 LOC, LOC/DME, LDA, LDA/DME, SDF, SDF/DME; § 97.27 NDB, NDB/DME; § 97.29 ILS, ILS/DME, ISMLS, MLS, MLS/DME, MLS/RNAV; § 97.31 RADAR SIAPs; § 97.33 RNAV SIAPs; and § 97.35 COPTER SIAPs, identified as follows:

RIN 2105–AB91

Aviation Charter Rules

AGENCY: Office of the Secretary, DOT.

ACTION: Final rule.

SUMMARY: DOT is amending its charter air transportation regulations to update the rules, make changes reflecting current operating procedures and include the following specific modifications:

Eliminate the 10-day waiting period after the filing of a prospectus or an amendment before Public Charters may be advertised or sold;

Allow charter operators to accept payment by credit cards for Public Charter flights;

Delete the minimum contract size of 20 seats for passenger charters;

Permit direct air carriers to sell charter flights within 7 days of departure;

Codify the Department's practice allowing a "sub-operator" to buy into another Public Charter operator's prospectus as a principal;

Eliminate the requirement for brief or "mini" prospectus to be filed by direct air carriers conducting foreign-originating flights for foreign charter operators;

Consolidate the rules applicable to U.S. and foreign direct air carriers into a single part; and

Broaden the definitions of "immediate family" in parts 212 and 380 to include the member's (or student participant's) spouse, children, and parents, whether or not they share a household with the member. This action is taken at the Department's initiative and responds to President Clinton's Regulatory Reinvention Initiative.

EFFECTIVE DATE: The rule shall become effective on June 22, 1998.

SUPPLEMENTARY INFORMATION:

Background

On September 16, 1992, the Department of Transportation issued a notice of proposed rulemaking (NPRM) [57 FR 42864, September 16, 1992] which proposed to (1) replace the filing of prospectus for Public Charters with an annual registration by charter operators; (2) eliminate the regulation of "major changes" in charter itineraries and the specific terms of Public Charter operator-participant contracts, but require that consumers receive actual notice of important terms affecting the charter; (3) simplify the financial security arrangements applicable to charter operators; (4) eliminate the financial security arrangements applicable to direct air carriers; (5) permit consumers to make credit card payments to charter operators for Public Charters; (6) remove the prohibition against charter sales within 7 days of departure by direct air carriers or charter operators affiliated with direct air carriers; (7) simplify and eliminate unnecessary requirements applicable to non-public charters (i.e., single entity, affinity, and mixed charters), and add provisions for the operation of gambling, junkets; and (8) consolidate the rules applicable to direct air carriers into a single part, removing obsolete and repetitive references and requirements.

Comments and reply comments on the Department's proposals were filed by 17 direct air carriers, 20 charter operators, 6 trade associations, 3 banks that serve (or served) as depository banks for charters, 1 state department of transportation, and 15 private citizens.[1]

[1] Specifically, comments in this proceeding were filed by Aeronautica de Cancun, Air 2000 Limited, Air Canada, Air Espana S.A., Air Transport Association of America (on behalf of Alaska Airlines, American Airlines, Continental Airlines, Delta Air Lines, Trans World Airlines, United Air Lines, and USAir), Airline Brokers Company, Association of Retail Travel Agents, American Society of Travel Agents, American Trans Air, Apple Vacations, Av Atlantic, Azores Express, Balair, Bruce Hall Sports, Condor Flugdienst, First of America Bank, Funway Holidays, Funjet, Great American Airways, GMV International, Hapag-Lloyd Fluggesellschaft, Harrah's Casino Hotel Atlantic City, Jamaica Express, Marazul Charters, Military Travel Corporation, Minnesota Department of Transportation, MLT Vacations, National Air Carrier Association (on behalf of American Trans Air, Evergreen International Airlines, Miami Air, Tower Air, and World Airways), National Bank of Royal Oak, North American Airlines, NW Tours, Northwest Airlines, Private Jet Expeditions, Regional Airline Association, Relvas Tours, Rich International Airways, Ryan International Airlines, Santo Tours, Schwaben International, Security Pacific National Trust Company (New York), Sunbird Vacations, Sunburst Holidays, The Surety Association of America, Trans Global Tours, Trans-National Travel, Trans World Airlines, Travel Impressions, United States Tour Operator Association, Worldwide Airline Services d/b/a Leisure Air, and a number of individuals.

While many of those responding supported the basic goals of reducing the burden of paperwork, simplifying the regulatory process, eliminating obsolete requirements, and liberalizing relationships in the marketplace, when it came to the proposed changes to the basic consumer protection provisions of the regulations, the majority urged the Department to retain the existing requirements. Except as discussed below we have decided not to adopt many of the rule changes proposed in the NPRM.

Discussion of Comments

The issues specifically addressed by commenters agreeing of disagreeing with proposals in the NPRM or offering alternative approaches fall primarily into the following categories: (1) Filing Requirements: (2) Protection of the Charter Participants' Expectations; (3) Protection of the Charter Participants' Funds; (4) Financial/Security Rules Applicable to Direct Air Carriers; (5) Direct Air Carrier Responsibilities; (6) Use of Credit Cards for Payments to Charter Operators; and (7) Other Matters.

(1) Filing Requirements

The NPRM proposed to substitute an annual registration requirement for U.S. charter operators in place of the present prospectus filings for each series of flights. This form would identify the applicant and its ownership, and would certify the existence of a contract with the carrier and the existence of a valid security agreement and that both complied with the requirements of Part 380. The applicant would be required to notify the Department within 10 days of any change in the required information. Once the proper registration was filed, the charter operator could begin sales immediately without filing a flight program and without waiting the 10 days for approval. The proposed treatment of foreign charter operators was slightly different in that they would still be required to seek authority in the U.S. as they do now.

While commenters generally approved of the proposal to require only an annual registration by charter operators, three of the industry associations (Association of Retail Travel Agents, American Society of Travel Agents and National Air Carriers Association) commented about several essential requirements of the registration process which permit the Department to regulate or discipline charter operators. The commenters referred specifically to the filing of schedules and changes thereto as well as to the certification that required security agreements to be in place. One of the associations also stated that if one believes the existing bond/escrow rules should be retained, then "specific identifying information for the operator's escrow accounts should also be provided and kept current." The purpose of the proposed relaxation of prospectus filing rules in the NPRM was to make the process less burdensome and possibly less expensive for the charter operator and to reduce the Department's regulatory workload. We are sympathetic to these comments and our further review of the mechanism of this proposed change leads us to conclude that the removal of the current system of prospectuses and amendments would compromise charter participants' ability to be assured of the legitimacy of charter programs and our ability to maintain useful records necessary to monitor Public Charter programs. The Department will not adopt the change proposed in the NPRM to replace the prospectus filing with an annual registration.

(2) Protection of Public Charter Participants' Expectations

Current charter rules contain provisions designed to protect the expectations of members of the public flying on Public Charters (14 CFR 380.30–380.33a). These rules prescribe the essential elements of contracts between charter operators and charter participants, and provide that certain major changes (hotels, flight dates, origin and destination cities, price) would entitle charter participants to cancel and receive a refund. The rules included precise requirements regarding the time for notifying charter participants of such changes and providing refunds where applicable.

In the NPRM, we proposed to eliminate the current provisions in the Public Charter rules that (1) specify the

contents of the contract between the charter operator and the charter participant; (2) regulate certain "major changes" in the price or itinerary that would entitle charter participants to cancel and receive a refund; and (3) prohibit charter operators from accepting charter participants' payments without first obtaining a signed operator-participant contract (§§ 380.31–380.33 and 380.12). In place of these provisions, we proposed to require charter operators to provide prospective participants with notice of, and access to, any conditions imposed by the operator (proposed § 380.7). The notice was to include, among other things, the terms under which the operator reserves the right to change the itinerary or price of the charter, and the charter participant's rights to cancel and receive funds under various circumstances. The notice, which would have been provided to the participant at the time of sale, could have been part of the charter operator's brochures or other solicitation materials. Just as with scheduled service (See 14 CFR Part 253), if a participant did not receive such notice, he or she would not have been bound by any term restricting refunds, imposing monetary penalties, or allowing the operator to change the itinerary or raise prices. The proposed rule also provided that, if a person purchased a charter and requested a copy of the full operator-participant contract within 5 days of the purchase, that person's payment would have been fully refundable if she or she canceled within 5 days after receiving the full contract, or by the day of the flight, whichever was earlier.

While some commenters supported our proposed elimination of the government-imposed contract provisions and the requirement that signed operator-participant contracts be received with or before receipt of payment for a charter flight, all who commented opposed some part of the notice of conditions offered as a substitute. The National Air Carriers Association and several charter operators opposed that portion of the proposed rule that would allow a customer up to 5 days after purchasing a charter trip to request a copy of the full contract and an additional 5 days after receiving the contract to cancel and receive a full refund. One of the commenters stated that such a provision would present serious practical difficulties, leaving charter operators with no viable opportunity to resell a late-canceling participant's seat and very likely incurring substantial cancellation fees for accommodations reserved for that charter participant. An adverse side effect of this situation described by the commenter would be that on heavily booked flights potential charter participants desiring to travel would be turned away and denied travel due to someone else's tardiness in deciding to cancel. It was suggested that a full charter operator-participant agreement be provided to the charter participant at or before the time of purchase. Then, when the charter participant had made the purchase, there should be no right to cancel and receive a full refund on the basis of dissatisfaction with the terms and conditions. Referring to the practice in the scheduled air carrier industry where the passenter is required to purchase a ticket within 24 hours after making a reservation, a commenter proposed that the section could be revised to provide that, in cases where the full agreement is furnished to the charter participant at time of purchase, the contract review period is limited to one day during which the customer may cancel and receive a full refund. The commenter also noted that the charter participant always has the right to obtain and study the contract and take any time necessary to fully consider the terms and conditions prior to paying.[2] We believe that the commenters have raised valid concerns over the details of the proposed notice of conditions and how it would work in practice.

We also received comments urging us to retain some or all of the "major change" provisions of our current rules, particularly those dealing with material changes in the origin or destination of the flights, the departure/return dates, the hotels provided, and the price of the trip. The current rules require that charter participants be informed of any such changes and in many situations be given the opportunity to cancel and be given a full refund if they find the changes unacceptable.

The existing rule states that beginning 10 days before departure, operators and carriers may not cancel a charter (unless it is physically impossible to operate) or raise the price. If at any time the operator changes a date or city, or raises the price by more than 10 percent, affected participants have the right to cancel and receive a full refund. Participants must be notified of such "major changes" within 10 days. Overbooking on charters is banned.

[2] In order to satisfy the requirements of this section, the notice would have to be in writing and in a form that allows the participant to review it. Thus, reciting the notice in a radio commercial or flashing a graphic in a TV commercial would not suffice.

The NPRM proposed to abolish all of those protections. For example, the operator would simply be required to provide notice of the existence of any contract conditions that permit him to make such changes. Under the proposed rule, operators could wait until the day of departure to cancel a flight due simply to lagging sales. They could change the destination of the charter, or move the departure date by a week, or raise the price by $200 two days before the flight; if anyone wanted to cancel as a result, the operator could impose a 100 percent cancellation penalty—and then resell the seat.

The regulatory reform rationale driving the NPRM was an attempt to redefine a part of the industry that appeared to be heavily restricted by artificial distinctions among the various kinds of air transportation available to the public. To accomplish this, the Department proposed to remove administrative burdens on airlines and charter operators, simplify financial security requirements, and liberalize sales of charters by eliminating time constraints, operator-participant contracts, major change rules, and requirements for non-public charters. It was noted that current charter rules still impose limitations on direct air carriers flying charters that are relatively stringent compared with those relating to the operation of scheduled air service. Similarly detailed requirements apply to charter operators who sell charter reservations to the general public. A significant part of the consumer protection features of the current rule concerns price changes, cancellations, itinerary changes and the contents of operator-participant contracts designed to ensure participants' expectations.

The notice requirement proposed in the NPRM was modeled on the contract disclosure rule for scheduled service, 14 CFR Part 253. However, charters work differently from scheduled service; all the market forces that might modify the behavior of a scheduled carrier are not in play in charter service. By the nature of the scheduled system, carriers operate flights even where the revenues on a particular operation don't cover their costs (i.e., the load factor is low). However, flight cancellations due to lack of participation and other changes are more likely to occur on charters, and when they do occur are likely to be at the last possible moment allowable under the rules, currently 10 days before departure of the outbound flight. Absent the current rule banning cancellations within the last 10 days before departure, a charter operator could wait to cancel or make another major change until two

or three days before planned departure in hopes of getting sizable bookings through wholesalers shortly before departure. Allowing charter operators unfettered discretion to fail to keep their end of the bargain with consumers would be unfair.

Also, when scheduled-service flights experience irregularities, passengers have more options than charter passengers because:

- Scheduled carriers operate more frequent flights than do charter operators. For example, if an 8 a.m. scheduled flight to Denver is canceled, the same carrier can usually rebook a passenger on another of its, or another airline's, Denver flights no more than a few hours later.
- Many scheduled airlines have agreements with each other so that one scheduled carrier can put passengers from its canceled or delayed flight on another airline's flight, at no additional cost to a passenger.
- Scheduled carriers operate many different routes; they may serve more than one airport in the same city. If they cancel a flight they might be able to reroute the passengers via another city or to another airport at the same destination city with limited inconvenience to the passengers.

We conclude that while the notice regime of Part 253 (Notice of Terms of Contract and Carriage) has worked well to protect schedule passengers, our proposal to apply a similar approach in the charter area would likely result in an unacceptable risk to charter participants. The American Society of Travel Agents (ASTA) commenting on the proposed annual registration thought it might be worth trying but "charter operators should still be required to file copies of promotional material containing the proposed flight schedules at least 10 days before a flight." ASTA went on to say that the requirement would be "to discourage the publication of fictitious flight schedules which are then changed at the last minute to convenience the tour operator or the airline." This theme was also expressed by the Association of Retail Travel Agents (ARTA) which said that "we realize from experience the need for updated promotional materials containing proposed flight schedules at least 10 days before flight." ARTA continued this discussion stating that "Agents need to see the exact product available to enable them to fully inform their customers so that prices and scheduling can be compared for customer benefits." Comments from the University of Minnesota touched the broader scope of the issue stating that the present process for regulating Public Charters, including the filing process, had proved to be beneficial and necessary. We will retain these provisions along with the other parts of the customer protection package in the final rule.

(3) Protection of the Charter Participants Funds

We tentatively concluded in the NPRM that the present financial security requirements applicable to Public Charters should be revised. Under the current rules, Public Charter operators must obtain either (1) an acceptable security arrangement in an amount equal to the charter price for the air transportation if air-only or, if land arrangements are involved, in an amount equal to one, two, or three times the price of the air transportation depending on the duration of the charter trip; or (2) an acceptable security arrangement in the amount of $10,000 per flight up to a maximum of $200,000 for 20 or more flights plus a depository (escrow) account at a bank, into which all payments by or on behalf of charter participants must be deposited and from which they may not be removed except under specified conditions (§§ 380.34, 380.34a, 380.35).

We postulated that existing financial security requirements may be unduly burdensome on or costly to Public Charter operators, and proposed to substitute one or more of the various options set forth in the NPRM for the existing surety/escrow combination. The options proposed in the NPRM were: (1) A security agreement [3] in an amount of at least $30,000 times the number of flights up to a maximum of $600,000; (2) a security agreement sufficient to cover the cost of air transportation sold but not yet provided to consumers (i.e., a "rolling bond" under which the amount of the security could increase or decrease over time as the number of charter participants who have paid but have not completed their travel changes); (3) a requirement that U.S. or foreign direct air carriers participating in Public Charter programs bear financial responsibility for charter participant funds paid for charter air transportation (i.e., by either refunding moneys paid or providing the transportation for which it was paid) in the event of insolvency or other failure to perform by the charter operator; (4) a security agreement in an amount not less than the charter price for the air transportation (whether or not the charter flights being sold include land arrangements); or (5) a security agreement in an amount not less than the cost of the charter trip paid by the participant, including air transportation and land arrangements, if applicable.

None on these options included retention of the existing surety/escrow system of protecting charter participant funds; however, in view of comments in earlier rulemakings in support of the present escrow system, we specifically asked for comments on whether we should retain that system.

Virtually all of the parties and individuals that commented on the NPRM discussed the financial security options, with a large majority in favor of retaining the surety/escrow option for charter operators permitted under the present rules. Those who commented on the specific alternative financial security measures generally noted that each would provide a measure of financial protection, but the comments were varied as to which, if any, should be adopted. Several commenters felt the escrow requirement should be done away with, but that the amount of any required security agreement should be less than the $30,000 per flight/ $600,000 maximum amount proposed.

Of those opposed to the current surety/escrow option, several charter operators cited administrative burdens and large fees imposed by banks. One charter operator complained in particular of fees of between $175 and $260 per departure, which it asserts are not offset by interest earned on an escrow account, and of being assessed other expenses related to maintaining the account, such as for wire transfer fees, cancellation fees, and other charges incurred by the bank to pay hotels, land operators, and air carriers. Others submitted comments against retention of the current surety/escrow option, primarily on the basis that such arrangements have not always sufficiently protected consumers' funds, particularly when operators have filed for protection under bankruptcy laws.

In support of retaining the present surety/escrow option, many individual charter operators and an association representing charter operators asserted that the present system provides a necessary discipline on the industry and that financially stable and responsible charter operators are not burdened by the escrow system. One of these commenters pointed out that the escrow account system has worked well, when

[3] Term security agreement would be defined as it is today to include either a surety bond, or a surety trust agreement or letter-of-credit that provides protection equal to or greater than that provided by a bond (See new § 380.2). The agreement would have to be for an amount that would cover all one-way or round-trip flights that the Public Charter operator will actively advertise, sell, or operate at any one time, including any flights that may be completed but are within the 60-day period for the filing of claims.

properly administered, to provide consumer protection at little or no cost, and it should continue as an option. It suggested, however, that there is no need to require a security agreement, such as the $10,000 per flight/$200,000 maximum required under present rules, in addition to the depository account.

The members of the banking industry that commented on the NPRM, as well as the private citizens who commented, were unanimously in favor of retaining some form of protection requiring a depository account. One bank that handles charter operator escrow accounts stated that the depository method is the safest and most economical manner in which to provide protection of consumer funds, in particular because of the high risk to banks of surety bonds and trusts, the costs of which must be passed on to charter operators and, ultimately, consumers. Another bank asserted that the interest earned on escrow accounts more than makes up for any charges assessed by the banks for maintenance of the accounts.

Many of the direct air carriers and associations filing comments on behalf of direct air carriers recognized that the present surety/escrow system carries with it certain costs and burdens. Most, however, suggested that it be kept in place because it has proven to be an effective means of protecting charter participant payments. One of these commenters suggested retention of the present escrow system, at least until the Department has had an opportunity to examine the effects on the charter industry of other changes to the Public Charter rules that may result from this proceeding. Another suggested that if there is to be a change, we retain the present surety/escrow system, and, in the interest of allowing the industry to respond to market requirements, also allow any of the other proposed systems as optional requirements.

The $30,000-per-flight, $600,000 maximum alternative received some support from several direct air carriers and from well-established charter operators. Many other direct air carriers and charter operators, as well as financial institutions, argued against such a security agreement requirement as being too expensive for many charter operators to obtain and maintain. Other commenters noted the requirement, which would triple currently required security amounts, would be unnecessarily broad for the many small-aircraft, domestic charter operations, so that the security required per flight could far exceed the cost of the air transportation. On the other hand, one commenter noted that the $30,000-per-flight figure could be insufficient to cover certain wide-body aircraft operations, while another felt that the $600,000 maximum would be insufficient to cover many large charter operator programs.

We see merit in each of the comments. We recognize that the proposed $30,000-per-flight, $600,000 maximum amount might not fully cover the operations of all charter operators. However, we are also concerned that adoption of the proposal could result in a situation where charter operators, particularly small businesses, would be required to obtain security in an amount far exceeding the cost of the flight, if it could be afforded at all. We conclude that we should not adopt this proposed alternative for protecting participant payments.

Another method of financial security discussed by the NPRM is a security agreement sufficient to cover the cost of air transportation sold but not yet provided to consumers. This "rolling bond" alternative would allow the amount of the security to increase or decrease over time as the number of charter participants who have paid but have not completed their travel changes.[4] This option was addressed by one charter operator and two of the banks. The charter operator was in favor of the option but one of the banks declared it "unworkably difficult" to administer since it could involve maintaining records and accounts involving dozens of charter flights and thousands of charter participants each day. We have determined not to adopt this option at this time since, under the rolling bond concept, the amount of coverage with respect to the protection of funds is determined solely by the charter operator and we are not convinced such a program could be administered to afford effective consumer protection. We will not adopt the rolling bond as an alternative security measure.

Another option that we have concluded should not be afforded to charter operators is to permit a direct carrier to agree to bear financial responsibility for charter participant funds paid to the charter operators, either by refunding moneys paid or providing the transportation paid for by the consumer. Most of the direct air carriers and their associations commenting on specific alternative proposals strongly urged the Department not to adopt this option. The many objections to adopting this financial security measure centered on a concern that holding a direct air carrier to be the guarantor of a charter operator's obligations would change the fundamental relationship of the two entities where direct air carriers have historically been merely contractors supplying services, without any effective means to assess or control the financial risks associated with such responsibility. It was argued that the direct air carrier and a non-affiliated charter operator have at best an arm's-length relationship and that the airline has no realistic opportunity or capability to effectively investigate the charter operator's financial status, managerial competence, or compliance disposition. It was also pointed out that the airline is not a party to any agreement between the charter operator and the participants and should not be placed in the middle of any disputes arising out of the participants' dissatisfaction with the arrangements.

Relating to the discussion above, one major direct air carrier and its affiliated charter operator, in a joint comment, suggested that the Department should adopt the option, expanded to allow a direct air carrier to assume financial responsibility for all of the obligations of an affiliated charter operator, including the affiliate's obligations for those flights for which it is not the direct air carrier. Permitting the direct air carrier to stand behind the obligations of its affiliate would, according to this commenter, afford a greater incentive to monitor the charter operator's business and provide a superior level of protection for consumers in those cases in which he direct air carrier is a scheduled carrier with wide operations. Several other commenters suggested that no affiliation should be required between the direct air carrier performing the flights and the charter operator whose programs would be backed.

Although we are somewhat receptive to this proposal, particularly where there is a true affiliation between the charter operator and direct air carrier (e.g., where one controls, is controlled by, or is under common control with the other), we are concerned that a blanket approval of this type of arrangement could lead to abuses, either where the direct air carrier overextends itself and guarantees a large charter program for which it has insufficient capacity available to operate in the event it becomes necessary to do so, or where financially weak direct air carriers "rent" their backing to charter operators seeking to avoid the financial security

[4] As with the air-only security agreement discussed above, under this option charter operators would be required to retain records sufficient to enable us to ascertain the separate cost to the consumer of the air and land portions of a charter package.

rules. We have decided, therefore, not to expand the rule as requested, but to review any such proposed arrangements on a case-by-case under the waiver provisions of § 380.9. Any direct air carrier seeking to provide such guarantees to operators must be prepared to demonstrate to our satisfaction that it has the wherewithal to undertake such an arrangement, particularly if it involves a substantial charter program.

One financial security option proposed in the NPRM is a security agreement in an amount not less than the charter price for the air transportation, whether or not the charter flight being sold includes land arrangements. Some of those that commented on this option were concerned about the lack of protection it entails for the land portion of a charter participant's payments and pointed out that it may provide less protection than is available today. As has been the case for years, today any consumer can purchase as a "package" from a retail travel agent or other entity a tour that includes travel on scheduled service and land arrangements that are independent of the air service. While the air portion of the price of the tour is "protected" after the ticket is issued, in the sense that the direct air carrier is obligated to honor the ticket for transportation or provide a refund, there is no Department-mandated protection for the land portion of the tour price. We reasoned that, to the extent present requirements place charter operators at a competitive disadvantage in providing services to consumers at the lowest possible price, it may be in the public interest to modify those requirements. Under this financial security option, we could do so without providing any less protection than that afforded purchasers of tours using scheduled service.[5]

In the NPRM, we also expressed our concern that the availability of this option, under which only the air transportation portion would be protected by a security agreement, could be subject to abuse if a charter operator would attempt to allocate only a small portion of the total tour package cost to the air transportation to be provided. We presented several possibilities for dealing with this problem, including a requirement that charter operators state separately their prices for the air and land portions of a package or a requirement that charter operators retain records sufficient to enable the Department to ascertain the separate cost to consumers of the air and land portions.

We have concluded however that we should not adopt this proposal. Charter air tours involving land accommodations are distinguishable from tour packages using scheduled service. As discussed earlier, in the event of a flight cancellation or change, passengers using scheduled service have more options than do charter passengers and they are more likely to reach their destination in a timely fashion without serious inconvenience or monetary loss. Passengers using scheduled service are therefore less likely to forfeit any portion of their land arrangements as a result of a flight irregularity or other problem. We thus remain concerned about a system that would fail to protect the land as well as the air portions of a charter participant's trip. The present rule in this regard appears reasonable and to have worked well and, on balance, we see no reason to change it at this time. The Department has authority to handle potential abuses in this area through its general authority to investigate and prohibit unfair and deceptive practices or unfair methods of competition (e.g., 49 U.S.C. 41712).[6]

The comments on the alternative of requiring a security agreement that would cover the cost of both the air and land portion of a charter trip received little direct support. Those opposed to the proposal cited the expense, in general, of obtaining such security. The opposition, however, was based on supposition that the Department would require such a large security agreement. In recognition of the fact that the expense of obtaining and maintaining financial security in an amount sufficient to cover the charter operator's cost of air and land may be unattractive to, or unattainable for, some charter operators, we will not adopt this financial security alternative as a requirement.

We continue to believe that there is a need for protection of charter participants' funds and for their right to receive refunds for services paid for but not received. As we pointed out in the NPRM, there is a unique financial risk inherent in the sale of charter transportation by charter operators that have not been required to meet our fitness requirements, and we conclude that the public benefits of retaining financial protections for charter participant funds significantly outweigh the cost of compliance.

After careful consideration of all of the comments in this proceeding, we have determined that we should retain the existing financial security rules as the means by which charter operators provide financial protection for consumer funds. A number of commenters stressed the view that significant benefits of the present system outweigh any administrative burdens and costs of compliance. Such comments from those intimately involved in the charter industry, particularly those parties upon whom the costs and burdens of the escrow requirements most heavily fall, together with the demonstrated benefits of the existing surety/escrow system, convince us that we should retain the existing system.

As a final point on the protection of consumer funds, we note elsewhere in this rule that we are allowing the use of credit cards as a means by which charter participants may pay for charter flights. If charter customers follow the trend of scheduled air transportation passengers, upwards of 70 percent of charter participants will be paying for their trips by credit card and not by cash or check. Those paying by credit cards will also be afforded the protections of Federal credit card laws.

(4) Financial Security Rules Applicable to Direct Air Carriers

Under the current rules, direct air carriers conducting charter flights are required to establish either (1) a surety bond in an unlimited amount, or (2) an escrow account into which all charter payments are to be deposited until after the flight is operated (14 CFR 207.17, 208.40, 212.12). These requirements apply to all U.S.-originating passenger charters, including Public and "non-public" type charters, as well as Overseas Military Personnel Charters originating outside of the United States. Direct air carriers using escrow accounts that engage in direct sales of Public Charters (i.e., without using an independent Public Charter operator) are also required to meet the bonding requirements of Part 380 applicable to Public Charter operators in addition to their flight escrow account.

We indicated in the NPRM that we were tentatively of the view that the present financial security requirements applicable to direct air carriers conducting charters, including direct

[5] Indeed, adoption of this option may enhance competition in other ways, as is apparent from the comments of one party that arranges both charter and scheduled service tour packages, and, as an enhancement to consumers and retail agents, elects to advertise the fact that it places in escrow the land portion of the scheduled service tours.

[6] Moreover, as part of their continuing obligation under new § 380.10 to ensure that any Public Charters they conduct are in compliance with the rules, we also expect that the direct air carriers performing the charters will ensure that the security agreement is at least in an amount sufficient to cover the cost of the air transportation to be provided as set forth in the direct air carrier charters operator contract.

sale Public Charters, were unnecessary, and we proposed to eliminate those requirements.[7]

Comments on this proposal were filed by several air carriers, charter operators, travel agent associations, and banks. Most of the direct air carriers agreed with the proposal that financial security arrangements should no longer be imposed on direct air carriers since airlines conducting charters are subject to the same fitness requirements as those operating scheduled flights; indeed, many carriers that operate charters also provide scheduled service. Moreover, scheduled flights are not subject to any such financial security requirements. These carriers also stated that the current security requirements are costly restrictions that produce little, if any, benefit while placing charter operations at a competitive disadvantage to scheduled service.

The proposed rule change was opposed by one air carrier, several charter operations, two travel agent associations, the banks, and most of the individuals filing comments, citing airline liquidations and bankruptcies in recent years and the apprehension they assert will be felt by charter operators who will be hesitant to take a chance on new entrants in the industry without the financial controls that are now in place. One commenter stated that more and more charter flights are being provided by new entrant U.S. and foreign carriers and that, since these carriers are the leading edge of competition in charter markets, it would be counterproductive to adopt a charter rule that has the effect of reducing their access to charter traffic. Another commenter stated that charter deposits transferred to direct air carriers represent relatively large sums of money in a single transaction with transfers made shortly before the flight operates, and it is not unreasonable, in these circumstances, for the direct air carrier to continue to provide depository protection for these sums, which have been afforded such protection while in the hands of the charter operator. Another commenter cited its concern that participants could claim against a charter operator's security agreement if they do not receive the charter trips they have purchased even though the charter operator had paid the direct air carrier.

We will continue to require direct air carriers to maintain a surety or escrow account for the protection of customer payments for charter flights that they operate. Our decision to retain this requirement is premised, in part, on our view that even though such carriers have been subjected to a "fitness" evaluation by the Department, the charter participants' funds should continue to be protected after leaving the security of the charter operator's escrow account and until the charter participant has received the service that was promised. Moreover, in the event of a stranding, charter participants are less likely than scheduled passengers to be carried by other airlines or to benefit from ticketing procedures common among scheduled carriers (e.g., where travel on a defaulting airline is via a ticket issued by another carrier, or vice-versa).

(5) Direct Air Carrier Responsibilities

Under the proposed rules, direct air carriers would be responsible, as they currently are, for ensuring that any charter they conduct meets the requirements of the charter rules—that is, they would have to take reasonable steps to verify that the Public Charter operators with which they contract meet the registration and financial security requirements of Part 380, and single entity or affinity charters meet the definitional requirements for those charter types (proposed §§ 212.30(d) and 212.5(f)). Direct air carriers would be free to establish whatever contractual requirements they deemed necessary in order to ensure compliance with the rules. Direct air carriers would also be responsible, as they have been in the past, for providing return transportation to any charter participant who has purchased round-trip transportation and whom they transported on an outbound flight, unless that charter participant's return flight is covered by a contract with another direct air carrier (proposed § 212.3(e)). We also proposed to add a provision to Part 380 (proposed § 380.10) to state that, should the direct air carrier fail to make a "reasonable effort" to verify that the Public Charter operator had met the Department's financial security requirements, that air carrier would bear the responsibility to provide the charter transportation or refund the air transportation portion of the charter participant payments in the event of the charter operator's failure to do so.

The inclusion of the requirement to provide return transportation was opposed by several direct air carriers and charter operators, principally because the NPRM had proposed to eliminate prepayment requirements that are a part of current regulations (§§ 207.13(b), 208.32(e), 212.8(a), 380.11) for both the outbound and return leg of charter round trips. The commenters stated that these prepayment rules worked as a mechanism to ensure that the direct air carrier would have the funds to either compensate the charter participants or cover the cost of transportation and that, without payments from the charter operator to cover the flights, the direct air carrier would have to endure a significant financial burden for which it was not responsible. One commenter proposed that the rule be revised to limit the direct air carrier's responsibility to the funds it had received from the charter operator to pay for the return leg. While the air carrier can always require the charter operator to pay the full price of the flight up front as a contractual matter, we agree that the rules should retain the prepayment requirements and the carrier will be responsible for the return air transportation of all round-trip Public Charter participants that it carries outbound, as in the current rule. This rule was written to protect the charter participants by ensuring that the charter operator had not only engaged the services of an air carrier but had also paid for the flight. We will retain the prepayment requirements of Parts 207, 208, 212, and § 380.11.

Comments were also received from a number of direct air carriers arguing that the refund-or-provision-of-transportation requirement proposed in new § 380.10 is an unfair and unworkable expansion of the "reasonable effort" concept of the current rules (§ 380.40). One carrier stated that this requirement would make the direct air carrier both the regulator and the guarantor of a charter operator and would "reformulate the nature of charter transportation. Recasting the carrier as the overseer of the charter operator would fundamentally change what has been understood to be a supplier-purchaser relationship." Several commenters view the NPRM language as a wholesale shift of responsibilities away from the charter operator, and argue that such shifting of the risk for charter operator performance to the direct air carrier will place greater financial pressure on the direct air carrier which, in turn, will make charter activities less attractive. The Department's rational that such a rule would minimize government oversight of the charter industry and help protect charter participants is a worthy goal, say the commenters, but the way to achieve it is not by handing the enforcement role over to the airlines. Several commenters stated that they should be given an explanation of what constitutes

[7] U.S. and Canadian air taxi operators that perform Public Charters are also subject to the financial security requirements applicable to direct air carriers. Under the proposed rule, those requirements, contained in §§ 298.38 and 294.32, would also have been eliminated.

VOL 63 ISS 99 MAY 22 1998 UMI

"reasonable effort" so they will be on notice as to what is expect of them. Others suggested that charter operators should be required to give the direct air carriers a certification of compliance with Department regulations, and that should be sufficient to satisfy this requirement.

We appreciate the concern of those many commenters who feel that § 380.10 as proposed might be an expansion of direct carrier responsibility. Direct air carriers have long been responsible under present § 380.40 for ensuring that charter operators comply with all the requirements of our Public Charter rules. Indeed, our Office of Aviation Enforcement and Proceedings has not hesitated to pursue direct carriers for violating this provision.[8] Nevertheless, we recognize that each situation involving a charter problem presents a different set for circumstances, and the fact that a problem occurs may not be causally related to a failure by a direct air carrier to have ensured compliance with Part 380. It was not our intent in proposing the language in the NPRM to make direct air carriers the guarantors of charter operations. Our intent was merely to clarify a significant obligation of direct air carriers that has for years been impressed upon them as a part of our charter enforcement policy. Upon reflection, we recognize that the present language under § 380.40 is understood and appropriate and we will make no changes. Accordingly, we are omitting this proposed section 380.10 from the final rule and will retain the language of § 380.40 in its present form. We emphasize to direct air carriers, however, that in doing so we are not diluting to any degree their long-standing obligation to ensure that charter operators comply with Part 380. Nor are we indicating any lessened resolve on our part to enforce this requirement to the extent necessary to ensure that consumers are not harmed.

Based on the number of comments received on this point, we recognize that the term "reasonable effort" may require further clarification. At a minimum, we would expect direct air carriers to verify that the Public Charter operators with whom they contract have filed with the Department a prospectus (that has been accepted)—they can accomplish this by contacting the Department's Special Authorities Division directly—and that they have, in fact, entered into a security arrangement in an amount sufficient to meet the requirements of our rules—they can accomplish this by contacting the named securer/escrow bank.[9]

(6) Use of Credit Cards for Payments to Charter Operators

The Public Charter (Part 380) was developed to protect the public by assuring that the individual participant receives the air flight and accommodations contracted for and that all payments to the charter operator are securely held and properly used. Among other provisions, Part 380 requires that each operator provide a security arrangement based on its total cost of the flights in its charter program or both a bank depository account (escrow account) and a $10,000 per flight security arrangement. Most operators choose the escrow account/security arrangement combination. When the depository/security combination is used, payments to the charter operator from or on behalf of charter participants must be in the form of a check or money order made payable to the bank in which the escrow account is located. In practice, checks not so payable are endorsed over and deposited into the escrow account. The bank then disburses the money to the direct air carrier and, thereafter in some circumstances, to providers of non-air arrangements that are part of the Public Charter package. This check or money order payment required was put in place long before credit cards became a preferred form of payment for charter service. The NPRM pointed out that the restriction in the rule against credit card payments is inconsistent with the reality of today's marketplace and denies consumers additional protections that may be gained when they use credit cards to pay for goods and services. For example, if services are not received or there is a problem, the consumer may not be required to pay a remaining amount and may even get a refund. The NPRM supported the view that many consumers prefer to use credit cards and charter operators can also benefit by offering the additional flexibility to the customer. The NPRM also noted that for years the Enforcement Office has as a matter of enforcement policy permitted charter operators to accept payment by credit card so long as certain consumer protection conditions are met.

Virtually all the commenters supported the rule change to allow direct credit card sales for Public Charters. Based on the comments and recent experience, the Department has decided to allow charter operators with depository accounts [10] to accept payment by credit card from charter participants into those accounts. If the credit card merchant account is separate from the depository account, it must be used solely as a conduit with all credit card payments toward Public Charter trips immediately remitted to the depository account in full, without holdback. If a separate bank is to be used as a conduit for the receipt of credit card payments, the Department must be satisfied that there are adequate procedural safeguards. For example, the Department may require the charter operator to furnish a copy of or certify that there is in place, an agreement between the charter operator and the credit card merchant bank sufficient to preclude participant funds from being held back.

In situations involving direct bookings by telephone, the Department will allow the Public Charter operator to accept credit card payments for its trips provided that the charter operator advises the customers: (1) That he or she has the right to receive the operator-participant contract before making a booking; (2) that the operator-participant contract will be mailed to the participant within 24 hours of accepting payment by credit card; and (3) that the operator-participant contract must be signed, and the signed portion returned to the operator, before travel. While the operator is free to establish a deadline for participants who pay by credit card to sign and return the contract, a full refund must be made of any amounts charged to a credit card for any participant who cancels before the operator-participant contract is signed.

(7) Other Matters

Minimum contract size and advance purchase requirements. Many commenters expressly supported our proposal to eliminate the 20-seat minimum contract size for less-than-planeload charters, and the 7-day advance purchase requirement for Public Charters sold directly to the public by direct air carriers or affiliated charterers. Several, however, expressed concern that the absence of these provisions could lead to abuse, especially in some international markets. One stated that, in cases where the United States has a restrictive scheduled and a liberal charter relationship with a foreign government, carriers could, absent the current minimum contract size and advance

[8] See Order 92–2–1, January 2, 1992 (America West); Order 92–4–50, April 28, 1992 (Mark Air); Order 92–6–17, June 11, 1992 (Faucett); and Order 94–3–34, March 21, 1994 (Express One).

[9] See also n.3, *supra*.

[10] Public Charter operators with bonds equaling their total flight costs (or multiples thereof for trips exceeding 14 days) have always been permitted to accept payment in any form.

purchase rules, set up basically unrestricted direct sale charters to circumvent scheduled route or capacity limitations. This commenter and one other felt that retention of these kinds of restrictions on charters would help prevent the undermining of bilateral scheduled service regimes by charter operations. Another commenter expressed concern that carriers might sell individual seats on charters without complying with the requirements of our Public Charter rules.

We have decided to eliminate the minimum contract size and advance purchase rules, as we proposed to do. We recognize the concerns raised by the commenters over the possible implications of this change in some international markets, but we find that these concerns do not warrant our retention of these restrictive provisions. Significantly, as we noted in the NPRM, the final rule will allow the Department to limit or prohibit the operation of direct sale Public Charters by a foreign air carrier if we find that such action is necessary in the public interest. Thus, we have ample ability to redress problems that might arise, should such action prove necessary. Furthermore, we believe that the rule as adopted makes it clear that any sale by a direct air carrier of an individual charter seat to the public must be done under the direct sale provisions of Part 380.

Additional information with charter operator registrations. Several commenters proposed that we require additional information from Public Charter operators at the time of their registration under the proposed filing system. Three commenters suggested that operators be required to file a copy of their promotional material showing flight schedules to be operated. Another suggested that operators be required to provide a copy of the contract of carriage they would enter into with their charter participants. A third suggested that operators be required to file a certification of any complaints made against them by state or local consumer agencies.

We will not adopt these suggestions. With respect to the filing of promotional material with flight schedules, the current prospectus filing requirement includes flight schedules, and, as is now the case, we will request copies of advertisements when appropriate. The other two suggestions, for charter operators to file copies of their operator-participant contracts, and certifications of complaints, are not required under our current rules, and we see no public interest reason to impose these burdens as a part of this proceeding.

We will, however, amend the rule with respect to the information required to be filed on the ownership of the charter operator (Part 380, Subpart E—Registration of Foreign Charter Operators) to replace the reference in the proposed rule to "stockholders" holding 10 percent or more of the company's stock with "persons" owning 10 percent or more of the company, since the proposed rule did not take into account the fact that many charter operators may be sole proprietorships or partnerships that do not have stockholders. Moreover, in order to accurately determine the citizenship of the charter operator, we will require that, if any such persons are themselves organizations or corporations, the 10 percent owners of those companies must also be identified back through the company's structure to individual persons who own stock in the ultimate "parent" company of the charter operator. Requiring such information is also consistent with our procedures in reviewing the ownership structure of direct air carriers.

Filing of claims against Public Charter operators and securers, and payment of claims. Three commenters suggested shortening the provision in proposed § 380.6(d) that allows Public Charter participants 60 days after the termination of a flight to make a claim against the Public Charter operator (this requirement is contained in current § 380.34(d)). The commenters argued that retaining the 60-day claim period requires operators to maintain expensive security instruments for this period, and that there is no need for such a long period since charter participants will know no later than upon returning from their Public Charter whether their payments were lost in progress to the providers of services—most commonly airlines and hotel operators—or that refunds are due under the operator-participant contract, e.g., for a flight cancellation or other major change requiring a partial or full refund.

Another commenter urged a requirement that claims against a security instrument be paid within 45 days of their submission.

We will not adopt these suggestions. With respect to the 60-day claim period, we note that while in some cases a Public Charter participant will immediately know of the need to submit a written claim, there are other instances, such as a delay in obtaining a promised refund from a charter operator, where the charter participant may not realize this need until well into the claim period. The 60-day claim period has been a part of our charter regulations for many years, and has, we believe, worked well in providing charter participants sufficient time to seek redress of problems they have encountered on Public Charters. We find no public interest reason to modify this provision at this time.

With respect to requiring the payment of claims within 45 days, we do not believe that such a condition is warranted. The resolution of claims can, in some cases, be a complex, time-consuming process, involving negotiations between and among the charter participant, the charter operator, and the securer, and at times the use of the courts. Mandating a 45-day period for claim resolution could be disruptive to this process, to the detriment of all parties. In any event, should a charter operator unreasonably delay the resolution of a claim, such that its action represented an unfair or deceptive practice within the meaning of 49 U.S.C. 41712, it would be subject to enforcement action by the Department.

Payment of claims under security agreement. One commenter objected to proposed § 380.6(a)(1), which pertains to payments by a securer to charter participants with claims against the charter operator's security agreement, because it would permit the entity providing the security to make payment to claimants without the charter operator's agreement or a judgment from an appropriate court of law. The portion of the rule of concern to the commenter states that the securer shall pay a claimant where it "is determined by the person providing the security or adjudged by a court of competent jurisdiction" that payment is due to a claimant. The basis for the objection is the commenter's concern that the securer will have no incentive to deny even the most frivolous of claims filed against the security agreement, since any amounts it pays out to claimants will be recoverable from the charter operator's collateral that secures the agreement.

The security agreement is intended to compensate consumers for claims incurred under the operator-participant contract, as a result of flight cancellations, and/or for major changes not accepted by the participant, in all cases in which the participant has not received an appropriate refund. That compensation should be provided as soon as practicable. To require in all cases the approval of the charter operator or a court judgment prior to payment could unnecessarily delay compensation from being made for legitimate claims. We do not share the commenter's concern that a securer

could feel free to make payments to claimants without concern for the actual legitimacy of their claims, since in doing so it would, at a minimum, risk losing future business and open itself to potential liability to the charter operator. It is our intent that securers approach such matters using a "reasonableness" standard, and give consideration to all facts surrounding the flight cancellation or other problem that gave rise to the claim. So long as the charter operator is available, we would expect the charter operator to be given a reasonable opportunity to comment before the securer makes payments. We will adopt the rule as proposed, since it will benefit consumers who experience problems for which the charter operator has failed to provide timely compensation.

Flight delays and substitute air transportation. One commenter urged that we retain the current requirements in §§ 208.32a and 208.33 that require charter air carriers to take certain action in the event of flight delays of specific periods. Under these regulations, charter air carriers in some instances provide substitute air transportation for the charter passengers involved, and in some instances provide payment for incidental expenses including food and lodging to the passengers affected. The commenter stated that, absent this requirement, the charter operator would bear the costs involved in these situations, and those costs would be especially burdensome on small charter operators. We will not retain this requirement. The flight delay requirements at issue here currently apply only to U.S. charter-only direct air carriers; they do not apply to the charter operations of U.S. scheduled carriers or foreign air carriers. We see no reason to continue these 30-year old requirements solely for one class of air carrier, when the majority of carriers are not subject to the rules. As we stated in the NPRM, both direct air carriers and charter operators have a commercial interest in providing amenities and/or alternate transportation for passengers when charter flights are delayed. To the extent that a charter operator is concerned about the costs it may incur in dealing with a possible flight delay, its proper forum for dealing with that concern is in negotiating the terms of its contract with the direct air carrier.

Subcontracting. One commenter urged the Department to amend its rules to permit a "primary" charter operator to contract with and be responsible to the direct carrier for payment for a charter flight and to subcontract seats on the flight to other operators without the need for the latter operators' having contracts with the direct air carrier. Under this proposal, both the "primary" and subcontracting charter operators would be registered with the Department. Another commenter urged that we also allow single entity charterers to subcontract seats to other single entity charterers, stating that such a provision would be useful in cases where a direct air carrier preferred to contract with only one charterer.

The Public Charter operator/sub-operator separate filing arrangement has existed informally for many years [11] and we will codify it here. However, we will not adopt the proposal to allow single entity charterers to subcontract seats. The operator/sub-operator concept entails a contract between a Public Charter operator that sells charter flights in its own right (either directly to the public, through its agents, or a combination of both) and a second Public Charter operator that piggy-backs its program onto the program of the primary operator with the primary operator retaining at least as many seats for itself as it has subcontracted to one or more sub-operators.[12] Once the Department has accepted the prospectus, the second Public Charter operator—the sub-operator—may advertise in its own right using its own securer and depository bank. However, subcontracting of single entity charters has never been permitted. Under the single entity concept, passengers may not directly or indirectly pay toward their trips. Although Public Charter operators are themselves indirect air carriers, single entity charterers are not. Alternatives for prospective single entity charterers include using smaller aircraft, special fares of part charters on schedule flights, and split charters—multiple charters on a single charter flight.

Small aircraft operations. One commenter asserted that a clarification is needed in our rules concerning Public Charter operations by operators of small aircraft. It noted that proposed § 380.1 states that the Part applies to air transportation furnished by certificated air carriers or foreign air carriers, but makes no mention of operations by non-certificated air taxi operators or commuter air carriers conducting operations under 14 CFR Part 298. It states that §§ 380.1 and 380.2 of the current rule provide for such operations, and that the definition of "direct air carrier" in proposed § 380.2 does include carriers operating under Part 298. The commenter suggests that we amend proposed § 380.1 to provide that the Part applies to air transportation furnished by "direct air carriers" which it states will resolve any ambiguity.

We will adopt this suggestion. It was not our intent in issuing the NPRM to remove the current ability of air taxi operators or commuter air carriers to conduct Public Charters under Part 380, and we will make the change in § 380.1 recommended by the commenter.

OMPC's and educational institutions. In the NPRM, we proposed to retain rules providing for the operation of two specialized charter types: Overseas Military Personnel Charters (OMPC's), now contained in 14 CFR Part 372, and charters conducted by educational institutions, now contained in 14 CFR 380.17. However, we specifically requested comments on whether these rules are still needed. We received one comment on each question. An OMPC operator supported continuation of the OMPC rules, stating that Germany, the major market for OMPC's, grants special relief for OMPC operations, in light of their role of providing low-cost transportation for U.S. military and civilian personnel and their families on furlough or authorized leave from an official station in a foreign country. We will retain Part 372 for air carriers to continue to provide this necessary and humanitarian service. A direct air carrier supported continuation of the special provisions in Part 380 for educational institutions, stating that the rules have provided a benefit that should remain available. The occasional use of these special provisions by air carriers assures us that there is a need and we will adopt the proposed

[11] Under 14 CFR 380.30(a), solicitation materials for Public Charters must identify the charter operator and the direct air carrier. Under 14 CFR 380.32(a), operator-participant contracts must state the name and complete mailing address of the charter operator. A sub-operator has its binding commitment for a specific number of seats on Public Charter flights shown in another Public Charter prospectus already filed with (and accepted by) the Department, but also must file its own prospectus and is bound independently by our charter rules. Unlike an agent, for example, a sub-operator advertises and sells as a Public Charter operator using its own escrow bank and security agreement. (Order 87–7–10, July 2, 1987, n. 2 at 3.)

[12] The sub-operator concept was devised as a way for direct air carriers to avoid the downsides of split charters and at the same time to permit multiple Public Charter operators to share a planeload charter contracted by a Public Charter operator. Heretofore, there has been a 20-seat minimum contract size. It has never been intended for use by middlemen brokers selling off most or all of the aircraft to Public Charter operators. Unless the direct air carrier is fully bonded, payments should go from the sub-operator's escrow account to the direct air carrier's escrow account with the primary Public Charter operator responsible for payment of the difference between the amount paid by one or more sub-operators and the amount it has agreed to pay the direct air carrier for the flight. Without a waiver granted upon a showing that it is in the public interest, sub-operator contracts may not exceed half of a planeload charter.

language in new § 380.3(d) concerning charters for educational institutions.

Affinity charter certifications. One commenter expressed concern with the provision in proposed § 212.5(f) that would require direct air carriers conducting affinity (pro rata) charters to obtain, and retain for two years, a certification by the chartering organization that all passengers are eligible for transportation under the rule. The commenter argued that the direct air carrier should not bear the responsibility and burden of obtaining and holding these certifications, but that the charterer should have this responsibility.

We will, however, adopt the provision as proposed. We continue to believe that the responsibility for obtaining and retaining the necessary certification of eligibility for an affinity charter property rests with the direct air carrier involved. Moreover, our proposal represents a significant reduction in the burden on direct air carriers and affinity organizations, since the certification would replace the detailed "Statement of Supporting Information" now required. Finally, should a problem arise with an affinity charter, having the certification in the hands of the direct air carrier, rather than with an organization whose identity and location would likely be unknown to us, would assure that we can promptly obtain information on the charter from that carrier.

Long-term wet leases. One commenter recommended that we modify proposed §§ 212.2 and 212.8(a), which would continue the current requirement in §§ 207.1, 207.10, 208.3, and 208.5, that U.S. air carriers conducting wet lease operations (that is, charters involving the lease of aircraft and crew) on behalf of foreign air carriers obtain prior Department approval, in the form of a statement of authorization, for all "long-term" wet leases of 60 days' duration or longer. The commenter proposed that the prior approval requirement apply only to wet leases by U.S. air carriers of 120 days or longer, stating that the change would relieve a burden and "better reflect the realties of the marketplace."

We will not adopt this suggestion. The purpose of the prior-approval requirement for U.S. air carrier long-term wet leases to foreign air carriers is to enable us to assure that these operations, which, because of their extended duration, may represent a significant benefit to the foreign carrier lessee, are in the public interest. The fact that a U.S. carrier is proposing to conduct the wet lease is a significant consideration, but it is not itself sufficient to meet the public interest test. Other public interest criteria as listed in the rule may figure in our decision. We believe that we need to continue the level of scrutiny of these types of wet lease operations that we have been exercising, and, in the absence of any compelling argument for changing the current provision, we will retain the 60-day threshold in the final rule. We do not believe that retention of this provision will pose a significant burden on U.S. air carriers, as the application process for a statement of authorization is uncomplicated, involving the filing of a minimal amount of information with the Department.

Direct Sales. The NPRM proposed that certificated and foreign air carriers could offer for sale and operate Public Charter flights under Part 380 directly to the public and need not comply with registration requirements or the requirements concerning financial security arrangements. While no comments were received on the proposed elimination of filing requirements for direct sales, the overall tenor of comments submitted was to retain the consumer protection provisions of the rule. We have responded to these public comments by retaining other participant protection elements and will do so for direct sale customers as well. We will, therefore, not adopt the wording of the NPRM but will take this opportunity to rewrite the section to eliminate confusing directions in the old rule.

Miscellanous. Several commenters proposed other changes to the proposed rule, from Federal licensing of Public Charter operators to the enactment of a single charter type to replace affinity, single entity, mixed, and Public Charters. Since these matters are well beyond the scope of this proceeding and have not been adequately justified, we will not address them here.

Effectiveness of the rule. The provisions of this rule will become effective 30 days after publication in the **Federal Register**.

Conclusion

After carefully weighing the comments provided in response to the NPRM, we have decided to adopt the revisions as discussed above.

Regulatory Impact

Excutive Order 12866 and DOT Regulatory Policies and Procedures

This final rule has been evaluated in accordance with existing policies and procedures. Because the requirements contained in this final rule clarify the applicability of the multiple Air Charter regulations to a specific segment of the industry and reduce selected portions of the regulatory burden on these operators, the Department has concluded that this final rule does mot constitute a significant rule under either Executive Order 12866 or DOT's policies and procedures.

Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (5 U.S.C. 601 *et seq.* requires a review of rules to assess their impact on small entities. The Department certifies that this final rule does not have a significant economic impact on a substantial number of small entities. The Public Charter industry is composed of approximately 250 charter operators half of which are small commercial enterprises that file for a single flight. The only change these operators will notice in filing a prospectus under the new rule will be the saving of $39 in not having to request a waiver of the 10-day waiting period. The Department has concluded that there are no substantial economic impacts for small units of government, business, or other organizations.

Paperwork Reduction Act

This rule contains information collection requirements that have been submitted to the Office of Management and Budget for approval under the Paperwork Reduction Act (44 U.S.C. 2507 *et seq.).* Collection-of-information requirements include reporting, recordkeeping, notification, and other similar requirements. Persons are not required to respond to a collection of information unless it displays a currently valid OMB control number. We will publish a notice in the **Federal Register** prior to the effective date of this final rule of OMB's decision to approve, modify, or disapprove the information collection requirements. The paperwork burden for the filing of Public Charter prospectuses will not changes as a result of this Final Rule because the applications and amendments must still be prepared and submitted to the Department.

Environmental Impact

The Department has evaluated this final rule in accordance with its procedures for ensuring full consideration of the potential environmental impacts of its actions as required by the National Environmental Policy Act (42 U.S.C. 4321 *et seq.),* other environmental statutes, Executive Orders, and DOT Order 5610.1c. It has

been determined that this final rule does not have any effect on the quality of the environment.

Federalism Implications

The Department has analyzed this rule under the principles and criteria contained in Executive Order 12612 ("Federalism") and has determined that the rule does not have a substantial effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Thus, in accordance with Executive Order 12612, the rule does not have sufficient federalism implications to warrant the preparation of a federalism assessment.

Unfunded Mandates Reform Act

This rule does not impose any unfunded mandates on State, local, or tribal governments as defined by the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1532–1538).

Summary of Cost/Benefits

Our analysis of the impact of changes made in the Public Charter rule clearly indicates that the changes are beneficial. Elimination of the 10-day waiting period after filing a prospectus will save the cost of a waiver request. We are also deleting the requirement to file a brief (mini) prospectus by direct air carriers conducting foreign-originating flights for foreign charter operators. And finally, we are consolidating three largely repetitive rules applicable to direct air carriers conducting charter flights.

In order to estimate the cost savings to industry from not requesting a waiver of the 10-day waiting period, we reviewed our 1996 record of filings. We approved nearly 800 prospectus filings during the year, most of which included a filing fee of $39 and an additional $39 for a waiver request. Of the total fees received, $62,400, nearly half would be saved under the new rule. In addition, we received between 700 and 800 waiver requests for amendments to Public Charter prospectuses, changing or eliminating flights. Eliminating filing fees for such amendments should provide an additional cost saving to charter operators of approximately $50,000. Cost savings in time and effort for those filing prospectuses under the new rule will be minimal since the filings and the amendments must still be provided.

In considering the cost savings to airlines conducting foreign originating flights for foreign tour operators we note that many foreign air carriers retain the services of U.S. law firms to provide these documents. Since most foreign air carriers are exempt from out filing fees because of reciprocity agreements with the U.S., the cost savings to the air carriers will be the expense of retaining a law firm to produce and file information heretofore required by Public Charter regulations.

Finally, rewrite of the four principal parts of the Code of Federal Regulations that address passenger air charter operations provides a more condensed and useable reference for the charter industry and for those desiring to engage in Public Charters. Consolidating Parts 207 and 208 into a revised Part 212 has eliminated duplicative wording while retaining these two parts with only an applicability statement to avoid confusion since a number of Department orders now in effect require adherence to the requirements. These and other benefits of this Final Rule which can not be quantified such as eliminating certain waiver requirements, allowing charter operators to accept credit card payments and including current practices concerning amendments to filings, simplifies the process for applications and does so without compromising consumer protection.

List of Subjects in 14 CFR Parts 207, 208, 212, 380

Air Carriers, Air Transportation, Charter Flights, Reporting and recordkeeping requirements, Surety bonds.

1. Part 207 is revised to read as follows:

PART 207—CHARTER TRIPS BY U.S. SCHEDULED AIR CARRIERS

Sec.
207.1 Applicability.
207.2 Terms of service.

Authority: 49 U.S.C. 40101, 40102, 40109, 40113, 41101, 41102, 41103, 41301, 41504, 41702, 41708, 41712, 46101.

§ 207.1 Applicability.

This part establishes the terms, conditions, and limitations applicable to charter air transportation conducted by air carriers holding certificates under 49 U.S.C. 41102 authorizing the operation of scheduled air transportation services.

§ 207.2 Terms of service.

Charter air transportation under this part shall be performed in accordance with the provisions of part 212 of this chapter.

2. Part 208 revised to read as follows:

PART 208—CHARTER TRIPS BY U.S. CHARTER AIR CARRIERS

Sec.
208.1 Applicability.
208.2 Terms of service.

Authority: 49 U.S.C. 40101, 40102, 40109, 40113, 41101, 41102, 41103, 41301, 41504, 41702, 41708, 41712, 46101.

§ 208.1 Applicability.

This part establishes the terms, conditions, and limitations applicable to charter air transportation conducted by air carriers holding certificates under 49 U.S.C. 41102 authorizing the operation of charter air transportation services.

§ 208.2 Terms of service.

Charter air transportation under this part shall be performed in accordance with the provisions of Part 212 of this chapter.

3. Part 212 is revised to read as follows:

PART 212—CHARTER RULES FOR U.S. AND FOREIGN DIRECT AIR CARRIERS

Sec.
212.1 Scope.
212.2 Definitions.
212.3 General provisions.
212.4 Authorized charter types.
212.5 Operation of affinity (pro rata) charters.
212.6 Operation of gambling junket charters.
212.7 Direct sales.
212.8 Protection of customers' payments.
212.9 Prior authorization requirements.
212.10 Application for statement of authorization.
212.11 Issuance of statement of authorization.
212.12 Waiver.

Appendix A—Certificated or Foreign Air Carrier's Surety Bond Under part 212 of the Regulations of the Department of Transportation (14 CFR Part 212)

Appendix B—Certification of Compliance

Authority: 49 U.S.C. 40101, 40102, 40109, 40113, 41101, 41103, 41504, 41702, 41708, 41712, 46101.

§ 212.1 Scope.

This part applies to all charter flights, and all other flights carrying charter passengers or cargo, in interstate and/or foreign air transportation by U.S. certificated air carriers or in foreign air transportation by foreign air carriers. It does not apply to any flights performed by a commuter air carrier, air taxi operator, or certificated air carrier operating "small aircraft" under part 298 of this chapter. Nothing in this part gives authority to operate a type or level of service not authorized by certificate, foreign air carrier permit, or exemption, except that a certificated air carrier

authorized to conduct scheduled operations may conduct charter flights, in interstate and/or foreign air transportation, without limitation as to the points served.

§ 212.2 Definitions.

For the purposes of this part:

Affinity (pro rata) charter means a charter arranged by an organization on behalf of its membership, and which meets the requirements of § 212.5.

Certificated air carrier means a U.S. direct air carrier holding a certificate issued under 49 U.S.C. 41102.

Charter flight means a flight operated under the terms of a charter contract between a direct air carrier and its charterer or lessee. It does not include scheduled interstate air transportation, scheduled foreign air transportation, or nonscheduled cargo foreign air transportation, sold on an individually ticketed or individually waybilled basis.

Charter operator means:

(1) A "Public Charter operator" as defined in § 380.2 of this chapter, or

(2) An "Overseas Military Personnel Charter operator" as defined in § 372.2 of this chapter.

Direct air carrier means a certificated or foreign air carrier that directly engages in the operation of aircraft under a certificate, permit, or exemption issued by the Department.

Fifth freedom charter means a charter flight carrying traffic that originates and terminates in countries other than the carrier's home country, regardless of whether the flight operates via the home country.

Foreign air carrier means a direct air carrier which is not a citizen of the United States as defined in 49 U.S.C. 40102(a) that holds a foreign air carrier permit issued under 49 U.S.C. 41302 or an exemption issued under 49 U.S.C. 40109 authorizing direct foreign air transportation.

Fourth freedom charter means a charter flight carrying traffic that terminates in the carrier's home country having originated in another country.

Gambling junket charter means a charter arranged by a casino, hotel, cruise line, or its agents, the purpose of which is to transport passengers to the casino, hotel, or cruise ship where gambling facilities are available, and which meets the requirements of § 212.6.

Long-term wet lease means a wet lease which either—

(1) Lasts more than 60 days, or

(2) Is part of a series of such leases that amounts to a continuing arrangement lasting more than 60 days.

Mixed charter means a charter, the cost of which is borne partly by the charter participants and partly by the charterer, where all the passengers meet the eligibility requirements for "affinity (pro rata)" charters of § 212.5.

Part charter means flight carrying both charter and scheduled passenger traffic.

Single entity charter means a charter the cost of which is borne by the charterer and not by individual passengers, directly or indirectly.

Third freedom charter means a charter flight carrying traffic that originates in the carrier's home country and terminates in another country.

Wet lease means a lease between direct air carriers by which the lessor provides all or part of the capacity of an aircraft, and its crew, including operations where the lessor is conducting services under a blocked space or code-sharing arrangement.

§ 212.3 General provisions.

(a) Certificated and foreign air carriers may conduct charter flights as described in this part, and may carry charter passengers on scheduled flights, or charter cargo on scheduled or nonscheduled flights (or on the main deck or in the belly of passenger charter flights), subject to the requirements of this chapter and any orders of, or specific conditions imposed by, the Department.

(b) Charter flights may be operated on a round-trip or one-way basis, with no minimum group, shipment, or contract size.

(c) Contracts to perform charter flights must be in writing and signed by an authorized representative of the certificated or foreign air carrier and the charterer prior to the operation of the flights involved. The written agreement shall include:

(i) The name and address of either the surety whose bond secures advance charter payments received by the carrier, or of the carrier's depository bank to which checks or money orders for the advance charter payments are to be made payable as escrow holder pending completion of the charter trip; and

(2) A statement that unless the charterer files a claim with the carrier, or, if the carrier is unavailable, with the surety, within 60 days after the cancellation of a charter trip with respect to which the charterer's advance payments are secured by the bond, the surety shall be released from all liability under the bond to such charterer for such trips.

(d) A certificated or foreign air carrier must make a reasonable effort to verify that any charterer with which it contracts, and any charter it conducts, meets the applicable requirements of this chapter.

(e) The certificated or foreign air carriers shall require full payment of the total charter price, including payment for the return portion of a round trip, or the posting of a satisfactory bond for full payment, prior to the commencement of any portion of the air transportation, *provided*, however, that in the case of a passenger charter for less than the entire of an aircraft, the carrier shall require full payment of the total charter price, including payment for the return portion of a round trip, from the charterers not less than 10 days prior to the commencement of any portion of the transportation, and such payment shall not be refundable unless the charter is canceled by the carrier or unless the carrier accepts a substitute charterer for one which has canceled a charter, in which case the amount paid by the latter shall be refunded. For the purpose of this section, payment to the carrier's depository bank, as designated in the charter contract, shall be deemed payment to the carrier.

(f) A certificated or foreign air carrier operating a U.S.-originating passenger charter shall be responsible to return to his or her point of origin any passenger who purchased round trip transportation on that charter and who was transported by that carrier on his or her outbound flight; except that this provision shall not apply in cases where the return transportation is to be provided by another certificated or foreign air carrier.

(g) A certificated or foreign air carrier may not perform any charter flight for which a statement of authorization is required under § 212.9 until one has been granted by the Department. In addition, if a foreign air carrier is required to obtain a statement of authorization under paragraph (e) of that section, neither it, not any charter operator, or any other person shall advertise or sell any passenger charter services except those that have been specifically authorized by the Department.

(h) A certificated air carrier may not operate charters where such operations would result in a substantial change in the scope of its operations within the meaning of part 204 of this chapter.

(i) A certificated air carrier may not limit its baggage liability for interstate charter flights except as set forth in part 254 of this chapter.

(j) A certificated air carrier may not, except as set forth in part 121 of the Federal Aviation Regulations (14 CFR part 121), limit the availability, upon reasonable request, of air transportation and related services to a person who

may require help from another person in expeditiously moving to an emergency exit for evacuation of an aircraft.

(k) A certificated air carrier holding a certificate to conduct only cargo operations may not conduct passenger charters.

(l) A certificated air carrier may not perform any charter in interstate commerce within the State of Alaska.

(m) A foreign air carrier may operate charters in foreign air transportation only to the extent authorized by its foreign air carrier permit under 49 U.S.C. 41302 or exemption authority under 49 U.S.C. 40109, and only to the extent to which such operations are consistent with the provisions of any applicable bilateral aviation undertaking.

§ 212.4 Authorized charter types.

Certificated and foreign air carriers may conduct the following charter types, subject to the provisions of this part:

(a) Affinity (pro rata) charters.

(b) Single entity charters, including:

(1) Wet leases involving the carriage of passengers and/or cargo, provided, that the wet lessee holds appropriate economic authority from the Department to conduct the proposed operations; and

(2) Charters pursuant to contracts with the Department of Defense, provided, that foreign air carriers may conduct charters for the Department of Defense only to the extent that such operations are consistent with the provisions of 49 U.S.C. 40118.

(c) Mixed charters.

(d) Gambling junket charters.

(e) Public Charters in accordance with part 380 of this chapter (including operations by educational institutions as defined in that part).

(f) Overseas military personnel charters in accordance with part 372 of this chapter.

(g) Cargo charters.

§ 212.5 Operation of affinity (pro rata) charters.

An affinity (pro rata) charter operated by a certificated or foreign air carrier must meet the following criteria:

(a) The aircraft must be chartered by an organization, no part of whose business is the formation of groups for transportation or solicitation or sale of transportation services, for the purpose of providing air transportation to its members and their immediate families.

(b) The charter must be organized by the organization itself, or by a person or company who acts not as a principal, but as an agent for the chartering organization or the certificated or foreign air carrier.

(c) No solicitation, sales, or participation may take place beyond the bona fide members of an eligible chartering organization, and their immediate families (spouse, children, and parents). All printed solicitation materials shall contain the following notice in boldface, 10-point or larger type—

Some of the Federal rules that protect against tour changes and loss of passengers' money in publicly sold charters do not apply to this charter flight.

(d) "Bona fide members" are members of an organization who: Have not joined the organization merely to travel on a charter flight; and who have been members of the chartering organization for a minimum of six months prior to the date of commencement of the affected flight; *provided*, that the "six month" rule does not apply to:

(1) Employees of a single commercial establishment, industrial plant, or government agency, or

(2) Students and employees of a single school.

(e) The charter price due the direct air carrier shall be prorated equally among all the charter passengers, except that children under 12 may be offered discounted or free transportation.

(f) The certificated or foreign air carrier shall make reasonable efforts to assure that passengers transported meet the eligibility requirements of this section. The certificated or foreign air carrier shall also obtain (no later than the date of departure), and maintain for two years, a certification by an authorized representative of the chartering organization that all passengers are eligible for transportation under this section.

§ 212.6 Operation of gambling junket charters.

A gambling junket charter operated by a certificated or foreign air carrier must meet the following criteria:

(a) The aircraft must be chartered by

(1) A casino, hotel, or cruise line duly licensed by the government of any state, territory or possession of the United States, or by a foreign government, or

(2) An agent of such a casino, or cruise line on behalf of that casino, hotel, or cruise line.

(b) The casino, hotel, or cruise line or its agents, may not require a passenger to incur any expense in taking the trip, *provided*, that this provision shall not preclude the casino, hotel, or cruise line or its agents, from requiring prospective passengers to pay nominal reservation fees that are duly refundable by the casino, hotel, or cruise line before the flight, establish a minimum line-of-credit at the casino, hotel, or cruise line, bring (but not necessarily spend) a specified minimum amount of money, or meet other requirements that do not place them in financial jeopardy; nor does it preclude the casino, hotel, or cruise line, or its agents, from offering operational land packages for a fee.

§ 212.7 Direct sales.

(a) Certificated and foreign air carriers may sell or offer for sale, and operate, as principal, Public Charter flights under part 380 of this chapter directly to the public.

(b) Each certificated or foreign air carrier operating a charter trip under this section shall comply with all the requirements of part 380 of this chapter, except that:

(1) Those provisions of part 380 relating to the existence of a contract between a charter operator and a direct air carrier do not apply;

(2) A depository agreement shall comply with § 380.34a (d) and (f);

(3) A security agreement shall comply with § 380.34 (c) and (d); and

(i) If no depository agreement is used, protect charter participant payments (including those for ground accommodations and services) and assure the certificated or foreign air carrier's contractual and regulatory responsibilities to charter participants in an unlimited amount (except that the liability of the securer with respect to any charter participant may be limited to the charter price paid by or on behalf of such participant);

(ii) If used in combination with a depository agreement, protect charter participant payments (including those for ground accommodations and services) and assure the certificated or foreign air carrier's contractual and regulatory responsibilities to charter participants in the amount of at least $10,000 times the number of flights, except that the amount need not be more than $200,000. The liability of the securer with respect to any charter participant may be limited to the charter price paid by or on behalf of such participant.

(c) The Department reserves the right to limit or prohibit the operation of direct sales Public Charters by a foreign air carrier upon a finding that such action is necessary in the public interest.

§ 212.8 Protection of customers' payments.

(a) Except as provided in paragraph (c) of this section, no certificated air carrier or foreign air carrier shall perform any charter trip (other than a cargo charter trip) originating in the United States or any Overseas Military

Personnel Charter trip, as defined in part 372 of this chapter, nor shall such carrier accept any advance payment in connection with any such charter trip, unless there is on file with the Department a copy of a currently effective agreement made between said carrier and a designated bank, by the terms of which all sums payable in advance to the carrier by charterers, in connection with any such trip to be performed by said carrier, shall be deposited with and maintained by the bank, as escrow holder, the agreement to be subject to the following conditions:

(1) The charterer (or its agent) shall pay the carrier either by check or money order made payable to the depository bank. Such check or money order and any cash received by the carrier from a charterer (or its agent) shall be deposited in, or mailed to, the bank no later than the close of the business day following the receipt of the check or money order or the cash, along with a statement showing the name and address of the charterer (or its agent); provided, however, that where the charter transportation to be performed by a carrier is sold through a travel agent, the agent may be authorized by the carrier to deduct its commission and remit the balance of the advance payment to the carrier either by check or money order made payable to the designated bank.

(2) The bank shall pay over to the carrier escrowed funds with respect to a specific charter only after the carrier has certified in writing to the bank that such charter has been completed; provided, however, that the bank may be required by the terms of the agreement to pay over to the carrier a specified portion of such escrowed funds, as payment for the performance of the outbound segment of a round-trip charter upon the carrier's written certification that such segment has been so completed.

(3) Refunds to a charterer from sums in the escrow account shall be paid directly to such charterer its assigns. Upon written certification from the carrier that a charter has been canceled, the bank shall turn over directly to the charterer or its assigns all escrowed sums (less any cancellation penalties as provided in the charter contract) which the bank holds with respect to such canceled charter, provided however, that in the case of a split charter escrowed funds shall be turned over to a charterer or its assigns only if the carrier's written certification of cancellation of such charter includes a specific representation that either the charter has been canceled by the carrier or, if the charter has been canceled by the charterer, that the carrier has accepted a substitute charterer.

(4) The bank shall maintain a separate accounting for each charter flight.

(5) As used in this section the term "bank" means a bank insured by the Federal Deposit Insurance Corporation.

(b) The escrow agreement required under paragraph (a) of this section shall not be effective until approved by the Department. Claims against the escrow may be made only with respect to the non-performance of air transportation.

(c) The carrier may elect, in lieu of furnishing an escrow agreement pursuant to paragraph (a) of this section, to furnish and file with the Department a surety bond with guarantees to the United States Government the performance of all charter trips (other than cargo charter trips) originating in the United States and of all overseas military personnel charter trips, as defined in part 372 of this chapter, to be performed, in whole or in part, by such carrier pursuant to any contracts entered into by such carrier. The amount of such bond shall be unlimited.[1] Claims under the bond may be made only with respect to the non-performance of air transportation.

(d) The bond permitted by this section shall be in the form set forth as the appendix to this part. Such bond shall be issued by a bonding or surety company—

(1) Which is listed in Best's Insurance Reports (Fire and Casualty) with a general policyholders' rating of "A" or better or

(2) Which is listed in the U.S. Department of Treasury's notice listing companies holding Certificates of Authority as acceptable sureties on Federal bonds and as acceptable reinsuring companies, published in the **Federal Register** on or about July 1. The bonding or surety company shall be one legally authorized to issue bonds of that type in the State in which there is located the office or usual residence of the agency designated by the carrier under 49 U.S.C. 46103 to receive service of notices, process and other documents issued by or filed with the Department of Transportation. For the purposes of this section the term "State" includes any territory or possession of the United States, or the District of Columbia. If the bond does not comply with the requirements of this section, or for any reason fails to provide satisfactory or adequate protection for the public, the Department will notify the certificated or foreign air carrier by registered or certified mail, stating the deficiencies of the bond. Unless such deficiencies are corrected within the time limit set forth in the notification, no amounts payable in advance by customers for the subject charter trips shall be accepted by the carrier.

(e) The bond required by this section shall provide that unless the charterer files a claim with the carrier, or, if the carrier is unavailable, with the surety, within 60 days after cancellation of a charter trip with respect to which the charterer's advance payments are secured by the bond, the surety shall be released from all liability under the bond to such charterer for such charter trip. The contract between the carrier and the charterer shall contain notice of this provision.

§ 212.9 Prior authorization requirements.

(a) Certificated air carriers shall obtain a statement of authorization for each long-term wet lease to a foreign air carrier.

(b) Foreign air carriers shall obtain a statement of authorization for each:

(1) Fifth freedom charter flight to or from the United States;

(2) Long-term wet lease;

(3) Charter flight for which the Department specifically requires prior authorization under paragraph (e) or (f) of this section; or

(4) Part charter.

(c) The Department may issue blanket statements of authorization to foreign air carriers to conduct fifth freedom charters. The standards for issuing such blanket authorizations shall be those stated in § 212.11. The Department may revoke any authority granted under this paragraph at any time without hearing.

(d) The Department may at any time, with or without hearing, but with at least 30 days' notice, require a foreign air carrier to obtain a statement of authorization before operating any charter flight. In deciding whether to impose such a requirement, the Department will consider (but not be limited to considering) whether the country of the carrier's nationality:

(1) Requires prior approval for third or fourth freedom charter flights by U.S. air carriers;

(2) Has, over the objection of the U.S. Government, denied rights of a U.S. air carrier guaranteed by a bilateral agreement; or

(3) Has otherwise impaired, limited, or denied the operating rights of U.S. air carriers, or engaged in unfair, discriminatory, or restrictive practices with respect to air transportation services to, from, through, or over its territory.

[1] While the face amount of the bond is unlimited, claims are limited to amounts that are paid to carrier for U.S.-originating passenger charter flights that carrier fails to perform or to refund.

(e) The Department, in the interest of national security, may require a foreign air carrier to provide prior notification or to obtain a statement of authorization before operating any charter flight over U.S. territory.

§ 212.10 Application for statement of authorization.

(a) Application for a statement of authorization shall be submitted on OST Form 4540 except that for part charters or long-term wet leases the application may be in letter form. An application for a long-term wet lease shall describe the purpose and terms of the wet lease agreement. An original and two copies of an application shall be submitted to the Department of Transportation, Office of International Aviation, U.S. Air Carrier Licensing Division, X–44 (for an application by a certificated air carrier), or Foreign Air Carrier Licensing Division, X–45 (for an application by a foreign air carrier), 400 Seventh Street, SW., Washington, DC 20590. Upon a showing of good cause, the application may be transmitted by facsimile (fax) or telegram, or may be made by telephone, provided, that in the case of a fax or telephone application, the applicant must confirm its request (by filing an original and two copies of its application as described above) within three business days.

(b) A copy of each application for a long-term wet lease shall also be served on the Director of Flight Standards Service (AFS–1), Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591, and on each certificated air carrier that is authorized to serve the general area in which the proposed transportation is to be performed.

(c)(1) Applicants for statements of authorization filed by foreign air carriers shall include documentation to establish the extent to which the country of the applicant's nationality deals with U.S. air carriers on the basis of reciprocity for similar flights, if such flights are not subject to a bilateral agreement, and

(i) The Department has not established that the country accords reciprocity;

(ii) The Department has found reciprocity defective in the most recent prior approval application involving the country; or

(iii) Changes in reciprocity have occurred since the most recent Department finding for the country in question.

(2) Applications filed by certificated or foreign air carriers to conduct long-term wet leases shall include, for the country of the lessee's nationality, the documentation specified in paragraph (c)(1) of this section.

(d)(1) Applications shall be filed at least 5 business days before commencement of the proposed flight or flights, except as specified in paragraphs (d)(2), (d)(3), and (d)(4) of this section. Late applications may be considered upon a showing of good cause for the lateness.

(2) Applications for a part charter or for a long-term wet lease shall be filed at least 45 calendar days before the date of the first proposed flight.

(3) Applications specifically required under § 212.9(d) shall be filed at least 30 calendar days before the proposed flight or flights (10 calendar days for cargo charters), unless otherwise specified by the Department.

(4) Applications required by a Department order under § 212.9(e) shall be filed at least 14 calendar days before the proposed flight or flights, unless otherwise specified by the Department.

(5) Where an application is required by more than one provision of this part and/or order of the Department, only one application need be filed, but it must conform to the earliest applicable filing deadline.

(6) The Department may require service of applications as it deems necessary.

(e)(1) Any part in interest may file a memorandum supporting or opposing an application. Three copies of each memorandum shall be filed within 7 business days after service of the application or before the date of the proposed flight or flights, whichever is earlier. Memorandums will be considered to the extent practicable; the Department may act on an application without waiting for supporting or opposing memorandums to be filed.

(2) Each memorandum shall set forth the reasons why the application should be granted or denied, accompanied by whatever data, including affidavits, the Department is requested to consider.

(3) A copy of each memorandum shall be served on the certified or foreign air carrier applying for approval.

(f)(1) Unless otherwise ordered by the Department, each application and memorandum filed in response will be available for public inspection at the Office of International Aviation immediately upon filing. Notice of the filing of all applications shall be published in the Department's Weekly List of Applications Filed.

(2) Any person objecting to public disclosure of any information in an application or memorandum must state the grounds for the objection in writing. If the Department finds that disclosure of all or part of the information would adversely affect the objecting person, and that the public interest does not require disclosure, it will order that the injurious information be withheld.

§ 212.11 Issuance of statement of authorization.

(a) The Department will issue a statement of authorization if it finds that the proposed charter flight, part charter, or wet lease meets the requirements of this part and that it is in the public interest. Statements of authorization may be conditioned or limited.

(b) In determining the public interest the Department will consider (but not be limited to) the following factors:

(1) The extent to which the authority sought to covered by and consistent with bilateral agreements to which the United States is a party.

(2) The extent to which an applicant foreign air carrier's home country (and, in the case of a long-term wet lease, the lessee's home country) deals with U.S. air carriers on the basis of substantial reciprocity.

(3) Whether the applicant or its agent has previously violated the provisions of this part.

(4) Where the application concerns a long-term wet lease:

(i) Whether the lessor (applicant) or its agent or the lessee (charterer) or its agent has previously violated the provisions of the Department's charter regulations.

(ii) Whether, because of the nature of the arrangement and the benefits involved, the authority sought should be the subject of a bilateral agreement.

(iii) To what extent the lessor owns and/or controls the lessee, or is owned and/or controlled by the lessee.

(c) The Department will submit any denial of an authorization specifically required of a foreign air carrier under § 212.9(d) to the President of the United States at least 10 days before the proposed departure. The denial will be subject to stay or disapproval by the President within 10 days after it is submitted. A shorter period for Presidential review may be specified by the Department where the application for authorization is not timely or properly filed. Denial of a late-filed application need not be submitted to the President. For the purposes of this paragraph, an application filed by a foreign air carrier under § 212.9(d) to conduct a cargo charter will be considered as timely filed only if it is filed at least 30 calendar days before the proposed flight, notwithstanding the 10-day filing requirement for cargo charters in § 212.10(d)(3).

(d) The Department will publish notice of its actions on applications for

statements of authorization in its Weekly List of Applications Filed. Interested persons may upon request obtain copies of letters of endorsed forms advising applicants of action taken on their applications.

§ 212.12 Waiver.

The Department may grant a waiver of any of the provisions of this part upon a finding that such waiver is in the public interest. A certificated or foreign air carrier may request a waiver by filing a written application with the Department, citing the specific provision to be waived and providing justification for such waiver.

Appendix A—Certificated or Foreign Air Carrier's Surety Bond Under Part 212 of the Regulations of the Department of Transportation (14 CFR Part 212)

Know all persons by these presents, that we _____ (Name of certificated or foreign air carrier) of _____, (City) _____ (State or Country) as Principal (hereinafter called Principal), and _____ (name of Surety) a corporation created and existing under the laws of the State of _____ (State) as Surety (hereinafter called Surety) are held and firmly bound unto the United States of America in an unlimited amount, as required by 14 CFR 212.8, for which payment, well and truly to be made, we bind ourselves and our heirs, executors, administrators, successors, and assigns, jointly and severally, firmly by these presents.

Whereas the principal, a certificated air carrier holding a certificate of public convenience and necessity issued under 49 U.S.C. 41102, or a foreign air carrier holding a foreign air carrier permit issued under 49 U.S.C. 41302 or an exemption issued under 49 U.S.C. 40109 authorizing that foreign air carrier to engage in charter trips in foreign air transportation, is subject to rules and regulations of the Department of Transportation relating to security for the protection of charterers of civil aircraft and has elected to file with the Department of Transportation such a bond as will guarantee to the United States Government the performance of all charter trips (other than cargo charter trips) originating in the United States and of all Overseas Military Personnel Charters, as defined in 14 CFR part 372, to be performed, in whole or in part, by such certificated or foreign air carrier pursuant to contracts entered into by such carrier after the execution date of this bond, and

Whereas this bond is written to assure compliance by the Principal with rules and regulations of the Department of Transportation relating to security for the protection of charterer of civil aircraft for charter trips (other than cargo charters) originating in the United States or of Overseas Military Personnel Charter trips and shall inure to the benefit of any and all such charterers to whom the Principal may be held legally liable for any of the damages herein described.

Now, therefore, the condition of this obligation is such that if the Principal shall pay or cause to be paid to such charterer any sum or sums for which the Principal may be held legally liable by reason of the Principal's failure faithfully to perform, fulfill, and carry out all contracts made by the Principal while this bond is in effect for the performance of charter trips (other than cargo charter trips) originating in the United States and of Overseas Military Personnel Charter trips, then this obligation shall be void, otherwise to remain in full force and effect.

The liability of the Surety shall not be discharged by any payment or succession of payments hereunder in any specified amount. The surety agrees to furnish written notice to the Department of Transportation forthwith of all suits filed, judgments rendered, and payments made by said Surety under this bond.

This bond is effective the _____ day of _____, _____, 12:01 a.m., standard time at the address of the Principal as stated herein and shall continue in force until terminated as hereinafter provided. The Principal or the Surety may at any time terminate this bond by written notice to the Department of Transportation at its office in Washington, D.C., such termination to become effective thirty (30) days after actual receipt of said notice by the Department. The Surety shall not be liable hereunder for the payment of the damages hereinbefore described which arise as the result of any contracts for the performance of air transportation services made by the Principal after the termination of this bond becomes effective, as herein provided, but such termination shall not affect the liability of the Surety hereunder for the payment of any such damages arising as the result of contracts for the performance of air transportation services made by the Principal after the termination of this bond becomes effective. Liability of the Surety under this bond shall in all events be limited only to a charterer who shall within sixty (60) days after the cancellation of a charter trip with respect to which the charterer's advance payments are secured by this bond give written notice of claim to the certificated or foreign air carrier, or, if it is unavailable, to the Surety, and all liability on this bond for such charter trip shall automatically terminate sixty (60) days after the termination date thereof except for claims filed within the time provided herein.

In witness whereof, the said Principal and Surety have executed this instrument on the _____ day of _____, _____.

Principal

Bonding or surety company must be listed in Best's Insurance Reports (Fire and Casualty) with a general policyholders' rating of "A" or better or in the Department of the Treasury listing of companies holding certificates of authority as acceptable sureties on Federal bonds. In addition, the bonding or surety company shall be one legally authorized to issue bonds of that type in the State(s) in which the charter flight(s) originate. Agents must provide satisfactory proof that they have the requisite authority to issue this bond.

Appendix B—Certification of Compliance

Organization Charterworthiness for Affinity Charter Air Transportation and Eligibility of All Prospective Passengers for Such Flights Under Part 212 of the Regulations of the Department of Transportation (14 CFR Part 212)

I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct.

4. Part 380 is revised to read as follows:

PART 380—PUBLIC CHARTERS

Subpart A—General Provisions

Sec.
380.1 Applicability.
380.2 Definitions.
380.3 General provisions.
380.4 Enforcement.

Subpart B—Conditions and Limitations

380.10 Public Charter requirements.
380.11 Payment to direct air carrier(s).
380.12 Cancellation by charter operator and notice to participants.
380.13 Prohibition on sale of round trips with open returns.
380.14 Unused space.
380.15 Substitution for charter participants.
380.17 Charters conducted by educational institutions.

Subpart C—Requirements Applicable to Charter Operators

380.20 Relief from the Statute.
380.21 380.23 [Reserved]
380.24 Suspension of exemption authority.
380.25 Prospectus filing and related requirements.
380.26 Discrimination.
380.27 Methods of competition.
380.28 Charter prospectus.
380.29 Charter contract.
380.30 Solicitation materials.
380.31 General requirements for operator-participant contracts.
380.32 Specific requirements for operator-participant contracts.
380.33 Major changes in itinerary or price; refunds.
380.33a Operator's option plan.
380.34 Security and depository agreements.
380.34a Substitution of direct air carrier's security or depository agreement.
380.35 Disbursements from depository account.
380.36 Record retention.

Subpart D—Requirements Applicable to Direct Air Carriers

380.40 Charter not to be performed unless in compliance with this part 380.
380.41 380.42 [Reserved]
380.43 Cancellations by direct air carriers.

380.45 Suspension of exemption authority.
380.46 Charter trip reporting.

Subpart E—Registration of Foreign Charter Operators

380.60 Purpose.
380.61 Operations by foreign charter operators.
380.62 Registration applications.
380.63 Objections to registration applications.
380.64 Department action on a registration application.
380.65 Notification of change of operations or ownership.
380.66 Cancellation or conditioning of the registration.
380.67 Waiver of sovereign immunity.
Appendix A—Public Charter Operator's Surety Bond Under Part 380 of the Special Regulations of the Department of Transportation (14 CFR Part 380)
Appendix B Public Charter Surety Trust Agreement

Authority: 49 U.S.C. 40101, 40102, 40109, 40113, 41101, 41103, 41301, 41504, 41702, 41708, 41712, 46101.

Subpart A—General Provisions

§ 380.1 Applicability.

This part applies to Public Charter air transportation of passengers in interstate or foreign air transportation, whether furnished by direct air carriers or Public Charter operators. This part also relieves such charter operators from various provisions of subtitle VII of Title 49 of the United States Code (statute), formerly Title IV of the Federal Aviation Act of 1958, as amended, for the purpose of enabling them to provide Public Charters utilizing aircraft chartered from such direct air carriers. It also declines jurisdiction over foreign Public Charter operators operating foreign-originating Public Charters.

§ 380.2 Definitions.

For the purposes of this part:

Certificated air carrier means a U.S. direct air carrier holding a certificate issued under the statute.

Charter flight means a flight operated under the terms of a charter contract between a direct air carrier and its customer. It does not include scheduled air transportation, scheduled foreign air transportation, or nonscheduled cargo air transportation, sold on an individually ticketed or individually waybilled basis.

Direct air carrier means a certificated or foreign air carrier, or an air taxi operator or commuter air carrier registered under part 298 of this chapter, or a Canadian charter air taxi operator registered under part 294 of this chapter, that directly engages in the operation of aircraft under a certificate, permit or exemption issued by the Department.

Educational institution means a school that is operated as such on a year-round basis and is empowered to grant academic degrees or secondary school diplomas by any government in the United States or by a foreign government.

Foreign air carrier means a direct air carrier that holds a foreign air carrier permit issued under the statute or an exemption issued under the statute authorizing direct foreign air transportation.

Foreign Public Charter opertor means an indirect air carrier which is not a citizen of the United States as defined in the statute, that is authorized to engage in the formation of groups for transportation on Public Charters in accordance with this part.

Indirect air carrier means any person who undertakes to engage indirectly in air transportation operations and who uses for such transportation the services of a direct air carrier.

Public Charter means a one-way or round-trip charter flight to be performed by one or more direct air carriers that is arranged and sponsored by a charter operator.

Public Charter operator means a U.S. or foreign Public Charter operator.

Security agreement means:

(1) A surety bond issued by a company—

(i) That is listed in the Best's Insurance Reports (Fire and Casualty) with a general policyholders' rating of "A" or better, or

(ii) That is listed in the U.S. Department of Treasury's notice listing companies holding Certificates of Authority as acceptable sureties on Federal bonds and as acceptable reinsuring companies, published in the **Federal Register** in the first week in July; or

(2) A Surety trust agreement or a letter-of-credit, issued by a Federal Deposit Insurance Corporation-insured financial institution, which provides substantially equivalent protection.

Statute means Subtitle VII of Title 49 of the United States Code (Transportation).

Sub-operator means a Public Charter operator that has contracted for its charter seats from a Public Charter operator that has contracted from one or more direct air carriers. A sub-operator is itself an indirect air carrier, not an agent of the Public Charter operator from which it has obtained its seat.

U.S. Public Charter operator means an indirect air carrier that is a citizen of the United States as defined in 49 U.S.C. 40102(a) and that is authorized to engage in the formation of groups for transportation on Public Charters in accordance with this part.

§ 380.3 General provisions.

(a) Public Charters may be operated on a one-way or round-trip basis, with no minimum group or contract size. Public Charters may be sold on an air-only basis, or with mandatory or optional land arrangements.

(b) A U.S. Public Charter operator operating a Public Charter which originates in a foreign country shall not be subject to the requirements of §§ 380.25, 380.28, 380.30 and 380.35.

(c) The Department declines to exercise jurisdiction over a foreign Public Charter operator which operates a Public Charter originating in a foreign country, but reserves the right to exercise its jurisdiction over any foreign Public Charter operator at any time its finds that such action is in the public interest.

(d)(1) An educational institution operating a Public Charter need not comply with the financial security requirements of § 380.34 if each student participant in the charter is enrolled in a formal academic course of study outside the United States, sponsored by or in conjunction with that institution, that is of at least four weeks' duration.

(2) The spouse, children, and parents of a student participant may accompany the participant on a charter operated under this section.

(e) The Department, upon application or on its own initiative, may waive any of the provision of this part if it finds such action to be in the public interest.

§ 380.4 Enforcement.

In the case of any violation of the provision of the Statute or of this part, or any other rule, regulations, or order issued under the Statute, the violator may be subject to a proceeding pursuant to the Statute before the Department or a U.S district court, as the case may be, to compel compliance therewith; to civil penalties pursuant to the provisions of the Statute, or to criminal penalties pursuant to the provisions of the Statute, or other lawful sanctions.

Subpart B—Conditions and Limitations

§ 380.10 Public Charter requirements.

Public Charters under this part shall meet the following requirements:

(a)–(b) [Reserved]

(c) If the charter is on a round-trip basis, the departing flight and returning need not be performed by the same direct air carrier.

(d) The air transportation portion of the charter must be performed by direct air carriers that hold authority under

Chapter 411 and 413 of the Statute, or are operating under 14 CFR part 298, except that only U.S. citizen direct air carriers may provide air transportation for operations in interstate air transportation.

§ 380.11 Payment to direct air carrier(s).

Except for air taxi operators and commuter air carriers (which are governed by 14 CFR 298.38) and Canadian charter air taxi operators (which are governed by 14 CFR 294.32), the direct air carrier(s) shall be paid in full for the cost of the charter transportation (for both legs, if a round-trip charter) prior to the scheduled date of flight departure, as provided for in the basic charter regulations applicable to the direct air carrier(s) under part 212 of this chapter.

§ 380.12 Cancellation by charter operator and notice to participants.

(a) The charter operator may not cancel a charter for any reason (including insufficient participation), except for circumstances that make it physically impossible to perform the charter trip, less than 10 days before the scheduled date of departure of the outbound trip.

(b) If the charter operator cancels 10 or more days before the scheduled date of departure, the operator must so notify each participant in writing within 7 days after the cancellation but in any event not less than 10 days before the scheduled departure date of the outbound trip. If a charter is canceled less than 10 days before scheduled departure (i.e., for circumstances that make it physically impossible to perform the charter trip), the operator must get the message to each participant as soon as possible.

§ 380.13 Prohibition on sale of round trips with open returns.

The charter operator shall not accept any participant's payment for return transportation unless the participant has specified a particular return flight.

§ 380.14 Unused space.

Noting contained in this part shall preclude a charter operator from utilizing any unused space on an aircraft by it for a Public Charter for the transportation, on a free or reduced basis, of such charter operator's employees, directors, and officers, and parents and immediate families of such persons.

§ 380.15 Substitution for charter participants.

Subsititues may be arranged for charter participants at any time preceding departure. Participants who provide the charter operator or its sales agent with a substitute participant, or who are substituted for by a participant found by the operator, shall receive a refund of all moneys paid to the operator, except that the operator may reserve the right to retain an administrative fee not to exceed $25 for effecting the substitution.

§ 380.17 Charters conducted by educational institutions.

(a) This section shall apply only to charters conducted by educational institutions for charter groups comprised of bona fide participants in a formal academic course of study abroad which is of at least 4 weeks duration. The charter group may also include a student participant's immediate family (spouse, children, and parents). Except as modified in this section, all terms and conditions of this part applicable to the operation of Public Charters shall apply to charters conducted by educational institutions.

(b) An educational institution conducting such a charter shall submit to the Office of Aviation Analysis, Special Authorities Division, a statement, signed by its president, certifying that it meets the definition of "educational institution" set forth in § 380.2.

(c) An educational institution conducting such a charter need not comply with the requirements of §§ 380.25, 380.28, 380.34, and 380.35.

Subpart C—Requirements Applicable to Charter Operators

§ 380.20 Relief from the Statute.

(a) To the extent necessary to permit them to organize and arrange public charters, charter operators and foreign charter operators are hereby relieved from the following provisions of Subtitle VII of Title 49 of the U.S. Code, only if and so long as they comply with the provisions and the conditions imposed by this part:

(1) Chapter 411.

(2) Chapter 413.

(3) Chapter 415.

(4) Chapter 419.

(5) If foreign charter operators receive interstate air transportation rights, any other provision of the statute that would otherwise prohibit them from organizing and arranging Public Charters in interstate air transportation.

(b) A charter operator who is a citizen of the United States shall not be subject to the following requirements with respect to Public Charters that originate in a foreign country: §§ 380.25, 380.28, and 380.30 through 380.35.

§§ 380.21–380.23 [Reserved]

§ 380.24 Suspension of exemption authority.

The Department reserves the power to deny the exemption authority of any charter operator, without hearing, if it finds that such action is necessary in the public interest or is otherwise necessary in order to protect the rights of the traveling public.

§ 380.25 Prospectus filing and related requirements.

A charter operator may organize and operate a Public Charter only in accordance with this part, and subject to the following conditions:

(a) No charter operator shall operate, sell, receive money from any prospective participant for, or offer to sell or otherwise advertise a charter or series of charters until the Office of Aviation Analysis, Special Authorities Division, has accepted a Public Charter prospectus as described in § 380.28.

(b) If within 10 days after the filing the Department notifies the charter operator that it has rejected the prospectus for noncompliance with this part, the prohibitions set forth in paragraph (a) of this section shall continue until the Department advises that it has accepted the prospectus.

(c) The following amendments to a filed prospectus may be made:

(1) The addition or cancellation of any flight;

(2) A change in any flight, date, origin city or destination city; and

(3) A change in or addition of any direct air carrier, securer, or depository bank.

(d) The charter operator shall amend the prospectus to reflect any change described in paragraph (c) of this section. The amendment shall be filed in the manner and form used for the original prospectus. It shall become effective upon filing unless the operator is otherwise notified.

(e) The charter operator shall notify the depository bank (if any) and the securer of any change described in paragraph (c) of this section not later than when filing a prospectus amendment to reflect the change. If the securer is unable to adjust the security agreement as required by the change, the Office of Aviation Analysis, Special Authorities Division shall be advised of this fact within 2 business days.

(Approved by the Office of Management and Budget under Control Number 2106–0005).

§ 380.26 Discrimination.

No charter operator shall make, give, or cause any undue or unreasonable preference or advantage to any

VOL 63 ISS 99 MY 22 1998 UMI

particular person, port, locality, or description of traffic in air transportation in any respect whatsoever, or subject any particular person, port, locality, or description of traffic in air transportation to any unjust discrimination or any undue or unreasonable prejudice or disadvantage in any respect whatsoever.

§ 380.27 Methods of competition.

No charter operator shall engage in unfair or deceptive practices or unfair methods of competition in air transportation or the sale thereof.

§ 380.28 Charter prospectus.

(a) The charter prospectus shall include an original and two copies of the following:

(1) From the charter operator and the direct air carrier:

(i) The proposed flight schedule, listing the origin and destination cities, dates, type of aircraft, number of seats, and charter price for each flight;

(ii) The tour itinerary (if any) including hotels (name and length of stay at each), and other ground accommodations and services; and

(iii) A statement that they have entered into a charter contract that covers the proposed flight schedule, that the contract complies with all applicable Department regulations, and that a copy of the schedule has been sent to the depository bank (if any) and the operator's securer. The schedule shall be identified with a number assigned by the charter operator that does not duplicate any schedule numbers assigned by the operator to other proposed flight schedules. The proposed flight schedule, tour itinerary (if any), and statement shall be filed on OST Form 4532.

(2)(i) From the charter operator and the securer, a statement:

(A) That they have entered into a security agreement covering the proposed flight schedule that complies with § 380.34, including the amount of the coverage, the number assigned to it by the securer, and the amount of any outstanding claims against it, and

(B) That the securer has received a copy of the proposed flight schedule. The statement shall identify the proposed flight schedule by the schedule number assigned by the charter operator in accordance with paragraph (a) of this section. If there are any outstanding claims against the agreement, the charter operator and securer shall also state that they have executed a rider or amendment increasing the coverage by the amount of the claims, or that the securer will separately pay any claims for which it may be liable without impairing the agreement or reducing the amount of its coverage.

(ii) These statements shall be filed an OST Form 4533.

(3) If a depository agreement is used, a statement from the charter operator, the direct air carrier, and the depository bank:

(i) That they have entered into a depository agreement covering the proposed flight schedule that complies with § 380.34, and

(ii) That the bank has received a copy of the proposed flight schedule by the schedule number assigned by the charter operator in accordance with paragraph (a)(1) of this section. This statement shall be filed on OST Form 4534.

(b) Each of the statements described in paragraph (a) of this section shall also include the names and addresses of the parties to it, and the originals shall be signed by those parties.

(c) The prospectus may cover a series of charters performed by one charter operator if the departure of the last charter is not more than one year after the departure of the first.

(d) If the prospectus covers a series of charters and the air transportation will be performed by more than one direct air carrier, the prospectus shall include separate statements in accordance with paragraphs (a)(1) and (a)(3) of this section to cover the flights that will be performed by each direct carrier.

(Approved by the Office of Management and Budget under Control Number 2106–0005).

§ 380.29 Charter contract.

The charter contract between the charter operator or foreign charter operator and the direct air carrier shall evidence a binding commitment on the part of the carrier to furnish the air transportation required for the trip or trips covered by the contract.

§ 380.30 Solicitation materials.

(a) All solicitation materials for a Public Charter shall include the name of the charter operator and the name of the direct air carrier.

(b) Any solicitation material that states a price per passenger shall also include one of the following:

(1) A statement referring to the operator-participant contract for further information about conditions applicable to the charter; or

(2) The full text of the operator-participant contract.

(c) Except as set forth in § 380.33a for operator's option plan contracts, if the charter prospectus names alternative dates or cities, any solicitation material that states a price per passenger shall also state that the actual dates or cities have not yet been selected, if that is the case.

(d) Any solicitation material that names a hotel but does not name every hotel named in the operator-participant contract shall also state that substitutions may be made.

(e) In any solicitation material from a direct air carrier, indirect air carrier, or an agent of either, for a charter, charter tour (*i.e.*, a combination of air transportation and ground accommodations), or a charter tour component (*e.g.*, a hotel stay), any price stated for such charter, tour, or component shall be the entire price to be paid by the participants to the air carrier, or agent, for such charter, tour, or component.

§ 380.31 General requirements for operator-participant contracts.

(a) Except for telephone sales for which payment is made by credit card as described in paragraph (b) of this section, the charter operator shall not accept payment from or on behalf of a prospective participant unless the participant has agreed to the conditions of the charter by signing an operator-participant contract as described in § 380.32. If a member of a group that will travel together pays for the group, that member may sign the contract on behalf of the group.

(b) For telephone sales only, the charter operator may accept payment by credit card without the participant having first signed an operator-participant contract provided that the charter operator first advises the customer:

(1) That he or she has the right to receive the operator-participant contract before making a booking;

(2) That the operator-participant contract will be mailed to the participant within 24 hours of accepting payment by credit card; and

(3) That the operator-participant contract must be signed, and the signed portion returned to the operator, before travel.

(4) A full refund must be made of any amounts charged to a credit card for any participant who cancels before the operator-participant contract is signed.

(c) The contract form may include a space that participants may check to authorize the charter operator to retain their money while attempting to make other arrangements for them if there is no space available on the flight or on specific alternative flights they have requested.

(d) If there is no space available on the flight or specific alternative flights requested by the participant the

operator shall return all the participant's money within 7 days after receiving it unless the participant, in accordance with paragraph (c) of this section, has authorized the operator to retain the payments while the operator attempts to make other arrangements for the participant. If the operator retains the payments while attempting to make other arrangements for the participant, it shall notify the participant of the fact within 7 days after receiving the payments, but in no event later than the departure. For the purpose of the time periods in this paragraph, receipt of money by a travel agent on behalf of a charter operator will not be considered as receipt by the operator.

(e) Except as set forth in § 380.33a for operator's option plan contracts, the operator-participant contract shall not specify alternative dates for the outbound or return flights, or alternative origin or destination cities for any flight leg.

(f) The contract form shall be printed in 7-point or larger type. The statements required by paragraph (a), (f), (h), (l), (r), (s), and (x) of § 380.32 shall be printed so as to contrast with the rest of the contract by the use of bold-faced type, capital letters, or a type size that is at least 50 percent larger than that used for the rest of the contract.

(g) The contract form shall include a space that participants may check to indicate that they wish to be furnished details of trip cancellation, health, and accident insurance.

(h) The contract form shall be designed so as to enable participants to retain a copy of the general terms and conditions after signing it. The specific information supplied by participants (such as choices of dates, cities, or other options) need not be retainable.

§ 380.32 Specific requirements for operator-participant contracts.

Contracts between charter operators and charter participants shall state:

(a) The name and complete mailing address of the charter operator;

(b) The name of the direct air carrier, the dollar amounts of that carrier's liability limitations for participant's baggage, the type and capacity of the aircraft to be used for the flight, and the conditions governing aircraft-equipment substitutions;

(c) The dates of the outbound and return flights;

(d) The origin and destination cities of each flight leg;

(e) The amount and schedule of payments;

(f) If a depository agreement as provided in § 380.34(b) is used: That all checks, money orders, and credit card drafts must be made payable to the escrow account at the depository bank (identifying bank) [1] or, when the charter is sold to the participant by a retail travel agent, checks and money orders may be made payable to the agent, who must in turn make his check payable to the escrow account at the depository bank;

(g) The tour itinerary, if any, including the name and location of the hotels, length of stay at each, and other ground accommodations and services that are part of the tour;

(h) That the charter operator may not cancel the charter less than 10 days before the scheduled departure date, except for circumstances that make it physically impossible to perform the charter tip;

(i) That if a charter is canceled 10 or more days before the scheduled departure date, the operator will notify the participant in writing within 7 days after the cancellation, but in any event at least 10 days before the scheduled departure;

(j) That is a charter is canceled less than 10 days before departure (*i.e.*, for circumstances that make it physically impossible to perform the charter trip), the operator will get the message to the participant as soon as possible;

(k) That if the charter is canceled, a refund will be made to the participant within 14 days after the cancellation;

(l) The right to refunds if the participant changes plans is limited;

(m) The right to refunds if the participant changes plans, including

(1) The right to a full refund, for sales made by credit card, until an operator-participant contract is signed; and

(2) That any participant who wishes to cancel will receive a full refund (less any applicable administrative fee, not to exceed $25) upon providing a substitute participant to the charter operator or its sales agent, or upon being substituted for by a participant found by the charter operator;

(n) The procedure for obtaining the refunds described in paragraph (m) of this section, including that they will be made within 14 days after the cancellation or substitution;

(o) The meaning of "major change", as set forth in § 380.33(a);

(p) That if the charter operator knows of a major change 10 or more days before scheduled departure, the operator will notify the participant of the change within 7 days after first knowing of it, but in any event at least 10 days before scheduled departure;

(q) That is the operator first knows of a major change less than 10 days before scheduled departure, the operator will get the message to the participant as soon as possible;

(r) That within 7 days after receiving a pre-departure notification of a major change but in no event later than departure, the participant may cancel, and that a full refund will be made to the participant within 14 days after canceling;

(s) That upon a post-departure notification of a major change, the participant may reject the substituted hotel or the changed date, origin, or destination of a flight leg and be sent, within 14 days after the return date named in the contract, a refund of the portion of his payment allocable to the hotel accommodations or air transportation not provided;

(t) That the participants rights and remedies set forth in the contract, including the procedures for major changes, shall be in addition to any other rights or remedies available under applicable law, although the operator may condition a refund on the participant's waiver of additional remedies;

(u) That trip cancellation, health, and accident insurance is available and that the operator will furnish details of the insurance to participants who check the space provided for this purpose on the contract form;

(v) The name and address of the surety company or bank issuing the security agreement; and that unless the charter participant files a claim with the charter operator or, if he is unavailable, with the securer, within 60 days after termination of the charter, the securer shall be released from all liability under the security agreement to that participant. Termination means the date of arrival (or in the case of a canceled charter, the intended date or arrival) of the return flight. If there is no return flight in a participant's itinerary, termination means the date or intended date of departure of the last flight in the participant's itinerary;

(w) For international flights only: That additional restrictions may be imposed on the flight by the foreign government involved, and that if landing rights are denied by a foreign government the flight will be canceled with a full refund to the participant.

[1] If the credit card merchant account is separate from the depository account, it must be used solely as a conduit, i.e., all credit card payments toward Public Charter trips must be immediately remitted to the depository account in full, without holdback, or retention of any portion of the participant's payment. If the depository bank is not the credit card merchant bank, the Department must be satisfied that there are adequate procedural safeguards for the protection of participants' payments.

This statement need not be included in the contract if—

(1) The prospectus includes a certification by the charter operator and the direct air carrier that landing rights have been obtained from all the foreign governments involved, and

(2) All the foreign governments involved have adopted country-of-origin rules for charterworthiness;

(x) That the charter operator is the principal and is responsible to the participants for all services and accommodations offered in connection with the charter. However, the contract may expressly provide that the charter operator, unless negligent, is not responsible for personal injury or property damage caused by any direct air carrier, hotel or other supplier of services in connection with the charter.

§ 380.33 Major changes in itinerary or price; refunds.

(a) For the purposes of this section, "major change" means any of the following:

(1) A change in the departure or return date shown in the operator-participant contract, (or, if the contract states alternative dates, the date designated to the participant by the charter operator in accordance with § 380.33a(b)), unless the change results from a flight delay. In any event, however, a date change that the operator knows of more than 2 days before the scheduled flight date, and any delay of more than 48 hours, will be considered a major change.

(2) A change in the origin or destination city shown in the operator-participant contract for any flight leg (or, if the contract states alternative cities, the city designated to the participant by the operator in accordance with § 380.33a(b)), unless the change affects only the order in which cities named in a tour package are visited.

(3) A substitution of any hotel that is not named in the operator-participant contract; and

(4) A price increase to the participant that occurs 10 or more days before departure and results in an aggregate price increase of more than 10 percent.

(b) The charter operator shall not increase the price to any participant less than 10 days before departure.

(c) The charter operator shall notify all participants of major changes, as required by the operator-participant contracts. This notification shall include the participants' rights to refunds required to be described in the operator-participant contract. The operator shall, if applicable, also notify the participants that the acceptance of a refund constitutes a waiver of their legal rights.

(d) Except as otherwise specified, notifications and refunds required by this part are considered made at the time they are mailed or sent by an equivalent method.

(e) The charter operator shall make all refunds required to be described in the operator-participant contract within the time limits set forth in paragraphs (k), (n), (r), and (s) of § 380.32, as applicable.

§ 380.33a Operator's option plan.

(a) For the purposes of this part, an operator's option plan contract that states alternative dates for the outbound or return flights, or alternative origin or destination cities for any flight leg.

(b) Operator's option plan contracts shall state, in addition to the information required by § 380.32, that the selection of the actual dates or cities, as applicable, is at the charter operator's option and will not entitle the participant to a refund, and that the operator will notify the participant of the actual dates or cities at least 10 days before the earliest of any alternative dates for the outbound flight.

(c) Contract forms for all operator's option plan contracts shall be labeled "OPERATOR'S OPTION PLAN" in bold-faced capital letters at least ¼ inch high. The statement required by paragraph (b) of this section and the statement of alternative dates (§ 380.32(c)) or alternative cities (§ 380.32(d)), as applicable, shall be printed so as to contrast with the rest of the contract, as set forth in § 380.31(f).

(d) Any solicitation material that states a price per passenger for an operator's option plan contract shall clearly and conspicuously—

(1) Identify that price as being for the operator's option plan,

(2) Name all the possible dates or cities, as applicable, and

(3) State that the selection of the actual dates or cities is at the charter operator's option.

(e) Charter operators and their agents shall not misrepresent to prospective participants, orally, in solicitation materials, or otherwise, the probability that any particular city or date will be selected from among the alternatives named in an operator's option plan contract.

(f) The charter operator shall notify all participants with operator's option plan contracts of the actual dates or cities, as applicable, as required by contracts.

§ 380.34 Security and depository agreements.

(a) Except as provided in paragraph (b) of this section, the charter operator or foreign charter operator shall furnish a security agreement in an amount for not less than the charter price for the air transportation, if only air transportation is involved, or, if the charter involves land accommodations in addition to air transportation, a security agreement in one of the following amounts dependent upon the length of the charter or series of charters:

(1) For a charter or series of charters of 14 days or less, security in an amount of not less than the charter price for the air transportation to be furnished in connection with such charter or series of charters;

(2) For a charter or series of charters of more than 14 days but less than 28 days security in an amount of not less than twice the charter price; and

(3) For a charter or series of charters of 28 days or more, security in an amount of not less than three times the charter price: Provided, however, That the liability of the securer to any charter participant shall not exceed amounts paid by that participant to the charter operator with respect to the charter.

(b) The direct air carrier and the charter operator or foreign charter operator may elect, in lieu of furnishing a security agreement as provided under paragraph (a) of this section, to comply with the requirements of paragraphs (b)(1) and (b)(2) of this section, as follows:

(1) The charter operator shall furnish a security agreement in an amount of at least $10,000 times the number of flights, except that the amount need not be more than $200,000. The liability of the securer to any charter participant shall not exceed the amount paid by the participant to the charter operator for that charter.

(2) The direct air carrier and charter operator or foreign charter operator shall enter into an agreement with a designated bank, the terms of which shall provide that all payments by charter participants paid to charter operators or foreign charter operators and their retail travel agents shall be deposited with and maintained by the bank subject to the following conditions:

(i) On sales made to charter participants by charter operators or foreign charter operators the participant shall pay by check, money order, or credit card draft payable to the bank; [2] on sales made to charter participants by retail travel agents, the retail travel agent may deduct his commission and remit the balance to the designated bank by check, money order, or electronic transfer: Provided, That the travel agent

[2] See also n.1, *supra*.

agrees in writing with the charter operator or foreign charter operator that if the charter is canceled the travel agent shall remit to the bank the full amount of the commission previously deducted or received within 10 days after receipt of notification of cancellation of the charter; except for the credit card company's usual commission (not to exceed 3 percent), the charter operator shall not permit any portion of a charter participant's payments by credit cared to be "held back" by the credit card merchant bank; [3]

(ii) The bank shall pay the direct air carrier the charter price for the transportation not earlier than 60 days (including day of departure) prior to the scheduled day of departure of the originating or returning flight, upon certification of the departure date by the air carrier: Provided, That, in the case of a round trip charter contract to be performed by one carrier, the total round trip charter price shall be paid to the carrier not earlier than 60 days prior to the scheduled day of departure of the originating flight;

(iii) The bank shall reimburse the charter operator or foreign charter operator for refunds made by the latter to the charter participant upon written notification from the charter operator or foreign charter operator;

(iv) If the charter operator, foreign charter operator or the direct air carrier notifies the bank that a charter has been canceled, the bank shall make applicable refunds directly to the charter participants;

(v) After the charter price has been paid in full to the direct air carrier, the bank shall pay funds from the account directly to the hotels, sightseeing enterprises, or other persons or companies furnishing ground accommodations and services, if any, in connection with the charter or series of charters upon presentation to the bank of vendors' bills and upon certification by the charter operator or foreign charter operator of the amounts payable for such ground accommodations and services and the person or companies to whom payment is to be made: Provided, however, That the total amounts paid by the bank pursuant to paragraphs (b)(2)(ii) and (v) of this section shall not exceed either the total cost of the air transportation, or 80 percent of the total deposits received by the bank less any refunds made to charter participants pursuant to paragraphs (b)(2)(ii) and (iv) of this section, whichever is greater;

(vi) As used in this section, the term "bank" means a bank insured by the Federal Deposit Insurance Corporation;

(vii) The bank shall maintain a separate accounting for each charter group;

(viii) Notwithstanding any other provisions of this section, the amount of total cash deposits required to be maintained in the depository account of the bank may be reduced by one or both of the following: The amount of the security agreement in the form prescribed in this section in excess of the minimum coverage required by paragraph (b)(1) of this section; an escrow with the designated bank of Federal, State, or municipal bonds or other securities, consisting of certificates of deposit issued by banks having a stated policy of redeeming such certificates before maturity at the request of the holder (subject only to such interest penalties or other conditions as may be required by law), or negotiable securities which are publicly traded on a securities exchange, all such securities to be made payable to the escrow account: Provided, That such other securities shall be substituted in an amount no greater than 80 percent of the total market value of the escrow account at the time of such substitution: And provided, further, That should the market value of such other securities subsequently decrease, from time to time, then additional cash or securities qualified for investment hereunder shall promptly be added to the escrow account, in an amount equal to the amount of such decreased value; and

(ix) Except as provided in paragraph (b)(2)(i), (iii), (iv), (v), and (viii) of this section, the bank shall not pay out any funds from the account prior to 2 banking days after completion of each charter, when the balance in the account shall be paid the charter operator or foreign charter operator, upon certification of the completion date by the direct air carrier: Provided, however, That if the Charter involves air transportation only and the bank has paid the direct air carrier(s) the charter price for the originating flight, and the returning flight if any, and has paid all refunds due to participants, as provided in paragraph (b)(2)(ii) and (iii), respectively, of this section, then the bank may pay the balance in the account to the charter operator upon certification by the direct air carrier performing the originating flight that such flight has in fact departed.

(c)(1) The security agreement required under paragraphs (a) and (b) of this section shall insure the financial responsibility of the charter operator or foreign charter operator and the supplying of the transportation and all other accommodations, services, and facilities in accordance with the contract between the charter operator or foreign charter operator and the charter participants.

(2) The security agreement may be either:

(i) A surety bond in the form set forth as appendix A to this part;

(ii) A surety trust agreement in the form set forth as appendix B to this part; or

(iii) An arrangement with a bank (for instance, a standby letter of credit) that provides protection of charter participants' funds equivalent to or greater than that provided by the Bond in appendix A. An arrangement that furnishes a lesser degree of protection than would be provided under the bond shall be invalid to that extent, and instead the bank, the charter operator or foreign charter operator, and the charter participants shall have the same rights and liabilities as provided under a bond in the form of appendix A. If the arrangement does not give as much protection as a bond against the risk of the charter operator's bankruptcy, the bank shall be liable in the event of bankruptcy to the same extent as if it had entered into a bond.

(3) Any agreement under paragraph (c)(2)(iii) of this section shall include a statement that, in the event that the other provisions of the agreement do not provide protection to charter participants comparable to that provided under a bond in the form of appendix A, the bank shall assume, for the benefit of the charter participants, all the liabilities it would have if it entered into the bond.

(4) The security agreement shall be effective on or before the date the charter prospectus is filed with the Department.

(5) The security agreement shall be specifically identified by the issuing securer with a numbering system so that the Department can identify the security agreement with the specific charter or charters to which it relates. These data may be set forth in an addendum attached to the security agreement, which addendum must be signed by the charter operator or foreign charter operator and the securer.

(6) When security is provided by a surety bond, such bond shall be issued by a bonding or surety company that is listed in Best's Insurance Reports (Fire and Casualty) with a general policyholders' rating of "A" or better. The bonding or surety company shall be one legally authorized to issue bonds of that type in the State in which the

[3] "Holdback" is an amount in excess of usual commissions that a credit card merchant bank sometimes retains to cover potential charge-backs or other charges.

charter originates. For purposes of this section the term "State" includes any territory or possession of the United States, or the District of Columbia.

(7) When security is provided by a security agreement other than a bond, the agreement shall be issued by a national bank complying with the provisions of 12 CFR 7.7010(a), or by a State bank complying with applicable State laws that give authority to issue such agreements, and all such banks must be insured by the Federal Deposit Insurance Corporation.

(d) The security agreement required by this section shall provide that unless the charter participant files a claim with the charter operator or foreign charter operator, or, if it is unavailable, with the securer, within 60 days after termination of the charter, the securer shall be released from all liability under the security agreement to such charter participant. Terminations means the date of arrival (or in the case of a canceled charter, the intended date of arrival) of the return flight. If there is no return flight in a participant's itinerary, termination means the date or intended date of departure of the last flight in the participant's itinerary.

§ 380.34a Substitution of direct air carrier's security or depository agreement.

(a) A direct air carrier may substitute its own security agreement and/or depository arrangements, as specified in this section, for those required of the charter operator under § 380.34, but only for charter trips in which all the air transportation is provided by one direct air carrier. Charter operators are relieved from § 380.34 to the extent that the direct carrier substitutes its own arrangements.

(b) The direct air carrier may substitute its security agreement for all of the arrangements required of the charter operator under § 380.34 (a) or (b). Alternatively, it may substitute its depository agreement for the depository agreement required of the charter operator under § 380.34(b)(2). If the direct carrier substitutes its depository agreement, it may also obtain and substitute a security agreement for the one otherwise required of the charter operator under § 380.34(b)(1). If the direct carrier substitutes its depository agreement only, the charter operator must supply the security agreement required under § 380.34(b)(1).

(c) If the direct carrier substitutes a security agreement for all the charter operator's requirements under § 380.34, the charter operator shall include in the charter prospectus, in place of the information in § 380.28(a)(2) regarding the charter operator's security agreement:

(1) A statement by the direct air carrier on OST Form 4535 that it will take responsibility for all charter participant payments (including those for ground accommodations and services) and for the fulfillment of all the charter operator's contractual and regulatory obligations to the charter participants.

(2) A statement from the direct air carrier and its securer (under § 212.12 of this chapter), OST Form 4533, that they have entered into a security agreement assuring the direct air carrier's responsibilities to charter participants under this section in an unlimited amount (except that the liability of the securer with respect to any charter participant may be limited to the charter price paid by or on behalf of such participant), and that the securer has received a copy of the proposed flight schedule identified by the schedule number assigned by the charter operator under this part.

(d) A substitute depository agreement under this section shall be signed by the direct air carrier, the charter operator, and the depository bank, and shall provide, in addition to existing requirements under § 212.8 of this chapter, that:

(1) Payments by or on behalf of charter participants shall be allocated to the flight accounts matching the participant's itinerary in the following way: Each account shall have allocated to it the charter cost of the participant's air transportation on that flight. The portion of each payment not intended for air transportation services shall be allocated to the account for the return flight in the participant's itinerary. If there is only one flight in the itinerary, the entire payment shall be allocated to that account.

(2) The bank shall pay funds from a flight account directly to the hotels, sightseeing enterprises, or other persons or companies furnishing ground accommodations and services, if any, in connection with the charter flight, upon presentation to the bank of vendor's bills and upon certification by the person who contracted for the ground accommodations or services of the amounts payable and the persons or companies to whom payment is to be made, except that no disbursement shall be made that would reduce the balance in the account below the charter cost of the flight.

(3) On sales made to participants by a person other than a retail travel agent, the participant shall pay by check, money order, or credit card draft payable to the bank. On sales made to participants by a retail travel agent, payments shall be made in the same manner unless the agent deducts its commission and remits the balance to the bank by check, money order, or electronic transfer. The agent may deduct its commission only if it agrees in writing with its principal (the charter operator or direct air carrier, as applicable) that, if the charter is canceled, the agent shall remit to the bank the full amount of the commission previously deducted or received within 10 days after receipt of notification of the cancellation. The depository bank shall pay refunds directly to participants according to the terms of the operator-participant contract and the terms of this part.

(e) If the direct carrier substitutes a security agreement in addition to substituting a depository agreement, the charter prospectus information must include all the information required by paragraphs (c) and (d) of this section, except for the amount of the security agreement. That agreement shall be in an amount of at least $10,000 times the number of flights, except that the amount need not be more than $200,000.

(f) A copy of the depository agreement under paragraph (d) of this section shall be filed with the Department, and it shall not be effective until approved by the Department.

(g) A copy of the security agreement under paragraph (c) or paragraph (e) of this section shall be filed with the Department. It shall insure the financial responsibility of the direct air carrier for supplying the transportation and all other accommodations, services, and facilities in accordance with the contracts between the charter operator and the charter participants. Such security agreement shall meet all the other requirements of § 380.34 (c) and (d).

§ 380.35 Disbursements from depository account.

No charter operator or direct air carrier shall cause its agents or the depository bank to make disbursements or payments from deposits except in accordance with the provisions of this part.

§ 380.36 Record retention.

Every charter operator conducting a charter pursuant to this part shall comply with the applicable record-retention provisions of part 249 of this chapter.

Subpart D—Requirements Applicable to Direct Air Carriers

§ 380.40 Charter not to be performed unless in compliance with this part 380.

(a) For all Public Charters other than foreign-originating charters organized by foreign charter operators: A direct air carrier shall not perform air transportation in connection with such a charter unless it has made a reasonable effort to verify that all provisions of this part have been complied with and that the charter operator's authority under this part has not been suspended by the Department.

(b) For foreign-originating Public Charters organized by foreign charter operators: A direct air carrier shall not perform air transportation in connection with such a charter unless—

(1) The charter is conducted in accordance with subpart B of this part and

(2) The charter operator conforms to all requirements of this part that are applicable to charter operators within the Department's jurisdiction, other than §§ 380.25, 380.28, 380.30 through 380.36, and 380.50.

§§ 380.41–380.42 [Reserved]

§ 380.43 Cancellations by direct air carriers.

The direct air carrier shall not cancel any charter under this part less than 10 days before the scheduled departure date, except for circumstances that make it physically impossible to perform the charter trip.

§ 380.45 Suspension of exemption authority.

The Department reserves the power to suspend the exemption authority of any air carrier, without hearing, if it finds that such action is necessary in order to protect the rights of the traveling public.

§ 380.46 Charter trip reporting.

The direct air carrier shall promptly notify the Office of Aviation Analysis, Special Authorities Division, regarding any charters covered by a prospectus filed under § 380.28 that are later canceled.

Subpart E—Registration of Foreign Charter Operators

§ 380.60 Purpose.

This subpart establishes registration procedures for foreign charter operators intending to engage in the formation of groups for transportation on Public Charters that originate in the United States.

§ 380.61 Operation by foreign charter operators.

(a) Each foreign charter operator shall be registered under this subpart and file a prospectus under § 380.25 before organizing groups for transportation on Public Charters that originate in the United States.

(b) Each foreign charter registered under this subpart shall comply with the other provisions of this part directed to charter operators.

§ 380.62 Registration applications.

(a) To be registered under this subpart, a foreign charter operator shall file two copies of an application for registration with the Office of Aviation Analysis, Special Authorities Division. The Department will list the names and nationalities of all persons applying for registration in its Weekly Summary of Filings.

(b) The application shall be made on OST Form 4530, which can be obtained from the Office of Aviation Analysis, Special Authorities Division.

(c) The applicant shall clearly indicate in its application for registration whether it requests authority to engage in foreign and/or interstate air transportation.

§ 380.63 Objections to registration applications.

Any person objecting to the registration application of a foreign charter operator or to a proposed change in the name or ownership of that operator shall file an objection with the Office of Aviation Analysis, Special Authorities Division, within 28 days after the Department receives the properly completed registration application.

§ 380.64 Department action on a registration application.

(a) After a registration is received, one of the following actions will be taken.

(1) The application will be approved by the stamping of the effective date of registration on OST Form 4530 and returning the duplicate copy of the form to the operator;

(2) Additional information will be requested for the applicant;

(3) The applicant will be notified that its application will require further analysis or procedures, or is being referred to the Department for formal action;

(4)The registration application will be rejected if it does not comply with the filing requirements of this subpart;

(5) The application will be approved subject to such terms, conditions, or limitations as may be required by the public interest; or

(6) The registration application will be rejected for reasons relating to the failure of effective reciprocity or if the Department finds that it would be in the public interest to do so.

(b) One of the actions described in paragraph (a) of this section will normally be taken within 60 days after the registration application is received. The Department will also consider requests for faster action that include a full explanation of the need for expedited action.

§ 308.65 Notification of change of operations or ownership.

(a) Not later than 30 days before any change in its name or address or before a temporary or permanent cessation of operations, each foreign charter operator registered under this subpart shall notify the Office of Aviation Analysis, Special Authorities Division, of the change by resubmitting OST Form 4530.

(b) A foreign charter operator registered under this subpart shall apply for an amendment to that registration not later than 30 days after either of the following events:

(1) A person listed on its existing registration as owning or holding beneficial interest in at least 10 percent of the operator or of the operator's stock reduces its holding to below 10 percent;

(2) A person not listed on the existing registration as owning or holding beneficial interest in at least 10 percent of the operator or of the operator's stock becomes an owner or holder of 10 percent or more of the company or of its stock.

(c) An application for an amendment shall be made by resubmitting OST Form 4530. The existing registration shall remain valid pending Department action on the amendment.

§ 380.66 Cancellation or conditioning of the registration.

The registration of a foreign charter operator may be canceled or subjected to additional terms, conditions, or limitations if any of the following occur:

(a) The operator files a written notice with the Department that it is discontinuing its charter operations;

(b) A substantial ownership interest is acquired by persons who are not citizens of the same country as the registrant; or

(c) The Department finds, after notice and an opportunity for responses, that it is in the public interest to do so. In making this finding, the Department will consider whether effective reciprocity exists between the United States and the government of the foreign charter operator.

§ 380.67 Waiver of sovereign immunity.

By accepting an approved registration form under this subpart, an operator waives any right it may have to assert any defense of sovereign immunity from suit in any proceeding against it, in any court or other tribunal of the United States, that is based upon a claim arising out of operations by the operator under this part.

Appendix A—Public Charter Operator's Surety Bond Under Part 380 of the Special Regulations of the Department of Transportation (14 CFR Part 380)

Know all men by these presents, that we _____ (name of charter operator) of _____, (city) _____ (state or country) as Principal (hereinafter called Principal), and_____ (name of surety) a corporation created and existing under the laws of the State of _____ (State) as Surety (hereinafter called Surety) are held and firmly bound unto the United States of America in the sum of $_____ (see § 380.34(f) of Part 380) for which payment, well and truly to be made, we bind ourselves and our heirs, executors, administrators, successors, and assigns, jointly and severally, firmly by these presents.

Whereas Principal intends to become a Public Charter operator pursuant to the provisions of part 380 of the Department's Special Regulations and other rules and regulations of the Department relating to insurance or other security for the protection of charter participants, and has elected to file with the Department of Transportation such a bond as will insure financial responsibility with respect to all moneys received from charter participants for services in connection with a Public Charter to be operated subject to Part 380 of the Department's Special Regulations in accordance with contracts, agreements, or arrangements therefor, and

Whereas this bond is written to assure compliance by Principal as an authorized charter operator with Part 380 of the Department's Special Regulations, and other rules and regulations of the Department relating to insurance and other security for the protection of charter participants, and shall inure to the benefit of any and all charter participants to whom Principal may be held legally liable for any damages herein described.

Now, therefor, the condition of this obligation is such that if Principal shall pay or cause to be paid to charter participants any sum or sums for which Principal may be held legally liable by reason of Principal's failure faithfully to perform, fulfill and carry out all contracts, agreements, and arrangements made by Principal while this bond is in effect with respect to the receipt of moneys from charter participants, and proper disbursement thereof pursuant to and in accordance with the provisions of Part 380 of the Department's Special Regulations, then this obligation shall be void, otherwise to remain in full force and effect.

The liability of Surety with respect to any charter participant shall not exceed the charter price paid by or on behalf of such participant.

The liability of Surety shall not be discharged by any payment or succession of payments hereunder, unless and until such payment or payments shall amount in the aggregate to the penalty of the bond, but in no event shall Surety's obligation hereunder exceed the amount of said penalty.

Surety agrees to furnish written notice to the Office of Aviation Analysis, Department of Transportation, forthwith of all suits or claims filed and judgments rendered, and payments made by Surety under this bond.

The bond shall cover the following charters:[1]

Surety company's bond No. _____

Date of flight departure _____

Place of flight departure _____

This bond is effective on the _____ day of _____, 12:01 a.m., standard time at the address of Principal as stated herein and as hereinafter provided. Principal or Surety may at any time terminate this bond by written notice to: "Special Authorities Division (P–57), Office of Aviation Analysis, U.S. Department of Transportation, Washington, DC 20590," such termination to become effective thirty (30) days after the actual receipt of said notice by the Department. Surety shall not be liable hereunder for the payment of any damages hereinbefore described which arise as a result of any contracts, agreements, undertakings, or arrangements for the supplying of transportation and other services made by Principal after the termination of this bond as herein provided, but such termination shall not affect the liability of the bond hereunder for the payment of any damages arising as a result of contracts, agreements, or arrangements for the supplying of transportation and other services made by Principal prior to the date that such termination becomes effective. Liability of Surety under this bond shall in all events be limited only to a charter participant or charter participants who shall within sixty (60) days after the termination of the particular charter described herein give written notice of claim to the charter operator or, if it is unavailable, to Surety, and all liability on this bond shall automatically terminate sixty (60) days after the termination date of each particular charter covered by this bond except for claims made in the time provided herein.

In witness whereof, the said Principal and Surety have executed this instrument on the _____ day of _____, _____.

Principal

Name _____

By: Signature and title

Surety

Name _____

By: Signature and title _____

Only corporations may qualify to act as surety and they must meet the requirements set forth in § 380.34(c)(6) of Part 380.

[1] These data may be supplied in addendum attached to the bond.

Appendix B—Public Charter Surety Trust Agreement

This Trust Agreement is entered into between _____ (charter operator) incorporated under the law of _____ with the principal place of business being _____ (hereinafter referred to as the Operator), and _____ (Bank) with its principal place of business being _____ (hereinafter referred to as the "Trustee"), for the purpose of creating a trust to become effective as of the _____ day of _____, _____, which trust shall continue until terminated as hereinafter provided.

The Operator intends to become a Public Charter operator pursuant to the provisions of Part 380 of the Department's Special Regulations and other rules and regulations of the Department relating to insurance or other security for the protection of charter participants, and has elected to file with the Department of Transportation such a Surety Trust Agreements as will insure financial responsibility with respect to all moneys received from charter participants for services in connection with a Public Charter to be operated subject to Part 380 of the Department's Special Regulations in accordance with contracts, agreements, or arrangements therefor.

This Surety Trust Agreement is written to assure compliance by the Operator with the provisions of Part 380 of the Department's Special Regulations and other rules and regulations of the Department relating to insurance or other security for the protection of charter participants.

It shall inure to the benefit of any and all charter participants to whom the Operator may be held legally liable for any of the damages herein described.

It is mutually agreed by and between the operator and Trustee that the Trustee shall manage the corpus of the trust and carry out the purposes of the trust as hereinafter set forth during the term of the trust for the benefit of charter participants (who are hereinafter referred to as "Beneficiaries.")

Beneficiaries of the trust created by this Agreement shall be limited to those charter participants who meet the following requirements:

1. Those for whom Operator or Operator's agent has received payment toward participation in one or more charters operated by or proposed to be operated by Operator.

2. Who have legal claim or claims for money damages against the Operator by reason of the Operators' failure faithfully to perform, fulfill, and carry out all contracts, agreements, and arrangements made by the Operator while this trust is in respect to the receipt of moneys and proper disbursement thereof pursuant to Part 380 of the Department's Special Regulations; and

3. Who have given notice of such claim or claims in accordance with this Trust Agreement, but who have not been paid by the Operator.

The Operator shall convey to the Trustee legal title to the trust corpus, which has a value of $_____ by the time of the execution of this Agreement.

Trustee shall assume the responsibilities of the Trustee over the said trust corpus and shall distribute from the trust corpus to any and all Beneficiaries to whom the Operator, in its capacity as a Public Charter operator, may be held legally liable by reason of the Operator's failure faithfully to perform, fulfill, and carry out all contracts, agreements, and arrangements made by the Operator, while this trust is in effect with respect to the receipt of moneys and proper disbursement thereof pursuant to Part 380 of the Department's Special Regulations in connection with said charters, such damages as will discharge such liability while this trust is in effect; Provided, however, That the liability of the trust to any Beneficiary shall not exceed the charter price (as defined in Part 380 of the Department's Special Regulations) paid by or on behalf on any such Beneficiary; Provided, further, That there shall be on obligation of the trust to any Beneficiary if the Operator shall pay or cause to be paid to any Beneficiary any sum or sums for which the Operator may be held legally liable by reasons of its failure faithfully to perform, fulfill, and carry out all contracts, agreements, and arrangements made by the Operator in its capacity as charter operator while this trust is in effect with respect to the receipt of moneys and proper disbursement thereof pursuant to Part 380 of the Department's Special Regulations; And provided still further, That the liability of the trust as administered by the Trustee shall not be discharged by any payment or succession of payments hereunder, unless and until such payment or payments, shall amount in the aggregate to $_____. Notwithstanding anything herein to the contrary, in no event shall the obligation of the trust or the Trustee hereunder exceed the aggregate amount of $_____.

The Trustee agrees to furnish written notice to the Office of Aviation Analysis, Department of Transportation, forthwith of all suits of claims filed and judgments rendered (of which it has knowledge), and of payments made by the Trustee under the terms of this trust.

The Trust shall not be liable hereunder for the payment of any damages hereinbefore described which arise as a result of any contracts, agreements, undertakings, or arrangements for the supplying of transportation and other services made by the Operator after the termination of this trust as herein provided, but such termination shall not affect the liability of the trust hereunder for the payment of any damages arising as a result of contracts, agreements, or arrangements for the supplying of transportation and other services made by the Operator prior to the date that such termination becomes effective.

Liability of the trust shall in all events be limited only to a Beneficiary or Beneficiaries who shall within sixty days after the termination of the particular charter give written notice of claim to the Operator or, if it is unavailable, to the Trustee, and all liability of the trust with respect to participants in a charter shall automatically terminate sixty days after the termination date of each particular charter covered by this trust except for claims filed in the time provided herein. Sixty-one days after the completion of the last charter covered by this Trust Agreement, the trust shall automatically terminate except for claims of any Beneficiary or Beneficiaries previously made in accordance with this Agreement still pending on and after said sixty-first day. To the extent of such claims, the trust shall continue until those claims are discharged, dismissed, dropped, or otherwise terminated; the remainder of the trust corpus shall be conveyed forthwith to the Operator. After all remaining claims which are covered by this Trust Agreement pending on and after the said sixty-first day have been discharged, dismissed, dropped, or otherwise terminated, the Trustee shall convey forthwith the remainder of the trust corpus, if any, to the Operator.

Either the Operator or Trustee may at any time terminate this trust by written notice to: "Special Authorities Division (P–57), Office of Aviation Analysis, U.S. Department of Transportation, Washington, DC 20590," such termination to become effective thirty days after the actual receipt of said notice by the Department.

In the event of any controversy or claim arising hereunder, the Trustee shall not be required to determine same or take any other action with respect thereto, but may await the settlement of such controversy or claim by final appropriate legal proceedings, and in such event shall not be liable for interest or damages of any kind.

Any Successor to the Trustee by merger, consolidation, or otherwise, shall succeed to this trusteeship and shall have the powers and obligations set forth in this Agreement.

The trust created under this Agreement shall be operated and administered under the laws of the State of _____.

IN WITNESS WHEREOF, the Operator and Trustee have executed this instrument on the _____ day of _____, _____.

[FRL–6015–3]

Protection of Stratospheric Ozone

AGENCY: Environmental Protection Agency.

ACTION: Notice of acceptability.

SUMMARY: This document expands the list of acceptable substitutes for ozone-depleting substances (ODS) under the U.S. Environmental Protection Agency's (EPA) Significant New Alternatives Policy (SNAP) program.

EFFECTIVE DATE: May 22, 1998.

ADDRESSES: Information relevant to this document is contained in Air Docket A–91–42, U.S. Environmental Agency, Office of Air and Radiation Docket and Information Center, Room M–1500, 401 M Street, SW, Washington, DC 20460. Telephone: (202) 260–7548. The docket may be inspected between 8:00 a.m. and 5:30 p.m. weekdays. As provided in 40 CFR Part 2, a reasonable fee may be charged for photocopying.

FOR FURTHER INFORMATION CONTACT: William Monroe at (202) 564–9161 or fax (202) 565–2093, U.S. EPA, Stratospheric Protection Division, 401 M Street, S.W., Mail Code 6205J, Washington, D.C. 20460; EPA Stratospheric Ozone Protection Hotline at (800) 296–1996; EPA World Wide Web Site (http://www.epa.gov/ozone/title6/snap).

SUPPLEMENTARY INFORMATION:

I. Section 612 Program
  A. Statutory Requirements
  B. Regulatory History
II. Listing of Acceptable Substitutes
  A. Aerosols
III. Additional Information
Appendix A—Summary of Acceptable Decisions

I. Section 612 Program

A. Statutory Requirements

Section 612 of the Clean Air Act authorizes EPA to develop a program for evaluating alternatives to ozone-depleting substances. EPA refers to this program as the Significant New Alternatives Policy (SNAP) program. The major provisions of section 612 are:

• *Rulemaking*—Section 612(c) requires EPA to promulgate rules making it unlawful to replace any class I (chlorofluorocarbon, halon, carbon tetrachloride, methyl chloroform, methyl bromide, and hydrobromofluorocarbon) or class II (hydrochlorofluorocarbon) substance with any substitute that the Administrator determines may present adverse effects to human health or the environment where the Administrator has identified an alternative that (1) reduces the overall risk to human health and the environment, and (2) is currently or potentially available.

• Listing of Unacceptable/Acceptable Substitutes—Section 612(c) also requires EPA to publish a list of the substitutes unacceptable for specific uses. EPA must publish a corresponding

list of acceptable alternatives for specific uses.

• *Petition Process*—Section 612(d) grants the right to any person to petition EPA to add a substance to or delete a substance from the lists published in accordance with section 612(c). The Agency has 90 days to grant or deny a petition. Where the Agency grants the petition, EPA must publish the revised lists within an additional 6 months.

• *90-day Notification*—Section 612(e) requires EPA to require any person who produces a chemical substitute for a class I substance to notify the Agency not less than 90 days before new or existing chemicals are introduced into interstate commerce for significant new uses as substitutes for a class I substance. The producer must also provide the Agency with the producer's unpublished health and safety studies on such substitutes.

• *Outreach*—Section 612(b)(1) states that the Administrator shall seek to maximize the use of federal research facilities and resources to assist users of class I and II substances in identifying and developing alternatives to the use of such substances in key commercial applications.

• *Clearinghouse*—Section 612(b)(4) requires the Agency to set up a public clearinghouse of alternative chemicals, product substitutes, and alternative manufacturing processes that are available for products and manufacturing processes which use class I and II substances.

B. Regulatory History

On March 18, 1994, EPA published the Final Rulemaking (FRM) (59 FR 13044) which described the process for administering the SNAP program and issued EPA's first acceptability lists for substitutes in the major industrial use sectors. These sectors include: refrigeration and air conditioning; foam blowing; solvent cleaning; fire suppression and explosion protection; sterilants; aerosols; adhesives, coatings and inks; and tobacco expansion. These sectors compose the principal industrial sectors that historically consumed the largest volumes of ozone-depleting compounds.

As described in the final rule for the SNAP program (59 FR 13044), EPA does not believe that rulemaking procedures are required to list alternatives as acceptable with no limitations. Such listings do not impose any sanction, nor do they remove any prior license to use a substance. Consequently, by this notice EPA is adding substances to the list of acceptable alternatives without first requesting comment on new listings.

EPA does, however, believe that Notice-and-Comment rulemaking is required to place any substance on the list of prohibited substitutes, to list a substance as acceptable only under certain conditions, to list substances as acceptable only for certain uses, or to remove a substance from either the list of prohibited or acceptable substitutes. Updates to these lists are published as separate notices of rulemaking in the **Federal Register**.

The Agency defines a *substitute* as any chemical, product substitute, or alternative manufacturing process, whether existing or new, that could replace a class I or class II substance. Anyone who produces a substitute must provide the Agency with health and safety studies on the substitute at least 90 days before introducing it into interstate commerce for significant new use as an alternative. This requirement applies to substitute manufacturers, but may include importers, formulators or end-users, when they are responsible for introducing a substitute into commerce.

EPA published documents listing acceptable alternatives on August 26, 1994 (59 FR 44240), January 13, 1995 (60 FR 3318), July 28, 1995 (60 FR 38729), February 8, 1996 (61 FR 4736), September 5, 1996 (61 FR 47012), March 10, 1997 (62 FR 10700), June 3, 1997 (62 FR 30275), and February 24, 1998 (63 FR 9151), and published Final Rulemakings restricting the use of certain substitutes on June 13, 1995 (60 FR 31092), May 22, 1996 (61 FR 25585), and October 16, 1996 (61 FR 54029).

II. Listing of Acceptable Substitutes

This section presents EPA's most recent acceptable listing decision for substitutes for class I and class II substances in the aerosol sector. For copies of the full list of SNAP decisions in all industrial sectors, contact the EPA Stratospheric Protection Hotline at (800) 296–1996.

Part A below presents a detailed discussion of the substitute listing determination; by major use sector; the table summarizing today's listing decision is in Appendix A. The comments contained in Appendix A provide additional information on a substitute, but for listings of acceptable substitutes, they are not legally binding under section 612 of the Clean Air Act. Thus, adherence to recommendations in the comments is not mandatory for use of a substitute. In addition, the comments should not be considered comprehensive with respect to other legal obligations pertaining to the use of the substitute. However, EPA encourages users of acceptable substitutes to apply all comments to their use of these substitutes. In many instances, the comments simply allude to sound operating practices that have already been identified in existing industry and/or building-code standards. Thus, many of the comments, if adopted, would not require significant changes in existing operating practices for the affected industry.

A. Aerosols

1. Acceptable Substitute

Under section 612 of the Clean Air Act, EPA is authorized to review substitutes for class I (CFCs) and class II (HCFCs) chemicals. The following decision expands the acceptable listing for propellants in the aerosol sector.

(a) Aerosol Propellants

(1) HFC–227ea

HFC–227ea is an acceptable substitute for CFC–11, CFC–12, CFC–114, HCFC–22, and HCFC–142b as a propellant in the aerosol sector. HFC–227ea has a zero ozone depletion potential and an atmospheric lifetime of 36.5 years, yet this compound contributes to global warming with a 100-year global warming potential (GWP) of 2,900 relative to carbon dioxide. Despite this concern, the Agency has listed this substitute as acceptable in today's notice since it meets a specialized medical application in metered dose inhalers (MDIs), used by asthmatics and others with chronic obstructive pulmonary diseases, where only one other substitute meets the medical requirements.

III. Additional Information

Contact the Stratospheric Protection Hotline at 1–800–296–1996, Monday–Friday, between the hours of 10:00 a.m. and 4:00 p.m. (Eastern Standard Time).

For more information on the Agency's process for administering the SNAP program or criteria for evaluation of substitutes, refer to the SNAP final rulemaking published in the **Federal Register** on March 18, 1994 (59 FR 13044). Notices and rulemakings under the SNAP program, as well as all EPA publications on protection of stratospheric ozone, are available from EPA's Ozone World Wide Web site at "http://www.epa.gov/ozone/title6/snap" and from the stratospheric Protection Hotline whose number is listed above.

Dated: May 8, 1998.

Richard D. Wilson,

Acting Assistant Administrator for Air and Radiation.

Note: The following Appendix will not appear in the Code of Federal Regulations.

APPENDIX A: SUMMARY OF ACCEPTABLE DECISIONS

[Aerosol Propellants]

ODS being replaced	Substitute	Decision	Comments
CFC–11, CFC–12, CFC–114, HCFC–22, HCFC–142b as aerosol propellant.	HFC–227ea	Acceptable	Despite the relatively high global warming potential of this compound, the Agency has listed this substitute as acceptable since it meets a specialized application in MDIs where other substitutes do not provide acceptable performance.

RIN 2070–AB78

Hydroxyethylidine Diphosphonic Acid; Exemption From the Requirement of a Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes an exemption from the requirement of a tolerance for residues of hydroxyethylidine diphosphonic acid (HEDP), when used as an inert ingredient (stabilizer/ chelator) in antimicrobial pesticide formulations applied in or on raw agricultural commodities. Ecolab, Inc. requested this tolerance under the Federal Food, Drug and Cosmetic Act (FFDCA), as amended by the Food Quality Protection Act of 1996 (Pub. L. 104–170).

DATES: This regulation is effective May 22, 1998. Objections and requests for hearings must be received by EPA on or before July 21, 1998.

ADDRESSES: Written objections and hearing requests, identified by the docket control number, [OPP–300658], must be submitted to: Hearing Clerk (1900), Environmental Protection Agency, Rm. M3708, 401 M St., SW., Washington, DC 20460. Fees accompanying objections and hearing requests shall be labeled "Tolerance Petition Fees" and forwarded to: EPA Headquarters Accounting Operations Branch, OPP (Tolerance Fees), P.O. Box 360277M, Pittsburgh, PA 15251. A copy of any objections and hearing requests filed with the Hearing Clerk identified by the docket control number, [OPP–300658], must also be submitted to: Public Information and Records Integrity Branch, Information Resources and Services Division (7502C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. In person, bring a copy of objections and hearing requests to Rm. 119, CM #2, 1921 Jefferson Davis Hwy., Arlington, VA.

A copy of objections and hearing requests filed with the Hearing Clerk may also be submitted electronically by sending electronic mail (e-mail) to: opp-docket@epamail.epa.gov. Copies of objections and hearing requests must be submitted as an ASCII file avoiding the use of special characters and any form of encryption. Copies of objections and hearing requests will also be accepted on disks in WordPerfect 5.1/6.1 file format or ASCII file format. All copies of objections and hearing requests in electronic form must be identified by the docket control number [OPP–300658]. No Confidential Business Information (CBI) should be submitted through e-mail. Electronic copies of objections and hearing requests on this rule may be filed online at many Federal Depository Libraries.

FOR FURTHER INFORMATION CONTACT: By mail: Amelia M. Acierto, Registration Division (7505W), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. Office location, telephone number, and e-mail address: Crystal Mall #2, 1921 Jefferson Davis Hwy., Arlington, VA, (703) 308–8377, e-mail: acierto.amelia@epamail.epa.gov.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of December 17, 1997 (62 FR 66091) (FRL–5760–5), EPA issued a notice pursuant to section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 346a(e) announcing the filing of a pesticide petition (PP 7E4922) for a tolerance exemption by Ecolab Inc., 370 N. Wabasha Street, St. Paul, Minnesota 55102. This notice included a summary of the petition prepared by Ecolab Inc., the petitioner. There were no comments received in response to the notice of filing.

The petition requested that 40 CFR 180.1001(c) be amended by establishing an exemption from the requirement of a tolerance for residues of the inert ingredient hydroxyethylidine diphosphonic acid (HEDP), when used as an inert ingredient (stabilizer and chelator) in antimicrobial pesticide formulations used in or on raw agricultural commodities.

I. Risk Assessment and Statutory Findings

New section 408(b)(2)(A)(i) of the FFDCA allows EPA to establish a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the tolerance is "safe." Section 408(b)(2)(A)(ii) defines "safe" to mean that "there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information." This includes exposure through drinking water and in residential settings, but does not include occupational exposure. Section 408(b)(2)(C) requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to "ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue. . . ."

EPA performs a number of analyses to determine the risks from aggregate exposure to pesticide residues. First, EPA determines the toxicity of pesticides based primarily on toxicological studies using laboratory animals. These studies address many adverse health effects, including (but not limited to) reproductive effects, developmental toxicity, toxicity to the nervous system, and carcinogenicity. Second, EPA examines exposure to the pesticide through the diet (e.g., food and drinking water) and through exposures that occur as a result of pesticide use in residential settings.

A. Toxicity

1. *Threshold and non-threshold effects.* For many animal studies, a dose response relationship can be determined, which provides a dose that causes adverse effects (threshold effects) and doses causing no observed effects (the "no-observed effect level" or "NOEL").

Once a study has been evaluated and the observed effects have been determined to be threshold effects, EPA generally divides the NOEL from the study with the lowest NOEL by an uncertainty factor (usually 100 or more) to determine the Reference Dose (RfD). The RfD is a level at or below which daily aggregate exposure over a lifetime will not pose appreciable risks to human health. An uncertainty factor (sometimes called a "safety factor") of 100 is commonly used since it is assumed that people may be up to 10 times more sensitive to pesticides than the test animals, and that one person or subgroup of the population (such as infants and children) could be up to 10 times more sensitive to a pesticide than another. In addition, EPA assesses the potential risks to infants and children based on the weight of the evidence of the toxicology studies and determines whether an additional uncertainty factor is warranted. Thus, an aggregate daily exposure to a pesticide residue at or below the RfD (expressed as 100 percent or less of the RfD) is generally considered acceptable by EPA. EPA generally uses the RfD to evaluate the chronic risks posed by pesticide exposure. For shorter term risks, EPA calculates a margin of exposure (MOE) by dividing the estimated human exposure into the NOEL from the appropriate animal study. Commonly, EPA finds MOEs lower than 100 to be unacceptable. This hundredfold MOE is based on the same rationale as the hundredfold uncertainty factor.

Lifetime feeding studies in two species of laboratory animals are conducted to screen pesticides for cancer effects. When evidence of increased cancer is noted in these studies, the Agency conducts a weight of the evidence review of all relevant toxicological data including short-term and mutagenicity studies and structure activity relationship. Once a pesticide has been classified as a potential human carcinogen, different types of risk assessments (e.g., linear low dose extrapolations or MOE calculation based on the appropriate NOEL) will be carried out based on the nature of the carcinogenic response and the Agency's knowledge of its mode of action.

2. *Differences in toxic effect due to exposure duration.* The toxicological effects of a pesticide can vary with different exposure durations. EPA considers the entire toxicity data base, and based on the effects seen for different durations and routes of exposure, determines which risk assessments should be done to assure that the public is adequately protected from any pesticide exposure scenario. Both short and long durations of exposure are always considered. Typically, risk assessments include "acute," "short-term," "intermediate term," and "chronic" risks. These assessments are defined by the Agency as follows.

Acute risk, by the Agency's definition, results from 1–day consumption of food and water, and reflects toxicity which could be expressed following a single oral exposure to the pesticide residues. High end exposure to food and water residues are typically assumed.

Short-term risk results from exposure to the pesticide for a period of 1–7 days, and therefore overlaps with the acute risk assessment. Historically, this risk assessment was intended to address primarily dermal and inhalation exposure which could result, for example, from residential pesticide applications. However, since enaction of the Food Quality Protection Act, this assessment has been expanded to include both dietary and non-dietary sources of exposure, and will typically consider exposure from food, water, and residential uses when reliable data are available. In this assessment, risks from average food and water exposure, and high-end residential exposure, are aggregated. High-end exposures from all three sources are not typically added because of the very low probability of this occurring in most cases, and because the other conservative assumptions built into the assessment assure adequate protection of public health. However, for cases in which high-end exposure can reasonably be expected from multiple sources (e.g. frequent and widespread homeowner use in a specific geographical area), multiple high-end risks will be aggregated and presented as part of the comprehensive risk assessment/characterization. Since the toxicological endpoint considered in this assessment reflects exposure over a period of at least 7 days, an additional degree of conservatism is built into the assessment; i.e., the risk assessment nominally covers 1–7 days exposure, and the toxicological endpoint/NOEL is selected to be adequate for at least 7 days of exposure. (Toxicity results at lower levels when the dosing duration is increased.)

Intermediate-term risk results from exposure for 7 days to several months. This assessment is handled in a manner similar to the short-term risk assessment.

Chronic risk assessment describes risk which could result from several months to a lifetime of exposure. For this assessment, risks are aggregated considering average exposure from all sources for representative population subgroups including infants and children.

B. Aggregate Exposure

In examining aggregate exposure, FFDCA section 408 requires that EPA take into account available and reliable information concerning exposure from the pesticide residue in the food in question, residues in other foods for which there are tolerances, residues in groundwater or surface water that is consumed as drinking water, and other non-occupational exposures through pesticide use in gardens, lawns, or buildings (residential and other indoor uses). Dietary exposure to residues of a pesticide in a food commodity are estimated by multiplying the average daily consumption of the food forms of that commodity by the tolerance level or the anticipated pesticide residue level. The Theoretical Maximum Residue Contribution (TMRC) is an estimate of the level of residues consumed daily if each food item contained pesticide residues equal to the tolerance. In evaluating food exposures, EPA takes into account varying consumption patterns of major identifiable subgroups of consumers, including infants and children. The TMRC is a "worst case" estimate since it is based on the assumptions that food contains pesticide residues at the tolerance level and that 100 percent of the crop is treated by pesticides that have established tolerances. If the TMRC exceeds the RfD or poses a lifetime cancer risk that is greater than approximately one in a million, EPA attempts to derive a more accurate exposure estimate for the pesticide by evaluating additional types of information (anticipated residue data and/or percent of crop treated data) which show, generally, that pesticide residues in most foods when they are eaten are well below established tolerances.

II. Aggregate Risk Assessment and Determination of Safety

Consistent with section 408(b)(2)(D), EPA has reviewed the available scientific data and other relevant information in support of this action, EPA has sufficient data to assess the hazards of HEDP and to make a determination on aggregate exposure, consistent with section 408(b)(2), for an exemption from the requirement of a tolerance for residues of HEDP when used as an inert ingredient in antimicrobial pesticide formulations applied to raw agricultural commodities. EPA's assessment of the dietary exposures and risks associated

with establishing the tolerance exemption follows.

A. Toxicological Profile

EPA has evaluated the available toxicity data and considered its validity, completeness, and reliability as well as the relationship of the results of the studies to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children. The nature of the toxic effects caused by HEDP are discussed below.

1. *Acute toxicity.* A rat acute oral study with an LD_{50} of 2,400 mg/kg.

2. *Genotoxicity.* HEDP was reported to be non-mutagenic in a *Salmonella*/ Mammalian microsome test or in a L5178Y TK mouse lymphoma cell point mutation assay, with and without mammalian microsomal activation.

3. *Subchronic toxicity*— i. *Dogs.* In a subchronic feeding study in beagle dogs (4 dogs/sex/dose), HEDP was administered at doses of 0, 1,000, 3,000, or 10,000 ppm for 90 days. The NOEL was 3,000 ppm (75 milligrams/ kilogram/day (mg/kg/day)) and the Lowest Observed Effect Level (LOEL) was 10,000 ppm (250 mg/kg/day based on decreased weight gain in females, and decreased testicular weight accompanied by evidence of bilateral focal degeneration of the testicular germinal epithelium in males.

ii. *Rats.* In a subchronic feeding study in rats, Sprague-Dawley strain rats were fed HEDP at dietary concentrations of 0, 3,000, 10,000 and 30,000 ppm for 90 days. The NOEL was 10,000 ppm (approximately 500 mg/kg/day) and the LOEL was 30,000 ppm (approximately 1,500 mg/kg/day) based on decreased body weight, decreased food consumption, slight anemia, and decreased heart, liver, and kidney weights.

4. *Developmental toxicity study.* In a developmental toxicity study, rabbits were administered HEDP at doses of 0, 25, 50 and 100 mg/kg/day, either incorporated into feed or by intubation with water. The NOEL for both systemic and developmental effects was 50 mg/ kg/day and the LOEL was 100 mg/kg/ day gavage dose based on decreased maternal weight gain/ food consumption and decreased fetal body weights.

5. *Reproductive toxicity study.* In a combined two-generation reproduction/ developmental toxicity study, rats (22 rats/sex/dose) were administered HEDP at doses of 0, 0.1, and 0.5 percent in the diet. The NOEL for developmental and reproductive findings was 50 mg/kg/day (0.1 percent in the diet) and the LOEL was 250 mg/kg/day (0.5 percent in the diet) based on reduced litter size in the first litter (F1a) and an increase in stillborn pups in the second liter (F1b). These effects occurred in the absence of maternal toxicity and were seen in both reproductive litters of the first generation.

B. Toxicological Endpoints

1. *Acute toxicity.* An acute dietary risk assessment is not required because no significant treatment-related effects attributable to a single exposure (dose) were seen in the oral studies conducted with HEDP.

2. *Short - and intermediate - term toxicity.* A short- and intermediate-term risk assessment is not required for HEDP since significant short- and intermediate- term exposures are not expected as a result of the proposed use pattern.

3. *Chronic toxicity.* EPA has established the RfD for HEDP at 0.05 mg/kg/day. This RfD is based on a reproductive/developmental toxicity study in rats with a NOEL of 50 mg/kg/ day. An uncertainty factor of 1,000 was used in the calculation of the RfD to account for intraspecies variability (tenfold uncertainty factor), interspecies extrapolation (tenfold uncertainty factor), lack of chronic toxicity/ carcinogenicity data (threefold uncertainty factor), and the additional sensitivity of infants and children (threefold uncertainty factor). The product of these four individual uncertainty factors results in an overall uncertainty factor of 1,000.

4. *Carcinogenicity.* A survey of the open literature has not revealed any studies as to the carcinogenicity of HEDP. Since HEDP has been determined to be nonmutagenic in genotoxicity testing and no preneoplastic lesions have been noted in any of the available animal or human test data, it is expected that the use of an additional threefold uncertainty factor in the chronic risk assessment of HEDP to account for the lack of carcinogenicity data should be protective of any possible cancer risk.

C. Exposures and Risks

1. *From food and feed uses.* Risk assessments were conducted by EPA to assess dietary exposures and risks from HEDP as follows:

i. *Acute exposure and risk.* Since there are no acute toxicological concerns for HEDP, an acute dietary risk assessment was not required.

ii. *Chronic exposure and risk.* For the purpose of assessing chronic dietary exposure from HEDP, EPA considered the proposed use of HEDP as a component of an antimicrobial pesticide formulation at a concentration not to exceed 1 percent of the formulation and a maximum use rate of the antimicrobial formulation used in fruit and vegetable wash water of 1 ounce/16.4 gallons of water. There are no established U.S. tolerances for HEDP, and there are no other registered uses for HEDP on food or feed crops in the United States. In conducting this exposure assessment, EPA assumed that residues of 1 part per billion (ppb) of HEDP would be present in all raw agricultural commodities, resulting in a large overestimate of dietary exposure and protective of any chronic dietary exposure scenario. (Limted data provided by the petitioner and prior estimations of dietary intake made by the U.S Food and Drug Administration (FDA) for the use of HEDP in antimicrobial applications to processed foods indicate that residues of HEDP in the treated commodities would be unlikely to exceed 1 ppb.) Based on the assumption that residues would be present at 1 ppb in all items consumed in the diet, it is estimated that the resultant dietary exposure would be 0.00004 mg/kg/day for adults (U.S. population) and 0.0001 mg/kg/day for children.

2. *From drinking water*— i. *Acute exposure and risk.* Since there are no acute toxicological concerns for HEDP, an acute drinking water risk assessment was not required.

ii. *Chronic exposure and risk.* For the purposes of assessing chronic exposure in drinking water, EPA has considered the current use of HEDP as an antiscalant in municipal drinking water treatment systems at a maximum concentration of 25 ppb in consumed water. Based on a typical average daily consumption of 2 liters of water/ day by adults and 1 liter water/day by children. The exposure to HEDP from drinking water exposure would not be expected to exceed 0.0007 mg/kg/day for adults and 0.0025 mg/kg/day for children.

3. *From non-dietary exposure.* Since there are no acute toxicological concerns for HEDP, an acute nondietary risk assessment was not required.

Chronic exposure and risk. While non-dietary exposure to HEDP as a result of its use in antimicrobial pesticide formulations applied to raw agricultural commodites is unlikely other uses of HEPD for which non-dietary exposure may result include its use in various personal care and over-the-counter pharmaceutical products. It is expected that the exposures associated with these uses would not exceed 0.0049 mg/kg/day for adults and 0.0204 mg/kg/day for children.

4. *Cumulative exposure to substances with common mechanism of toxicity.* Section 408(b)(2)(D)(v) requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider "available information" concerning the cumulative effects of a particular pesticide's residues and "other substances that have a common mechanism of toxicity." The Agency believes that "available information" in this context might include not only toxicity, chemistry, and exposure data, but also scientific policies and methodologies for understanding common mechanisms of toxicity and conducting cumulative risk assessments. For most pesticides, although the Agency has some information in its files that may turn out to be helpful in eventually determining whether a pesticide shares a common mechanism of toxicity with any other substances, EPA does not at this time have the methodologies to resolve the complex scientific issues concerning common mechanism of toxicity in a meaningful way. EPA has begun a pilot process to study this issue further through the examination of particular classes of pesticides. The Agency hopes that the results of this pilot process will increase the Agency's scientific understanding of this question such that EPA will be able to develop and apply scientific principles for better determining which chemicals have a common mechanism of toxicity and evaluating the cumulative effects of such chemicals. The Agency anticipates, however, that even as its understanding of the science of common mechanisms increases, decisions on specific classes of chemicals will be heavily dependent on chemical specific data, much of which may not be presently available.

Although at present the Agency does not know how to apply the information in its files concerning common mechanism issues to most risk assessments, there are pesticides as to which the common mechanism issues can be resolved. These pesticides include pesticides that are toxicologically dissimilar to existing chemical substances (in which case the Agency can conclude that it is unlikely that a pesticide shares a common mechanism of activity with other substances) and pesticides that produce a common toxic metabolite (in which case common mechanism of activity will be assumed).

EPA does not have, at this time, available data to determine whether HEDP has a common mechanism of toxicity with other substances or how to include this pesticide in a cumulative risk assessment. Unlike other pesticides for which EPA has followed a cumulative risk approach based on a common mechanism of toxicity, HEDP does not appear to produce a toxic metabolite produced by other substances. For the purposes of this tolerance action, therefore, EPA has not assumed that HEDP has a common mechanism of toxicity with other substances.

D. Aggregate Risks and Determination of Safety for U.S. Population

Using the extremely conservative exposure assumptions described above, EPA has concluded that aggregate exposure to HEDP from all pesticide and nonpesticide uses will not exceed 0.006 mg/kg/day for adults (12 percent of the RfD) and 0.023 mg/kg/day for children (46 percent of the RfD. EPA generally has no concern for exposures below 100 percent of the RfD because the RfD represents the level at or below which daily aggregate dietary exposure over a lifetime will not pose appreciable risks to human health. EPA does not expect the aggregate exposure to exceed 100 percent of the RfD. EPA therefore concludes that there is a reasonable certainty that no harm will result from aggregate exposure to HEDP residues.

E. Aggregate Risks and Determination of Safety for Infants and Children

Safety factor for infants and children. In assessing the potential for additional sensitivity of infants and children to residues of HEDP, EPA considered data from developmental toxicity studies in the rat and rabbit and a two-generation reproduction study in the rat. The developmental toxicity studies are designed to evaluate adverse effects on the developing organism resulting from maternal pesticide exposure gestation. Reproduction studies provide information relating to effects from exposure to the pesticide on the reproductive capability of mating animals and data on systemic toxicity.

FFDCA section 408 provides that EPA shall apply an additional tenfold margin of safety for infants and children in the case of threshold effects to account for pre-and post-natal toxicity and the completeness of the database unless EPA determines that a different margin of safety will be safe for infants and children. Margins of safety are incorporated into EPA risk assessments either directly through use of a MOE analysis or through using uncertainty (safety) factors in calculating a dose level that poses no appreciable risk to humans. In either case, EPA generally defines the level of appreciable risk as exposure that is greater than 1/100 of the NOEL in the animal study appropriate to the particular risk assessment. This hundredfold uncertainty (safety) factor/MOE (safety) is designed to account for inter-species extraoplation and inter-species variability. EPA believes that reliable data support using the hundredfold margin/factor, rather than the thousandfold margin/factor, when EPA has a complete data base under existing guidleines, and when the severity of the effect in infants or children, the potency or unusual toxic properties of a compound, or the quality of the exposure data do not raise concerns regarding the adequacy of the standard margin/factor.

The following factors support retention of a tenfold uncertainly factor: (i) The reproductive effects were observed at dose levels in which there was no apparent maternal toxicity, (ii) the study was not conducted in accordance with OPP's Subdivision F (Hazard Evaluation: Humans and Domestic Animals) Pesticide Assessment Guidelines, and (iii) a prenatal developmental toxicity study of HEDP in rats conducted via the gavage route of administration was not available (the dietary developmental toxicity study in rats which was conducted as part of the reproductive study did not completely meet Subdivision F Pesticide Assessment Guideline requirements. However, the noted reproductive effects (decreased average number of live fetuses and increases in stillborn pups) were seen as separate, single litter events of the first generation but not of the second generation which would render less significance to a finding of a treatment-related effect. Taking into account that in this case there are study deficiencies not absent studies, the evidence of a reproductive effects in the absence of maternal toxicity is equivocal, and developmental effects were observed in rabbits at dose levels in which maternal toxicity was not observed, EPA has concluded that the tenfold uncertainty factor for infants and children should be reduced to a threefold uncertainty factor.

III. Other Considerations

A. Analytical Enforcement Methodology

The Agency is establishing an exemption from the requirement of a tolerance without any numerical limitation; therefore, the Agency has concluded that an analytical method is not required for enforcement purposes for HEDP.

B. International Residue Limits

No Codex maximum residue levels have been established for HEDP.

IV. Conclusion

Therefore, an exemption from the requirement of a tolerance is established for residues of HEDP when used as an inert ingredient (stabilizer/ chelator) in antimicrobial pesticide formulations applied to raw agricultural commodites at a level not to exceed 1 percent of the antimicrobial pesticide formulation.

V. Objections and Hearing Requests

The new FFDCA section 408(g) provides essentially the same process for persons to "object" to a tolerance regulation issued by EPA under new section 408(e) and (l)(6) as was provided in the old section 408 and in section 409. However, the period for filing objections is 60 days, rather than 30 days. EPA currently has procedural regulations which govern the submission of objections and hearing requests. These regulations will require some modification to reflect the new law. However, until those modifications can be made, EPA will continue to use those procedural regulations with appropriate adjustments to reflect the new law.

Any person may, by July 21, 1998, file written objections to any aspect of this regulation and may also request a hearing on those objections. Objections and hearing requests must be filed with the Hearing Clerk, at the address given above (40 CFR 178.20). A copy of the objections and/or hearing requests filed with the Hearing Clerk should be submitted to the OPP docket for this rulemaking. The objections submitted must specify the provisions of the regulation deemed objectionable and the grounds for the objections (40 CFR 178.25). Each objection must be accompanied by the fee prescribed by 40 CFR 180.33(i). If a hearing is requested, the objections must include a statement of the factual issues on which a hearing is requested, the requestor's contentions on such issues, and a summary of any evidence relied upon by the requestor (40 CFR 178.27). A request for a hearing will be granted if the Administrator determines that the material submitted shows the following: There is genuine and substantial issue of fact; there is a reasonable possibility that available evidence identified by the requestor would, if established, resolve one or more of such issues in favor of the requestor, taking into account uncontested claims or facts to the contrary; and resolution of the factual issues in the manner sought by the requestor would be adequate to justify the action requested (40 CFR 178.32). Information submitted in connection with an objection or hearing request may be claimed confidential by marking any part or all of that information as CBI. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. A copy of the information that does not contain CBI must be submitted for inclusion in the public record. Information not marked confidential may be disclosed publicly by EPA without prior notice.

VI. Public Docket and Electronic Submissions

EPA has established a record for this rulemaking under docket control number [OPP–300658] (including any comments and data submitted electronically). A public version of this record, including printed, paper versions of electronic comments, which does not include any information claimed as CBI, is available for inspection from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The public record is located in Room 119 of the Public Information and Records Integrity Branch, Information Resources and Services Division (7502C), Office of Pesticide Programs, Environmental Protection Agency, Crystal Mall #2, 1921 Jefferson Davis Hwy., Arlington, VA.

Electronic comments may be sent directly to EPA at:

opp-docket@epamail.epa.gov.

Electronic comments must be submitted as an ASCII file avoiding the use of special characters and any form of encryption.

The official record for this rulemaking, as well as the public version, as described above will be kept in paper form. Accordingly, EPA will transfer any copies of objections and hearing requests received electronically into printed, paper form as they are received and will place the paper copies in the official rulemaking record which will also include all comments submitted directly in writing. The official rulemaking record is the paper record maintained at the Virginia address in "ADDRESSES" at the beginning of this document.

VII. Regulatory Assessment Requirements

This final rule establishes an exemption from the requirement of a tolerance under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled Regulatory Planning and Review (58 FR 51735, October 4, 1993). This final rule does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA), 44 U.S.C. 3501 *et seq.*, or impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) (Pub. L. 104–4). Nor does it require any prior consultation as specified by Executive Order 12875, entitled Enhancing the Intergovernmental Partnership (58 FR 58093, October 28, 1993), or special considerations as required by Executive Order 12898, entitled Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations (59 FR 7629, February 16, 1994), or require OMB review in accordance with Executive Order 13045, entitled Protection of Children from Environmental Health Risks and Safety Risks (62 FR 19885, April 23, 1997).

In addition, since these tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the exemption in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*) do not apply. Nevertheless, the Agency has previously assessed whether establishing tolerances, exemptions from tolerances, raising tolerance levels or expanding exemptions might adversely impact small entities and concluded, as a generic matter, that there is no adverse economic impact. The factual basis for the Agency's generic certification for tolerance actions published on May 4, 1981 (46 FR 24950) and was provided to the Chief Counsel for Advocacy of the Small Business Administration.

VIII. Submission to Congress and the General Accounting Office

Under 5 U.S.C. 801(a)(1)(A), as added by the Small Business Regulatory Enforcement Fairness Act of 1996, the Agency has submitted a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the General Accounting Office prior to publication of this rule in today's **Federal Register**. This is not a "major rule" as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: May 8, 1998.

Peter Caulkins,

Acting Director, Registration Division, Office of Pesticide Programs.

Therefore, 40 CFR chapter I is amended as follows:

PART 180— [AMENDED]

1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 346a and 371.

2. In § 180.1001, in paragraph (c), the table is amended by alphabetically adding the inert ingredient "hydroxyethylidine diphosphonic acid (HEDP)" to read as follows:

§ 180.1001 Exemptions from the requirement of a tolerance.

* * * * *

(c) * * *

Inert ingredients	Limits	Uses
* * *	* * *	*
Hydroxyethylidine diphosphonic acid (HEDP) (CAS Reg. No. 2809–21–4).	For use in antimicrobial pesticide formulations at not more than 1 percent.	Stabilizer, chelator

RIN 2070–AB78

Bacillus Thuringiensis Subspecies tolworthi Cry9C Protein and the Genetic Material Necessary for its Production in Corn; Exemption from the Requirement of a Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This rule amends an exemption from the requirement of a tolerance for resid ues of the insecticide, *Bacillus thuringiensis* subspecies *tolworthi* Cry9C protein and the genetic material necessary for its production in corn for feed use only; as well as in meat, poultry, milk, or eggs resulting from animals fed such feed. Plant Genetic Systems (America), Inc. submitted a petition to the EPA under the Federal Food, Drug and Cosmetic Act (FFDCA) as amended by the Food Quality Protection Act (FQPA) of 1996 requesting the exemption from the requirement of a tolerance. This regulation eliminates the need to establish a maximum permissible level for residues of this plant-pesticide in or on corn used for feed; as well as in meat, poultry, milk, or eggs resulting from animals fed such feed.

EFFECTIVE DATE: This regulation is effective May 22, 1998. Objections and requests for hearings must be received by EPA on or before July 21, 1998.

ADDRESSES: Written objections and hearing requests, identified by the docket control number [OPP–300659], must be submitted to: Hearing Clerk (1900), Environmental Protection Agency, Rm. M3708, 401 M St., SW., Washington, DC 20460. Fees accompanying objections and hearing requests shall be labeled "Tolerance Petition Fees" and forwarded to: EPA Headquarters Accounting Operations Branch, OPP (Tolerance Fees), P.O. Box 360277M, Pittsburgh, PA 15251. A copy of any objections and hearing requests filed with the Hearing Clerk identified by the docket control number, [OPP–300659], must also be submitted to: Public Information and Records Integrity Branch, Information Resources and Services Division (7502C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. In person, bring a copy of objections and hearing requests to Rm. 119, CM #2, 1921 Jefferson Davis Hwy., Arlington, VA.

A copy of objections and hearing requests filed with the Hearing Clerk may be submitted electronically by sending electronic mail (e-mail) to: opp-docket@epamail.epa.gov. Copies of electronic objections and hearing requests must be submitted as an ASCII file avoiding the use of special characters and any form of encryption. Copies of electronic objections and hearing requests will also be accepted on disks in WordPerfect 5.1/6.1 or ASCII file format. All copies of electronic objections and hearing requests must be identified by the docket number [OPP–300659]. No Confidential Business Information (CBI) should be submitted through e-mail. Copies of electronic objections and hearing requests on this rule may be filed online at many Federal Depository Libraries.

FOR FURTHER INFORMATION CONTACT: By mail: Mike Mendelsohn, Regulatory Action Leader, Biopesticides and Pollution Prevention Division (7511W), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460, Office location, telephone number, and e-mail: Room CS15–W29, 2800 Jefferson Davis Highway, Arlington, VA, 703–308–8715, e-mail: mendelsohn.mike@epamail.epa.gov.

SUPPLEMENTARY INFORMATION: Plant Genetic Systems (America), Inc., 7200 Hickman Road, Suite 202, Des Moines, IA 50322 has requested in pesticide petition (PP 7F4826) the establishment of an exemption from the requirement of a tolerance for residues of the insecticide *Bacillus thuringiensis* subspecies *tolworthi* Cry9C protein and the genetic material necessary for its production in corn in or on all raw agricultural commodities. A notice of filing (FRL–5739–9) was published in the **Federal Register** (62 FR 49224, September 19, 1997), and the notice announced that the comment period would end on October 20, 1997; no comments were received. Plant Genetic Systems (America), Inc. submitted an amendment to their petition on April 24, 1998 to request the establishment of an exemption from the requirement of a tolerance for residues of the insecticide *Bacillus thuringiensis* subspecies *tolworthi* Cry9C protein and the genetic material necessary for its production in corn only in corn used for feed; as well as in meat, poultry, milk, or eggs resulting from animals fed such feed. This exemption from the requirement of a tolerance will permit the marketing of feed corn containing the plant-pesticide; as well as meat, poultry, milk, or eggs resulting from animals fed such feed. The data submitted in the petition and all other relevant material have been evaluated. Following is a summary of EPA's findings regarding this petition as required by section 408(d) of the Federal Food, Drug and Cosmetic Act (FFDCA), 21 U.S.C. 346a, as recently amended by the Food Quality Protection Act (FQPA), Pub. L. 104–170.

I. Risk Assessment and Statutory Findings

A. Product Identity/Chemistry

The Cry9C gene was originally isolated from a *Bacillus thuringiensis* subsp. *tolworthi* strain. The gene was then synthesized with plant preferred codons before it was stably inserted into corn plants to produce a truncated and modified Cry9C protein. The tryptic core of the microbially produced Cry9C delta-endotoxin is similar to the Cry9C protein found in event CBH351 save for a single amino acid substitution in the internal sequence and the addition of two amino acids to the *N*-terminus. The Cry9C protein was produced and purified from a bacterial host to utilize in the mammalian toxicity studies due to the bacterium's greater production potential. Product analysis that compared the Cry9C protein from the two sources included: SDS-PAGE, Western blots, *N*-terminal amino acid sequencing, glycosylation tests (for possible post- translational modifications) and insect bioassays. No analytical method was included since this petition requests an exemption from the requirement of a tolerance.

B. Mammalian Toxicological Profile

Consistent with section 408(b)(2)(D) of FFDCA, EPA has reviewed the available scientific data and other relevant information in support of this action and considered its validity, completeness and reliability and the relationship of this information to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children. Additionally, section 408(b)(2)(D)(v) requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider "available information" concerning the cumulative effects of a particular pesticide's residues and "other substances that have a common mechanism of toxicity." A high-dose acute oral toxicity study (3,760 mg/kg body weight) showed no mortalities. Transient weight losses were seen in three female treated animals, with one not recovering her pre-dosing, pre-fast weight at 14 days after dose administration. The treated males showed no weight losses. Transient weight loss has been observed in similar studies conducted on other purified Cry proteins as well as microbial pesticides containing Cry proteins and is not considered a significant adverse effect. The *in vitro* digestibility study showed the Cry9C protein to be stable to pepsin digestion at pH 2.0 for 4 hours. The Cry9C protein is also heat stable, not being affected by incubation at 90 ° C for 10 minutes. The Cry9C protein in corn is the trypsin resistant core and is therefore stable to tryptic digest. A search for amino acid homology did not reveal any significant homology with known toxins or allergens. The genetic material necessary for the production of the plant-pesticide active ingredient is the nucleic acids (DNA) which comprise genetic material encoding the Cry9C protein and its regulatory regions. Regulatory regions are the genetic material that control the expression of the genetic material encoding the proteins, such as promoters, terminators, and enhancers. DNA is common to all forms of plant and animal life and the Agency knows of no instance where these nucleic acids have been associated with toxic effects related to their consumption as a component of food. These ubiquitous nucleic acids as they appear in the subject plant-pesticide have been adequately characterized by the applicant and supports EPA's conclusion that no mammalian toxicity is anticipated from dietary exposure to the genetic material necessary for the production of the Cry9C protein.

C. Aggregate Exposure

The available information on the aggregate exposure levels of consumers (and major identifiable subgroups of consumers) to the Cry9C protein residue include dietary exposure and exposure from non-occupational sources. Exposure via the skin or inhalation is not likely since the Cry9C plant-pesticide is contained within plant cells essentially eliminating these exposure routes or reducing these exposure routes to negligible. Drinking water is unlikely to be significantly contaminated with Cry9C protein due to the low expression of the protein in corn tissue, degradation of plant materials in the soil and low leaching potential of a protein from a soil matrix. Minimal to non-existent oral exposure could occur from ingestion of meat, poultry, eggs or milk from animals fed corn containing the plant-pesticide and from drinking water. While unlikely, meat, eggs or milk from animals fed corn containing the plant-pesticide could contain negligible but finite residues. This is viewed as a remote possibility due to the low Cry9C expression level in corn tissue (3 to 250 µg/gm dry weight), the anticipated degradation and elimination of the Cry9C protein by the animal or the lack of uptake of such a large protein by the animal's intestinal tract. It is not possible to establish with certainty whether finite residues will be incurred, but there is no reasonable expectation of finite residues. However, the best available information on the uptake of intact proteins from the diet would indicate that the intact Cry9C protein would not be available in products from animals fed corn products containing Cry9C protein.

D. Cumulative Effects

The Agency has considered available information on the cumulative effects of such residues and other substances that have a common mechanism of toxicity. These considerations included the cumulative effects on adults as well as on infants and children of such residues and other substances with a common mechanism of toxicity. Since there is no indication of mammalian toxicity to the Cry9C protein from the studies submitted, there is no reason to believe there would be cumulative toxic effects.

E. Safety Determination

The tolerance exemption is limited to residues of the Cry9C protein resulting from feed use only. The basis of safety for this tolerance exemption includes both the results of the acute oral study at high doses indicating no toxicity and the anticipated minimal to nonexistent human dietary exposure of the Cry9C protein via animal feed use. Bt microbial pesticides, containing Cry proteins other than Cry9C, have been applied for more than 30 years to food and feed crops consumed by the U.S. population. There have been no human safety problems attributed to the specific Cry proteins. An oral dose of the tryptic core Cry9C protein of at least 3,760 mg/kg was administered to 10 animals without mortality demonstrating a high degree of safety for the protein. Transient weight loss in three female rodents was observed, but not in any males. Transient weight loss has been observed in similar studies conducted on other purified Cry proteins as well as microbial pesticides and this is not considered a significant adverse effect.

A comparison of the amino acid sequence of the Cry9C protein with those found in the PIR, Swiss-Prot and HIV AA data bases did not reveal any significant homology with known toxins or allergens. The *in vitro* digestibility study showed the Cry9C protein to be stable to pepsin at pH 2.0. The Cry9C protein was shown to be stable to heat at 90 ° C for 10 minutes and the Cry9C protein in corn is the trypsin resistant core and is therefore stable to tryptic digest. The best available information to date would indicate that edible products derived from animals such as meat, milk

UMI
VOL
63
ISS
99
MY
22
1998
UMI

and eggs, intended for human consumption, have not been shown to be altered in their allergenicity due to changes in the feed stock utilized. This information would include no transfer of allergenic factors from cattle fed soybeans to the derived meat or milk eaten by individuals with food sensitivity to soybeans.

F. Infants and Children

FFDCA section 408(b)(2)(C) provides that EPA shall assess the available information about consumption patterns among infants and children, special susceptibility of infants and children to pesticide chemical residues and the cumulative effects on infants and children of the residues and other substances with a common mechanism of toxicity. In addition, FFDCA section 408 provides that EPA shall apply an additional tenfold margin of exposure (safety) for infants and children in the case of threshold effects to account for pre- and post-natal toxicity and the completeness of the database unless EPA determines that a different margin of exposure (safety) will be safe for infants and children. In this instance, based on all the available information, the Agency concludes that infants and children will consume only minimal, if any, residues of this plant-pesticide and that there is a finding of no toxicity. Thus, there are no threshold effects of concern and, as a result the provision requiring an additional margin of safety does not apply. Further, the provisions of consumption patterns, special susceptibility, and cumulative effects do not apply.

G. Other Considerations

1. *Analytical method.* The Agency is establishing an exemption from the requirement of a tolerance without any numerical limitation; therefore, the agency has concluded that an analytical method is not required for enforcement purposes for this plant-pesticide.

2. *Effects on the endocrine systems.* EPA does not have any information regarding endocrine effects for these kinds of pesticides at this time. The Agency is not requiring information on the endocrine effects of these plant-pesticides at this time; and Congress allowed 3 years after August 3, 1996, for the Agency to implement a screening and testing program with respect to endocrine effects.

H. Existing Tolerances

A temporary exemption from the requirement of a tolerance for residues of *Bacillus thuringiensis* subsp. *tolworthi* Cry9C and the genetic material necessary for the production of this protein in corn, only in corn used for feed; as well as in meat, poultry, milk, or eggs resulting from animals fed such feed was established on April 10, 1998 under 40 CFR 180.1192 [63 FR 69]. The exemption from the requirement of a tolerance in this rule makes permanent the temporary tolerance exemption of 40 CFR 180.1192.

II. Conclusion

Based on the toxicology data cited and the limited exposure expected with animal feed use, there is reasonable certainty that no harm will result from aggregate exposure to the U.S. population, including infants and children, to residues of *Bacillus thuringiensis* subspecies *tolworthi* Cry9C protein and the genetic material necessary for its production in corn. This includes all anticipated dietary exposures and all other exposures for which there is reliable information. The Agency has arrived at this conclusion because, as discussed above, the temporary tolerance exemption is limited to feed use only. The conclusion of safety is supported by the lack of toxicity after administration of a high oral dose (3,760 mg/kg), the lack of homology to known toxins or allergens, and the minimal to nonexistent exposure via dietary and non-dietary routes. This exemption from the requirement of a tolerance will be revoked if any experience with or scientific data on this pesticide indicate that the tolerance is not safe.

III. Objections and Hearing Requests

The new FFDCA section 408(g) provides essentially the same process for persons to "object" to a tolerance exemption regulation issued by EPA under new section 408(e) as was provided in the old section 408. However, the period for filing objections is 60 days, rather than 30 days. EPA currently has procedural regulations which govern the submission of objections and hearing requests. These regulations will require some modification to reflect the new law. However, until those modifications can be made, EPA will continue to use those procedural regulations with appropriate adjustments to reflect the new law.

Any person adversely affected by this regulation may by June 22, 1998, file written objections to the regulation and may also request a hearing on those objections. Objections and hearing requests must be filed with the Hearing Clerk, at the address given above (40 CFR 178.20). A copy of the objections and/or hearing requests filed with the Hearing Clerk should be submitted to the OPP docket for this rulemaking. The objections submitted must specify the provisions of the regulation deemed objectionable and the grounds for the objections (40 CFR 178.25). Each objection must be accompanied by the fee prescribed by 40 CFR 180.33(i). If a hearing is requested, the objections must include a statement of the factual issue(s) on which a hearing is requested, the requestor's contentions on such issues, and a summary of any evidence relied upon by the objector (40 CFR 178.27). A request for a hearing will be granted if the Administrator determines that the material submitted shows the following: There is genuine and substantial issue of fact; there is a reasonable possibility that available evidence identified by the requestor would, if established, resolve one or more of such issues in favor of the requestor, taking into account uncontested claims or facts to the contrary; and resolution of the factual issue(s) in the manner sought by the requestor would be adequate to justify the action requested (40 CFR 178.32). Information submitted in connection with an objection or hearing request may be claimed confidential by marking any part or all of that information as CBI. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR Part 2. A copy of the information that does not contain CBI must be submitted for inclusion in the public record. Information not marked confidential may be disclosed publicly by EPA without prior notice.

IV. Public Record and Electronic Submissions

EPA has established a record for this rulemaking under docket control number [OPP–300659] (including any comments and data submitted electronically). A public version of this record, including printed, paper versions of electronic comments, which does not include any information claimed as CBI, is available for inspection from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The public record is located in Room 119 of the Public Information and Records Integrity Branch, Information Resources and Services, Division (7502C), Office of Pesticide Programs, Environmental Protection Agency, Crystal Mall #2, 1921 Jefferson Davis Highway, Arlington, VA.

Electronic comments may be sent directly to EPA at:

opp-docket@epamail.epa.gov.

Electronic comments must be submitted as an ASCII file avoiding the use of special characters and any form of encryption. The official record for

this rulemaking, as well as the public version, as described above will be kept in paper form. Accordingly, EPA will transfer any copies of objections and hearing requests received electronically into printed, paper form as they are received and will place the paper copies in the official rulemaking record which will also include all comments submitted directly in writing. The official rulemaking record is the paper record maintained at the Virginia address in "ADDRESSES" at the beginning of this document.

V. Regulatory Assessment Requirements

This final rule establishes an exemption from the tolerance requirement under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled Regulatory Planning and Review (58 FR 51735, October 4, 1993). This final rule does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA), 44 U.S.C. 3501 et seq., or impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) (Pub. L. 104–4). Nor does it require any prior consultation as specified by Executive Order 12875, entitled Enhancing the Intergovernmental Partnership (58 FR 58093, October 28, 1993), or special considerations as required by Executive Order 12898, entitled Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations (59 FR 7629, February 16, 1994), or require OMB review in accordance with Executive Order 13045, entitled Protection of Children from Environmental Health Risks and Safety Risks (62 FR 19885, April 23, 1997).

In addition, since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the exemption in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 et seq.) do not apply. Nevertheless, the Agency previously assessed whether establishing tolerances, exemptions from tolerances, raising tolerance levels or expanding exemptions might adversely impact small entities and concluded, as a generic matter, that there is no adverse economic impact. The factual basis for the Agency's generic certification for tolerance actions published on May 4, 1981 (46 FR 24950), and was provided to the Chief Counsel for Advocacy of the Small Business Administration.

VI. Submission to Congress and the General Accounting Office

Under 5 U.S.C. 801(a)(1)(A), as added by the Small Business Regulatory Enforcement Fairness Act of 1996, the Agency has submitted a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the General Accounting Office prior to publication of this rule in today's **Federal Register**. This is not a "major rule" as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: May 11, 1998.

Marcia E. Mulkey,

Director, Office of Pesticide Programs.

Therefore, 40 CFR chapter I is amended as follows:

PART 180—[AMENDED]

1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 346a and 371

2. Section 180.1192 is revised to read as follows:

§ 180.1192 Bacillus thuringiensis subspecies tolworthi Cry9C protein and the genetic material necessary for its production in corn; exemption from the requirement of a tolerance.

The plant-pesticide *Bacillus thuringiensis* subspecies *tolworthi* Cry9C protein and the genetic material necessary for its production in corn is exempted from the requirement of a tolerance for residues, only in corn used for feed; as well as in meat, poultry, milk, or eggs resulting from animals fed such feed.

[FR Doc. 98–13604 Filed 5–21–98; 8:45 am]

BILLING CODE 6560–50–F

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 65

[Docket No. FEMA–7244]

Changes in Flood Elevation Determinations

AGENCY: Federal Emergency Management Agency (FEMA).

ACTION: Interim rule.

SUMMARY: This interim rule lists communities where modification of the base (1% annual chance) flood elevations is appropriate because of new scientific or technical data. New flood insurance premium rates will be calculated from the modified base flood elevations for new buildings and their contents.

DATES: These modified base flood elevations are currently in effect on the dates listed in the table and revise the Flood Insurance Rate Map(s) in effect prior to this determination for each listed community.

From the date of the second publication of these changes in a newspaper of local circulation, any person has ninety (90) days in which to request through the community that the Associate Director for Mitigation reconsider the changes. The modified elevations may be changed during the 90-day period.

ADDRESSES: The modified base flood elevations for each community are available for inspection at the office of the Chief Executive Officer of each community. The respective addresses are listed in the following table.

FOR FURTHER INFORMATION CONTACT: Matthew B. Miller, P.E., Chief, Hazards Study Branch, Mitigation Directorate, 500 C Street SW., Washington, DC 20472, (202) 646–3461.

SUPPLEMENTARY INFORMATION: The modified base flood elevations are not listed for each community in this interim rule. However, the address of the Chief Executive Officer of the community where the modified base flood elevation determinations are available for inspection is provided.

Any request for reconsideration must be based upon knowledge of changed conditions, or upon new scientific or technical data.

The modifications are made pursuant to Section 201 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.*, and with 44 CFR Part 65.

For rating purposes, the currently effective community number is shown and must be used for all new policies and renewals.

The modified base flood elevations are the basis for the floodplain management measures that the community is required to either adopt or to show evidence of being already in effect in order to qualify or to remain qualified for participation in the National Flood Insurance Program (NFIP).

These modified elevations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own, or pursuant to policies established by other Federal, State, or regional entities.

The changes in base flood elevations are in accordance with 44 CFR 65.4.

National Environmental Policy Act.

This rule is categorically excluded from the requirements of 44 CFR Part 10, Environmental Consideration. No environmental impact assessment has been prepared.

Regulatory Flexibility Act.

The Associate Director for Mitigation certifies that this rule is exempt from the requirements of the Regulatory Flexibility Act because modified base flood elevations are required by the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are required to maintain community eligibility in the NFIP. No regulatory flexibility analysis has been prepared.

Regulatory Classification.

This interim rule is not a significant regulatory action under the criteria of Section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

Executive Order 12612, Federalism.

This rule involves no policies that have federalism implications under Executive Order 12612, Federalism, dated October 26, 1987.

Executive Order 12778, Civil Justice Reform.

This rule meets the applicable standards of Section 2(b)(2) of Executive Order 12778.

List of Subjects in 44 CFR Part 65

Flood insurance, Floodplains, Reporting and recordkeeping requirements.

Accordingly, 44 CFR part 65 is amended to read as follows:

PART 65—[AMENDED]

1. The authority citation for part 65 continues to read as follows:

Authority: 42 U.S.C. 4001 *et seq.*; Reorganization Plan No. 3 of 1978, 3 CFR, 1978 Comp., p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp., p. 376.

§ 65.4 [Amended]

2. The tables published under the authority of § 65.4 are amended as follows:

BILLING CODE 6718–04–P

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 65

[Docket No. FEMA–7257]

Changes in Flood Elevation Determinations

AGENCY: Federal Emergency Management Agency, FEMA.

ACTION: Interim rule.

SUMMARY: This interim rule lists communities where modification of the base (1% annual chance) flood elevations is appropriate because of new scientific or technical data. New flood insurance premium rates will be calculated from the modified base flood elevations for new buildings and their contents.

DATES: These modified base flood elevations are currently in effect on the dates listed in the table and revise the Flood Insurance Rate Map(s) (FIRMs) in effect prior to this determination for each listed community.

From the date of the second publication of these changes in a newspaper of local circulation, any person has ninety (90) days in which to request through the community that the Associate Director reconsider the changes. The modified elevations may be changed during the 90-day period.

ADDRESSES: The modified base flood elevations for each community are available for inspection at the office of the Chief Executive Officer of each community. The respective addresses are listed in the following table.

FOR FURTHER INFORMATION CONTACT: Matthew B. Miller, P.E., Chief, Hazards Study Branch, Mitigation Directorate, 500 C Street SW., Washington, DC 20472, (202) 646–3461.

SUPPLEMENTARY INFORMATION: The modified base flood elevations are not listed for each community in this interim rule. However, the address of the Chief Executive Officer of the community where the modified base flood elevation determinations are available for inspection is provided.

Any request for reconsideration must be based upon knowledge of changed conditions, or upon new scientific or technical data.

The modifications are made pursuant to section 201 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.*, and with 44 CFR part 65.

For rating purposes, the currently effective community number is shown and must be used for all new policies and renewals.

The modified base flood elevations are the basis for the floodplain management measures that the community is required to either adopt or to show evidence of being already in effect in order to qualify or to remain qualified for participation in the National Flood Insurance Program.

These modified elevations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own, or pursuant to policies established by other Federal, state or regional entities.

The changes in base flood elevations are in accordance with 44 CFR 65.4.

National Environmental Policy Act

This rule is categorically excluded from the requirements of 44 CFR Part 10, Environmental Consideration. No environmental impact assessment has been prepared.

Regulatory Flexibility Act

The Associate Director, Mitigation Directorate, certifies that this rule is exempt from the requirements of the Regulatory Flexibility Act because modified base flood elevations are required by the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are required to maintain community eligibility in the National Flood Insurance Program. No regulatory flexibility analysis has been prepared.

Regulatory Classification

This interim rule is not a significant regulatory action under the criteria of section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

Executive Order 12612, Federalism

This rule involves no policies that have federalism implications under Executive Order 12612, Federalism, dated October 26, 1987.

Executive Order 12778, Civil Justice Reform

This rule meets the applicable standards of section 2(b)(2) of Executive Order 12778.

List of Subjects in 44 CFR Part 65

Flood insurance, Floodplains, Reporting and recordkeeping requirements. Accordingly, 44 CFR part 65 is amended to read as follows:

PART 65—[AMENDED]

1. The authority citation for part 65 continues to read as follows:

Authority: 42 U.S.C. 4001 et seq.; Reorganization Plan No. 3 of 1978, 3 CFR, 1978 Comp., p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp., p. 376.

§ 65.4 [Amended]

2. The tables published under the authority of § 65.4 are amended as follows:

BILLING CODE 6718–03–P

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 65

Changes in Flood Elevation Determinations

AGENCY: Federal Emergency Management Agency, FEMA.

ACTION: Final rule.

SUMMARY: Modified base (1% annual chance) flood elevations are finalized for the communities listed below. These modified elevations will be used to calculate flood insurance premium rates for new buildings and their contents.

EFFECTIVE DATES: The effective dates for these modified base flood elevations are indicated on the following table and revise the Flood Insurance Rate Map(s) (FIRMs) in effect for each listed community prior to this date.

ADDRESSES: The modified base flood elevations for each community are available for inspection at the office of the Chief Executive Officer of each community. The respective addresses are listed in the following table.

FOR FURTHER INFORMATION CONTACT: Matthew B. Miller, P.E., Chief, Hazards Study Branch, Mitigation Directorate, 500 C Street SW., Washington, DC 20472, (202) 646–3461.

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency makes the final determinations listed below of modified base flood elevations for each community listed. These modified elevations have been published in newspapers of local circulation and ninety (90) days have elapsed since that publication. The Associate Director has resolved any appeals resulting from this notification.

The modified base flood elevations are not listed for each community in this notice. However, this rule includes the address of the Chief Executive Officer of the community where the modified base flood elevation determinations are available for inspection.

The modifications are made pursuant to section 206 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.*, and with 44 CFR part 65.

For rating purposes, the currently effective community number is shown and must be used for all new policies and renewals.

The modified base flood elevations are the basis for the floodplain management measures that the community is required to either adopt or to show evidence of being already in effect in order to qualify or to remain qualified for participation in the National Flood Insurance Program.

These modified elevations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own, or pursuant to policies established by other Federal, state or regional entities.

These modified elevations are used to meet the floodplain management requirements of the NFIP and are also used to calculate the appropriate flood insurance premium rates for new buildings built after these elevations are made final, and for the contents in these buildings.

The changes in base flood elevations are in accordance with 44 CFR 65.4.

National Environmental Policy Act

This rule is categorically excluded from the requirements of 44 CFR Part 10, Environmental Consideration. No environmental impact assessment has been prepared.

Regulatory Flexibility Act

The Associate Director, Mitigation Directorate, certifies that this rule is exempt from the requirements of the Regulatory Flexibility Act because modified base flood elevations are required by the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are required to maintain community eligibility in the National Flood Insurance Program. No regulatory flexibility analysis has been prepared.

Regulatory Classification

This final rule is not a significant regulatory action under the criteria of section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

Executive Order 12612, Federalism

This rule involves no policies that have federalism implications under Executive Order 12612, Federalism, dated October 26, 1987.

Executive Order 12778, Civil Justice Reform.

This rule meets the applicable standards of section 2(b)(2) of Executive Order 12778.

List of Subjects in 44 CFR Part 65

Flood insurance, Floodplains, Reporting and recordkeeping requirements.

Accordingly, 44 CFR part 65 is amended to read as follows:

PART 65—[AMENDED]

1. The authority citation for part 65 continues to read as follows:

Authority: 42 U.S.C. 4001 *et seq.*; Reorganization Plan No. 3 of 1978, 3 CFR, 1978 Comp., p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp., p. 376.

§ 65.4 [Amended]

2. The tables published under the authority of § 65.4 are amended as follows:

State and county	Location	Dates and name of newspaper where notice was published	Chief executive officer of community	Effective date of modification	Community No.
Illinois:					
DuPage and Cook (FEMA Docket No. 7233).	Village of Bensenville.	September 3, 1997, September 10, 1997, Press Publications.	Mr. John C. Geils, President of the Village of Bensenville, 700 West Irving Park Road, Bensenville, Illinois 60106.	August 27, 1997 ..	170200 C
Cook (FEMA Docket No. 7243).	Village of Schaumburg.	September 30, 1997, October 7, 1997, Daily Herald.	The Honorable Al Larson, Mayor of the Village of Schaumburg, 101 Schaumburg Court, Schaumburg, Illinois 60193–1899.	January 5, 1998 ...	170158 D

BILLING CODE 6718–04–P

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 67

Final Flood Elevation Determinations

AGENCY: Federal Emergency Management Agency (FEMA).

ACTION: Final rule.

SUMMARY: Base (1% annual chance) flood elevations and modified base flood elevations are made final for the communities listed below. The base flood elevations and modified base flood elevations are the basis for the floodplain management measures that each community is required either to adopt or to show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

EFFECTIVE DATE: The date of issuance of the Flood Insurance Rate Map (FIRM) showing base flood elevations and modified base flood elevations for each community. This date may be obtained by contacting the office where the FIRM is available for inspection as indicated in the table below.

ADDRESSES: The final base flood elevations for each community are available for inspection at the office of the Chief Executive Officer of each community. The respective addresses are listed in the table below.

FOR FURTHER INFORMATION CONTACT: Matthew B. Miller, P.E., Chief, Hazards Study Branch, Mitigation Directorate, 500 C Street SW., Washington, DC 20472, (202) 646–3461.

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency makes final determinations listed below of base flood elevations and modified base flood elevations for each community listed. The proposed base flood elevations and proposed modified base flood elevations were published in newspapers of local circulation and an opportunity for the community or individuals to appeal the proposed determinations to or through the community was provided for a period of ninety (90) days. The proposed base flood elevations and proposed modified base flood elevations were also published in the **Federal Register**.

This final rule is issued in accordance with Section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR Part 67.

FEMA has developed criteria for floodplain management in floodprone areas in accordance with 44 CFR Part 60.

Interested lessees and owners of real property are encouraged to review the proof Flood Insurance Study and FIRM available at the address cited below for each community.

The base flood elevations and modified base flood elevations are made final in the communities listed below. Elevations at selected locations in each community are shown.

National Environmental Policy Act

This rule is categorically excluded from the requirements of 44 CFR Part 10, Environmental Consideration. No environmental impact assessment has been prepared.

Regulatory Flexibility Act

The Associate Director for Mitigation certifies that this rule is exempt from the requirements of the Regulatory Flexibility Act because final or modified base flood elevations are required by the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and are required to establish and maintain community eligibility in the NFIP. No regulatory flexibility analysis has been prepared.

Regulatory Classification

This final rule is not a significant regulatory action under the criteria of Section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

Executive Order 12612, Federalism

This rule involves no policies that have federalism implications under Executive Order 12612, Federalism, dated October 26, 1987.

Executive Order 12778, Civil Justice Reform

This rule meets the applicable standards of Section 2(b)(2) of Executive Order 12778.

List of Subjects in 44 CFR Part 67

Administrative practice and procedure, Flood insurance, Reporting and recordkeeping requirements.

Accordingly, 44 CFR part 67 is amended to read as follows:

PART 67—[AMENDED]

1. The authority citation for part 67 continues to read as follows:

Authority: 42 U.S.C. 4001 *et seq.*; Reorganization Plan No. 3 of 1978, 3 CFR, 1978 Comp., p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp., p. 376.

§ 67.11 [Amended]

2. The tables published under the authority of § 67.11 are amended as follows:

Source of flooding and location	#Depth in feet above ground. *Elevation in feet (NGVD)
ALASKA	
Emmonak (City), Unorganized Borough (FEMA Docket No. 7238)	
Yukon River:	
Over the entire corporate limits of the City	Δ 20
—To indicate mean sea level (approximate).	
Maps are available for inspection at the City Office, Emmonak, Alaska.	
ARKANSAS	
Lakeview (Town), Phillips County (FEMA Docket No. 7238)	
White River:	
At the intersection of Center and Martin Luther King	*173
Approximately 1,500 feet east of the intersection of Martin Luther King and Maple	*173
Maps are available for inspection at the Town of Lakeview Town Hall, 14264 Highway 44, Helena, Arkansas.	
West Helena (City), Phillips County (FEMA Docket No. 7238)	
Crooked Creek:	
Just downstream of Airport Road	*228
Crooked Creek Lateral "A":	
Approximately 400 feet upstream of Mimosa Street	*258
Approximately 1,300 feet upstream of Mimosa Street	*266
Caney Creek:	
Approximately 300 feet downstream of Little Rock Road	*211
Approximately 700 feet downstream of Highway 49	*225
Approximately 200 feet upstream of Highway 49	*232
Caney Creek Lateral "A":	
Approximately 100 feet upstream of confluence with Caney Creek	*232
Caney Creek Lateral "D":	
Approximately 500 feet downstream of Little Rock Road	*207
Approximately 100 feet upstream of Little Rock Road	*211
Maps are available for inspection at the City of West Helena City Hall, 98 East Plaza, West Helena, Arkansas.	
Phillips County (Unincorporated Areas) (FEMA Docket No. 7238)	
Crooked Creek:	
At confluence with Lick Creek	*197
Just downstream of Quarles Lane	*252
Crooked Creek Lateral "A":	
At confluence with Crooked Creek	*242
Approximately 3,000 feet downstream of Hill Road	#2
Approximately 550 feet downstream of Hill Road	*270
Crooked Creek Lateral "B":	
At confluence with Crooked Creek	*231
Approximately 800 feet upstream of Kelsa Street	*238
Crooked Creek Lateral "C":	
At confluence with Crooked Creek	*234
Approximately 1,750 feet downstream from Sebastian Street	*238
Caney Creek:	
At confluence with Beaver Bayou Ditch	*183
Approximately 4,250 feet upstream of Springdale Road	*279
Caney Creek Lateral "A":	
Approximately 200 feet upstream of confluence with Caney Creek	*232
Approximately 2,000 feet upstream of County Highway 242	*246
Caney Creek Lateral "C":	
At confluence with Caney Creek	*205
Just downstream of Little Rock Road	*210

Source of flooding and location	#Depth in feet above ground. *Elevation in feet (NGVD)
Caney Creek Lateral "D":	
At confluence with Caney Creek	*198
Just downstream of Little Rock Road	*210
Beaver Bayou Ditch:	
At Missouri Pacific Railroad	*173
Just south of Missouri Pacific Railroad	*182
Lick Creek:	
At confluence with Big Creek	*173
Approximately 3,700 feet upstream of Missouri Pacific Railroad	*199
Freedonia Branch:	
Just downstream of U.S. Route 49	*212
Approximately 2,200 feet upstream of Farm Road	*230
Main Outlet Ditch:	
Just upstream of Long Lake	*179
Approximately 300 feet upstream of Missouri Pacific Railroad	*182
Mississippi River:	
At U.S. Highway 49	*197
Approximately 2.75 miles upstream of U.S. Highway 49	*198
Maps are available for inspection at 620 Cherry Street, Helena, Arkansas.	
CALIFORNIA	
Gilroy (City), Santa Clara County (FEMA Docket No. 7226)	
Uvas Creek East Overbank Above Highway 101:	
Just above Highway 101	*186
Approximately 2,000 feet upstream of Highway 101	*192
West Branch Llagas Creek:	
Approximately 500 feet upstream of Golden Gate Avenue	*232
West Branch Llagas Creek, East Split:	
Approximately 300 feet north of Day Road	*222
Approximately 500 feet north of Golden Gate Avenue	*232
Uvas Creek East Overbank Above SPRR:	
Ponding north of Bolsa Road between the Southern Pacific Railroad and Uvas Creek	*175
Just south of the intersection of Monterey Highway and the Southern Pacific Railroad	*187
Maps are available for inspection at the City of Gilroy City Hall, 7351 Rosanna Street, Gilroy, California.	
Sacramento (City), Sacramento County (FEMA Docket No. 7063)	
American River:	
Just upstream of confluence with the Sacramento River	*31
Just upstream of State Highway 160	*36
Approximately 8,000 feet upstream of Business Interstate 80	*42
Approximately 2,000 feet upstream of H Street	*46
Approximately 700 feet downstream of Watt Avenue	*52
American River (Detailed Flooding Adjacent to the River):	
At the intersection of N and 28th Streets	*26
At the intersection of W and 33rd Streets	*26
At the intersection of 35th Street and Folsom Boulevard	*28
At the intersection of 41st and M Streets	*30
At the intersection of D and 46th Streets	*32
Just north of the intersection of Business Route 80 and the Southern Pacific Railroad	*43
At the intersection of Callister and Carlson Drives	*44
Approximately 3,000 feet south of the intersection of Arden and Challenge Ways	*44
At the intersection of Jordan Way and Jed Smith Drive	*45
At the intersection of Julliard and Occidental Drives	*48
At Mossglen Circle	*49
Arcade Creek:	
Just upstream of confluence with Natomas East Main Drainage Canal	*36
Approximately 1,300 feet upstream of Rio Linda Boulevard	*33
Just upstream of Marysville Boulevard	*40
Deep Ponding:	
At the intersection of Deer Gren Drive and Red Deer Way	*16
Approximately 1,000 feet west of the intersection of Archean Way and Deer Creek Drive	*16
At the intersection of Decathalon Circle and Archean Way	*16
Approximately 500 feet west of the intersection of Deer Gren Drive and Red Deer Way	*16
Approximately 800 feet west of Black Trail and Deer Gren Drives	*16
At the intersection of Deer Lake Drive and Evalita Way	*16
Approximately 300 feet east of the intersection of Deer Water and Sea Meadow Ways	*16
Approximately 800 feet southeast of the intersection of Deer Lake Drive and Sea Forest Way	*16
At the intersection of Amina and Chinquapin Ways	*16
Approximately 2,000 feet southwest of the intersection of Ernhardt Avenue and Franklin Boulevard	*16
Approximately 3,000 feet southwest of the intersection of Ernhardt Avenue and Franklin Boulevard	*16
Approximately 400 feet southwest of the intersection of Ernhardt Avenue and Franklin Boulevard	*16
Approximately 400 feet north of the intersection of Eddington Court and Euler Way	*16
At the intersection of Deer Creek Drive and Decathalon Circle	*16
Approximately 200 feet south of the intersection of Mack Road and Archean Way	*16
South of the intersection of Deer Lake Drive and De la Vina Way	*16
Approximately 300 feet east of the intersection of Deer Water Way and Deer Lake Drive	*16
Approximately 50 feet southwest of the intersection of Valley Hi Drive and Chinquapin Way	*16
Approximately 800 feet south of the intersection of Deer Lake Drive and Sea Forest Way	*16
At the intersection of Valley Hi Drive and Halkeep Way	*16
Approximately 1,000 feet south of the intersection of La Coruna and Valley Hi Drives	*16
Approximately 8,000 feet south of the intersection of 23rd Street and Craig Avenue	*16
At the intersection of Meadowview Road and 24th Street	*18
At the intersection of Meadowgate Drive and Winner Way	None
At the intersection of Golfview Drive and Mangrum Avenue	*18
At the intersection of Greenhaven Drive and Pocket Road	*19
At the intersection of Havenside Drive and Florin Road	*19
At the intersection of Riverside Boulevard and Park Riviera Drive	*19
At the intersection of 26th and Euclid Avenues	*19
At the intersection of Freeport Boulevard and Wentworth Avenue	*24
At the intersection of Ninth Avenue and 33rd Street	*24
At the intersection of P and 18th Streets	*24
At the intersection of Truxel Road and West El Camino Avenue	None
At the intersection of Del Paso and El Centro Roads	None
At the intersection of Orchard Lane and West El Camino Avenue	None

Source of flooding and location	#Depth in feet above ground. *Elevation in feet (NGVD)
At the intersection of Bercut Drive and Richards Boulevard	*35
At the intersection of North 12th and Sitka Streets	*35
At the intersection of Bell Court Avenue and Englewood Street	None
At the intersection of Taylor Street and Interstate Highway 880	None
At the intersection of Norwood and Las Palmas Avenues	*36
Approximately 2,000 feet west of the intersection of 20th and A Streets	*38
At the intersection of Response Road and Heritage Lane	*41
Dry Creek:	
Just upstream of confluence with Natomas East Main Drainage Canal	*38
Approximately 8,700 feet upstream of confluence with Natomas East Main Drainage Canal	*40
Lower Magpie Creek:	
Approximately 500 feet upstream of Natomas East Main Drainage Canal	*19
Just downstream of Rio Linda Boulevard	*32
Morrison Creek:	
Approximately 300 feet upstream of Elk Grove Florin Road	*47
Natomas East Drainage Canal:	
Just upstream of confluence with Natomas Main Drainage Canal	None
Just downstream of Elkhorn Boulevard	None
Natomas East Main Drainage Canal:	
Approximately 1,000 feet upstream of Northgate Boulevard	*35
Just downstream of Interstate 880	*37
Approximately 2,500 feet upstream of Main Avenue	*38
Just downstream of the City of Sacramento corporate limits	*31
Natomas Main Drainage Canal:	
Just upstream of Garden Highway	None
Just upstream of Interstate 80	None
Natomas West Drainage Canal:	
Just upstream of confluence with Natomas Main Drainage Canal	None
Just downstream of Del Paso Road	None
Robla Creek:	
Just upstream of confluence with Natomas East Main Drainage Canal	*38
Just upstream of Rio Linda Boulevard	*39
Sacramento River:	
Approximately 4,000 feet downstream of Sleepy River Way	*24
Approximately 200 feet upstream of Evros River Court	*27
Approximately 1,200 feet upstream of 43rd Avenue	*29
Approximately 1,000 feet upstream of Darnel Way	*30
Approximately 3,000 feet upstream of I Street	*31
Shallow Flooding:	
Approximately 500 feet southeast of the intersection of Arden and Challenge Ways	#2
At the intersection of Woodbine and 47th Avenues	#2
Approximately 500 feet north of the intersection of 47th Avenue and Romack Circle	#3
At the intersection of Kitchner Avenue and Zelda Way	#3
At the intersection of Edna and 24th Streets	#3
At the intersection of Alvarado and Riviera Drives	#2
At the intersection of Arcade Boulevard and Clay Street	#1
Approximately 1,500 feet north of the intersection of Tunis Road and Barros Drive	None
Approximately 800 feet south of the intersection of Arden Way and Evergreen Street	#1
Unionhouse Creek:	
Just upstream of the confluence with Morrison Creek	*16
Approximately 400 feet downstream of Franklin Boulevard	*16
Maps are available for inspection at the City of Sacramento Department of Public Works, Engineering Division, 927 Tenth Street, Room 100, Sacramento, California.	
Sacramento (City), Sacramento County (FEMA Docket No. 7218)	
Morrison Creek:	
Approximately 6,440 feet downstream of confluence with Unionhouse Creek	*16
Approximately 370 feet downstream of Meadowview Road	*16
Unionhouse Creek:	
Approximately 260 feet downstream of Western Pacific Railroad	*16
Approximately 530 feet downstream of Franklin Boulevard	*16
Elder Creek:	
At confluence with Morrison Creek	*16
Approximately 1,700 feet upstream of confluence with Morrison Creek	*16
Maps are available for inspection at the City of Sacramento City Hall, 915 I Street, Room 207, Sacramento, California.	
Sacramento County (Unincorporated Areas) (FEMA Docket No. 7063)	
American River:	
Just downstream of Northrop Avenue	*42
Approximately 1,000 feet downstream of Watt Avenue	*52
Approximately 14,000 feet upstream of Watt Avenue	*58
Approximately 23,000 feet upstream of Watt Avenue	*60
Approximately 7,000 feet downstream of confluence with Carmichael Creek	*66
Approximately 1,900 feet upstream of confluence with Carmichael Creek	*76
Approximately 5,500 feet upstream of confluence with Carmichael Creek	*80
Approximately 9,700 feet upstream of confluence with Carmichael Creek	*86
Approximately 500 feet downstream of Sunrise Boulevard	*92
Approximately 6,600 feet upstream of Sunrise Boulevard	*100
Approximately 300 feet downstream of Hazel Avenue	*106
Approximately 300 feet upstream of Hazel Avenue	*114
Just upstream of Nimbus Dam	*126
American River (Detailed Flooding Adjacent to the River):	
At the intersection of Ethan Drive and El Camino Avenue	*41
At the intersection of Keith Way and Violet Street	*41
At the intersection of Fair Oaks Boulevard and Munroe Street	*44
At the intersection of the Southern Pacific Railroad and Reith Court	*49
At the intersection of Watt Avenue and La Riviera Drive	*50
At the intersection of Manlove Road and Folsom Boulevard	*50
At the intersection of Estates and American River Drives	*55
At the intersection of American River Drive and Whitehall Way	*55
Approximately 100 feet east of the intersection of Huntsman Drive and Mayhew Road	*56
At the intersection of Mayhew Road and Folsom Boulevard	*56
Approximately 7,000 feet downstream of Hazel Avenue, South Overbank	*102
American River (Shallow Flooding):	

Source of flooding and location	#Depth in feet above ground. *Elevation in feet (NGVD)
Approximately 8,000 feet upstream of Watt Avenue, South Overbank	#1
Approximately 100 feet north of the intersection of La Riviera Drive and Folsom Boulevard	#1
Just southeast of the intersection of La Riviera Drive and Folsom Boulevard	#2
Approximately 500 feet west of the intersection of Folsom Boulevard and Mayhew Road	None
Approximately 1,100 feet north and 200 feet west of the intersection of Folsom Boulevard and Mayhew Road	None
Approximately 1,500 feet downstream of Nimbus Dam, South Overbank	None
Carmichael Creek:	
Just upstream of confluence with the American River	*74
Approximately 125 feet downstream of Palm Drive	*76
Chicken Ranch Slough:	
Approximately 700 feet downstream of Hurley Way	*33
Just downstream of Hernando Road	*43
Deep Ponding:	
At the intersection of Beach Lake Road and Interstate Route 5	*16
At the intersection of the Union Pacific Railroad and Laguna Creek	*16
At the intersection of two unnamed roads approximately 3,000 feet west of the intersection of the Union Pacific Railroad and Laguna Creek	*16
Approximately 2,000 feet southeast of the intersection of Unionhouse Creek and the Union Pacific Railroad	*16
Approximately 200 feet southeast of the intersection of Unionhouse Creek and the Union Pacific Railroad	*16
At the intersection of Stonecrest Avenue and Interstate Route 5	*18
Approximately 2,000 feet southwest of the intersection of Sacramento Boulevard and Fruitridge Road	None
Approximately 3,000 feet west of the intersection of Sacramento Boulevard and Lemon Hill Avenue	None
At the intersection of Elkhorn Boulevard and Powerline Road	None
At the intersection of Delta and Powerline Roads	None
At the intersection of Elverta and Powerline Roads	None
At the intersection of El Centro and Elverta Roads	None
Approximately 2,500 feet east of the intersection of Elverta Road and Natomas East Drainage Canal	None
At the intersection of Interstate Route 5 and Schoolhouse Road	None
At the intersection of Del Paso and Powerline Roads	None
At the intersection of Meister Way and Powerline Road	None
At the intersection of El Centro Road and Elkhorn Boulevard	None
At the intersection of Garden Highway and San Juan Road	None
Approximately 2,000 feet west of the intersection of Elverta Road and the Union Pacific Railroad	None
Just west of the intersection of Sorento and Del Paso Roads	None
Dry Creek:	
Just east of West Fourth Street, along Ascot Avenue	None
At the intersection of Ascot Avenue and West Second Street	None
Approximately 300 feet east of the intersection of Ascot Avenue and West Second Street	None
Dry Creek, North Branch:	
Approximately 200 feet upstream of confluence with Dry Creek, West Overbank	*41
Approximately 600 feet upstream of confluence with Dry Creek, West Overbank	*41
Just upstream of Marysville Boulevard, West Overbank	*41
Natomas East Drainage Canal:	
Just upstream of Elkhorn Boulevard	None
Just downstream of the Sacramento-Sutter County boundary	None
Natomas East Main Drainage Canal:	
Approximately 2,700 feet downstream of Sorento Road	*31
Just downstream of confluence with Natomas East Main Drainage Canal Tributary I	*31
Approximately 5,800 feet upstream of confluence with Natomas East Main Drainage Canal Tributary F	*33
Natomas East Main Drainage Canal (Shallow Flooding):	
Approximately 2,500 feet downstream of Elkhorn Boulevard, West Overbank	None
At Elkhorn Boulevard, West Overbank	None
Approximately 1,300 feet upstream of Elkhorn Boulevard, West Overbank	None
Approximately 4,500 feet upstream of Elverta Road, West Overbank	None
Natomas East Main Drainage Canal Tributary F:	
Just upstream of confluence with Natomas East Main Drainage Canal	*33
Just downstream of Rio Linda Boulevard	*36
Natomas East Main Drainage Canal Tributary G:	
Just upstream of confluence with Natomas East Main Drainage Canal	*33
Approximately 40 feet downstream of Elwyn Avenue	*37
Natomas East Main Drainage Canal Tributary I:	
Approximately 1,000 feet upstream of confluence with Natomas East Main Drainage Canal	*31
Just downstream of West Second Street	*33
Natomas Main Drainage Canal:	
Just upstream of Interstate Highway 80	None
Natomas North Drainage Canal:	
Approximately 2,200 feet downstream of the access road	None
Just downstream of the Sacramento-Sutter County boundary	None
Natomas West Drainage Canal:	
Just upstream of confluence with Natomas Main Drainage Canal	None
Just downstream of Elkhorn Boulevard	None
At Elkhorn Boulevard	None
Sacramento River:	
Approximately 200 feet upstream of Freeport Bridge	*25
Approximately 5,000 feet upstream of Freeport Bridge	*26
Approximately 4,000 feet upstream of Interstate Route 80	*31
Approximately 4,000 feet downstream of Interstate Route 80	*31
Approximately 5,000 feet upstream of San Juan Road	*32
Approximately 5,000 feet upstream of Powerline Road	*33
Approximately 5,000 feet downstream of Interstate Highway 5	*35
Approximately 4,500 feet downstream of Elkhorn Boulevard	*36
Approximately 500 feet upstream of Elkhorn Boulevard	*37
Approximately 8,200 feet upstream of Elverta Road	*38
Shallow Flooding:	
At the intersection of Lemon Hill Avenue and Franklin Boulevard	#1
Strong Ranch Slough:	
Approximately 200 feet downstream of Howe Avenue	*33
Just downstream of Wyda Way	*43

Maps are available for inspection at the Sacramento County Department of Public Works, Water Resources Division, 827 Seventh Street, Room 301, Sacramento, California.

Source of flooding and location	#Depth in feet above ground. *Elevation in feet (NGVD)
San Jose (City), Santa Clara County (FEMA Docket No. 7214)	
Calabazas Creek:	
Approximately 600 feet downstream of Prospect Drive	*290
Just downstream of Prospect Drive	*297
Alamitos Creek Above Percolation Pond:	
At Percolation Pond	*196
At Winfield Boulevard	*203
800 feet upstream of Almaden Expressway	*327
Berryessa Creek:	
Just upstream of Morrill Avenue	*110
Approximately 200 feet upstream of Piedmont Road	*218
South Babb Creek:	
Approximately 700 feet downstream of Clayton Road	*200
At private drive 300 feet downstream of Clayton Road	*208
Upper Silver Creek:	
At Yerba Buena Road	*170
Just above private drive near intersection of Silver Creek and Yerba Buena Roads	*280
Maps are available for inspection at the City of San Jose City Hall, 801 North First Street, Room 308, San Jose, California.

Alamitos Creek:	
At projection of Pfeiffer Court across Graystone Lane	*260
At confluence of Arroyo Calero	*283
East Little Llagas Creek:	
At confluence with Llagas and Church Creeks	*248
Just upstream of Middle Avenue	*304
Madrone Channel:	
At confluence with East Little Llagas Creek	*305
Approximately 2,000 feet upstream of East Main Avenue	*369
San Tomas Aquino Creek:	
At intersection of Davis and Gianera Streets	*15
At intersection of Fillmore and North Fourth Streets	*17
Tennant Creek:	
At confluence with East Little Llagas Creek	*288
Just upstream of Middle Avenue	*308
Approximately 1,500 feet upstream of Tennant Avenue	*346
Uvas Creek:	
Just above the Southern Pacific Railroad	*174
Just upstream of Hecker Pass Highway (Highway 152)	*246
Just below Uvas Reservoir	*398
Watsonville Road Overflow:	
Just downstream of Watsonville Road	*320
At confluence with Llagas Creek	*303
West Branch Llagas Creek:	
Just upstream of Day Road	*221
Along Turlock Avenue between Highland Avenue and Fitzgerald Road	#1
Approximately 2,500 feet upstream of Coolidge Avenue	*291
West Little Llagas Creek:	
Just upstream of Highway 101	*305
Just downstream of Monterey Highway	*316
Calabazas Creek:	
Approximately 600 feet downstream of Prospect Road	*290
Just downstream of Prospect Road	*297
Middle Avenue Overflow (From West Little Llagas Creek):	
At confluence with Llagas Creek just north of San Martin Avenue	*283
At intersection of Middle and Murphy Avenues	*305
West Branch Llagas Creek-Upper Split:	
Approximately 1,000 feet west of Coolidge Avenue	*278
At Harding Avenue, 500 feet north of intersection with Highland Avenue	*267
Uvas Creek (South Split):	
Just north of Bloomfield Avenue between Monterey Highway and the Southern Pacific Railroad	*166
Approximately 3,000 feet north of Bloomfield Avenue between Monterey Highway and the Southern Pacific Railroad	*179
Maps are available for inspection at the Santa Clara County Department of Land Use and Development, Central Permit Office, 70 West Hedding Street, San Jose, California.	
Sutter County (Unincorporated Areas) (FEMA Docket No. 7063)	
Cross Canal:	
At confluence with the Sacramento River	*39
At confluence with Pleasant Grove Creek Canal	*40
Deep Ponding:	
At the intersection of Sankey and Power Line Roads	None
At the intersection of Sankey Road and Pacific Avenue	None
At the intersection of Riego and Power Line Roads	None
Natomas East Main Drainage Canal:	
Approximately 2,000 feet south of Sankey Road	*37
At the Sacramento County line	*33
Pleasant Grove Creek Canal:	
At confluence with Cross Canal	*40
At confluence with Pleasant Grove Creek	*41
Sacramento River:	
At confluence with Cross Canal	*39
At the Sacramento County line	*38
Maps are available for inspection at the Sutter County Department of Public Works, Planning Department, Suite D, 1160 Civic Center Boulevard, Yuba City, California.	
Tulare County (Unincorporated Areas) (FEMA Docket No. 7238)	
Kaweah River Overflow:	
Just above State Highway 198	*186
Approximately 200 feet upstream of Persian Ditch	*293

BILLING CODE 6718–04–P

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 67

Final Flood Elevation Determinations

AGENCY: Federal Emergency Management Agency (FEMA).

ACTION: Final rule.

SUMMARY: Base (1% annual chance) flood elevations and modified base flood elevations are made final for the communities listed below. The base flood elevations and modified base flood elevations are the basis for the floodplain management measures that each community is required either to adopt or to show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

EFFECTIVE DATES: The date of issuance of the Flood Insurance Rate Map (FIRM) showing base flood elevations and modified base flood elevations for each community. This date may be obtained by contacting the office where the maps are available for inspection as indicated on the table below.

ADDRESSES: The final base flood elevations for each community are available for inspection at the office of the Chief Executive Officer of each community. The respective addresses are listed in the table below.

FOR FURTHER INFORMATION CONTACT: Matthew B. Miller, P.E., Chief, Hazards Study Branch, Mitigation Directorate, 500 C Street SW., Washington, DC 20472, (202) 646–3461.

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency (FEMA or Agency) makes final determinations listed below of base flood elevations and modified base flood elevations for each community listed. The proposed base flood elevations and proposed modified base flood elevations were published in newspapers of local circulation and an opportunity for the community or individuals to appeal the proposed determinations to or through the community was provided for a period of ninety (90) days. The proposed base flood elevations and proposed modified base flood elevations were also published in the **Federal Register.**

This final rule is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR part 67.

The Agency has developed criteria for floodplain management in floodprone areas in accordance with 44 CFR part 60.

Interested lessees and owners of real property are encouraged to review the proof Flood Insurance Study and Flood Insurance Rate Map available at the address cited below for each community.

The base flood elevations and modified base flood elevations are made final in the communities listed below. Elevations at selected locations in each community are shown.

National Environmental Policy Act

This rule is categorically excluded from the requirements of 44 CFR part 10, Environmental Consideration. No environmental impact assessment has been prepared.

Regulatory Flexibility Act

The Associate Director, Mitigation Directorate, certifies that this rule is exempt from the requirements of the Regulatory Flexibility Act because final or modified base flood elevations are required by the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and are required to establish and maintain community eligibility in the National Flood Insurance Program. No regulatory flexibility analysis has been prepared.

Regulatory Classification

This final rule is not a significant regulatory action under the criteria of section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

Executive Order 12612, Federalism

This rule involves no policies that have federalism implications under Executive Order 12612, Federalism, dated October 26, 1987.

Executive Order 12778, Civil Justice Reform

This rule meets the applicable standards of section 2(b)(2) of Executive Order 12778.

Administrative practice and procedure, Flood insurance, Reporting and recordkeeping requirements.

Accordingly, 44 CFR part 67 is amended as follows:

PART 67—[AMENDED]

1. The authority citation for part 67 continues to read as follows:

Authority: 42 U.S.C. 4001 *et seq.*; Reorganization Plan No. 3 of 1978, 3 CFR, 1978 Comp., p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp., p. 376.

§ 67.11 [Amended]

2. The tables published under the authority of § 67.11 are amended as follows:

Source of flooding and location	# Depth in feet above ground. *Elevation in feet (NGVD)
ALABAMA	
Huntsville (City), Madison County (FEMA Docket Nos. 7199 and 7243)	
Aldridge Creek:	
At confluence with Tennessee River	*576
Downstream side of Drake Avenue	*679
Big Cove Creek:	

Source of flooding and location	# Depth in feet above ground. *Elevation in feet (NGVD)
Approximately 0.75 mile upstream of confluence with Flint River	*601
Downstream side of Dug Hill Road	*654
Bradford Creek:	
At confluence with Barren Fork Creek	*570
At upstream side of I–565	*616
Dry Creek 1:	
Approximately 800 feet upstream of confluence with Broglan Branch	*666
Approximately 1,400 feet upstream of Mastin Lake Road	*747
Dry Creek 2:	
Approximately 550 feet downstream of Indian Creek Road	*672
Approximately 1.02 miles upstream of Pulaski Pike	*818
Tributary 1 to Dry Creek 2:	
At confluence with Dry Creek 2	*705
Approximately 2,100 feet upstream of Rideout Road	*746
Tributary 2 to Dry Creek 2:	
At Nick Fitcheard Road	*736
Approximately 0.6 mile downstream of Garner Road	*769
Tributary 3 to Dry Creek 2:	
Backwater area surrounding intersection of Nick Fitcheard Road and Bob Wade Lane	*764
Approximately 1.4 miles upstream of Bob Wade Lane	*780
Tributary 4 to Dry Creek 2:	
At confluence with Dry Creek 2	*770
Approximately 2,000 feet upstream of Pulaski Pike	*789
Fagan Creek:	
At confluence with Huntsville Spring Branch	*610
Approximately 0.65 mile upstream of Tel-Fair Drive	*715
Indian Creek:	
At State Route 20	*613
Approximately 0.7 mile upstream of confluence of Tributary 2 to Indian Creek	*685
Tributary 1 to Indian Creek:	
Approximately 750 feet upstream of confluence with Indian Creek	*618
Approximately 50 feet upstream of railroad	*634
Tributary 2 to Indian Creek:	
At confluence with Indian Creek	*673
Approximately 1,000 feet upstream of confluence with Indian Creek	*675
Tributary 3 to Indian Creek:	
Approximately 250 feet downstream of Jeff Road	*715
Approximately 500 feet downstream of U.S. Route 72	*756
Knox Creek:	
Approximately 3,000 feet downstream of Balch Road	*692
At confluence of Tributary to Knox Creek	*738
Tributary to Knox Creek:	
At confluence with Knox Creek	*738
At Capshaw Road	*752
Limestone Creek:	
At State Route 20	*573
At railroad	*585
Miller Branch:	
Approximately 1,000 feet east of intersection of Boeing Circle and Boeing Boulevard	*571
Approximately 2.04 miles upstream of Wall-Triana Highway	*573
Mountain Brook Branch:	
At confluence with Fagan Creek	*647
Approximately 1,040 feet upstream of Darnell Street	*703
Beaverdam Creek 2:	
Approximately 500 feet upstream of State Route 20	*570
At Old Highway 20	*572
Betts Spring Branch:	
At confluence with Barren Fork Creek	*570
At Lady Ann Lake Dam	*577
Chase Creek:	
At confluence with Flint River	*660
Approximately 0.5 mile upstream of Old Gurley Road	*732
Flint River:	
Approximately 300 feet downstream of confluence of Chase Creek	*660
Approximately 1.8 miles upstream of confluence of Chase Creek	*665
Lady Ann Lake:	
Shoreline within community	*577
Peevey Creek:	
Approximately 0.6 mile upstream of confluence with Robinson Mill Creek	*607
Approximately 100 feet upstream of Little Cove Road	*628
Piney Creek:	
At Joe Wheeler Highway	*564
At Roberts Road	*572
Tennessee River:	
Approximately 0.6 mile upstream of confluence of Unnamed Tributary to Tennessee River	*575
Approximately 2.5 miles downstream of confluence of Flint River	*577
Withers Spring Branch:	
Approximately 1,200 feet downstream of Airport Road	*567
Approximately 0.48 mile upstream of Old Highway 20	*661
McDonald Creek:	
Approximately 0.5 mile upstream of Patton Road	*603
Approximately 1,500 feet downstream of confluence of Unnamed Tributary to McDonald Creek	*620
Blue Spring Creek:	
Upstream side of Leland Drive	*702
Downstream side of Pulaski Pike	*750
Maps available for inspection At the Huntsville City Hall, 320 Fountain Circle, Huntsville, Alabama.	

Source of flooding and location	# Depth in feet above ground. *Elevation in feet (NGVD)
Madison County (Unincorporated Areas) (FEMA Docket Nos. 7199 and 7243)	
Aldridge Creek:	
At confluence with Tennessee River	*576

BILLING CODE 6718–04–P

DEPARTMENT OF DEFENSE

48 CFR Parts 225 and 252

[DFARS Case 97–D321]

Defense Federal Acquisition Regulation Supplement; Waiver of Domestic Source Restrictions

AGENCY: Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: The Director of Defense Procurement has adopted as final, with changes, an interim rule that was published in the **Federal Register** on February 4, 1998. The rule amends the Defense Federal Acquisition Regulation Supplement (DFARS) to implement Section 811 of the National Defense Authorization Act for Fiscal Year 1998. Section 811 limits the authority for waiver of the domestic source restrictions of 10 U.S.C. 2534(a).

EFFECTIVE DATE: May 22, 1998.

FOR FURTHER INFORMATION CONTACT: Ms. Amy Williams, (703) 602–0131.

SUPPLEMENTARY INFORMATION:

A. Background

An interim rule with request for comments was published at 63 FR 5744 on February 4, 1998. The rule amended DFARS Parts 225 and 252 to implement Section 811 of the National Defense Authorization Act for Fiscal Year 1998 (Pub. L. 105–85). Section 811 provides that DoD may exercise the authority of 10 U.S.C. 2534(d), to waive the domestic source restrictions of 10 U.S.C. 2534(a), only if the waiver is made for a particular item and for a particular foreign country. 10 U.S.C. 2534(a) contains domestic source restrictions applicable to procurement of the following items: Buses, chemical weapons antidote, components for naval vessels (including air circuit breakers, anchor and mooring chain, and totally enclosed lifeboats), and ball and roller bearings.

One source submitted comments in response to the interim rule. The comments were considered in the formation of the final rule. The final rule adds guidance to clarify that, for contracts entered into prior to the effective date of a waiver, provided adequate consideration is received to modify the contract, such waiver shall be applied as directed or authorized in the waiver to (1) subcontracts entered into on or after the effective date of the waiver; and (2) options for the procurement of items that are exercised after the effective date of the waiver, if the option prices are adjusted for any reason other than the application of the waiver.

B. Regulatory Flexibility Act

DoD certifies that this final rule will not have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.*, because there are no known small business manufacturers of buses, air circuit breakers, or the restricted chemical weapons antidote; the acquisition of anchor and mooring chain, totally enclosed lifeboat survival systems, and noncommercial ball and roller bearings is presently restricted to domestic sources by defense appropriations acts; and the restrictions of 10 U.S.C. 2534(a) do not apply to purchases of commercial items incorporating ball or roller bearings.

C. Paperwork Reduction Act

The Paperwork Reduction Act does not apply, because this final rule does not impose any information collection requirements that require the approval of the Office of Management and Budget under 44 U.S.C 3501, et seq.

List of Subjects in 48 CFR Parts 225 and 252

Government procurement.

Michele P. Peterson,

Executive Editor, Defense Acquisition Regulations Council.

Interim Rule Adopted as Final With Changes

Accordingly, the interim rule amending 48 CFR Parts 225 and 252, which was published at 63 FR 5744 on February 4, 1998, is adopted as final with the following changes:

1. The authority citation for 48 CFR Parts 225 and 252 continues to read as follows:

Authority: 41 U.S.C. 421 and 48 CFR Chapter 1.

PART 225—FOREIGN ACQUISITION

2. Section 225.7005 is amended by adding paragraph (a)(4) to read as follows:

225.7005 Waiver of certain restrictions.

* * * * *

(a) * * *

(4) For contracts entered into prior to the effective date of a waiver, provided adequate consideration is received to modify the contract, such waiver shall be applied as directed or authorized in the waiver to—

(i) Subcontracts entered into on or after the effective date of the waiver; and

(ii) Options for the procurement of items that are exercised after the effective date of the waiver, if the option

prices are adjusted for any reason other than the application of the waiver.

* * * * *

3. Section 225.7019–3 is amended by adding paragraph (b)(4) to read as follows:

225.7019–3 Waiver.

* * * * *

(b) * * *

(4) For contracts entered into prior to the effective date of a waiver, provided adequate consideration is received to modify the contract, such waiver shall be applied as directed or authorized in the waiver to—

(1) Subcontracts entered into on or after the effective date of the waiver; and

(ii) Options for the procurement of items that are exercised after the effective date of the waiver, if the option prices are adjusted for any reason other than the application of the waiver.

BILLING CODE 5000–04–M

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

48 CFR Part 1816

Revision to the NASA FAR Supplement on Technical Performance Incentive Guidance.

AGENCY: National Aeronautics and Space Administration(NASA).

ACTION: Final rule.

SUMMARY: This is a final rule amending the NASA FARSupplement (NFS) to correct inconsistencies on technical performance incentive guidance.

EFFECTIVE DATE: May 22, 1998.

FOR FURTHER INFORMATION CONTACT: Tom O'Toole, NASA Office of Procurement, Contract Management Division (Code HK), (202) 358–0478.

SUPPLEMENTARY INFORMATION:

Background

NFS section 1816.402–270, NASA Technical Performance Incentives, requires the use of positive and negative performance incentives in hardware contracts greater than $25M unless waived in writing by the Center Director. New section 1816.402, Application of Predetermined, Formula-Type Incentives, was added as a final rule in the March 17, 1998 **Federal Register** (63 FR 12997–12998). This section provided guidance on the appropriate selection and use of positive and negative performance incentives, but did not change the mandatory requirement in 1816.402–270 which appears to preempt those guidelines in certain circumstances. This incongruity is rectified by adding language to 1816.402–270 stating that NASA has considered the guidelines in 1816.402 and has determined that performance incentives are appropriate for, and must be used in, hardware contracts greater than $25M. Additional administrative revisions are made to indicate that this policy does not apply to commercial acquisitions under FAR Part 12 and that negative incentives are not required for contracts which already require total contractor liability for product performance.

Impact

NASA certifies that this regulation will not have a significant economic impact on a substantial number of small business entities under the RegulatoryFlexibility Act (5 U.S.C. 601 *et seq.*). This final rule does not impose any reporting requirements or recordkeeping requirements subject to the Paperwork Reduction Act.

List of Subjects in 48 CFR Part 1816

Government procurement.

Deidre A. Lee,

Associate Administrator for Procurement.

Accordingly, 48 CFR Part 1816 is amended as follows:

PART 1816—TYPES OF CONTRACTS

1. The authority citation for 48 CFR Part 1816 continues to read as follows:

Authority: 42 U.S.C. 2473(c)(1).

2. In section 1816.402–270, paragraphs (a), (b), and (c) are revised to read as follows:

1816.402–270 NASA technical performance incentives.

(a) Pursuant to the guidelines in 1816.402, NASA has determined that a performance incentive shall be included in all contracts based on performance-oriented documents (see FAR 11.101(a)), except those awarded under the commercial item procedures of FAR part 12, where the primary deliverable(s) is (are) hardware with a total value (including options) greater than $25 million. Any exception to this requirement shall be approved in writing by the Center Director. Performance incentives may be included in hardware contracts valued under $25 million acquired under procedures other than FAR Part 12 at the discretion of the procurement officer upon consideration of the guidelines in 1816.402. Performance incentives, which are objective and measure hardware performance after delivery and acceptance, are separate from other incentives, such as cost or delivery incentives.

(b) When a performance incentive is used, it shall be structured to be both positive and negative based on hardware performance after delivery and acceptance, unless the contract type requires complete contractor liability for product performance (e.g., fixed price). In this latter case, a negative incentive is not required. In structuring the incentives, the contract shall establish a standard level of performance based on the salient hardware performance requirement. This standard performance level is normally the contract's minimum performance requirement. No incentive amount is earned at this standard performance level. Discrete units of measurement based on the same performance parameter shall be identified for performance above and, when a negative incentive is used, below the standard. Specific incentive amounts shall be associated with each performance level from maximum beneficial performance (maximum positive incentive) to, when a negative incentive is included, minimal beneficial performance or total failure (maximum negative incentive). The relationship between any given incentive, either positive and negative, and its associated unit of measurement should reflect the value to the Government of that level of hardware performance. The contractor should not be rewarded for above-standard performance levels that are of no benefit to the Government.

(c) The final calculation of the performance incentive shall be done when hardware performance, as defined in the contract, ceases or when the maximum positive incentive is reached. When hardware performance ceases below the standard established in the contract and a negative incentive is included, the Government shall calculate the amount due and the contractor shall pay the Government that amount. Once hardware performance exceeds the standard, the contractor may request payment of the incentive amount associated with a given level of performance, provided that such payments shall not be more frequent than monthly. When hardware performance ceases above the standard level of performance, or when the maximum positive incentive is reached, the Government shall calculate the final performance incentive earned and

unpaid and promptly remit it to the contractor.

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

49 CFR Parts 365, 372, 373, 374, and 377

RIN 2125–AE41

Federal Motor Carrier Regulations; Authority Corrections

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Final rule; technical corrections.

SUMMARY: This document makes technical amendments to the authority statements for various FHWA motor carrier regulations in order to remove the obsolete authority citations provided in the subparts. This correction is necessary due to changes required by the ICC Termination Act of 1995 (ICCTA) and the transfer of certain regulatory functions to the FHWA from the former Interstate Commerce Commission (ICC). The effect of these amendments is to remove the outdated authority citations listed in the subparts.

DATES: This final rule is effective May 22, 1998.

FOR FURTHER INFORMATION CONTACT: Mr. Michael J. Falk, Office of the Chief Counsel, Motor Carrier Law Division, (202) 366–1384, Federal Highway Administration, 400 Seventh Street, S.W., Washington, D.C. 20590. Office hours are from 7:45 a.m. to 4:15 p.m., e.t., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION: On October 21, 1996, the FHWA published a final rule that transferred and redesignated certain motor carrier transportation regulations from chapter X of title 49, Code of Federal Regulations, to the FHWA in chapter III of that title. See Motor Carrier Transportation; Redesignation of Regulations From the Surface Transportation Board Pursuant to the ICC Termination Act of 1995 [61 FR 54706]. Another document also made technical amendments to former ICC regulations and was published on April 1, 1997. Technical Amendments to Former Interstate Commerce Commission Regulations in Accordance With the ICC Termination Act of 1995. [62 FR 15417]. The technical changes made in both of these documents were required by section 204 of the ICCTA, Public Law 104–88, 109 Stat. 803. Part 365, Rules for governing applications for operating authority, subpart D (formerly part 1181); part 372, Exemptions, commercial zones, and terminal areas, subparts A, B, and C (formerly parts 1047, 1048, and 1049, respectively); part 373, Receipts and bills, subparts A and B (formerly parts 1051 and 1081, respectively); part 374, Passenger carrier regulations, subparts A, B, C, and D (formerly parts 1055, 1061, 1063, and 1064, respectively); and part 377, Payment of transportation charges, subparts A and B (formerly parts 1052 and 1320, respectively) included in the new statutory authority at the part level, but inadvertently failed to remove the former ICC authority at the subpart levels. Accordingly, the FHWA removes the obsolete ICC authority citations in the subpart levels noted above and retains the current authority citations in the part levels which reflect the changes mandated by the ICCTA.

Rulemaking Analyses and Notices

This final rule makes only minor technical corrections to existing regulations by removing obsolete ICC authority citations at the subpart levels of FHWA regulations. This rule replaces outdated authority citations with current statutory authority and the regulatory standards are not changed in any way. Therefore, the FHWA finds good cause to adopt the rule without prior notice or opportunity for public comment [5 U.S.C. 553(b)]. The Department of Transportation's regulatory policies and procedures also authorize promulgation of the rule without prior notice because it is anticipated that such action would not result in the receipt of useful information. The FHWA is making this rule effective upon publication in the **Federal Register** because it imposes no new burdens and merely corrects existing regulations.

Executive Order 12866 (Regulatory Planning and Review) and DOT Regulatory Policies and Procedures

The FHWA has determined that this action is not a significant regulatory action within the meaning of Executive Order 12866 or significant within the meaning of Department of Transportation regulatory policies and procedures. Since this rulemaking action makes only technical corrections to the current regulations, it is anticipated that the economic impact of this rulemaking will be minimal; therefore, a full regulatory evaluation is not required.

Regulatory Flexibility Act

In compliance with the Regulatory Flexibility Act (Pub. L. 96–354, 5 U.S.C. 601–612), the FHWA has evaluated the effects of this rule on small entities. Based on the evaluation, and since this rulemaking action makes only technical corrections to the authority citations in current regulations, the FHWA hereby certifies that this action will not have a significant impact on a substantial number of small entities.

Unfunded Mandates Reform Act

This rule does not impose any unfunded mandates on State, local, or tribal governments as defined by the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1532).

Excutive Order 12612 (Federalism Assessment)

This action has been analyzed in accordance with the principles and criteria contained in Executive Order 12612, and it has been determined that this action does not have sufficient federalism implications to warrant the preparation of a federalism assessment.

Executive Order 12372 (Intergovernmental Review)

Catalog of Federal Domestic Assistance Program Number 20.217, Motor Carrier Safety. The regulations implementing Executive Order 12372 regarding intergovernmental consultation of Federal programs and activities do not apply to this program.

Paperwork Reduction Act

This action does not contain a collection of information requirement for purposes of the Paperwork Reduction Act of 1995, 44 U.S.C. 44 U.S.C. 3501 *et seq.*,

National Environmental Policy Act

The agency has analyzed this action for the purpose of the National Environmental Policy Act of 1969, as amended (42 U.S.C. 432 *et seq.*) and has determined that this action would not have any effect on the quality of the environment.

Regulation Identification Number

A regulation identification number (RIN) is assigned to each regulatory action listed in the Unified Agenda for Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. The RIN contained in the heading of this document can be used to cross reference this action with the Unified Agenda.

Issued on: May 14, 1998.

Kenneth R. Wykle,

Federal Highway Administrator.

In consideration of the foregoing, the FHWA amends title 49, Code of Federal Regulations, chapter III, as set forth below:

PART 365—[AMENDED]

1. The authority citation for 49 CFR part 365 continues to read as follows:

Authority: 5 U.S.C. 553 and 559; 16 U.S.C. 1456; 49 U.S.C. 13101, 13301, 13901–13906, 14708, 31138, and 31144; 49 CFR 1.48.

1a. The authority citation for subpart D is removed.

PART 372—[AMENDED]

2. The authority citation for 49 CFR part 372 continues to read as follows:

Authority: 49 U.S.C. 13504 and 13506; 49 CFR 1.48.

2a. The authority citations for subparts A, B, and C are removed.

PART 373—[AMENDED]

3. The authority citation for part 373 continues to read as follows:

Authority: 49 U.S.C. 13301 and 14706; 49 CFR 1.48.

3a. The authority citations for subparts A and B are removed.

PART 374—[AMENDED]

4. The authority citation for part 374 continues to read as follows:

Authority: 49 U.S.C. 13301 and 14101; 49 CFR 1.48.

4a. The authority citations for subparts A, B, C, and D are removed.

PART 377—[AMENDED]

5. The authority citation for 49 CFR part 377 continues to read as follows:

Authority: 49 U.S.C. 13101, 13301, 13701–13702, 13706, 13707, and 14101; 49 CFR 1.48.

5a. The authority citations for subparts A and B are removed.

BILLING CODE 4910–22–M

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

49 CFR Parts 1152 and 1155

[STB Ex Parte No. 566]

Rail Service Continuation Subsidy Standards

AGENCY: Surface Transportation Board, DOT.

ACTION: Final rule.

SUMMARY: The Surface Transportation Board (Board) is removing from the Code of Federal Regulations rules concerning standards for determining subsidies for the continuation of rail service on rail properties not transferred to Consolidated Rail Corporation (Conrail) under the Final System Plan pursuant to the Regional Rail Reorganization Act of 1973. It is also amending the regulations concerning offers of financial assistance to provide rules for the purchase or subsidization of rail lines that have been continuously subsidized since the inception of the Final System Plan.

EFFECTIVE DATE: June 21, 1998.

FOR FURTHER INFORMATION CONTACT: Beryl Gordon, (202) 565–1600. [TDD for the hearing impaired: (202) 565–1695.]

SUPPLEMENTARY INFORMATION: In a notice of proposed rulemaking (NPR) served and published in the **Federal Register** on August 8, 1997 (62 FR 42734), the Board proposed to remove the regulations at 49 CFR part 1155 that concern subsidy standards for certain rail lines of railroads in reorganization not included in the Final System Plan, described *infra*. The NPR noted that these regulations are based, at least partially, on statutes that are still in effect. 45 U.S.C. 744 (c) and (d). Under the ICC Termination Act of 1995, Public Law 104–88, 109 Stat. 803 (ICCTA),[1] however, the Rail Services Planning Office (RSPO), the statutory body that developed the regulations, has been abolished. *See* repealed 49 U.S.C. 10361–64. Moreover, the Board has in place analogous offer of financial assistance (OFA) regulations providing national subsidy standards. 49 CFR 1152.27. Finally, the NPR stated that the regional subsidy regime at 45 U.S.C. 744, which applies to "rail service on rail properties of a railroad in reorganization," may be outdated and may apply only to a limited number of situations. Accordingly, we instituted this proceeding to determine whether these regulations may be eliminated in light of the national OFA standards, whether portions of the part 1155 regulations could be transferred to the national standards, or whether they have a continuing vitality and should be retained.

After considering the record, we will eliminate the part 1155 rules and modify the national OFA rules at 1152.27. Because the part 1155 rules have only limited applicability, it is unnecessary to maintain these detailed regulations. However, to provide an opportunity for rail service continuation and to deal with abandonments of lines that are still being subsidized, we are modifying our national OFA regulations at 49 CFR 1152.27 to require that the line owner give notice of the abandonment or discontinuance to enable interested persons to purchase or subsidize the line.

Background

Our NPR gave a detailed background for the part 1155 regulations and will be repeated only as necessary. The part 1155 rules were based on the Regional Rail Reorganization Act of 1973, Public Law 93–236, 87 Stat. 985, 45 U.S.C. 701 *et seq.* (3R Act), as amended by the Railroad Revitalization and Regulatory Reform Act of 1976 (4R Act), Public Law 94–210, 90 Stat. 127. In response to the bankruptcy of the Penn Central Transportation Company and seven other major railroads in the Northeast and Midwest,[2] the 3R Act provided for the development and ultimate approval by Congress of a Final System Plan (Plan) for the redesign of rail services in

[1] Effective January 1, 1996, the ICCTA abolished the Interstate Commerce Commission and established the Board within the Department of Transportation. Section 204(a) of the ICCTA provides that "[t]he Board shall promptly rescind all regulations established by the [Interstate Commerce Commission] that are based on provisions of law repealed and not substantively reenacted by this Act."

[2] The Lehigh Valley Railroad Company, the Central Railroad of New Jersey, the Ann Arbor Railroad Company, the Lehigh and Hudson Valley Railroad Company, the Boston and Maine Corporation, the Erie Lackawanna Railway Company, and the Reading Railroad.

the region. Lines that could not be operated profitably and were not considered essential to the rail transportation system would not be included in the Plan. The 3R Act's Plan created Conrail as a for-profit corporation to reorganize the bankrupt rail services in the region.

Section 304 of the 3R Act permitted the summary discontinuance of service over those lines not included in the Plan without Interstate Commerce Commission (ICC or Commission) approval if 60 days' notice was given and certain parties were notified. Beginning 120 days after such discontinuance, the summary abandonment of a line was allowed if 30 days' notice was given and the parties were notified. The 3R Act, in effect, authorized the discontinuance and abandonment of the lines not included in the Plan; ICC approval was not needed.[3] However, section 304(c)(2) of the 3R Act (codified at 45 U.S.C. 744(c)(2)(A)) stated that an abandonment or discontinuance could not be carried out if a shipper, or public authority, or any responsible person offered a rail service continuation subsidy.[4] The 4R Act amended the 3R Act by adding a new section 45 U.S.C. 744(d) which specified that a "designated operator" would be the rail carrier conducting operations when a subsidizer guaranteed payment.[5] Although not needing ICC authority to operate or abandon, the designated operators were common carriers.[6]

The use of the subsidy is limited to rail service and rail properties of a railroad in reorganization[7] in the region[8] that are not included in the Plan. 45 U.S.C. 744(a). Moreover, the subsidy must be made within 2 years of the effective date of the Plan[9] or within "2 years after the date on which the final rail service continuation payment is received, whichever is later * * *." 45 U.S.C. 744(c)(1).

The 3R Act, as amended by the 4R Act, also created RSPO[10] which was authorized to issue standards for defining the subsidy-related terms "revenue attributable to rail properties," "avoidable costs of providing service," "a reasonable return on the value," and "reasonable management fee" found in section 304. Section 205(d)(6).[11] Subsequently, the ICC issued regulations that are now codified at 49 CFR 1155. The regulations define the terms noted above (revenue attributable, avoidable costs, return on value, reasonable management fee) for determining the subsidy payment for the continuation of train service over lines not included in the Plan. The regulations are largely self-executing with little role provided for the ICC.[12]

The 4R Act also instituted the national OFA procedures. It allowed an abandonment to be postponed for up to 6 months if a financially responsible person offered to purchase or subsidize the line. Section 802. (This provision was originally codified at 49 U.S.C. 1a(6)(a) and subsequently recodified without substantive change at former 49 U.S.C. 10905.) In essence, the regional subsidy provision of 45 U.S.C. 744 was expanded to apply to all carriers. In November 1976, the ICC promulgated regulations that were predicated on the part 1155 regulations, although, due to factual and statutory differences, there were certain variations. The OFA rules are now found at 49 CFR 1152.27.[13]

The ICCTA was the latest legislative action applicable to these regulations. There was no change to 45 U.S.C. 744(c). The changes to section 744(d) do not affect part 1155. The RSPO statutes—49 U.S.C. 10361–64—were repealed. Former 49 U.S.C. 10905 was modified and is now found at 49 U.S.C. 10904, but the changes there do not affect our analysis.

In our NPR, we stated that we were reexamining part 1155 because of the changes made by the ICCTA, the availability of our national subsidy standards, and the likelihood that few situations fall within the regional subsidy framework. Comments were filed by the Association of American Railroads (AAR) and the Delaware Valley Railway Company, Inc. (DV).

Comments of the Parties

The AAR, in its brief comment, supports the removal of part 1155, arguing that rules "are of marginal, if any, utility * * *."

DV is a Class III short line railroad.[14] It has operated over a rail line owned by a subsidiary of the Reading Company, the corporate successor of the bankrupt Reading Railroad Company. DV expresses its belief that the regional standards "substantially duplicate the National OFA standards," and supports removal of the part 1155 regional regulations because of the availability of the national OFA standards. It claims that, to keep separate regulations applicable to only a few lines and

---

[3] See *Common Carrier Status of States, State Agencies and Instrumentalities, and Political Subdivisions 49 CFR 1120A*, Finance Docket No. 28990F (ICC served July 16, 1981) at 9–10 (footnote omitted): "A rail line which was approved for abandonment under the Final System Plan * * * but over which operations were continued by a [designated operator], comes within the meaning of abandoned or authorized for abandonment * * *."

[4] This subsidy "covers the difference between the revenue attributable to such rail properties and the avoidable costs of providing service on such properties plus a reasonable return on the value of such rail properties * * *."

[5] The subsidy payment was now defined at section 744(d) as "the difference between the revenue attributable to such properties and the avoidable costs of providing service on such rail properties, together with a *reasonable management fee* as determined by [RSPO]." (Emphasis supplied.)

[6] See *Application Proc.-Construct, Acq. Or Oper. R. Lines*, 365 I.C.C. 516, 523 (1982) and *Exemption of Certain Designated Operators from Section 11343*, 361 I.C.C. 379 (1979), *aff'd in part and remanded in part sub nom. McGinness* v. *ICC*, 662 F.2d 853 (D.C. Cir. 1981). See also 49 CFR 1150.16: "Although the designated operator will not be required to seek and obtain authority from the Board either to commence or terminate operations, the designated operator is a common carrier by railroad subject to all other provisions of 49 U.S.C. Subtitle IV."

[7] A "railroad in reorganization" is defined at 45 U.S.C. 702(16) as a railroad which is subject to a bankruptcy proceeding and which has not been determined by a court to be reorganizable or not subject to reorganization pursuant to this chapter as prescribed in section 717(b) of this title. A 'bankruptcy proceeding' includes a proceeding pursuant to section 77 of the Bankruptcy Act and an equity receivership or equivalent proceeding * * *."

[8] "Region" is defined at 45 U.S.C. 702(17) as "the States of Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, Ohio, Indiana, Michigan, and Illinois; the District of Columbia; and those portions of contiguous States in which are located rail properties owned or operated by railroads doing business in the aforementioned jurisdictions (as determined by [ICC] order) * * *."

[9] The Plan was submitted to Congress on July 26, 1975. It was approved when neither the House of Representatives nor the Senate objected to it. The Plan was formally approved in section 601(e) of the 4R Act.

[10] RSPO was established as "an office in the Interstate Commerce Commission." Former 49 U.S.C. 10361. In resolving the issue of whether final orders or regulations of RSPO were to be considered orders or regulations of the ICC, the court held that "[a]lthough Congress gave to the RSPO final administrative responsibility for certain determinations, we conclude that the RSPO is sufficiently part of the ICC so that its orders are to be considered orders of the ICC for purposes of the Hobbs Act." *Southeastern Pennsylvania Transp. Auth.* v. *I.C.C.*, 644 F.2d 238, 240, n.3 (3d Cir. 1981).

[11] The language of section 205 pertaining to RSPO was eventually codified at 49 U.S.C. 10361–64.

[12] However, under 49 CFR 1155.3(a), a carrier giving notice of intent to discontinue service shall submit an "Estimate of Subsidy Payment" to, *inter alia*, RSPO. Under 49 CFR 1155.4(c), a party desiring an interpretation of the standards can file a petition with RSPO. Under § 1155.9, if the parties cannot agree on certain issues, the matter could be arbitrated. The ICC was not directly involved in reviewing disputes.

[13] The Staggers Rail Act of 1980, Public Law 96–448, 94 Stat. 1895, further revised former 49 U.S.C. 10905. Section 402. The 6-month negotiating period was shortened and, when a carrier and shipper could not agree to terms, the ICC upon request would set, and the carrier was bound by, the purchase or subsidy price.

[14] DV is involved in a pending proceeding in which relief is sought, *inter alia*, under 49 CFR part 1155. *RailAmerica, Inc., and the Delaware Valley Railway Company, Petition to Set Subsidy Terms Under 45 U.S.C. 744(c) and 49 CFR Part 1155*, STB Finance Docket No. 33285.

another standard for all other lines, would cause "unnecessary, wasteful, potentially inconsistent, and duplicative regulation." It seeks to amend the national OFA standards to handle the few situations that would still fall under the regional standards.

In response to the question of whether there are any "railroads in reorganization," DV claims that the Reading Company, while "concededly not a railroad in reorganization under that [3R Act] statute, is a successor to a railroad in reorganization and should be subject to the provisions of 49 CFR part 1155 on that basis." [15] It argues that Congress did not intend that carriers could avoid regulatory oversight by reorganizing themselves, and that the Board should focus on the rail property and rail service at issue and not the status of the owning entity.[16]

Discussion and Conclusions

Because of the changes in the ICCTA and the fact that there appear to be few lines being operated under the regional subsidy regime, we will remove the more than 30 pages of regulations at part 1155. While technically there may no longer be any 3R Act railroads in reorganization, there appear to be a few lines that have been continuously subsidized under 49 U.S.C. 744, and these lines require special procedures. Therefore, we are issuing regulations at 49 CFR 1152.27(n) that would provide for summary abandonment and discontinuance on notice by the carrier owning the line, and that would allow for the opportunity to subsidize and purchase lines under the national OFA rules.

As noted, *supra*, these lines were effectively approved for abandonment and discontinuance under section 744, and, for those lines that have been continually subsidized, we do not believe that the approval to abandon or discontinue has been removed. Accordingly, Board authorization is not needed for cessation of service. Lines of railroad in the Northeast that were not included in the Plan and are no longer being subsidized under section 744 but continue to be operated are common carrier lines subject to the regular abandonment and national OFA regime of the Interstate Commerce Act.

The commenters generally support the removal of part 1155 (with DV also seeking a concomitant modification of the national OFA rules). Moreover, the record indicates that the regulations appear to be unnecessary. They were determined and issued by an office (RSPO) that has been abolished by the ICCTA.[17] Under former 49 U.S.C. 10362(b)(7), RSPO was to "maintain, and from time to time revise and republish * * * standards for determining the revenue attributable to the rail properties, the avoidable costs of providing transportation, a reasonable return on value, and a reasonable management fee * * *." As noted, this section, as well as RSPO, has been abolished. There are, however, parallel sections in force—45 U.S.C. 744(c) and (d)—that pertain to subsidies for the continuation of rail freight service. Even here, however, support for the subsidy regulations is uncertain, because section 744(d)(1) and (d)(2) refer to laws repealed by the ICCTA.[18]

Even if the ICCTA does not mandate the removal of the regulations, there appears to be little need for the subsidy rules, because of the availability of the national standards and because the circumstances and conditions that the regional standards were to address have largely expired. Under 45 U.S.C. 744(a)(1) and (c)(1), the regional subsidy program applies to a "rail service on rail properties of a railroad in reorganization" and is not available "after 2 years from the effective date of the [Plan] or more than two years after the last rail service continuation payment is received, whichever is later * * *." There may not be any railroads in reorganization as defined by the statute. In *Consolidated Rail Corp.* v. *Reading Co.*, 654 F. Supp. 1318, 1323 (Sp. Ct. RRRA 1987) (*Reading*), a case arose that involved whether personal injury claims could be brought against Conrail and National Railroad Passenger Corporation pursuant to section 709(b) of the 3R Act (45 U.S.C. 797h(b)). That section provided for assumption by Conrail of personal injury claims against "a railroad in reorganization." The court looked at the definition of railroad in reorganization (45 U.S.C. 702(16)), *supra*, and stated that certain predecessor railroads of Conrail were not railroads in reorganization because they were no longer "subject to a bankruptcy proceeding." These carriers had undergone reorganization, final consummation orders had been entered, and the carriers had been discharged in bankruptcy.[19] The court found that "[w]here, as is the case here, the definition of a statutory term is clear and unequivocal it is controlling." *Id.* (citations omitted.)

As a consequence of *Reading*, there will, at a minimum, be no new lines that can be added to the regional subsidy regime. This does not, however, end our inquiry. There appears to be at least one line that has been subsidized since the enactment of the regional subsidy program. Such lines have already been approved for abandonment and discontinuance. Moreover, it can be argued that these lines still fall within the ambit of section 744. Under these circumstances, we believe that the best approach will be to eliminate part 1155, but modify the OFA regulations for situations involving lines that are still being subsidized under the regional standards.

The notice periods will follow the basic regime of section 744. Summary discontinuance of service without Board approval may be effected if 60 days' notice is given by the owner of the line and certain parties are notified.[20] Beginning 120 days thereafter, the summary abandonment of a line is allowed if 30 days' notice is given and the parties are notified.

We are requiring the owner of the line, and not the designated operator, to provide the notice that triggers the OFA process. We are retaining the provision by which a designated operator may terminate service in accordance with the terms of its agreement and is only required to give notice of termination of service to the shippers on the line. 49 CFR 1150.11. No time period is specified for the notice. We hope that

[15] DV claims it involves "one of the few instances, if not the last instance, of rail service provided over railroad property owned by the successor to a bankrupt railroad not transferred to Conrail or another rail carrier under the [Plan]." [Footnote omitted.]

[16] These concerns are moot, because we are finding that the abandonment and discontinuance of lines still being subsidized will fall under the special national OFA standards at 49 CFR 1152.27(n). Formerly subsidized lines that are being abandoned or discontinued will come under the regular OFA rules at section 1152.27.

[17] We note that the regulations assign continuing responsibilities to the abolished office (issuing interpretations, receiving estimates of subsidy payments).

[18] Under 45 U.S.C. 744(d)(1), the defunct RSPO is to determine the terms a subsidizer is to pay a designated operator. Section 744(d)(1) states that the terms "revenue attributable," "avoidable costs," and "reasonable management fee" are to be determined by "the Office," defined at 45 U.S.C. 702(12) as RSPO.

Moreover, under 45 U.S.C. 744(d)(2), the term "reasonable return on value" is to be developed according to the standards of 205(d)(6) of the 3R Act, which, as noted, was codified at the now repealed RSPO statute, 49 U.S.C. 10362.

[19] The court noted (*Id.* at 1323, n.2) the following consummation dates: Erie Lackawanna, Inc. (November 30, 1982); Reading Co. (December 31, 1980); Penn Central Transportation Co. (October 24, 1978); Lehigh Valley Railroad Co. (September 1, 1982); and the Central of New Jersey (September 14, 1979). We note that despite this ruling, section 797h(b) has not been removed.

[20] Notice shall be to the Board, governor and transportation agencies and the government of each political subdivision of each state in which such rail properties are located and to each shipper who has used the rail service during the previous 12 months.

the designated operator and line owner will coordinate the giving of notice so that there will be no break in service. We recognize, however, that under our present "designated operator" rules, it is possible that the operator could terminate service before the notice period has expired. This eventuality is a natural outcome of such subsidy regimes where service is tied specifically to an agreement. Nevertheless, given the specified time periods and the ability of the Board to set terms and conditions under the national standards, we expect that any breaks in service would be of short duration.

The New OFA Rules

We are modifying 49 CFR 1152.27 by adding a new paragraph (n). Abandonment or discontinuance notice must be given, affording interested persons an opportunity to purchase or subsidize the line under our national OFA standards.[21] The applicable time limits will run from the date of the notice as the Board does not approve the cessation of service for these lines.

We will generally apply the national OFA standards applicable to class exemptions found at 49 CFR 1152.27 to these summary abandonments and discontinuances.[22] For example, a party may discontinue [23] or abandon service on a line of railroad formerly in reorganization that was not included in the Plan on 60 days' notice and, beginning 120 days after discontinuance, on 30 days' notice, respectively. Notice of summary abandonment or discontinuance will be published by the Board in the **Federal Register** within 20 days of filing. 49 CFR 1152.27(b)(2)(ii). Expressions of intent to file an offer must be filed no later than 10 days after the **Federal Register** publication. Paragraph (c)(2)(i) of section 1152.27. An offer must be filed within 30 days of the **Federal Register** publication. Paragraphs (b)(2)(ii) and (c)(2)(ii)(B) of section 1152.27.

The Board will review offers to determine if a financially responsible person has offered assistance. If this criterion is met, the Board will postpone the effective date of the summary abandonment (but not the discontinuance) [24] within 35 days of the **Federal Register** publication. Paragraph (e)(2) of § 1152.27. If the carrier and financially responsible person fail to agree on the amount or terms of subsidy or purchase, either party may request the Board to establish the conditions and amount of the compensation. This request must be filed within 30 days after the offer of purchase or subsidy is made, and the Board will issue a decision within 30 days after the request is due. Paragraphs (g)(1) and (h)(1) of § 1152.27.

Lines of the former railroads in reorganization under the 3R Act are under Board jurisdiction insofar as the institution of new rail service is involved. See *Delaware and Hudson Ry. Co.—Modified Cert. Of PC&N*, 363 I.C.C. 808 (1981) (holding that where a line had formally been operated under subsidy and was later abandoned, the carrier was required to file an application under former 49 U.S.C. 10901 to operate the line). Thus, in those instances, any future abandonment or discontinuance would be subject to the abandonment and OFA procedures of 49 U.S.C. 10903–04.

The Board concludes that the removal of the rule and the addition of the new rule will not have a significant effect on a substantial number of small entities. It appears that the eliminated, as well as the new, rule does not apply to many situations. In those situations where the rule changes are applicable, they are consistent with the new statutory framework. Moreover, there should not be any significant change from current practice under the new rules.

This action will not significantly affect either the quality of the human environment or the conservation of energy resources.

List of Subjects

49 CFR Part 1152

Administrative practice and procedure, Conservation, Environmental protection, National forests, National parks, National trails system, Public land-grants, Public lands-rights-of-way, Railroads, Recreation and recreation areas, Reporting and recordkeeping requirements.

49 CFR Part 1155

Railroads, Uniform System of Accounts.

Decided: May 13, 1998.

By the Board, Chairman Morgan and Vice Chairman Owen.

Vernon A. Williams,

Secretary.

For the reasons set forth in the preamble and under the authority of 49 U.S.C. 721(a), title 49, chapter X of the Code of Federal Regulations is amended as set forth below:

PART 1152—ABANDONMENT AND DISCONTINUANCE OF RAIL LINES AND RAIL TRANSPORTATION UNDER 49 U.S.C. 10903

1. The authority citation for part 1152 is revised to read as follows:

Authority: 11 U.S.C. 1170; 16 U.S.C. 1247(d) and 1248; 45 U.S.C. 744; and 49 U.S.C. 701 note (1995) (section 204 of the ICC Termination Act of 1995), 721(a), 10502, 10903–10905, and 11161.

2. In § 1152.27, paragraph (n) is added to read as follows:

§ 1152.27 Financial assistance procedures.

* * * * *

(n) *Special provisions for summary discontinuance and abandonment of lines not part of the Final System Plan.* (1) Board authorization is not needed for the cessation of service on a line of railroad formerly in reorganization that was not included in the Final System Plan (Plan) under the Regional Rail Reorganization Act of 1973, 45 U.S.C. 701 *et seq.*, as amended by the Railroad Revitalization and Regulatory Reform Act of 1976, if the line has been continuously subsidized since the inception of the Plan. To provide an opportunity for rail service continuation through offers of financial assistance, however, the owner of the line must give not less than 60 days' notice of a discontinuance, and beginning 120 days after discontinuance, not less than 30 days' notice of abandonment. Designated operators need only comply with the notice requirements of § 1150.11 of this title. In instances of discontinuance by a designated operator, the line owner is not obligated to operate the line. Notice is to be sent by the line owner to the Board, the governor and transportation agencies and the government of each political subdivision of each state in which such rail properties are located and to each shipper who has used the rail service

[21] Under the statute, the standards for subsidizing lines are the same for both the national OFA (49 U.S.C. 10904(f)(1)(C)) and regional subsidy (45 U.S.C. 744(c)(2)): the difference between the revenue attributable to the line and the avoidable costs of providing service plus a reasonable return on the value of the line. The regional standards also provide that designated operators are to receive a reasonable management fee discussed *infra*. Unlike section 744, however, the national OFA statute provides that the standard for purchasing a line is its fair market value. This standard will be used in processing offers under section 1152.27(n).

[22] The one significant difference is that we are incorporating into new section 1152.27(n)(2) the reasonable management fee standard for designated operators (4½ %) from section 1155.7(o).

[23] As noted, the owner of the lines gives the notice that triggers the OFA process for discontinuances. The designated operator follows the notice requirements of 49 CFR 1150.11.

[24] We cannot postpone the effective date of the discontinuance because, under our rules, designated operators need only comply with the notice requirements of 49 CFR 1150.11, and, in instances of discontinuance, the line owner is not obligated to operate the line.

during the previous 12 months. The Board will generally apply the OFA procedures in this section (49 CFR 1152.27) for class exemptions to summary abandonment and discontinuance notices (except that the Board will not postpone the effective date of a summary discontinuance). For example, notice of summary abandonment or discontinuance will be published by the Board in the **Federal Register** within 20 days of filing. Paragraph (b)(2)(ii) of this section. Expressions of intent to file an offer must be filed no later than 10 days after the **Federal Register** publication. Paragraph (c)(2)(i) of this section. An offer must be filed within 30 days of the **Federal Register** publication. Paragraphs (b)(2)(ii) and (c)(2)(ii)(B) of this section. The Board will review offers to determine if a financially responsible person has offered assistance. If this criterion is met, the Board will postpone the effective date of the summary abandonment (but not the discontinuance) within 35 days of the **Federal Register** publication. Paragraph (e)(2) of this section. If the carrier and financially responsible person fail to agree on the amount or terms of subsidy or purchase, either party may request the Board to establish the conditions and amount of the compensation. This request must be filed within 30 days after the offer of purchase or subsidy is made, and the Board will issue a decision within 30 days after the request is due. Paragraphs (g)(1) and (h)(1) of this section.

(2) Where a designated operator is being used, it shall be paid a reasonable management fee. If the parties cannot agree on this fee, it shall be four and one-half percent of the total annual revenues attributable to the branch.

PART 1155—[REMOVED]

3. Part 1155 is removed.

Vol. 63, No. 99
Friday, May 22, 1998

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 1160

[DA–98–04]

Fluid Milk Promotion Order; Invitation to Submit Comments on Proposed Amendments to the Order

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule.

SUMMARY: This document invites written comments on a proposal to amend the Fluid Milk Promotion Order. The proposed amendments, requested by the National Fluid Milk Processor Promotion Board, which administers the Order, would modify the membership status and term of office of Board members. The proposed rule would also amend order language pertaining to committees and intellectual property rights (patents, copyrights, inventions, and publications). The Board believes that the proposed amendments are necessary to maintain Board membership continuity. The changes should allow the Board to operate in a more effective and efficient manner.

DATES: Comments are due no later than June 22, 1998.

ADDRESSES: Comments (two copies) should be filed with the USDA/AMS/Dairy Programs, Promotion and Research Branch, 1400 Independence Avenue, SW, Stop 0233, Room 2734 South Building, Washington, DC 20250–0233. Comments should reference the docket number and the date and page number of this issue of the **Federal Register** and will be made available for public inspection in Room 2734 South Building during regular business hours.

FOR FURTHER INFORMATION CONTACT: David R. Jamison, Chief, USDA/AMS/Dairy Programs, Promotion and Research Branch, 1400 Independence Avenue, SW, Stop 0233, Room 2734 South Building, Washington, DC 20250–0233, (202) 720–6909, David__Jamison@usda.gov.

SUPPLEMENTARY INFORMATION: The Regulatory Flexibility Act (5 U.S.C. 601–612) requires the Agency to examine the impact of a proposed rule on small entities. Small businesses in the fluid milk processing industry have been defined by the Small Business Administration as those employing less than 500 employees. There are approximately 250 fluid milk processors subject to the provisions of the Fluid Milk Promotion Order. Most of the parties subject to the Order are considered small entities.

Several changes are proposed to the Order provisions of the Fluid Milk Promotion Order (7 CFR Part 1160) concerning membership on the National Fluid Milk Processor Promotion Board (Board) and the terms of office for Board members. The Order is authorized under the Fluid Milk Promotion Act of 1990 (7 USC 6401–6417). The Board requested the amendments.

The Order provides for a 20-member board with 15 members representing geographic regions and five at-large members, at least three of whom are to be fluid milk processors and at least one member from the general public. To the extent practicable, members representing geographic regions should represent processing operations of differing sizes.

Currently, the Order provides that a fluid milk processor can be represented on the Board by not more than one member. The Board in its petition for rulemaking noted that it is more difficult to maintain the single member representation; that processors are larger in size and operate in several geographic areas; and that, to maintain continuity and provide a consistent pool of processor representatives, a change in the Order provisions is needed to allow more than one representative on the Board. The proposed amendments would allow a fluid milk processor to have two members on the Board.

Currently, except in those instances where a Board member changes fluid milk processor affiliation and is eligible to serve on the Board in another capacity during the same term, a Board member whose processor affiliation has changed cannot continue to serve on the Board. This proposed rule would allow Board members whose fluid milk processor company affiliation has changed to serve on the Board for a period of up to 60 days or until a successor is appointed, whichever is sooner, provided that the eligibility requirements of the Order are still met. This should help in the reduction of Board vacancies and foster continuity in Board activities and membership.

Another change that would contribute to greater continuity on the Board would allow Board members who fill vacancies with a term of 18 months or less to serve two consecutive full 3-year terms. Currently, the order provides that except for the initial staggered appointments, Board members could only serve two consecutive terms.

Another change would permit the Board to establish working committees of persons other than Board members to assist the Board with activities by providing information, knowledge, and expertise that otherwise might not be available.

Finally, the amendments would also modify the intellectual property provisions of the Order to specifically provide for and allow joint ownership of intellectual property, i.e., patents, copyrights, inventions, and publications, that is developed using joint funds.

These amendments to Order provisions should not add any burden to regulated parties because they relate to provisions concerning membership on the Board, the establishment of working committees, and joint ownership for patents, copyrights, inventions, and publications. The proposed changes would not impose additional reporting or collecting requirements. No relevant Federal rules have been identified that duplicate, overlap, or conflict with the rule.

Accordingly, pursuant to 5 U.S.C. 605(b), the Agricultural Marketing Service has certified that this rule would not have a significant economic impact on a substantial number of small entities.

Executive Order 12866 and the Paperwork Reduction Act

This proposed rule has been reviewed by the Office of Management and Budget and has been determined to be not significant for purposes of Executive Order 12866.

This proposed rule has been reviewed under Executive Order 12988, Civil Justice Reform. This rule is not intended to have retroactive effect. If adopted,

this proposed rule would not preempt any State or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule.

The Fluid Milk Promotion Act of 1990, as amended, authorizes the Fluid Milk Promotion Order. The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 1999K of the Act, any person subject to a Fluid Milk Promotion Order may file with the Secretary a petition stating that the Order, any provision of the Order, or any obligation imposed in connection with the Order is not in accordance with the law and request a modification of the Order or to be exempted from the Order. A person subject to an order is afforded the opportunity for a hearing on the petition. After a hearing, the Secretary would rule on the petition. The Act provides that the district court of the United States in any district in which the person is an inhabitant, or has his principal place of business, has jurisdiction to review the Secretary's ruling on the petition, provided a complaint is filed not later than 20 days after the date of the entry of the ruling.

In accordance with the Paperwork Reduction Act (44 U.S.C. Chapter 35), the forms and reporting and recordkeeping requirements that are included in the Fluid Milk Promotion Order have been approved previously by the Office of Management and Budget (OMB) and were assigned OMB No. 0581–0093, except for Board members' nominee background information sheets that were assigned OMB No. 0505–0001.

Statement of Consideration

The proposed rule would amend the membership and term-of-office provisions of the Fluid Milk Promotion Order. Currently, the Order provides that a fluid milk processor can be represented on the Board by not more than one member. The Board in its recommendation for rulemaking noted that it is more difficult to maintain the single member representation; that processors are larger in size and operate in several geographic areas; and that, to maintain continuity and provide a consistent pool of processor representatives, a change in the Order provisions is needed to allow more than one representative on the Board. The proposed amendments would allow a fluid milk processor to have two members on the Board.

The proposed amendments also would allow Board members whose fluid milk processor company affiliation has changed to serve on the Board for a period of up to 60 days or until a successor is appointed, whichever is sooner. Currently, except in those instances where a Board member changes fluid milk processor affiliation and is eligible to serve on the Board in another capacity during the same term, a Board member whose processor affiliation has changed cannot continue to serve on the Board. This proposed rule would allow Board members whose fluid milk processor company affiliation has changed to serve on the Board for a period of up to 60 days or until a successor is appointed, whichever is sooner, provided that the eligibility requirements of the Order are still met. This should help in the reduction of Board vacancies and foster continuity in Board activities and membership.

The proposed amendments would also allow Board members who fill vacancies with a term of 18 months or less to serve two additional 3-year terms. Currently, the Order states that, except for the initial staggered Board appointments of 1- or 2-year terms, Board members may only serve two consecutive terms. Thus any time served with the initial term is considered a complete term. The Board feels that this rule change would allow for greater continuity of membership.

This document also proposes to amend two additional sections of the Fluid Milk Promotion Order. The proposed amendments would permit the Board to establish working committees of persons other than Board members to assist the Board with activities by providing information, knowledge, and expertise that otherwise might not be available.

The proposed amendments also would modify the section on patents, copyrights, inventions, and publications by allowing jointly developed intellectual property to be jointly owned. Currently, the Order does not specifically provide for such joint ownership. This proposed amendment would allow the Board greater flexibility concerning intellectual property as it relates to ownership rights.

A thirty-day comment period is provided for interested persons to comment on this proposed rule. This period is appropriate so as to permit implementation of the changes, if adopted, as soon as possible.

List of Subjects in 7 CFR Part 1160

Fluid milk products, Milk, Promotion.

For the reasons set forth in the preamble, it is proposed that 7 CFR Part 1160 be amended as follows:

PART 1160—FLUID MILK PROMOTION PROGRAM

1. The authority citation for 7 CFR Part 1160 continues to read as follows:

Authority: 7 U.S.C. 6401–6417.

2. In § 1160.200, paragraph (a) is revised to read as follows:

§ 1160.200 Establishment and membership.

(a) There is hereby established a National Fluid Milk Processor Promotion Board of 20 members, 15 of whom shall represent geographic regions and five of whom shall be at-large members of the Board. To the extent practicable, members representing geographic regions shall represent fluid milk processing operations of differing sizes. No fluid milk processor shall be represented on the Board by more than two members. The at-large members shall include at least three fluid milk processors and at least one member from the general public. Except for the member or members from the general public, nominees appointed to the Board must be active owners or employees of a fluid milk processor. The failure of such a member to own or work for a fluid milk processor or its successor fluid milk processor shall disqualify that member for membership on the Board except that such member shall continue to serve on the Board for a period of up to 60 days following the disqualification or until the appointment of a successor Board member to such position, whichever is sooner, provided that such person continues to meet the criteria for serving on the Board as a processor representative.

* * * * *

3. In § 1160.201, paragraph (b) is revised to read as follows:

§ 1160.201 Term of office.

* * * * *

(b) No member shall serve more than two consecutive terms, except that any member who is appointed to serve for an initial term of one or two years shall be eligible to be reappointed for two three-year terms. Appointment to another position on the Board is considered a consecutive term. Should a non-board member be appointed to fill a vacancy on the Board with a term of 18 months or less remaining, the appointee shall be entitled to serve two consecutive 3-year terms following the term of the vacant position to which the person was appointed.

4. In § 1160.208, paragraph (g) is revised to read as follows:

§ 1160.208 Powers of the Board.

* * * * *

(g) To select committees and subcommittees, to adopt bylaws, and to adopt such rules for the conduct of its business as it may deem advisable; and the Board may establish working committees of persons other than Board members;

* * * * *

5. In § 1160.505, the text is designated paragraph (a) and a new paragraph (b) is added to read as follows:

§ 1160.505 Patents, copyrights, inventions and publications.

* * * * *

(b) Should patents, copyrights, inventions, and publications be developed through the use of funds collected by the Board under this subpart, and funds contributed by another organization or person, ownership and related rights to such patents, copyrights, inventions, and publications shall be determined by the agreement between the Board and the party contributing funds towards the development of such patent, copyright, invention, and publication in a manner consistent with paragraph (a) of this section.

Uniform Administrative Requirements for Grants and Cooperative Agreements to State and Local Governments and Uniform Administrative Requirements for Grants and Agreements with Institutions of Higher Education, Hospitals, and Other Non-Profit Organizations

AGENCY: Department of Agriculture, USDA.

ACTION: Notice of proposed rulemaking; extension of comment period.

SUMMARY: On February 17, 1998, USDA published in the **Federal Register** (63 FR 7734) a Notice of Proposed Rulemaking (NPRM) in which USDA proposed to revise its grants management regulations in order to bring the entitlement programs it administers under the same regulations that already apply to nonentitlement programs and identify exceptions to these general rules that apply only to entitlement programs. This document extends the comment period for that NPRM in order to give interested parties ample time to comment.

DATES: The period for written comments is extended from May 19, 1998 to June 18, 1998.

ADDRESSES: Comments must be mailed or faxed to Gerald Miske, Supervisory Management Analyst, Fiscal Policy Division, Office of the Chief Financial Officer, USDA, Room 3022 South Building, 1400 Independence Avenue, SW, Washington, D.C. 20250; FAX (202) 690–1529. Written comments may be inspected at the above address from 8:00 a.m. to 5:00 p.m. A copy of the Regulatory Cost/Benefit Assessment referenced in the Regulatory Impact Analysis section of this preamble can be obtained from Gerald Miske, Supervisory Management Analyst, Fiscal Policy Division, Office of the Chief Financial Officer, USDA, Room 3022 South Building, 1400 Independence Avenue, SW, Washington, D.C. 20250. This assessment may be examined at the same address.

FOR FURTHER INFORMATION CONTACT: Gerald Miske, Supervisory Management Analyst, Fiscal Policy Division, Office of the Chief Financial Officer, USDA, at the above address; telephone (202) 720–1553.

Dated: May 19, 1998.

Sally Thompson,

Chief Financial Officer.

Federal Aviation Administration

14 CFR Part 39

[Docket No. 98–CE–09–AD]

RIN 2120–AA64

Airworthiness Directives; The New Piper Aircraft, Inc. PA–24, PA–28R, PA–30, PA–32R, PA–34, and PA–39 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes to revise Airworthiness Directive (AD) 97–01–01, which currently requires repetitively inspecting the main gear sidebrace studs for cracks on The New Piper Aircraft, Inc. (Piper) Models PA–24, PA–28R, PA–30, PA–32R, PA-34, and PA–39 series airplanes, and replacing any main gear sidebrace stud found cracked. The Federal Aviation Administration (FAA) has approved certain alternative methods of compliance (AMOC) for AD 97–01–01, and has determined that these AMOC's should be incorporated into the AD. The proposed AD would retain all the actions of AD 97–01–01, and would incorporate certain AMOC's as a way of accomplishing the actions specified in AD 97–01–01. The actions specified by the proposed AD are intended to prevent a main landing gear collapse caused by main gear sidebrace stud cracks, which could result in loss of control of the airplane during landing operations.

DATES: Comments must be received on or before July 23, 1998.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Central Region, Office of the Regional Counsel, Attention: Rules Docket No. 96-CE–09-AD, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106. Comments may be inspected at this location between 8 a.m. and 4 p.m., Monday through Friday, holidays excepted.

Information that applies to the proposed AD may be examined at the Rules Docket at the address above.

FOR FURTHER INFORMATION CONTACT: Mr. William O. Herderich, Aerospace Engineer, FAA, Atlanta Certification Office, One Crown Center, 1895 Phoenix Boulevard, suite 450, Atlanta, Georgia 30349; telephone: (770) 703–6084; facsimile: (770) 703–6097.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications should identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by

interested persons. A report that summarizes each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket No. 96-CE-09-AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, Central Region, Office of the Regional Counsel, Attention: Rules Docket No. 96-CE-09-AD, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106.

Discussion

AD 97-01-01, Amendment 39-9872 (62 FR 10, January 2, 1997), currently requires repetitively inspecting the main gear sidebrace studs for cracks on Piper Models PA-24, PA-28R, PA-30, PA-32R, PA-34, and PA-39 series airplanes, and replacing any main gear sidebrace stud found cracked. The actions specified by AD 97-01-01 are intended to prevent a main landing gear collapse caused by main gear sidebrace stud cracks, which could result in loss of control of the airplane during landing operations.

Actions Since Issuance of Previous Rule

Since issuance of AD 97-01-01, the FAA has approved alternative methods of compliance for modifying the existing bracket assembly as terminating action for the repetitive inspection requirement of that AD.

The FAA's Determination

After examining the circumstances and reviewing all available information related to the subject described above, the FAA has determined that (1) the alternative methods of compliance approved for modifying the existing bracket assembly should be made available as an option of complying with the current AD; and (2) AD action should be taken to prevent a main landing gear collapse caused by main gear sidebrace stud cracks, which could result in loss of control of the airplane during landing operations.

Explanation of the Provisions of the Proposed AD

Since an unsafe condition has been identified that is likely to exist or develop in other Piper Models PA-24, PA-28R, PA-30, PA-32R, PA-34, and PA-39 series airplanes of the same type design, the FAA is proposing to revise AD 97-01-01. The proposed AD would retain all the actions of AD 97-01-01, and would incorporate alternative methods of compliance for modifying the existing bracket assembly, as terminating action for the repetitive inspection requirement of that AD.

Cost Impact

The cost impact of the proposed AD would be the same as is currently required by AD 97-01-01. As a courtesy, the FAA is reprinting that cost information in the following paragraphs.

The FAA estimates that 13,200 airplanes in the U.S. registry would be affected by the proposed AD, that it would take approximately 5 workhours per airplane to accomplish the proposed action, and that the average labor rate is approximately $60 an hour. Based on these figures, the total cost impact of the proposed inspection on U.S. operators is estimated to be $3,960,000. This figure represents the total cost of the proposed initial inspection, and does not reflect costs for any of the proposed repetitive inspections or possible replacements. The FAA has no way of determining how many main gear side brace studs may need replacement or how many repetitive inspections each owner/operator may incur over the life of the airplane.

In addition, the proposed AD would require the same inspections required by AD 95-20-07 (which was superseded by AD 97-01-01). The only difference between the proposed AD and AD 95-20-07 is the addition of an inspection-terminating modification option and the elimination of (from the "Applicability" section of the AD) certain airplanes that incorporate a certain main side brace stud assembly. The proposed AD would also not provide any additional cost impacts over that already required by AD 95-20-07.

Regulatory Impact

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action has been placed in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES**.

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13, is amended by removing Airworthiness Directive 97-01-01, Amendment 39-9872 (62 FR 10, January 2, 1997), and by adding a new AD to read as follows:

The New Piper Aircraft, Inc.: Docket No. 96-CE-09-AD; Revises AD 97-01-01, Amendment 39-9872.

Applicability: The following airplane models and serial numbers, certificated in any category:

1. All serial numbers of Models PA-24, PA-24-250, PA-24-260, PA-24-400, PA-30, and PA-39 airplanes;

2. The following model and serial number airplanes that are not equipped with a Piper part number (P/N) 78717-02 (or FAA-approved equivalent part number) main gear sidebrace stud in both right and left main gear sidebrace bracket assemblies:

Model	Serial Nos.
PA-28R-180	28R-30002 through 28R-31135, and 28R-7130001 through 28R-7130013.
PA-28R-200	28R-35001 through 28R-35820, and 28R-7135001 through 28R-7635539.
PA-28R-201	28R-7737002 through 28R-7737096.
PA-28R-201T ..	28R-7703001 through 28R-7703239.
PA-32R-300	32R-7680001 through 32R-7780444.

UMI
VOL
63
ISS
99
MY
22
1998

Model	Serial Nos.
PA–34–200	All serial numbers.
PA–34–200T	34–7570001 through 34–7770372.

Note 1: P/N 78717–02 sidebrace stud was installed at manufacture on Piper Model PA–34–200T airplanes, serial numbers 34–7670325 through 34–7770372.

Note 2: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (e) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required initially as follows, and thereafter as specified in the body of this AD:

1. For the affected Models PA–28R–180, PA–28R–200, PA–28R–201, PA–28R–201T, PA–32R–300, PA–34–200, and PA–34–200T airplanes: Within the next 100 hours time-in-service (TIS) after the effective date of this AD; or, if the main gear sidebrace stud has already been inspected or replaced as specified in this AD, within 500 hours TIS after the last inspection or replacement; whichever occurs later.

2. For the affected Models PA–24, PA–24–250, PA–24–260, PA–24–400, PA–30, and PA–39 airplanes: Within the next 100 hours TIS after the effective date of this AD; or, if the main gear sidebrace stud has already been inspected or replaced as specified in this AD, within 1,000 hours TIS after the last inspection or replacement; whichever occurs later.

To prevent main landing gear (MLG) collapse caused by main gear sidebrace stud cracks, which could result in loss of control of the airplane during landing operations, accomplish the following:

Note 3: The paragraph structure of this AD is as follows:

Level 1: (a), (b), (c), etc.
Level 2: (1), (2), (3), etc.
Level 3: (i), (ii), (iii), etc.
Level 4: (A), (B), (C), etc.

Level 2, Level 3, and Level 4 structures are designations of the Level 1 paragraph they immediately follow.

(a) Remove both the left and right main gear sidebrace studs from the airplane in accordance with the instructions contained in the Landing Gear section of the maintenance manual, and inspect each main gear sidebrace stud for cracks, using Type I (fluorescent) liquid penetrant or magnetic particle inspection methods. Figure 1 of this AD depicts the area of the sidebrace stud shank where the sidebrace stud is to be inspected.

Note 4: All affected Models PA–24 and PA–24–250 airplanes were equipped at manufacture with P/N 20829–00 main gear sidebrace studs. All affected Models PA–24–260, PA–24–400, PA–30, and PA–39 airplanes were equipped at manufacture with P/N 22512–00 main gear sidebrace studs. The Appendix included with this AD contains information on determining the P/N of the bracket assembly (which contains the main gear side brace stud) on the affected PA–28R, PA–32R, and PA–34 series airplanes.

BILLING CODE 4910–13–U

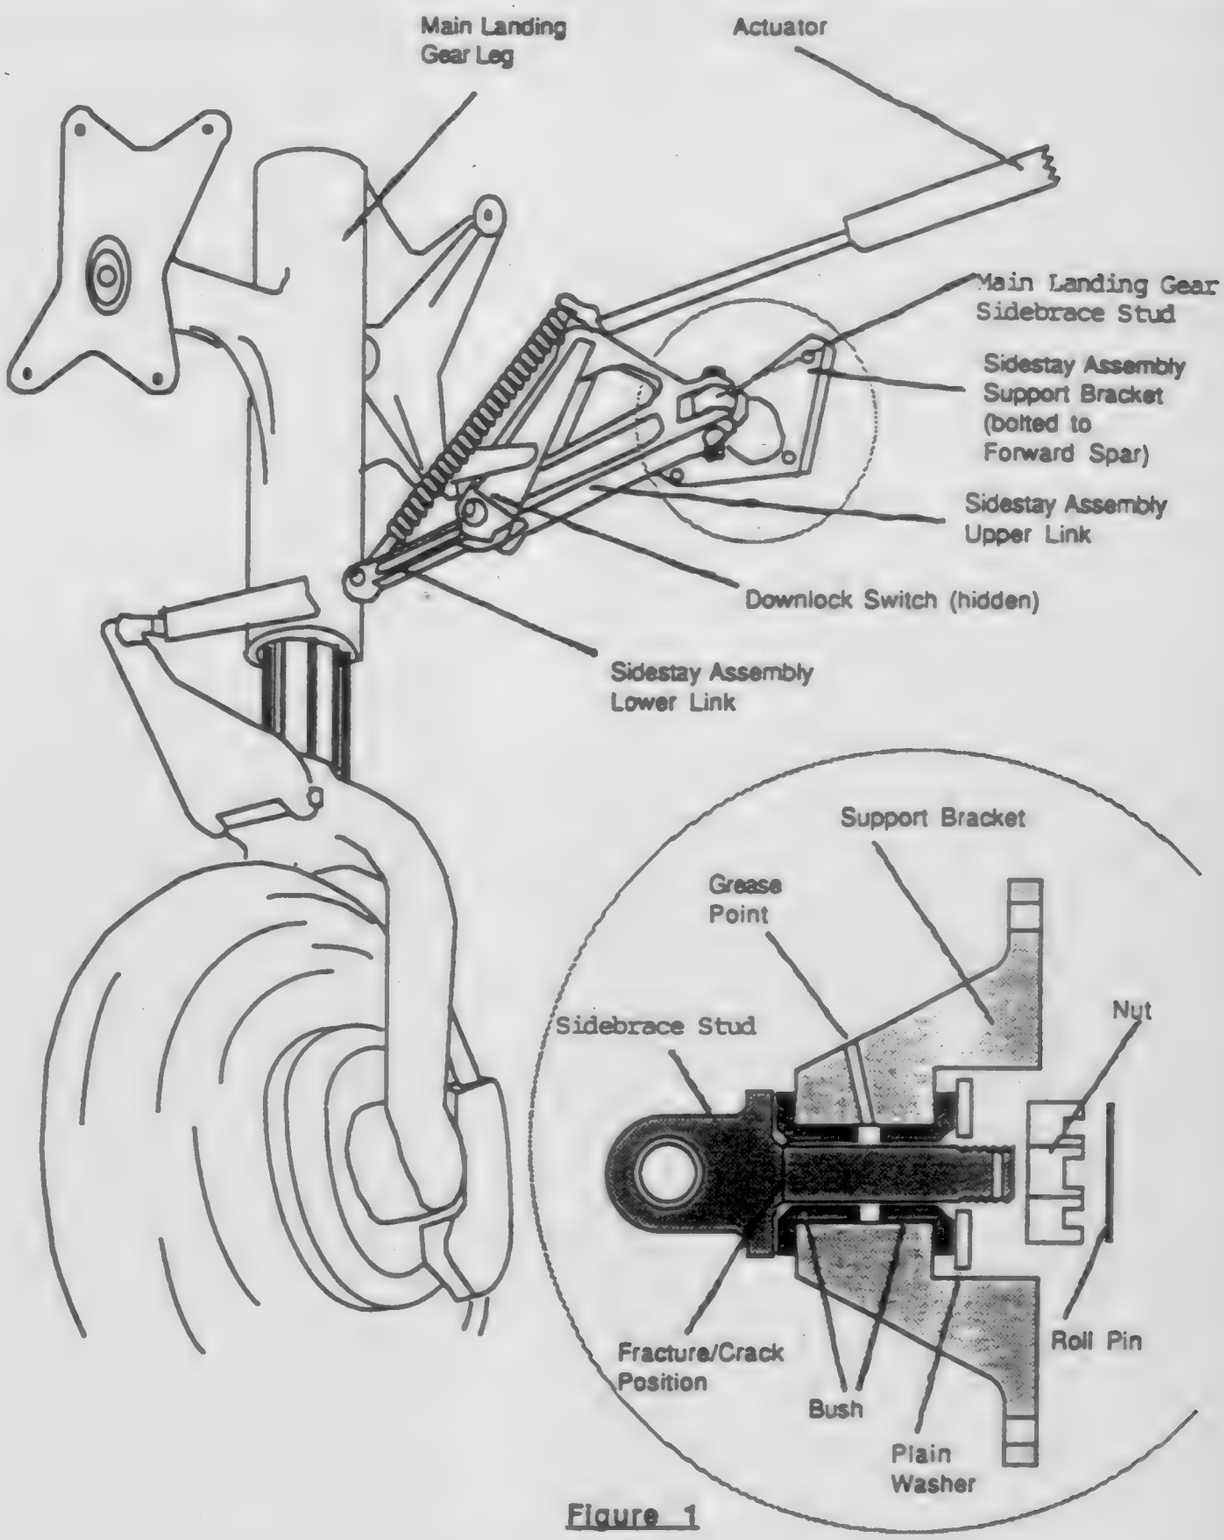

Figure 1

Note: This figure is provided to depict the area of the sidebrace stud to be inspected. This is not intended to represent the configuration of all models affected.

BILLING CODE 4910-13-C

(1) For any main gear sidebrace stud found cracked, prior to further flight, replace the cracked stud with an FAA-approved serviceable part (part numbers referenced in the table in paragraph (b) of this AD or FAA-approved equivalent part number) in accordance with the instructions contained in the Landing Gear section of the applicable maintenance manual, and accomplish one of the following, as applicable:

(i) Reinspect (and replace as necessary) as specified in paragraph (b) of this AD; or

(ii) For the affected Models PA–28R–180, PA–28R–200, PA–28R–201, PA–28R–201T, PA–32R–300, PA–34–200, and PA–34–200T airplanes, the 9/16-inch main gear sidebrace studs (P/N 95299–00, 95299–02, or P/N 67543, as applicable) are no longer manufactured. Install a new main gear sidebrace stud bracket assembly, P/N 95643–06, P/N 95643–07, P/N 95643–08, or P/N 95643–09, as applicable. No repetitive inspections will be required by this AD for these affected airplane models when this bracket assembly is installed; or

(iii) For the affected Models PA–28R–180, PA–28R–200, PA–28R–201, PA–28R–201T, PA–32R–300, PA–34–200, and PA–34–200T airplanes, ream the existing two-piece bushings to an inside diameter of .624-inch to .625-inch, chamfer the head side of the bushing to accommodate the radius in the shank of the main gear sidebrace stud, and install the 5/8-inch stud, P/N 78717–02. No repetitive inspections will be required by this AD when this action is accomplished. If the bushings cannot be reamed while installed in the bracket (i.e., the bushings are loose), then install a main gear sidebrace bracket assembly, P/N 95643–06, P/N 95643–07, P/N 95643–08, or P/N 95643–09, as applicable. Models PA–28R–180 and PA–28R–200 with serial numbers as specified in the Appendix to this AD may be equipped with a bracket casting identified with casting number 67073–2 or 67073–3 and may require the following modification to P/N 78717–02 for proper installation:

(A) Reduce the length of the stud to 1.688 ± 0.15 inches;

(B) Add additional rolled threads to 1.125 ± .015 inches from the flange. Note that the stud is heat treated to 180 to 200 ksi; and

(C) Drill an additional roll pin hole 90 degrees to the existing hole, and approximately 1.480 inches from the flange.

(iv) No repetitive inspections will be required by this AD when a P/N 78717–02 (or FAA-approved equivalent part number) main gear sidebrace stud is installed in the existing bracket assembly or when a bracket assembly, P/N 95643–07 (or FAA-approved equivalent part number), P/N 95643–08 (or FAA-approved equivalent part number), or P/N95643–09 (or FAA-approved equivalent part number), as applicable, is installed.

(2) For any main gear sidebrace stud not found cracked, prior to further flight, reinstall the uncracked stud in accordance with the instructions contained in the Landing Gear section of the applicable maintenance manual, and reinspect and replace (as necessary) as specified in paragraph (b) of this AD.

(b) Reinspect both the left and right main gear sidebrace studs, using Type I (fluorescent) liquid penetrant or magnetic particle inspection methods. Replace any cracked stud or reinstall any uncracked stud as specified in paragraphs (a)(1) and (a)(2) of this AD, respectively:

Part number installed	TIS inspection interval (hours)	Model airplanes installed on
20829–00 (Piper parts) or FAA-approved equivalent part number.	1,000	PA–24 and PA–24–250.
22512–00 (Piper parts) or FAA-approved equivalent part number.	1,000	PA–24–260, PA–24–400, PA–30, and PA–39.
95299–00 or 95299–02 (Piper parts) or FAA-approved equivalent part number.	500	PA–28R–180 and PA–28R–200 not equipped with casting number 67073–2 or 67073–3, PA–28R–201, PA–28R–201T, PA–32R–300, PA–34–200, and PA–34–200T.
67543 (Piper parts) or FAA-approved equivalent part number	500	PA–28R–180 and PA–28R–200 equipped with casting number 67073–02 or 67073–03.

Note 5: Accomplishing the actions of this AD does not affect the requirements of AD 77–13–21, Amendment 39–3093. The tolerance inspection requirements of that AD still apply for Piper PA–24, PA–30, and PA–39 series airplanes.

(c) Owners/operators of the affected Models PA–28R–180, PA–28R–200, PA–28R–201, PA–28R–201T, PA–32R–300, PA–34–200, and PA–34–200T airplanes may accomplish one of the following at any time to terminate the repetitive inspection requirement of this AD:

(1) Install a main gear sidebrace bracket assembly, P/N 95643–06 (or FAA-approved equivalent part number), P/N 95643–07 (or FAA-approved equivalent part number), P/N 95643–08 (or FAA-approved equivalent part number), or P/N 95643–09 (or FAA-approved equivalent part number), as applicable, which contains the 5/8-inch diameter main gear sidebrace stud, P/N 78717–02 (or FAA-approved equivalent part number), and the one-piece bushing, P/N 67026–12 (or FAA-approved equivalent part number). Accomplish these installations in accordance with the instructions contained in the Landing Gear section of the applicable maintenance manual; or

(2) Ream the existing two-piece bushings to an inside diameter of .624-inch to .625-inch, chamfer the head side of the bushing to accommodate the radius in the shank of the main gear sidebrace stud, and install the 5/8-inch stud, P/N 78717–02 (or FAA-approved equivalent part number). No repetitive inspections will be required by this AD when this action is accomplished. If the bushings cannot be reamed while installed in the bracket (i.e., the bushings are loose), then install a main gear sidebrace bracket assembly, P/N 95643–06 (or FAA-approved equivalent part number), P/N 95643–07 (or FAA-approved equivalent part number), P/N 95643–08 (or FAA-approved equivalent part number), or P/N 95643–09 (or FAA-approved equivalent part number), as applicable. Models PA–28R–180 and PA–28R–200 with serial numbers as specified in the Appendix to this AD may be equipped with a bracket casting identified with casting number 67073–2 or 67073–3 and may require the following modification to P/N 78717–02 (or FAA-approved equivalent part number) for proper installation:

(i) Reduce the length of the stud to 1.688 ± 0.15 inches;

(ii) Add additional rolled threads to 1.125 ± .015 inches from the flange. Note that the stud is heat treated to 180 to 200 ksi; and

(iii) Drill an additional roll pin hole 90 degrees to the existing hole, and approximately 1.480 inches from the flange.

(d) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(e) An alternative method of compliance or adjustment of the initial or repetitive compliance times that provides an equivalent level of safety may be approved by the Manager, Atlanta Aircraft Certification Office (ACO), One Crown Center, 1895 Phoenix Boulevard, suite 450, Atlanta, Georgia 30349.

(1) The request shall be forwarded through an appropriate FAA Maintenance Inspector, who may add comments and then send it to the Manager, Atlanta ACO.

(2) Alternative methods of compliance approved in accordance with AD 97–01–01, Amendment 39–9872 (revised by this action), or AD 95–20–07, Amendment 39–9386 (superseded by AD 97–01–01), are considered approved as alternative methods of compliance with this AD.

Note 6: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Atlanta ACO.

(f) Information related to this AD may be inspected at the FAA, Central Region, Office of the Regional Counsel, Room 1558, 601 E. 12th Street, Kansas City, Missouri.

(g) This amendment revises AD 97–01–01, Amendment 39–9872, which superseded AD 95–20–07, Amendment 39–9386.

Appendix to Docket No. 96–CE–09–AD Information to Determine Main Gear Sidebrace Stud Assembly Part Number (P/N)

—The P/N 95643–00/-01/-02/-03 bracket assembly contains the 9/16-inch diameter main gear sidebrace stud, P/N 95299–00/-02, and a two-piece bushing, P/N 67026–6.
—The P/N 95643–06/-07/-08/-09 bracket assembly contains the 5/8-inch diameter main gear sidebrace stud, P/N 78717–02, and a one-piece bushing, P/N 67026-12.
—Both the one-piece and the two-piece bushing have a visible portion of the bushing flange, i.e., bushing shoulder.
—Whether a one-piece or two-piece bushing is installed may be determined by measuring the outside diameter of the bushing flange with a micrometer (jaws of the caliper must be 3/32-inch or less). The two-piece bushing will have an outside diameter of 1.00 inch and the one-piece bushing will have an outside diameter of 1.128 to 1.130 inches. This measurement is not valid for the following airplanes:

Model	Serial Nos.
PA–28R–180	28R–30004 through 28–31270.
PA–28R–200	28R–35001 through 28R–35820, and 28R–7135001 through 28R–7135062.

The main gear sidebrace studs on these airplanes will require removal to determine the P/N installed.

—The one-piece bushing contains a visible chamfer in the center of the bushing, and the chamfer in the two-piece bushing is not visible when the stud is installed.
—If P/N 95643–00/-01/-02/-03 bracket assembly is installed or the above information cannot be utilized, the main gear sidebrace stud will need to be removed from the bracket to determine the shank diameter and main gear sidebrace stud P/N.
—P/N 95299–00 and P/N 95299–02 main gear sidebrace studs are 9/16-inch in diameter.
—P/N 78717–00 main gear sidebrace studs are 5/8-inch in diameter.
—P/N 95643–00/-01/-02/-03 bracket assembly may have been modified to accommodate the 5/8-inch diameter main gear sidebrace stud, P/N 78717–02.
—The embossed number of 95363 on the bracket forging is not the bracket assembly P/N.
—The bracket assemblies identified with casting number 67073–2 or 67073–3 contain a 9/16-inch diameter main gear sidebrace stud, P/N 67543, and two-piece bushing, P/N 67026–2 and 67026–3.
—Model PA–28R–180 airplanes, serial numbers 28R-30004 through 28R–31270; and Model PA–28R–200 airplanes, serial numbers 28R–35001 through 28R–35820 and 28R–7135001 through 28R–7135062, are equipped from the factory with bracket assemblies identified with casting number 67073–2 and 67073–3.
—P/N 67543 main gear sidebrace studs are 9/16-inch in diameter.

Issued in Kansas City, Missouri, on May 14, 1998.

Michael Gallagher,

Small Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910–13–U

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 95–CE–72–AD]

RIN 2120–AA64

Airworthiness Directives; SOCATA—Groupe AEROSPATIALE Models TB9 and TB10 Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes to adopt a new airworthiness directive (AD) that would apply to certain SOCATA—Groupe AEROSPATIALE (Socata) Models TB9 and TB10 airplanes. The proposed AD would require repetitively inspecting the wing front attachments on the wing and fuselage sides for cracks, and repetitively incorporating a certain modification kit (type of kit and time of incorporation depends on whether cracks are found during the inspection). The proposed AD is the result of mandatory continuing airworthiness information (MCAI) issued by the airworthiness authority for France. The actions specified by the proposed AD are intended to prevent structural failure of the wing front attachments caused by fatigue cracking, which could result in the wing separating from the airplane if the airplane is operated with cracked wing front attachments over an extended period of time.

DATES: Comments must be received on or before June 25, 1998.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Central Region, Office of the Regional Counsel, Attention: Rules Docket No. 95–CE–72–AD, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106. Comments may be inspected at this location between 8 a.m. and 4 p.m., Monday through Friday, holidays excepted.

Service information that applies to the proposed AD may be obtained from the SOCATA—Groupe AEROSPATIALE, Socata Product Support, Aeroport Tarbes-Ossun-Lourdes, B P 930, 65009 Tarbes Cedex, France; telephone: 33–5–62–41–76–52; facsimile: 33–5–62–41–76–54; or the Product Support Manager, SOCATA Aircraft, North Perry Airport, 7501 Pembroke Road, Pembroke Pines, Florida 33023; telephone: (954) 893–1400; facsimile: (954) 964–1402. This information also may be examined at the Rules Docket at the address above.

FOR FURTHER INFORMATION CONTACT: Mr. Karl Schletzbaum, Aerospace Engineer, FAA, Small Airplane Directorate, 1201 Walnut Street, suite 900, Kansas City, Missouri 64106; telephone: (816) 426–6934; facsimile: (816) 426–2169.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications should identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report that summarizes each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket No. 95–CE–72–AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, Central Region, Office of the Regional Counsel, Attention: Rules Docket No. 95–CE–72–AD, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106.

Discussion

The Direction Générale de l'Aviation Civile (DGAC), which is the airworthiness authority for France, recently notified the FAA that an unsafe condition may exist on all Socata Model TB9 airplanes and certain Socata Model TB10 airplanes. The DGAC reports 15 cases of cracks found on the wing front attachments of the referenced airplanes.

This condition, if not detected and corrected in a timely manner, could result in structural failure of the wing attachment and the wing separating from the airplane if the airplane is operated with cracked wing front attachments over an extended period of time.

Relevant Service Information

Socata has issued Service Bulletin No. SB 10–081–57, Amendment 1, dated August 1996, which specifies procedures for inspecting the wing front attachments on the wing and fuselage sides for cracks. Also included in this service bulletin is reference to certain wing front attachment kits that should be incorporated on the Socata Models TB9 and TB10, depending on the inspection results. The procedures for incorporating the modification kits are in the Technical Instructions for Modification included with each kit.

The DGAC classified this service bulletin as mandatory and issued DGAC AD 94–264(A), dated December 7, 1994, in order to assure the continued airworthiness of these airplanes in France.

The FAA's Determination

This airplane model is manufactured in France and is type certificated for operation in the United States under the provisions of § 21.29 of the Federal Aviation Regulations (14 CFR 21.29) and the applicable bilateral airworthiness agreement.

Pursuant to this bilateral airworthiness agreement, the DGAC has kept the FAA informed of the situation described above. The FAA has examined the findings of the DGAC; reviewed all available information, including the service information referenced above; and determined that AD action is necessary for products of this type design that are certificated for operation in the United States.

Explanation of the Provisions of the Proposed AD

Since an unsafe condition has been identified that is likely to exist or develop in other Socata Models TB9 and TB10 airplanes of the same type design registered in the United States, the FAA is proposing AD action. The proposed AD would require repetitively inspecting the wing front attachments on the wing and fuselage sides for cracks, and repetitively incorporating a certain modification kit (type of kit and time of incorporation depends on whether cracks are found during the inspection). Accomplishment of the proposed inspections would be in accordance with Socata Service Bulletin No. SB 10–081–57, Amendment 1, dated August 1996. Accomplishment of the proposed modifications, as applicable, would be required in accordance with the Technical Instructions for Modification included with each kit.

Cost Impact

The FAA estimates that 113 airplanes in the U.S. registry would be affected by the proposed AD.

The proposed inspection would take approximately 3 workhours per airplane to accomplish, at an average labor rate of approximately $60 an hour. Based on these figures, the total cost impact of the proposed inspection on U.S. operators is estimated to be $20,340, or $180 per airplane.

The proposed modification would take approximately 32 workhours to accomplish, at an average labor rate of $60 per hour. Parts cost approximately $1,125 per airplane. Based on these figures, the total cost impact of the proposed modifications on U.S. operators is estimated to be $344,085, or $3,045 per airplane.

Regulatory Impact

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action has been placed in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding a new airworthiness directive (AD) to read as follows:

Socata—Groupe Aerospatiale: Docket No. 95–CE–72–AD.

Applicability: The following airplane models and serial numbers, certificated in any category:

Model TB9, serial numbers 1 through 9999; and

Model TB10, serial numbers 1 through 803, 805, 806, 809 through 815, 820, 821, and 822.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (g) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated in the body of this AD, unless already accomplished.

To prevent structural failure of the wing front attachments caused by fatigue cracking, which could result in the wing separating from the airplane if the airplane is operated with cracked wing front attachments over an extended period of time, accomplish the following:

Note 2: The compliance times of this AD are presented in landings instead of hours time-in-service (TIS). If the number of landings is unknown, hours TIS may be used by multiplying the number of hours TIS by 1.5.

(a) For all affected airplanes, upon accumulating 3,000 landings on the wing front attachments or within the next 100 landings after the effective date of this AD,

whichever occurs later, and thereafter at intervals not to exceed 3,000 landings, inspect the wing front attachments (both the wing sides and fuselage sides) in accordance with Socata Service Bulletin No. SB 10–081–57, Amendment 1, dated August 1996.

(b) For all affected airplanes, accomplish the following on the wing front attachments on the wing sides:

(1) If no cracks are found on the wing front attachments on the wing sides during any inspection required by paragraph (a) of this AD, upon accumulating 12,000 landings on these wing front attachments or within the next 100 landings after the effective date of this AD, whichever occurs later, and thereafter at intervals not to exceed 6,000 landings provided no cracks are found during any inspection required by paragraph (a) of this AD, incorporate Modification Kit OPT10 911000 in accordance with Socata Technical Instruction No. 9110, which incorporates the following pages:

Pages	Revision level	Date
0 and 1	Amendment	January 31, 1992.
2 through 11	Original Issue	October 1985.

(2) If a crack(s) is found on the wing front attachments on the wing sides during any inspection required by paragraph (a) of this AD, prior to further flight, incorporate Modification Kit OPT10 911000 in accordance with Socata Technical Instruction No. 9110. Incorporate this kit at intervals not to exceed 6,000 landings thereafter provided no cracks are found during any inspection required by paragraph (a) of this AD.

(c) For Models TB9 and TB10 airplanes, with a serial number in the range of 1 through 399, or with a serial number of 413; that do not have either Socata Service Letter (SL) 10–14 incorporated or Socata Modification Kit OPT10 908100 incorporated, accomplish the following on the wing front attachments on the fuselage sides:

(1) If no cracks are found on the wing front attachments on the fuselage sides during any inspection required by paragraph (a) of this AD, upon accumulating 6,000 landings on these wing front attachments or within the next 100 landings after the effective date of this AD, whichever occurs later, and thereafter at intervals not to exceed 12,000 landings provided no cracks are found during any inspection required by paragraph (a) of this AD, incorporate Modification Kit OPT10 919800 in accordance with Socata Technical Instruction of Modification OPT10 9198–53, dated October 1994.

(2) If a crack(s) is found on the wing front attachments on the fuselage sides during any inspection required by paragraph (a) of this AD, prior to further flight, incorporate Modification Kit OPT10 919800 in accordance with Socata Technical Instruction of Modification OPT10 9198–53, dated October 1994. Incorporate this kit at intervals not to exceed 12,000 landings thereafter provided no cracks are found during any inspection required by paragraph (a) of this AD.

(d) For Models TB9 and TB10 airplanes, with a serial number in the range of 1 through 399, or with a serial number of 413; that have either Socata Service Letter (SL) 10–14 incorporated or Socata Modification Kit OPT10 908100 incorporated, accomplish the following on the wing front attachments on the fuselage sides:

(1) If no cracks are found on the wing front attachments on the fuselage sides during any inspection required by paragraph (a) of this AD, upon accumulating 12,000 landings on these wing front attachments or within the next 100 landings after the effective date of this AD, whichever occurs later, and thereafter at intervals not to exceed 12,000 landings provided no cracks are found during any inspection required by paragraph (a) of this AD, incorporate Modification Kit OPT10 919800 in accordance with Socata Technical Instruction of Modification OPT10 9198–53, dated October 1994.

(2) If a crack(s) is found on the wing front attachments on the fuselage sides during any inspection required by paragraph (a) of this AD, prior to further flight, incorporate Modification Kit OPT10 919800 in accordance with Socata Technical Instruction of Modification OPT10 9198–53, dated October 1994. Incorporate this kit at intervals not to exceed 12,000 landings thereafter provided no cracks are found during any inspection required by paragraph (a) of this AD.

(e) For Models TB9 and TB10 airplanes, with a serial number in the range of 400 through 412, or with a serial number in the range of 414 through 9999; accomplish the following on the wing front attachments on the fuselage sides:

(1) If no cracks are found on the wing front attachments on the fuselage sides during any inspection required by paragraph (a) of this AD, upon accumulating 12,000 landings on these wing front attachments or within the next 100 landings after the effective date of this AD, whichever occurs later, and thereafter at intervals not to exceed 12,000 landings provided no cracks are found during any inspection required by paragraph (a) of this AD, incorporate Modification Kit OPT10 908100 in accordance with Socata Technical Instruction of Modification OPT10 9181–53, Amendment 2, dated October 1994.

(2) If a crack(s) is found on the wing front attachments on the fuselage sides during any inspection required by paragraph (a) of this AD, prior to further flight, incorporate Modification Kit OPT10 908100 in accordance with Socata Technical Instruction of Modification OPT10 9181–53, Amendment 2, dated October 1994. Incorporate this kit at intervals not to exceed 12,000 landings thereafter provided no cracks are found during any inspection required by paragraph (a) of this AD.

Note 3: "Unless already accomplished" credit may be used if the kits that are required by paragraphs (c)(1), (d)(1), and (e)(1) of this AD are aleady incorporated on the applicable airplanes. As specified in the AD, repetitive incorporation of these kits would still be required at intervals not to exceed 12,000 landings provided no cracks are found.

(f) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(g) An alternative method of compliance or adjustment of the initial or repetitive compliance times that provides an equivalent level of safety may be approved by the Manager, Small Airplane Directorate, FAA, 1201 Walnut, suite 900, Kansas City, Missouri 64106. The request shall be forwarded through an appropriate FAA Maintenance Inspector, who may add comments and then send it to the Manager, Small Airplane Directorate.

Note 4: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Small Airplane Directorate.

(h) Questions or technical information related to the service information referenced in this AD should be directed to the SOCATA—Groupe AEROSPATIALE, Socata Product Support, Aeroport Tarbes-Ossun-Lourdes, B P 930, 65009 Tarbes Cedex, France; telephone: 33–5–62–41–76–52; facsimile: 33–5–62–41–76–54; or the Product Support Manager, SOCATA Aircraft, North Perry Airport, 7501 Pembroke Road, Pembroke Pines, Florida 33023; telephone: (954) 893–1400; facsimile: (954) 964–1402. This service information may be examined at the FAA, Central Region, Office of the Regional Counsel, Room 1558, 601 E. 12th Street, Kansas City, Missouri.

Note 5: The subject of this AD is addressed in French AD 94–264(A), dated December 7, 1994.

Issued in Kansas City, Missouri, on May 14, 1998.

Michael Gallagher,

Manager, Small Airplane Directorate, Aircraft Certification Service.

[Docket No. 98N–0040]

Regulations for In Vivo Radiopharmaceuticals Used for Diagnosis and Monitoring

AGENCY: Food and Drug Administration, HHS.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA), in response to the requirements of the Food and Drug Administration Modernization Act of 1997 (FDAMA), is proposing to amend the drug and biologics regulations by adding provisions that would clarify the evaluation and approval of in vivo

VOL 63 ISS 99 MAY 22 1998 UMI

radiopharmaceuticals used in the diagnosis or monitoring of diseases. The proposed regulations would describe certain types of indications for which FDA may approve diagnostic radiopharmaceuticals. The proposed rule also would include criteria that the agency would use to evaluate the safety and effectiveness of a diagnostic radiopharmaceutical under the Federal Food, Drug, and Cosmetic Act (the act) and the Public Health Service Act (the PHS Act).

DATES: Submit comments on this proposed rule on or before August 5, 1998. Submit written comments on the information collection provisions by June 22, 1998. See section IV of this document for the proposed effective date of a final rule based on this document.

ADDRESSES: Submit written comments to the Dockets Management Branch (HFA–305), Food and Drug Administration, 12420 Parklawn Dr., rm. 1–23, Rockville, MD 20857. Submit comments of the information collection provisions to the Office of Information and Regulatory Affairs, OMB, New Executive Office Bldg., 725 17th St. NW., Washington, DC 20503, Attn: Desk Officer for FDA.

FOR FURTHER INFORMATION CONTACT: Dano B. Murphy, Center for Biologics Evaluation and Research (HFM–17), Food and Drug Administration, 1401 Rockville Pike, Rockville, MD 20852–1448, 301–827–6210; or Brian L. Pendleton, Center for Drug Evaluation and Research (HFD–7), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–594–5649.

SUPPLEMENTARY INFORMATION:

I. Introduction

Radiopharmaceuticals are used for a wide variety of diagnostic, monitoring, and therapeutic purposes. Diagnostic radiopharmaceuticals are used to image or otherwise identify an internal structure or disease process, while therapeutic radiopharmaceuticals are used to effect a change upon a targeted structure or disease process.

The action of most radiopharmaceuticals is derived from two components: A nonradioactive delivery component, i.e., a carrier and/or ligand; and a radioactive imaging component, i.e., a radionuclide. Nonradioactive delivery ligands and carriers are usually peptides, small proteins, or antibodies. The purpose of ligands and carriers is to direct the radionuclide to a specific body location or process. Once a radiopharmaceutical has reached its targeted location, the radionuclide component can be detected. The imaging component usually is a short-lived radioactive molecule that emits radioactive decay photons having sufficient energy to penetrate the tissue mass of the patient. The emitted photons are detected by specialized devices that generate images of, or otherwise detect, radioactivity, such as nuclear medicine cameras and radiation detection probe devices.

On November 21, 1997, the President signed FDAMA into law. Section 122(a)(1) of FDAMA directs FDA to issue proposed and final regulations on the approval of diagnostic radiopharmaceuticals within specific timeframes. As defined in section 122(b) of FDAMA, a radiopharmaceutical is an article "that is intended for use in the diagnosis or monitoring of a disease or a manifestation of a disease in humans * * * that exhibits spontaneous disintegration of unstable nuclei with the emission of nuclear particles or photons[,] or * * * any nonradioactive reagent kit or nuclide generator that is intended to be used in the preparation of any such article." Section 122(a)(1)(A) of FDAMA states that FDA regulations will provide that, in determining the safety and effectiveness of a radiopharmaceutical under section 505 of the act (for a drug) (21 U.S.C. 355) or section 351 of the PHS Act (for a biological product) (42 U.S.C. 262), the agency will consider the proposed use of the radiopharmaceutical in the practice of medicine, the pharmacological and toxicological activity of the radiopharmaceutical (including any carrier or ligand component), and the estimated absorbed radiation dose of the radiopharmaceutical.

FDAMA requires FDA to consult with patient advocacy groups, associations, physicians licensed to use radiopharmaceuticals, and the regulated industry before proposing any regulations governing the approval of radiopharmaceuticals. Accordingly, in the **Federal Register** of February 2, 1998 (63 FR 5338), FDA published a notification of a public meeting entitled "Developing Regulations for In Vivo Radiopharmaceuticals Used for Diagnosis and Monitoring." The notice invited all interested persons to attend the meeting, scheduled for February 27, 1998, and to comment on how the agency should regulate radiopharmaceuticals. In particular, FDA invited comment on the following topics: (1) The effect of the use of a radiopharmaceutical in the practice of medicine on the nature and extent of safety and effectiveness evaluations; (2) the general characteristics of a radiopharmaceutical that should be considered in the preclinical and clinical pharmacological and toxicological evaluations of a radiopharmaceutical (including the radionuclide as well as the ligand and carrier components); (3) determination and consideration of a radiopharmaceutical's estimated absorbed radiation dose in humans; and (4) the circumstances under which an approved indication for marketing might refer to manifestations of disease (biochemical, physiological, anatomic, or pathological processes) common to, or present in, one or more disease states.

Approximately 50 individuals from industry, academic institutions, professional medical organizations, and patient advocacy groups attended the February 27, 1998, public meeting and/or submitted comments in response to the notice. FDA has considered all of these comments in drafting this proposed rule.

The proposed rule applies to the approval of in vivo radiopharmaceuticals (both drugs and biologics) used for diagnosis and monitoring. The proposed regulations will not apply to radiopharmaceuticals used for therapeutic purposes. The regulations include a definition of diagnostic radiopharmaceuticals (which includes radiopharmaceuticals used for monitoring) and provisions that address the following aspects of diagnostic radiopharmaceuticals: (1) General factors to be considered in determining safety and effectiveness, (2) possible indications for use, (3) evaluation of effectiveness, and (4) evaluation of safety.

To establish these regulations, FDA proposes to add a new part 315 to title 21 of the Code of Federal Regulations (CFR) and to rename subpart D and add §§ 601.30 through 601.35 in part 601 (21 CFR part 601). These new provisions would complement and clarify existing regulations on the approval of drugs and biologics in parts 314 (21 CFR parts 314) and 601, respectively. In addition to these regulatory changes, FDA is in the process of revising and supplementing its guidance to industry on product approval and other matters related to the regulation of diagnostic radiopharmaceutical drugs and biologics. This guidance will address the application of the proposed rule. FDA will make such guidance available in draft form for public comment in accordance with the agency's Good Guidance Practices (see 62 FR 8961, February 27, 1997).

Positron emission tomography (PET) drugs are a particular type of radiopharmaceutical. Section 121 of FDAMA addresses these products

separately from other diagnostic radiopharmaceuticals and requires FDA to develop appropriate approval procedures and current good manufacturing practice requirements for PET products within the next 2 years. Although FDA expects the standards for determining the safety and effectiveness of diagnostic radiopharmaceuticals set forth in this proposed rule to apply to PET diagnostic products under the approval procedures that FDA intends to develop for those products, the agency will address this issue when it publishes its proposal on PET drugs.

II. Description of the Proposed Rule

The proposed rule would add a new part 315 to the CFR containing provisions on radiopharmaceutical drugs subject to section 505 of the act that are used for diagnosis and monitoring. Corresponding provisions applicable to radiopharmaceutical biological products subject to licensure under section 351 of the PHS Act would be set forth in revised subpart D of part 601. Both proposed regulations are discussed in the following section of this document.

A. Scope

Proposed §§ 315.1 and 601.30 define the scope of the diagnostic radiopharmaceutical provisions, i.e., that they apply only to radiopharmaceuticals used for diagnosis and monitoring and not to radiopharmaceuticals intended for therapeutic uses. FDA intends that these regulations will apply only to diagnostic radiopharmaceuticals that are administered in vivo. In vitro diagnostic products generally are regulated as medical devices under the act, although they may also be biological products subject to licensure under section 351 of the PHS Act (see 21 CFR 809.3(a)).

Some radiopharmaceuticals may have utility as both diagnostic and therapeutic drugs or biologics. When a particular radiopharmaceutical drug or biologic is proposed for both diagnostic and therapeutic uses, FDA will evaluate the diagnostic claims under the provisions in part 315 (for drugs) or subpart D of part 601 (for biologics) and evaluate the therapeutic claims under the regulations applicable to other drug or biologic applications.

B. Definition

The proposed ruling in §§ 315.2 and 601.31 would include a definition of "diagnostic radiopharmaceutical" that is identical to the definition of "radiopharmaceutical" in section 122(b) of FDAMA. Thus, a "diagnostic radiopharmaceutical" would be defined as an article that is intended for use in the diagnosis or monitoring of a disease or a manifestation of a disease in humans; and that exhibits spontaneous disintegration of unstable nuclei with the emission of nuclear particles or photons; or any nonradioactive reagent kit or nuclide generator that is intended to be used in the preparation of such article. FDA interprets "disease or a manifestation of a disease" to include conditions that may not ordinarily be considered diseases, such as essential thrombocytopenia and bone fractures. In addition, FDA interprets the definition as including articles that exhibit spontaneous disintegration leading to the reconstruction of unstable nuclei and the subsequent emission of nuclear particles or photons.

C. General Factors Relevant to Safety and Effectiveness

In §§ 315.3 and 601.32, FDA proposes to incorporate in its regulations the requirement in section 122 of FDAMA that the agency consider certain factors in determining the safety and effectiveness of diagnostic radiopharmaceuticals under section 505 of the act or section 351 of the PHS Act. These factors are as follows: (1) The proposed use of a diagnostic radiopharmaceutical in the practice of medicine; (2) the pharmacological and toxicological activity of a diagnostic radiopharmaceutical, including any carrier or ligand component; and (3) the estimated absorbed radiation dose of the diagnostic radiopharmaceutical. Other sections of the proposed regulations describe how the agency will assess these factors. In addition, FDA intends to provide further information in guidance to industry.

D. Indications

In §§ 315.4(a) and 601.33(a), FDA proposes to specify some of the types of indications for which the agency may approve a diagnostic radiopharmaceutical. These categories of indications are as follows: (1) Structure delineation; (2) functional, physiological, or biochemical assessment; (3) disease or pathology detection or assessment; and (4) diagnostic or therapeutic management. Approval may be possible for claims other than those listed. (In these and other provisions on diagnostic radiopharmaceuticals in the proposed rule, the terms "indication," "indication for use," and "claim" have the same meaning and are used interchangeably.)

A diagnostic radiopharmaceutical that is intended to provide structural delineation is designed to locate and outline anatomic structures. For example, a radiopharmaceutical might be developed to distinguish a structure that cannot routinely be seen by any other imaging modality, such as a drug designed to image the lymphatics of the small bowel.

A diagnostic radiopharmaceutical that is intended to provide a functional, physiological, or biochemical assessment is used to evaluate the function, physiology, or biochemistry of a tissue, organ system, or body region. Functional, physiological, and biochemical assessments are designed to determine if a measured parameter is normal or abnormal. Examples of a functional or physiological assessment include the determination of the cardiac ejection fraction, myocardial wall motion, and cerebral blood flow. Examples of a biochemical assessment include the evaluation of sugar, lipid, protein, or nucleic acid synthesis or metabolism.

A diagnostic radiopharmaceutical that is intended to provide disease or pathology detection or assessment information assists in the detection, location, or characterization of a specific disease or pathological state. Examples of this type of diagnostic radiopharmaceutical include a radiolabeled monoclonal antibody used to attach to a specific tumor antigen and thus detect a tumor and a peptide that participates in an identifiable transporter function associated with a specific neurological disease.

A diagnostic radiopharmaceutical that is intended to assist in diagnostic or therapeutic patient management provides imaging, or related, information leading directly to a diagnostic or therapeutic patient management decision. Examples of this type of indication include: (1) Assisting in a determination of whether a patient should undergo a diagnostic coronary angiography or will have predictable clinical benefit from a coronary revascularization, and (2) assisting in a determination of the resectability of a primary tumor.

Proposed §§ 315.4(b) and 601.33(b) reflect the intent of section 122(a)(2) of FDAMA, which states that in appropriate cases, FDA may approve a diagnostic radiopharmaceutical for an indication that refers to "manifestations of disease (such as biochemical, physiological, anatomic, or pathological processes) common to, or present in, one or more disease states." Where a diagnostic radiopharmaceutical is not intended to provide disease-specific information, the proposed indications for use may refer to a process or to more than one disease or condition. This would allow FDA to approve a product

for an indication (e.g., delineation of a particular anatomic structure or functional assessment of a specific organ system) that would encompass manifestations of disease that are common to multiple disease states. An example of a manifestation that is common to multiple diseases is tumor metastases to the liver caused by various malignancies.

E. Evaluation of Effectiveness

The specific criteria that FDA would use to evaluate the effectiveness of a diagnostic radiopharmaceutical are stated in proposed §§ 315.5(a) and 601.34(a). These provisions state that FDA assesses the effectiveness of a diagnostic radiopharmaceutical by evaluating its ability to provide useful clinical information that is related to its proposed indication for use. The nature of the indication determines the method of evaluation, and because an application may include more than one type of claim, FDA might need to employ multiple evaluation criteria. FDA would require that any such claim be supported with information demonstrating that the potential benefit of the diagnostic radiopharmaceutical outweighs the risk to the patient from administration of the product.

Under proposed §§ 315.5(a)(1) and 601.34(a)(1), a claim of structure delineation would be established by demonstrating the ability of a diagnostic radiopharmaceutical to locate and characterize normal anatomic structures. In §§ 315.5(a)(2) and 601.34(a)(2), FDA proposes that a claim of functional, physiological, or biochemical assessment would be established by demonstrating that the diagnostic radiopharmaceutical could reliably measure the function or the physiological, biochemical, or molecular process. A reliable measurement would need to be supported by studies in normal and abnormal patient populations, consistent with the proposed claim and would require a qualitative or quantitative understanding of how the measurement varies in normal and abnormal subjects.

The agency proposes, in §§ 315.5(a)(3) and 601.34(a)(3), that a claim of disease or pathology detection or assessment would be established by demonstrating in a defined clinical setting that the diagnostic radiopharmaceutical had sufficient accuracy in identifying or characterizing the disease or pathology. The term "accuracy" refers to the diagnostic performance of the product as measured by factors such as sensitivity, specificity, positive predictive value, negative predictive value, and reproducibility of test interpretation. The term "sufficient accuracy" means accuracy that is good enough to indicate that the product would be useful in one or more clinical settings. FDA believes that the data demonstrating accuracy must be obtained from patients in a clinical setting(s) reflecting the proposed indication(s). For example, if a claim is for diagnosis of tumor in patients with a negative computed tomography (CT) scan for disease and a borderline serum carcinoembryonic antigen (CEA), the accuracy of the diagnostic radiopharmaceutical should be assessed in such patients rather than only in patients with CT-diagnosed disease or high serum CEA.

Under proposed §§ 315.5(a)(4) and 601.34(a)(4), for a claim of diagnostic or therapeutic patient management, the applicant must establish effectiveness by demonstrating in a defined clinical setting that the test is useful in such patient management. For example, an imaging agent might be studied in a manner that would demonstrate its usefulness in directing local excision of cancer-laden lymph nodes and sparing a wide area of nondiseased lymphatic tissue.

In §§ 315.5(a)(5) and 601.34(a)(5), FDA proposes that, for claims that do not fall within the indication categories in §§ 315.4 and 601.33, the applicant may consult with the agency on how to establish effectiveness.

Proposed §§ 315.5(b) and 601.34(b) specify that the accuracy and usefulness of diagnostic information provided by a diagnostic radiopharmaceutical must be determined by comparison with a reliable assessment of actual clinical status. To obtain such a reliable assessment, a diagnostic standard or standards of demonstrated accuracy must be used, if available. An example of such a standard is a tissue biopsy confirmation of a site of a diagnostic radiopharmaceutical localization. If an accurate diagnostic standard is not available, the actual clinical status must be established in some other manner, such as through patient followup.

FDA intends to develop a guidance document that will provide more detailed guidance to industry on the types of clinical investigations that would meet regulatory requirements for obtaining approval for particular types of indications for diagnostic radiopharmaceuticals. The guidance may address such matters as appropriate clinical endpoints and suitable diagnostic standards. For indications that are common to multiple disease states, the guidance may address clinical trial design and statistical analysis considerations for patient populations that provide a range of representative disease processes.

F. Evaluation of Safety

FDA's proposed approach to the evaluation of the safety of diagnostic radiopharmaceuticals is set forth in §§ 315.6 and 601.35. Proposed §§ 315.6(a) and 601.35(a) state that the safety assessment of a diagnostic radiopharmaceutical includes, among other things, the following: The radiation dose; the pharmacology and toxicology of the radiopharmaceutical, including any radionuclide, carrier, or ligand; the risks of an incorrect diagnostic determination; the adverse reaction profile of the drug; and results of human experience with the radiopharmaceutical for other uses.

In §§ 315.6(b) and 601.35(b), FDA proposes that the assessment of the adverse reaction profile of a diagnostic radiopharmaceutical (including the carrier or ligand) include, but not be limited to, an evaluation of the product's potential to elicit the following: (1) Allergic or hypersensitivity responses, (2) immunologic responses, (3) changes in the physiologic or biochemical function of target and non-target tissues, and (4) clinically detectable signs or symptoms.

Proposed §§ 315.6(c)(1) and 601.35(c)(1) state that FDA may require, among other information, the following types of preclinical and clinical data to establish the safety of a diagnostic radiopharmaceutical: (1) Pharmacology data, (2) toxicology data, (3) a clinical safety profile, and (4) a radiation safety assessment. Other information that may be required to establish safety includes information on chemistry, manufacturing, and controls.

Under proposed §§ 315.6(c)(2) and 601.35(c)(2), the amount of new safety data required would depend on the characteristics of the diagnostic radiopharmaceutical and available information on the safety of the product obtained from other studies and uses. This information might include, but would not be limited to, the dose, route of administration, frequency of use, half-life of the ligand or carrier, half-life of the radionuclide of the product, and results of preclinical studies on the product. Proposed §§ 315.6(c)(2) and 601.35(c)(2) further states that FDA will categorize diagnostic radiopharmaceuticals based on defined characteristics that relate to safety risk and will specify the amount and type of safety data appropriate for each category. The paragraph states, as an example, that required safety data would be limited for diagnostic

radiopharmaceuticals with well-established low-risk profiles.

Proposed §§ 315.6(d) and 601.35(d) discusses the radiation safety assessment that will be required for a diagnostic radiopharmaceutical. FDA proposes that the applicant for approval of a diagnostic radiopharmaceutical establish the radiation dose of the product by radiation dosimetry evaluations in humans and appropriate animal models. Such evaluations must consider dosimetry to the total body, to specific organs or tissues, and, as appropriate, to target organs or target tissues. FDA notes that the use of occupational radiation dosimetry limits is not required in performing such evaluations. The maximum tolerated dose of the diagnostic radiopharmaceutical need not be established.

FDA intends to provide guidance on safety assessments for diagnostic radiopharmaceuticals. Such guidance may include a classification of diagnostic radiopharmaceuticals based on quantity administered, adverse event profile, and proposed patient population. The guidance would allow the safety information required to meet regulatory requirements to vary according to the class of the radiopharmaceutical. The guidance will also address evaluations of radiation dosimetry.

III. Analysis of Economic Impacts

FDA has examined the impact of the proposed rule under Executive Order 12866, under the Regulatory Flexibility Act (5 U.S.C. 601–612), and under the Unfunded Mandates Reform Act (Pub. L. 104–114). Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages, distributive impacts and equity). Under the Regulatory Flexibility Act, unless an agency certifies that a rule will not have a significant economic impact on a substantial number of small entities, the agency must analyze significant regulatory options that would minimize any significant economic impact of a rule on small entities. The Unfunded Mandates Reform Act requires (in section 202) that agencies prepare an assessment of anticipated costs and benefits before proposing any mandate that results in an expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100 million in any 1 year.

The agency has reviewed this proposed rule and has determined that the rule is consistent with the principles set forth in the Executive Order and in these two statutes. FDA finds that the rule will not be a significant rule under the Executive Order. Further, the agency finds that, under the Regulatory Flexibility Act, the rule will not have a significant economic impact on a substantial number of small entities. Also, since the expenditures resulting from the standards identified in the rule are less than $100 million, FDA is not required to perform a cost/benefit analysis according to the Unfunded Mandates Reform Act.

The proposed rule clarifies existing FDA requirements for the approval and evaluation of drug and biological products already in place under the act and the PHS Act. Existing regulations (parts 314 and 601) specify the type of information that manufacturers are required to submit in order for the agency to properly evaluate the safety and effectiveness of new drugs or biological products. Such information is usually submitted as part of a new drug application (NDA) or biological license application or as a supplement to an approved application. The information typically includes both nonclinical and clinical data concerning the product's pharmacology, toxicology, adverse events, radiation safety assessments, chemistry, and manufacturing and controls.

The proposed regulation recognizes the unique characteristics of diagnostic radiopharmaceuticals and sets out the agency's approach to the evaluation of these products. For certain diagnostic radiopharmaceuticals, the proposed regulation may reduce the amount of safety information that must be obtained by conducting new clinical studies. This would include approved radiopharmaceuticals with well-established low-risk safety profiles because such products might be able to use scientifically sound data established during use of the radiopharmaceutical to support the approval of a new indication for use. In addition, the clarification achieved by the proposed rule is expected to reduce the costs of submitting an application for approval of a diagnostic radiopharmaceutical by improving communications between applicants and the agency and by reducing wasted effort directed toward the submission of data that is not necessary to meet the statutory approval standard.

Manufacturers of in vitro and in vivo diagnostic substances are defined by the Small Business Administration as small businesses if such manufacturers employ fewer than 500 employees. The agency finds that only 2 of the 8 companies that currently manufacture or market radiopharmaceuticals have fewer than 500 employees. [1] Moreover, the proposed rule would not impose any additional costs but, rather, is expected to reduce costs for manufacturers of certain diagnostic radiopharmaceuticals, as discussed previously. Therefore, in accordance with the Regulatory Flexibility Act, FDA certifies that this rule will not have a significant economic impact on a substantial number of small entities.

IV. Proposed Effective Date

FDA proposes that any final rule that may issue based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

V. Environmental Impact

The agency has determined under 21 CFR 25.24(h) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

VI. The Paperwork Reduction Act of 1995

This proposed rule contains information collection provisions that are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). A description of these provisions is shown below with an estimate of the annual reporting burden. Included in the estimate is the time for reviewing the instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing each collection of information.

FDA invites comments on: (1) Whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

[1] Medical and Healthcare Marketplace Guide, Dorland's Biomedical, sponsored by Smith Barney Health Care Group, 13th ed., 1997 to 1998.

Title: Regulations for In Vivo Radiopharmaceuticals Used for Diagnosis and Monitoring.
Description: FDA is proposing regulations for the evaluation and approval of in vivo radiopharmaceuticals used for diagnosis and monitoring. The proposed rule would clarify existing FDA requirements for approval and evaluation of drug and biological products already in place under the authorities of the act and the PHS Act. Those regulations, which appear in primarily at parts 314 and 601, specify the information that manufacturers must submit to FDA for the agency to properly evaluate the safety and effectiveness of new drugs or biological products. The information, which is usually submitted as part of an NDA or new biological license application or as a supplement to an approved application, typically includes, but is not limited to, nonclinical and clinical data on the pharmacology, toxicology, adverse events, radiation safety assessments, and chemistry, manufacturing and controls. The content and format of an application for approval of new drugs and antibiotics are set out in § 314.50 and for new biological products in § 601.25. Under the proposed regulation, information required under the act and the PHS Act and needed by FDA to evaluate safety and effectiveness would still need to be reported.
Description of Respondents: Manufacturers of in vivo radiopharmaceuticals used for diagnosis and monitoring.

To estimate the potential number of respondents that would submit applications or supplements for diagnostic radiopharmaceuticals, FDA used the number of approvals granted in fiscal year 1997 (FY 1997) to approximate the number of future annual applications. In FY 1997, FDA approved seven diagnostic radiopharmaceuticals and received one new indication supplement; of these, three respondents received approval through the Center for Drug Evaluation and Research and five received approval through the Center for Biologics Evaluation and Research. The annual frequency of responses was estimated to be one response per application or supplement. The hours per response refers to the estimated number of hours that an applicant would spend preparing the information referred to in the proposed regulations. The time needed to prepare a complete application is estimated to be approximately 10,000 hours, roughly one-fifth of which, or 2,000 hours, is estimated to be spent preparing the portions of the application that are affected by these proposed regulations. The proposed rule would not impose any additional reporting burden beyond the estimated current burden of 2,000 hours because safety and effectiveness information is already required by preexisting regulations (parts 314 and 601). In fact, clarification by the proposed regulation of FDA's standards for evaluation of diagnostic radiopharmaceuticals is expected to streamline overall information collection burdens, particularly for diagnostic radiopharmaceuticals that may have well-established low-risk safety profiles, by enabling manufacturers to tailor information submissions and avoid conducting unnecessary clinical studies. The following table indicates estimates of the annual reporting burdens for the preparation of the safety and effectiveness sections of an application that are imposed by existing regulations. The burden totals do not include an increase in burden because no increase is anticipated. This estimate does not include the actual time needed to conduct studies and trials or other research from which the reported information is obtained. FDA invites comments on this analysis of information collection burdens.

TABLE 1.—ESTIMATED ANNUAL REPORTING BURDEN[1]

21 CFR Section	No. of Respondents	Annual Frequency per Response	Total Annual Responses	Hours per Response	Total Hours
315.4, 315.5, and 315.6	3	1	3	2,000	6,000
601.33, 601.34, and 601.35	5	1	5	2,000	10,000
Total	8		8		16,000

[1]There are no capital costs or operating and maintenance costs associated with this collection of information.

Interested persons and organizations may submit comments on the information collection requirements of this proposed rule by June 22, 1998, to Office of Information and Regulatory Affairs, OMB, New Executive Office Bldg., 725 17th St. NW., Washington, DC 20503, Attn: Desk Officer for FDA.

At the close of the 30-day comment period, FDA will review the comments received, revise the information collection provisions as necessary, and submit these provisions to OMB for review. FDA will publish a notice in the **Federal Register** when the information collection provisions are submitted to OMB, and an opportunity for public comment to OMB will be provided at that time. Prior to the effective date of the proposed rule, FDA will publish a notice in the **Federal Register** of OMB's decision to approve, modify, or disapprove the information collection provisions. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

VII. Request for Comments

Interested persons may, on or before August 5, 1998, submit to the Dockets Management Branch (address above) written comments on this proposal. Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the office above between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects

21 CFR Part 315

Biologics, Diagnostic radiopharmaceuticals, Drugs.

21 CFR Part 601

Administrative practice and procedure, Biologics, Confidential business information.

Therefore, under the Federal Food, Drug, and Cosmetic Act, the Public Health Service Act, the Food and Drug Modernization Act, and under authority delegated to the Commissioner of Food and Drugs, it is proposed that 21 CFR chapter I be amended as follows:

1. Part 315 is added to read as follows:

PART 315—DIAGNOSTIC RADIOPHARMACEUTICALS

Sec.

315.1 Scope.
315.2 Definition.
315.3 General factors relevant to safety and effectiveness.
315.4 Indications.
315.5 Evaluation of effectiveness.
315.6 Evaluation of safety.

Authority: 21 U.S.C. 321, 331, 351, 352, 353, 355, 356, 357, 371, 374, 379e; sec. 122, Pub. L. 105–115, 111 Stat. 2322 (21 U.S.C. 355 note).

§ 315.1 Scope.

The regulations in this part apply to radiopharmaceuticals intended for in vivo administration for diagnostic and monitoring use. They do not apply to radiopharmaceuticals intended for therapeutic purposes. In situations where a particular radiopharmaceutical is proposed for both diagnostic and therapeutic uses, the radiopharmaceutical shall be evaluated taking into account each intended use.

§ 315.2 Definition.

For purposes of this part, diagnostic radiopharmaceutical means:

(a) An article that is intended for use in the diagnosis or monitoring of a disease or a manifestation of a disease in humans; and that exhibits spontaneous disintegration of unstable nuclei with the emission of nuclear particles or photons; or

(b) Any nonradioactive reagent kit or nuclide generator that is intended to be used in the preparation of such article as defined in paragraph (a) of this section.

§ 315.3 General factors relevant to safety and effectiveness.

FDA's determination of the safety and effectiveness of a diagnostic radiopharmaceutical shall include consideration of the following:

(a) The proposed use of the diagnostic radiopharmaceutical in the practice of medicine;

(b) The pharmacological and toxicological activity of the diagnostic radiopharmaceutical (including any carrier or ligand component of the diagnostic radiopharmaceutical); and

(c) The estimated absorbed radiation dose of the diagnostic radiopharmaceutical.

§ 315.4 Indications.

(a) For diagnostic radiopharmaceuticals, the categories of proposed indications for use include, but are not limited to, the following:

(1) Structure delineation.

(2) Functional, physiological, or biochemical assessment.

(3) Disease or pathology detection or assessment.

(4) Diagnostic or therapeutic patient management.

(b) Where a diagnostic radiopharmaceutical is not intended to provide disease-specific information, the proposed indications for use may refer to a process or to more than one disease or condition.

§ 315.5 Evaluation of effectiveness.

(a) The effectiveness of a diagnostic radiopharmaceutical is assessed by evaluating its ability to provide useful clinical information related to its proposed indications for use. The method of this evaluation will vary depending upon the proposed indication(s) and may use one or more of the following criteria:

(1) The claim of structure delineation is established by demonstrating the ability to locate and characterize normal anatomical structures.

(2) The claim of functional, physiological, or biochemical assessment is established by demonstrating reliable measurement of function(s) or physiological, biochemical, or molecular process(es).

(3) The claim of disease or pathology detection or assessment is established by demonstrating in a defined clinical setting that the diagnostic radiopharmaceutical has sufficient accuracy in identifying or characterizing the disease or pathology.

(4) The claim of diagnostic or therapeutic patient management is established by demonstrating in a defined clinical setting that the test is useful in diagnostic or therapeutic patient management.

(5) For a claim that does not fall within the indication categories identified in § 315.4, the applicant or sponsor should consult FDA on how to establish the effectiveness of the diagnostic radiopharmaceutical for the claim.

(b) The accuracy and usefulness of the diagnostic information shall be determined by comparison with a reliable assessment of actual clinical status. A reliable assessment of actual clinical status may be provided by a diagnostic standard or standards of demonstrated accuracy. In the absence of such diagnostic standard(s), the actual clinical status shall be established in another manner, e.g., patient followup.

§ 315.6 Evaluation of safety.

(a) Factors considered in the safety assessment of a diagnostic radiopharmaceutical include, among others, the following: The radiation dose; the pharmacology and toxicology of the radiopharmaceutical, including any radionuclide, carrier, or ligand; the risks of an incorrect diagnostic determination; the adverse reaction profile of the drug; and results of human experience with the radiopharmaceutical for other uses.

(b) The assessment of the adverse reaction profile includes, but is not limited to, an evaluation of the potential of the diagnostic radiopharmaceutical, including the carrier or ligand, to elicit the following:

(1) Allergic or hypersensitivity responses.

(2) Immunologic responses.

(3) Changes in the physiologic or biochemical function of the target and non-target tissues.

(4) Clinically detectable signs or symptoms.

(c) (1) To establish the safety of a diagnostic radiopharmaceutical, FDA may require, among other information, the following types of data:

(i) Pharmacology data.

(ii) Toxicology data.

(iii) Clinical adverse event data.

(iv) Radiation safety assessment.

(2) The amount of new safety data required will depend on the characteristics of the product and available information regarding the safety of the diagnostic radiopharmaceutical obtained from other studies and uses. Such information may include, but is not limited to, the dose, route of administration, frequency of use, half-life of the ligand or carrier, half-life of the radionuclide, and results of preclinical studies. FDA will categorize diagnostic radiopharmaceuticals based on defined characteristics relevant to risk and will specify the amount and type of safety data appropriate for each category. For example, for a category of radiopharmaceuticals with a well-established low-risk profile, required safety data will be limited.

(d) The radiation safety assessment shall establish the radiation dose of a diagnostic radiopharmaceutical by radiation dosimetry evaluations in humans and appropriate animal models. Such an evaluation must consider dosimetry to the total body, to specific organs or tissues, and, as appropriate, to target organs or target tissues. The maximum tolerated dose need not be established.

PART 601—LICENSING

2. The authority citation for part 601 is revised to read as follows:

Authority: 21 U.S.C. 321, 351, 352, 353, 355, 360, 360c–360f, 360h–360j, 371, 374,

379e, 381; 42 U.S.C. 216, 241, 262, 263; 15 U.S.C. 1451–1461; sec. 122, Pub. L. 105–115, 111 Stat. 2322 (21 U.S.C. 355 note).

§ 601.33 [Redesignated as § 601.28]

3. Section 601.33 *Samples for each importation* is redesignated as § 601.28 and transferred from subpart D to subpart C, and the redesignated section heading is revised to read as follows:

§ 601.28 Foreign establishments and products: samples for each importation.

* * * * *

4. Subpart D is amended by revising the title and adding §§ 601.30 through 601.35 to read as follows:

Subpart D—Diagnostic Radiopharmaceuticals

Sec.

601.30 Scope.
601.31 Definition.
601.32 General factors relevant to safety and effectiveness.
601.33 Indications.
601.34 Evaluation of effectiveness.
601.35 Evaluation of safety.

Subpart D—Diagnostic Radiopharmaceuticals

§ 601.30 Scope.

This subpart applies to radiopharmaceuticals intended for in vivo administration for diagnostic and monitoring use. It does not apply to radiopharmaceuticals intended for therapeutic purposes. In situations where a particular radiopharmaceutical is proposed for both diagnostic and therapeutic uses, the radiopharmaceutical shall be evaluated taking into account each intended use.

§ 601.31 Definition.

For purposes of this subpart, diagnostic radiopharmaceutical means:

(a) An article that is intended for use in the diagnosis or monitoring of a disease or a manifestation of a disease in humans; and that exhibits spontaneous disintegration of unstable nuclei with the emission of nuclear particles or photons; or

(b) Any nonradioactive reagent kit or nuclide generator that is intended to be used in the preparation of such article as defined in paragraph (a) of this section.

§ 601.32 General factors relevant to safety and effectiveness.

FDA's determination of the safety and effectiveness of a diagnostic radiopharmaceutical shall include consideration of the following:

(a) The proposed use of the diagnostic radiopharmaceutical in the practice of medicine;

(b) The pharmacological and toxicological activity of the diagnostic radiopharmaceutical (including any carrier or ligand component of the diagnostic radiopharmaceutical); and

(c) The estimated absorbed radiation dose of the diagnostic radiopharmaceutical.

§ 601.33 Indications.

(a) For diagnostic radiopharmaceuticals, the categories of proposed indications for use include, but are not limited to, the following:

(1) Structure delineation.

(2) Functional, physiological, or biochemical assessment.

(3) Disease or pathology detection or assessment.

(4) Diagnostic or therapeutic patient management.

(b) Where a diagnostic radiopharmaceutical is not intended to provide disease-specific information, the proposed indications for use may refer to a process or to more than one disease or condition.

§ 601.34 Evaluation of effectiveness.

(a) The effectiveness of a diagnostic radiopharmaceutical is assessed by evaluating its ability to provide useful clinical information related to its proposed indications for use. The method of this evaluation will vary depending upon the proposed indication and may use one or more of the following criteria:

(1) The claim of structure delineation is established by demonstrating the ability to locate and characterize normal anatomical structures.

(2) The claim of functional, physiological, or biochemical assessment is established by demonstrating reliable measurement of function(s) or physiological, biochemical, or molecular process(es).

(3) The claim of disease or pathology detection or assessment is established by demonstrating in a defined clinical setting that the diagnostic radiopharmaceutical has sufficient accuracy in identifying or characterizing the disease or pathology.

(4) The claim of diagnostic or therapeutic patient management is established by demonstrating in a defined clinical setting that the test is useful in diagnostic or therapeutic patient management.

(5) For a claim that does not fall within the indication categories identified in § 601.33, the applicant or sponsor should consult FDA on how to establish the effectiveness of the diagnostic radiopharmaceutical for the claim.

(b) The accuracy and usefulness of the diagnostic information shall be determined by comparison with a reliable assessment of actual clinical status. A reliable assessment of actual clinical status may be provided by a diagnostic standard or standards of demonstrated accuracy. In the absence of such diagnostic standard(s), the actual clinical status shall be established in another manner, e.g., patient followup.

§ 601.35 Evaluation of safety.

(a) Factors considered in the safety assessment of a diagnostic radiopharmaceutical include, among others, the following: The radiation dose; the pharmacology and toxicology of the radiopharmaceutical, including any radionuclide, carrier, or ligand; the risks of an incorrect diagnostic determination; the adverse reaction profile of the drug; and results of human experience with the radiopharmaceutical for other uses.

(b) The assessment of the adverse reaction profile includes, but is not limited to, an evaluation of the potential of the diagnostic radiopharmaceutical, including the carrier or ligand, to elicit the following:

(1) Allergic or hypersensitivity responses.

(2) Immunologic responses.

(3) Changes in the physiologic or biochemical function of the target and non-target tissues.

(4) Clinically detectable signs or symptoms.

(c) (1) To establish the safety of a diagnostic radiopharmaceutical, FDA may require, among other information, the following types of data:

(i) Pharmacology data.

(ii) Toxicology data.

(iii) Clinical adverse event data.

(iv) Radiation safety assessment.

(2) The amount of new safety data required will depend on the characteristics of the product and available information regarding the safety of the diagnostic radiopharmaceutical obtained from other studies and uses. Such information may include, but is not limited to, the dose, route of administration, frequency of use, half-life of the ligand or carrier, half-life of the radionuclide, and results of preclinical studies. FDA will categorize diagnostic radiopharmaceuticals based on defined characteristics relevant to risk and will specify the amount and type of safety data appropriate for each category. For example, for a category of radiopharmaceuticals with a well-established low-risk profile, required safety data will be limited.

(d) The radiation safety assessment shall establish the radiation dose of a

diagnostic radiopharmaceutical by radiation dosimetry evaluations in humans and appropriate animal models. Such an evaluation must consider dosimetry to the total body, to specific organs or tissues, and, as appropriate, to target organs or target tissues. The maximum tolerated dose need not be established.

Dated: April 15, 1998.

William B. Schultz,

Deputy Commissioner for Policy.

[FRL–6014–4]

RIN 2060–AH65

Control of Emissions of Air Pollution from New CI Marine Engines at or Above 37 Kilowatts

AGENCY: Environmental Protection Agency (EPA).

ACTION: Advance notice of proposed rulemaking.

SUMMARY: EPA is issuing this Advance Notice of Proposed Rulemaking (ANPRM) to invite comment from all interested parties on EPA's plans to propose emission standards and other related provisions for new propulsion and auxiliary marine compression-ignition (CI) engines at or above 37 kilowatts (kW). This action supplements an earlier action for these engines initiated as part of an overall control strategy for new spark-ignition (SI) and CI marine engines (Notice of Proposed Rulemaking (NPRM) published November 9, 1994, modified in a Supplemental Notice of Proposed Rulemaking (SNPRM) published at February 7, 1996). The engines covered by today's action are used for propulsion and auxiliary power on both commercial and recreational vessels for a wide variety of applications including, but not limited to, barges, tugs, fishing vessels, ferries, runabouts, and cabin cruisers. This document does not address diesel marine engines rated under 37 kW, which are included in a proposed rulemaking for land-based nonroad CI engines published at September 24, 1997.

DATES: EPA requests comment on this ANPRM no later than June 22, 1998. Should a commenter miss the requested deadline, EPA will try to consider any comments received prior to publication of the NPRM that is expected to follow this ANPRM. There will also be opportunity for oral and written comment when EPA publishes the NPRM.

ADDRESSES: Materials relevant to this action are contained in Public Docket A–97–50, located at room M–1500, Waterside Mall (ground floor), U.S. Environmental Protection Agency, 401 M Street, S.W., Washington, DC 20460. The docket may be inspected from 8:00 a.m. until 5:30 p.m., Monday through Friday. A reasonable fee may be charged by EPA for copying docket materials.

Comments on this notice should be sent to Public Docket A–97–50 at the above address. EPA requests that a copy of comments also be sent to Jean Marie Revelt, U.S. EPA, 2565 Plymouth Road, Ann Arbor, MI 48105.

FOR FURTHER INFORMATION CONTACT: Margaret Borushko, U.S. EPA, Engine Programs and Compliance Division, (734) 214–4334.

SUPPLEMENTARY INFORMATION:

I. Purpose and Background

A. Purpose

Ground level ozone levels continue to be a significant problem in many areas of the United States. In the past, the main strategy employed in efforts to reduce ground-level ozone was reduction of volatile organic compounds (VOCs). In recent years, however, it has become clear that NO_X controls are often a more effective strategy for reducing ozone. As a result, attention has turned to NO_X emission controls as the key to improving air quality in many areas of the country. Building on the emission standards for CI engines promulgated in the early 1990s, EPA has recently promulgated a new emission control program for on-highway CI engines and proposed a new program for nonroad CI engines.[1, 2] Both of these programs contain stringent standards that will greatly reduce NOx emissions from these engines.

Similarly, particulate matter (PM) is also a problem in many areas of the country. Currently, there are 80 PM–10 nonattainment areas across the U.S. (PM–10 refers to particles less than or equal to 10 microns in diameter). PM, like ozone, has been linked to a range of serious respiratory health problems. Levels of PM caused by mobile sources are expected to rise in the future, due to the predicted increase in the number of individual mobile sources. Both of the new emission programs referred to above, for on-highway and nonroad CI engines, are anticipated to reduce ambient PM levels, either through a reduction in directly emitted particulate matter or through a reduction in indirect (atmospheric) PM formation caused by NO_X emissions.

Domestic and ocean-going CI marine engines account for approximately 4.5 percent of total mobile source NOx emissions nationwide. However, because of the nature of their operation, the contribution of these engines to NO_X levels in certain port cities and coastal areas is much higher. To address these emissions, today's action outlines a control program for CI marine engines at or above 37 kW that builds on EPA's programs for on-highway and land-based nonroad diesel engines identified above, EPA's recent locomotive rule, discussed below, and the International Convention on the Prevention of Pollution from Ships (MARPOL 73/78), Annex VI—Air Pollution developed by the International Maritime Organization (IMO).[3] If the emission standards and other requirements for those CI marine engines that use the same technologies reflected in EPA's on-highway, land-based nonroad, or locomotive rules are implemented as discussed in today's action, EPA would expect to see NO_X and PM reductions on a per-engine basis comparable to those achieved by engines subject to those rules. The numerical levels that EPA is considering applying to very large CI marine engines were intended by IMO to result in a 30 percent NO_X reduction. EPA continues to investigate IMO's anticipated reductions for those engines, based on the age and other characteristics of the U.S. fleet.

B. Statutory Authority

Section 213(a) of the Clean Air Act (CAA) directs EPA to: (1) conduct a study of emissions from nonroad engines and vehicles; (2) determine whether emissions of carbon monoxide (CO), oxides of nitrogen (NO_X), and volatile organic compounds (VOCs, including hydrocarbons (HC)) from nonroad engines and vehicles are significant contributors to ozone or CO in more than one area which has failed to attain the national ambient air quality standards (NAAQS) for ozone or CO; and (3) if nonroad emissions are determined to be significant, regulate those categories or classes of new

[1] In this notice, the term "land-based nonroad" and "nonroad" refers to the land-based CI engines and equipment regulated under 40 CFR part 89. It does not include locomotive engines.

[2] *See* 62 FR 54694 (October 21, 1997) and 62 FR 50152 (September 24, 1997).

[3] A copy of MARPOL 73/78 Annex VI and the associated NO_X Technical Code is available in this docket.

nonroad engines and vehicles that cause or contribute to such air pollution.

The Nonroad Engine and Vehicle Emission Study required by section 213(a)(1) was completed in November 1991.[4] The determination of the significance of emissions from nonroad engines and vehicles in more than one NAAQS nonattainment area was published on June 17, 1994.[5] At the same time, the first set of regulations for new land-based nonroad CI engines at or above 37 kW was promulgated.[6] These are often referred to as the nonroad Tier 1 standards for large CI engines. EPA has also issued proposed or final rules for other categories of nonroad engines, including gasoline engines less than 19 kW,[7] gasoline marine engines (outboards and personal watercraft),[8] and locomotives.[9] Today's action pertains to all diesel marine engines greater than 37 kW.

C. Regulatory Background

The marine engine industry consists of a complex set of entities that manufacture a wide variety of engines. The primary entities involved include engine manufacturers, which produce marine versions of their land-based nonroad engines, and post-manufacturer marinizers, which purchase engines in various stages of completion and adapt them for operation in the marine environment. Engine sizes range from very small engines used for auxiliary purposes onboard vessels or to propel sailboats to very large engines used to propel ocean-going cargo ships. However, as more fully described below, these engines can be categorized into three basic types: those that are derived from or that use land-based nonroad technologies; those that are derived from or that use locomotive technologies; and those that are designed for propulsion on very large ocean-going vessels.

Numerical emission standards for CI marine engines were originally proposed in 1994 as part of the proposed rule for control of emissions from new SI and CI marine engines.[10] At that time, EPA had a limited understanding of the CI marine industry and, relying on the similarities between nonroad and CI marine engines, proposed to apply the same emission levels as those in the then just-developed land-based nonroad rule. The nonroad Tier 1 standards are set out in Table 1. EPA proposed that these standards for CI marine engines become effective January 1, 1999 for engines less than 560 kW, and January 1, 2000, for engines 560 KW and above. Although no upper limits on engine size were proposed for application of these standards to CI marine engines, EPA requested comment on whether an upper limit should be established above which the emission control program being developed concurrently by the International Maritime Organization (Annex VI, Air Pollution to the International Convention on the Prevention of Pollution from Ships, MARPOL 73/78) should apply. Annex VI contains, among other provisions,[11] requirements to limit NO_X emissions from diesel marine engines, but sets no limits for other pollutants (*i.e.*, HC, CO, PM). Negotiations were concluded September 26, 1997, and a final version of the Annex was signed by participating IMO member nations, including the U.S. delegation. The Annex in its entirety will acquire the force of law in the United States only after it is ratified by Congress. Table 1 also contains the IMO's NO_X limits, which are intended to apply to new engines greater than 130 kW installed on vessels constructed on or after January 1, 2000, or which undergo a major conversion after that date.

TABLE 1.—COMPARISON OF PROPOSED NUMERICAL EMISSION LIMITS—EPA AND IMO

Agency	Engine speed	HC (g/kW-hr)	CO (g/kW-hr)	NO_x (g/kW-hr)	PM (g/kW-hr)
EPA (Nonroad Tier 1)	all	1.3	11.4	9.2	0.54
IMO	n <130 rpm	None	None	17.0	None.
	130 rpm≤n<2000 rpm	None	None	$45*n^{(-0.2)}$	None.
	n ≥ 2000	None	None	9.8	None.

In response to the NPRM, several commenters requested that EPA harmonize domestic emission standards for CI marine engines to the levels being considered by IMO, in effect applying the proposed IMO limits domestically. Because the proposed IMO standards were not as stringent as the proposed domestic standards, this was a significant issue. On February 7, 1996, EPA published a Supplemental NPRM to address this and other concerns in more detail.[12] Specifically, EPA identified and requested comment on three alternative harmonization approaches: (1) Adopt the IMO NOx emission standard instead of the standard proposed in the NPRM; (2) retain the proposed average NOx emission standard of 9.2 g/kW-hr and also adopt the IMO emission standards across the engine speed range as a cap which no engine could exceed; or (3) determine an appropriate engine speed or engine power output cutoff point such that engines of high horsepower and low and medium speeds would be subject to IMO emission limits and engines of low horsepower and high speed would be subject to the proposed 9.2 g/kW-hr average standard with the 9.8 g/kW-hr IMO level as a cap which no engine could exceed. EPA also sought comment on harmonizing the numerical emission limits for other pollutants. Options considered were to drop, retain, or alter the proposed standards for HC, CO, PM, and smoke.

While the development of the national marine rule and the MARPOL negotiations continued, EPA began a new action for land-based nonroad diesel engines as part of a new Agency initiative to reduce national NOx and PM emissions from mobile sources. EPA proposed a rule that would set more stringent standards for land-based nonroad engines and equipment, known as Tier 2 standards (set out in Table 3, below).[13] EPA proposed that these Tier 2 standards come into effect as early as 2001 for some engine categories. That

[4] This study is available in docket A–92–28.

[6] See 59 FR 31306 (June 17, 1994).

[7] See 60 FR 34582 (July 3, 1995) for the final rule establishing Tier 1 standards and 62 FR 14740 (March 27, 1997) for the ANPRM discussing Tier 2 standards.

[8] See 61 FR 52087 (October 4, 1996) for the final rule. EPA did not set numerical emission standards for sterndrive and inboard gasoline marine engines in this rule.

[9] See 62 FR 6365 (February 11, 1997); the final rule was signed December 17, 1997 and is available electronically (see Section VI below).

[10] See 59 FR 55929 (November 9, 1994).

[11] Other provisions include requirements for ozone-depleting substances, sulfur content of fuel, incineration, VOCs from refueling, and fuel quality.

[12] See 61 FR 4600 (February 7, 1996).

[13] See 62 FR 50152 (September 24, 1997).

proposed rule also included more stringent Tier 3 standards (also set out in table 3), which would go into effect subject to a feasibility review in 2001. That feasibility review will be conducted through a public rulemaking process. Finally, marine and land-based nonroad CI engines less than 37 KW were included in the diesel land-based nonroad rule, with standards to come into effect as early as 1999 for Tier 1 and 2004 for Tier 2. Smaller CI marine engines were included in the proposal because they were not subject to any emission limits at the time (the existing marine NPRM covered only CI marine engines at or greater than 37 kW).

Also during this time, and pursuant to its Clean Air Act obligations, EPA proposed a rule that would set emission standards for new locomotive engines, which has since been finalized. [14] The locomotive program consists of three separate sets of standards, with applicability of the standards dependent on the date a locomotive is first manufactured. The first set of standards (Tier 0) applies to locomotives and locomotive engines originally manufactured from 1973 through 2001. The Tier 0 standards will be phased in over a two year period beginning in 2000, and will apply at the time of each remanufacture (as well as at the time of original manufacture for those covered locomotives originally manufactured in 2000 and 2001). The second set of standards (Tier 1) apply to locomotives and locomotive engines originally manufactured from 2002 through 2004. Such locomotives and locomotive engines will be required to meet the Tier 1 standards at the time of original manufacture and at each subsequent remanufacture. The final set of standards (Tier 2) apply to locomotives and locomotive engines originally manufactured in 2005 and later. Such locomotives and locomotive engines will be required to meet the Tier 2 standards at the time of original manufacture and at each subsequent remanufacture. The numerical standards are contained in Table 2.

TABLE 2.—LOCOMOTIVE STANDARDS

[Line-haul only]

Tier	HC (g/kW-hr)	CO (g/kW-hr)	NO_x (g/kW-hr)	PM (g/kW-hr)
Tier 0	1.3	6.7	12.7	0.80
Tier 1	0.7	2.9	9.9	0.6
Tier 2	0.4	2.0	7.4	0.27

EPA's efforts toward new emission limits for land-based nonroad diesel engines and locomotive engines led EPA to reconsider its approach to the control of emissions from CI marine engines. Again, because of the similarities between land-based nonroad and locomotive engines and CI marine engines, EPA is considering a rule based on applying the anticipated new technologies to CI marine engines. As a result, EPA did not take final action on CI marine engines when it adopted standards for marine spark-ignition engines. [15] Instead, EPA is pursuing a separate initiative for marine diesel engines which involves proposing a more ambitious emission control program than those proposed in 1994 and modified in 1996. The remainder of this ANPRM describes the new approach the Agency is considering for regulating emissions from new CI marine engines.

II. General Approach for Emission Control Program

A. Building on Land-Based Nonroad and Locomotive Rulemakings

Because of the similarities between certain CI marine engines and land-based nonroad diesel and locomotive engines, EPA intends to continue the same general approach as described in the earlier NPRM and SNPRM. That is, EPA envisions that the emission control program for CI marine engines at or above 37 kW will in many cases be an outgrowth of and depend on EPA's proposed emission control program for other land-based engines. However, instead of basing the program on the land-based nonroad Tier 1 program, this new proposal will look to the newer Tier 2 and locomotive programs. EPA intends to draw on both of those programs for elements such as numerical standards, compliance program, and manufacturer flexibility provisions. At the same time, EPA recognizes that differences between the engines may make it difficult to apply those programs to CI marine engines. Therefore, EPA seeks comments on all aspects of the basic program outlined below and on the suitability of applying provisions of the land-based and locomotive rulemakings in this context. Interested parties should refer directly to those rules, cited above, for more details on their contents.

B. Program Scope

The emission control program contemplated by today's action is intended to cover all new propulsion or auxiliary compression-ignition engines of 37 kW or greater offered for sale, introduced into commerce, or imported into the United States for installation on a vessel that is registered or flagged in the United States. Engines produced for installation on vessels not registered or flagged in the United States may be covered by an export exemption, as long as those vessels are not operated solely within United States. With regard to size, this rule is intended to cover all new engines from a 37 kW engine used on a small recreational vessel to a 30,000 kW or larger engine installed on an ocean-going container ship. With regard to application, the requirements are intended to cover both recreational and commercial engines. EPA requests comment generally on the proposed scope of the program and, in particular, on its effect on international commerce.

For purposes of this rulemaking, EPA considers a propulsion engine to be an engine that serves to move a vessel through water, either directly or indirectly. Any other engine installed on a vessel is considered to be an auxiliary engine. However, portable auxiliary engines of any size not permanently affixed to a marine vessel (e.g., auxiliary engines that are not permanently installed but, instead, are mounted on pallets that can be easily removed from the vessel) are not intended to be covered by this rule; those engines are subject to the land-based nonroad rule.

C. Emission Standards

1. Need for Multi-Category Approach

The engines to be covered by the emission control program contemplated

[14] See 62 FR 6365 (February 11, 1997); the final rule was signed December 17, 1997, and is available electronically (see section VI below).

[15] See 61 FR 52087 (October 4, 1996).

in today's action are very diverse, in terms of engine size, emission technology, control hardware, and costs associated with reducing emissions. EPA therefore believes that it is not reasonable to propose one set of numerical emission levels for all CI marine engines. Because of the differences among engines, numerical standards that are reasonable and feasible for a 37 kW engine used on an 18-foot boat may not be reasonable or feasible for a 1500 kW engine installed on a tug or a 20,000 kW engine installed on an ocean-going container ship. Similarly, numerical emission limits that are appropriate for very large engines may be too loose for smaller engines, leaving them virtually unregulated. Therefore, EPA is considering setting different numerical standards for different size CI marine engines, as discussed in further detail below. EPA seeks comment on how the categories of engines should be defined. Options for defining the categories include engine power, displacement, bore size, or underlying engine technology.

While it is also possible to consider setting numerical standards based on the use of the vessel (i.e., whether it is used for commercial or recreational purposes), EPA is not considering doing so. Regardless of their ultimate use, CI marine engines of similar size can and do use the same emission control technologies, although they may be calibrated differently for performance reasons. Therefore, there appears to be no need to make such a use-based distinction for purposes of the proposed rulemaking.

2. Category 1: Engines Similar to Land-Based Nonroad

EPA is considering defining as a first category of CI marine engines those engines that are derived from land-based nonroad CI engines or that use similar technologies. As noted above, EPA recently issued an NPRM for control of emissions from land-based nonroad CI engines. Preliminary research confirms that many CI marine engines are derived from land-based nonroad CI engines covered in that NPRM, using the same base engine or engine block as their land-based counterparts and employing the same or similar engine technologies. Therefore, EPA believes that the NOx emission control technologies utilized for nonroad engines can be extended to these marine engines, and concomitantly that the numerical emission levels specified for Tier 2 and Tier 3 land-based nonroad engines are appropriate for CI marine engines. The land-based nonroad standards are set out in Table 3. CI marine engines should be able to achieve these emission limits on the E3 duty cycle (described below in section I.D. of today's ANPRM) by applying technologies under development for land-based nonroad engines, including increased use of turbocharging, better engine cooling, electronic controls, and exhaust gas recirculation. Because of the relationship between land-based and marine engines, the 2001 feasibility review intended for land-based engine standards would be expanded to include a re-evaluation of any Tier 3 standards adopted for marine engines. EPA requests comment on the appropriateness of extending land-based requirements to this category of CI marine engines and on the appropriateness of promulgating Tier 3 standards for marine engines prior to a formal technology review.

TABLE 3.—PROPOSED STANDARDS AND IMPLEMENTATION DATES FOR LAND-BASED NONROAD CI ENGINES RATED OVER 37 KW

Rated power (kW)	Standard level	NMHC+NO_x (g/kW-hr)	CO (g/kW-hr)	PM (g/kW-hr)	Implementation date
37 ≤75	Tier 2	7.5	5.0	0.40	2004
	Tier 3	4.7	5.0		2008
75 ≤130	Tier 2	6.6	5.0	0.30	2003
	Tier 3	4.0	5.0		2007
130 ≤225	Tier 2	6.6	3.5	0.20	2003
	Tier 3	4.0	3.5		2006
225 ≤450	Tier 2	6.4	3.5	0.20	2001
	Tier 3	4.0	3.5		2006
450 ≤560	Tier 2	6.4	3.5	0.20	2002
	Tier 3	4.0	3.5		2006
>560	Tier 2	6.4	3.5	0.20	2006

Table 3 also sets out the proposed implementation dates for land-based nonroad engines. EPA seeks comment on applying these dates to CI marine engines. Specifically, EPA seeks comment on the extent to which implementation should be delayed to provide additional time to work out the marinization of the land-based engine or application of technology to uncontrolled CI marine engines as new standards are implemented. In addition, if such delays are required, EPA seeks comment on the appropriate extension of the schedule.

If the standards described above are directly applied to CI marine engines, one important result would be that engines greater than 560 kW would remain unregulated until 2006. To close this gap, EPA is considering applying interim standards to these engines. One option would be to apply the Tier 1 standards described in Table 1, to go into effect in 2000 as originally proposed in the CI marine NPRM.[16] The other option is to apply the IMO NOx emission limits in the interim. These standards are also scheduled to apply beginning in 2000. EPA seeks comment on the relative merits of these two approaches. If the Tier 1 standards are adopted, EPA does not believe the effective dates should be delayed for CI marine since these emission limits are similar to those of the IMO which will go into effect for engines installed on vessels constructed on or after January 1, 2000.

[16] See 59 FR 55929 (November 9, 1994).

3. Category 2: Engines Similar to Locomotive Engines

EPA is considering defining as a second category of CI marine engines those engines that are derived from locomotive engines or that use similar technologies. These engines are typically used in vessels such as tugs, ferries, and small coastal container or bulk carriers that operate primarily in US waters. Despite their relatively small number, these engines contribute

disproportionately to coastal and port NO_x levels due to the high power ratings, high number of hours they are used, and the way they are used (high load factors).

EPA is considering two ways to address emissions from engines in this category. The first approach would be to apply the NO_x emission limits contained in MARPOL Annex VI, as reflected in the NOx curve. These limits would apply to new engines constructed on or after January 1, 2000. Alternatively, due to their relatively high contribution to the NOx and PM inventories on a per engine basis, more stringent emission limits may be appropriate for these engines. Thus, the second approach would be to apply the numerical emission limits for new locomotive engines to these CI marine engines (see Table 2, above). EPA seeks comment on both of these approaches, and on the extent to which the implementation dates in the locomotive rule should be adjusted to accommodate application of those standards to marine engines.[17]

4. Category 3: Low Speed, High Horsepower Engines

EPA is considering defining as a third category of CI marine engines those low speed, high horsepower engines that are used for propulsion purposes on ocean-going engines or Great Lakes freighters. These engines, which are typically larger than those derived from locomotive engines, are built to unique specifications onboard the vessel, and are manufactured in very small numbers. For such new engines, EPA is considering setting numerical standards for this category consistent with the IMO NO_x curve (see Table 1 above). EPA believes this approach to be reasonable for this category of engines, primarily because of their use patterns. Such engines are used in large vessels that engage in ocean travel and may operate only a limited amount of time in U.S. ports, while they are loading or unloading cargo and/or people. Setting standards more stringent than those adopted by IMO for such engines may accordingly have only a minimal impact on U.S. air quality, especially since the more stringent standards could apply only to engines installed on vessels flagged or registered in the United States. In addition, because more stringent standards would apply only to U.S. vessels, they may also affect the competitiveness of U.S. shipping vessels in the world transportation market, since engines installed on foreign-flagged vessels would need to comply only with the IMO emission limits. EPA seeks comment on the appropriateness of this approach for these very large engines.

With regard to the effective date for Category 3 engines, EPA is considering two approaches. The first reflects the approach typically used by EPA: standards are effective based on the construction date of the engine. Under this approach, EPA would require engines manufactured on or after January 1, 2000 to meet these limits. The second approach reflects the approach typically used by IMO and which is incorporated in MARPOL Annex VI: standards are effective based on the construction date of the vessel on which they are installed. Under this approach, engines installed on vessels constructed on or after January 1, 2000 would be required to meet these limits. The difference between these two approaches is not insignificant, since construction on a vessel may begin up to two years before the engine is manufactured and installed. Thus, using the IMO approach may lead to earlier implementation. EPA seeks comment on the relative merits of either approach.

5. Smoke Standards

In previous diesel engine emission control programs, EPA has typically set smoke standards as well as NO_x and PM emission limits for diesel engines. However, as in the proposed rule for land-based and small marine nonroad engines, EPA does not intend to propose a smoke standard for the CI marine engines subject to this rule. This is primarily because a test procedure to accurately measure smoke levels has not yet been developed for marine engines. While the test for land-based engines could be used, it may be inappropriate because it does not reflect how marine engines are actually operated. In addition, current PM controls for CI engines, as well as customer awareness and demand for smoke-controlled engines, may effectively control smoke from these engines beyond any levels the Agency may reasonably set. EPA seeks comment on the necessity of setting smoke standards.

6. Remanufacturing Requirements

To address the fact that certain types of engines are kept in service for very long periods of time, both the locomotive rule and the IMO's NO_x emission control program contain remanufacturing requirements. The locomotive rule's three tiers of numerical emission limits apply to freshly manufactured [18] and existing engines whenever they are remanufactured to a condition similar to freshly manufactured. The MARPOL Annex VI NO_x curve emission limits apply to new engines and to existing engines when they are substantially modified. Remanufacturing provisions were included in both of these rules because of the slow rate of fleet turnover in these sectors, which prevents the realization of significant emission reductions from these categories of engines until well into the future. EPA seeks comment on the appropriateness of applying these rebuild provisions to Category 2 and 3 engines.

While remanufacturing provisions could be extended to Category 1 engines, EPA is not currently considering doing so for two reasons. First, current industry rebuilding practices for Category 1 engines may make it difficult to implement a remanufacturing program. As noted above, there is a large degree of diversity among these engines, in terms of their applications (e.g., auxiliary/propulsion engines on fishing vessels, barges, tugs, recreational vessels, etc.). This diversity, in turn, is likely to lead to a diverse set of remanufacturing practices, depending on application and engine type. In other words, engines on fishing vessels may not be remanufactured at the same rate as engines on recreational vessels. This diversity may make it difficult to set a uniform process and standard on the Category 1 segment of the marine industry. Second, it is not clear that a remanufacturing requirement for Category 1 engines would yield an emission benefit large enough to offset the potential burden on users, and so may not justify such a requirement. At the same time, EPA is considering extending the proposed land-based nonroad rebuild provisions to Category 1 engines. EPA seeks comment on the characteristics of rebuilding practices for Category 1 engines, the appropriateness of extending a remanufacturing requirement to those engines, and whether a remanufacturing requirement, if extended, should vary according to the intended use of the engine.

D. Duty Cycles

To ensure the benefits of the emission control program, engine manufacturers must certify their engines to the required emission limits using an appropriate duty cycle. The many kinds of duty cycles that exist for marine

[17] See 62 FR 6365 (February 11, 1997); the final rule was signed December 17, 1997, and is available electronically (see section VI below).

[18] In the locomotive rule, EPA defined a new locomotive to include both freshly manufactured, and remanufactured to like-new condition.

engines make it necessary to specify which duty cycle will be used to demonstrate compliance with the specified emission limits. The choice of duty cycle is a function of engine size, engine characteristics, and how the engine is used. EPA is considering separate duty cycles for propulsion and auxiliary applications for each of the three categories of engines described above.

For Category 1 propulsion engines, EPA is considering two duty cycles: the International Standards Organization (ISO) E3 and E5 duty cycles. The E3 cycle is a four-mode steady-state cycle which was developed to represent in-use operation of commercial marine diesel propulsion engines. The E5 duty cycle, which was developed to represent in-use operation of recreational marine diesel engines, is similar to the E3 except that it includes an idle mode and is more heavily weighted towards lower power modes. At this time, EPA is considering proposing to require use of the E3 duty cycle for these engines.[19]

To ease the certification burden associated with this rule, EPA is considering proposing a flexibility to marine engine manufacturers that was proposed in the land-based nonroad rule for CI marine engines less than 37 kW. This provision would allow marine engines to be included in land-based engine families, thus avoiding the necessity of performing a separate certification test for both the land-based nonroad and marine engines. In essence, the flexibility would enable manufacturers to certify propulsion marine engines on ISO's C1 test cycle, which is an 8-mode test designed for variable speed, variable load engines. Although the C1 test procedure may not be as representative of marine operation as the E3 or E5 cycles, it should provide comparable assurance of control. If this flexibility is adopted in the CI marine engine program, the engine manufacturer will not be relieved of the responsibility to ensure that the marine engine in fact meets the emission limits on the E3 test cycle even though it is part of a land-based family. EPA seeks comment on whether this cross-over testing should be allowed.

For Category 3 propulsion engines, EPA is considering applying the duty cycles and procedures contained in the International Maritime Organization's NOx Technical Code.[20] These test cycles are set out in Table 5.

TABLE 5.—DUTY CYCLES—CATEGORY ENGINES

(As set out in Annex VI NOx Technical Code)

Engine	Cycle
Constant-speed marine engines for ship's main propulsion, including diesel electric drive	E2
Variable-pitch propeller sets	E2
Propeller law operated main and propeller law operated auxiliary engines	E3

Finally, for Category 2 propulsion engines, EPA requests comment on whether one of the two approaches described above is appropriate, or whether another duty cycle should be required.

With regard to auxiliary engines of any category, EPA intends to propose the ISO D2 duty cycle for variable-speed engines, which was designed for constant-speed generator sets with an intermittent load. In addition, EPA is considering extending the C1 flexibility described above to marine auxiliary engines. EPA seeks comment on the appropriateness of this cross-over testing for auxiliary engines.

E. Certification and Compliance Requirements

1. Certification

EPA is planning to put into place certification, engine family selection, recordkeeping and reporting requirements similar to those proposed in the nonroad land-based rule. EPA seeks comments on any revisions to these elements that may be necessary in the context of the CI marine engine emission control program, and any alterations that may be required for the different categories of CI marine engines.

2. Averaging, Banking, and Trading

In past federal mobile source rulemakings, EPA has adopted averaging, banking, and trading programs, and each of the programs referred to in today's ANPRM (on-highway [21] and land-based nonroad [22], locomotive [23], and gasoline marine [24] rules) include such programs. EPA requests comment on the need or applicability of such a program to CI marine engines.

3. Interface with IMO

Although EPA does not anticipate any difficulties with the interface between the domestic and IMO certification programs, EPA seeks comment on any problems that could arise.

4. Other Compliance Issues

EPA plans to draw on the compliance program set out in the land-based nonroad NPRM. [25] EPA intends to include selective enforcement auditing and recall provisions, in which engines are tested at the production line or in the field, respectively. EPA also intends to propose emission defect warranty and reporting requirements for marine diesel engines. Tampering prohibitions and importation restrictions will be outlined in the NPRM. EPA requests comment on how to apply these programs to marine diesel engines. Commenters are encouraged to provide detailed discussion of any revisions that may be needed to the land-based nonroad version of these programs to accommodate the marine engine market. EPA seeks comment on applying similar requirements to Category 2 and Category 3 engines, and how such provisions should interface with IMO requirements. In addition, EPA seeks comment on whether the production line testing program contained in the locomotive rule should be extended to Category 1 engines as an alternative to selective enforcement auditing.

F. Other Issues

1. Competitiveness with Spark-Ignition Engines

In response to the original marine NPRM, some commenters argued that CI engines should be subject to no more stringent regulation than gasoline SI sterndrive or inboard engines. [26] According to these commenters, CI

[19] An explanation of EPA's preliminary view on using the E3 duty cycle is set forth in Memorandum to Docket #A–96–40 from Mike Samulski, "Selection of Duty Cycle to Propose for High Speed CI Marine Engines (February 19, 1997).

[20] A copy of this document is available in this docket.

[21] See 62 FR 54694 (October 21, 1997).

[22] See 62 FR 50152 (September 24, 1997).

[23] See 62 FR 6365 (February 11, 1997).

[24] See 61 FR 52087 (October 4, 1996).

[25] See 62 FR 50152 (September 24, 1997).

[26] See 59 FR 55929 (November 9, 1994).

marine engines compete directly with SI sterndrive and inboard engines in certain markets, particularly for inboard cruisers. As described in the final rule for SI marine engines, EPA determined not to set standards for SI marine sterndrive and inboard engines, and these engines remain unregulated at this time.[27]

EPA understands that manufacturers of inboard cruisers often give customers a choice of purchasing either gasoline or diesel engines for certain types of vessels. However, information obtained from vessel manufacturers indicates that the choice of engine is complex. Customers primarily consider reliability, durability, fuel economy, and power when making their engine choice. In other words, the decision of whether to purchase a gasoline engine or a diesel engine appears to depend mainly on the intended usage patterns of the consumer. Typically, diesel engines are more attractive to customers interested in slow cruising over long distances, while gasoline engines are more attractive to customers interested in certain performance characteristics (e.g., speed). Thus, diesel engines do not appear to compete directly with gasoline engines in that the performance of the engines is not similar and the engines are not completely interchangeable in terms of use.

Current pricing of the engines further supports this argument. Information received by EPA suggests that at nearly the same power rating, the price of diesel engines is estimated to be double that for counterpart gasoline engines, in part due to fabrication requirements. EPA believes that if the two engine types were truly competitive, their prices would be more similar. EPA nevertheless recognizes that diesel and gasoline engines are offered on some of the same or similar vessels, and is therefore requesting additional information on this issue.

2. Voluntary Low-Emitting Engine Program

EPA is interested in adopting voluntary standards involving very low-emitting engine technologies, similar to those proposed in the land-based nonroad engine NPRM. The nonroad "Blue Sky Series" program sets out voluntary standards which manufacturers can meet using novel technologies or alternative fuels. The intended goal of adopting voluntary standards is two-fold: to increase the potential for emission reductions and to encourage the development and initial introduction of new technologies. The creation of incentives to produce Blue Sky Series engines would be left to the discretion of states or other organizations. The concentrated use of large marine engines near certain nonattainment areas should motivate consideration of these voluntary low-emission standards for new engines. Retrofit of existing engines may also be appropriate, but would not fall under the Blue Sky Series program.

Voluntary standards for diesel marine engines could be set up to be similar to those proposed for land-based engines, with some important differences. First, as proposed in the land-based nonroad NPRM, Blue Sky Series engines would be certified using the highway transient test. Testing these engines on a transient test cycle is important to ensure adequate control of particulate emissions. Use of the highway test cycle for large CI marine engines would, however, be problematic because of the very different operating modes experienced in use. Voluntary standards for some or all marine diesel engines would therefore need to rely on the ISO C1 or another test cycle, with a corresponding shift in focus to reducing NOx emissions. Second, the numerical levels for the voluntary standards proposed in the land-based nonroad NPRM would need to be revised, to reflect the potential for achieving superior emission control from the various sizes of marine engines. Finally, as with the land-based nonroad Blue Sky Series program, manufacturers would not be relieved of the responsibility to demonstrate compliance with the prevailing mandatory standards, although initial certification of such engines could be streamlined.

EPA requests comment on the potential success of a voluntary emission standards program for CI marine engines. EPA further requests comment on the appropriate makeup of a program of voluntary standards for all sizes of CI marine engines, including those subject to the MARPOL Annex VI NOx levels.

III. Potential Impacts

EPA will include detailed analysis of the emissions reductions and air quality benefits that would result from the standards proposed in the NPRM. EPA will also include in the NPRM an analysis of the expected environmental and economic impacts of meeting the proposed emission standards. The estimated economic impacts for land-based nonroad engines to meet proposed standards will be the starting point for a projection of Category 1 engine impacts. EPA expects that manufacturers will comply with diesel marine emission standards by marinizing engines that have been designed for land-based emission standards. Adjustments will be made to account for the unique design and operation of the marinized engines. Cost calculations will include certification and testing costs, as well as a consideration of fuel economy impacts resulting from the anticipated technologies; however, no fuel economy penalty was projected for land-based engines. Cost estimates for Category 2 engines will be similarly derived from the analysis completed for locomotive engines. EPA does not currently contemplate proposing standards more stringent than IMO levels for Category 3 engines and therefore intends not to estimate any cost impact for those engines.

IV. Small Business Concerns

Section 605 of the Regulatory Flexibility Act (RFA), 5 U.S.C. 601 *et seq.* requires the Administrator to assess the economic impact of proposed rules on small entities. The Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, Public Law 104–121, amended the RFA to strengthen its analytical and procedural requirements and to ensure that small entities are adequately considered during rule development. The Agency accordingly requests comment on the potential impacts on a small business of the program outlined in today's proposal. Such comments will help the Agency meet its obligations under SBREFA and will suggest how EPA can minimize the impacts of this rule for small companies that may be adversely affected.

EPA has identified three distinct groups of entities involved in the marine industry that could be affected by the emission control program under consideration. The first group, considered by EPA as "post-manufacturer marinizers," are companies that purchase an engine block from an engine manufacturer and modify it in such as way to make it adaptable to the marine environment. As with the SI marine emission standards, these companies would need to certify the marinized engines under the standards contemplated here. Most of these companies would be considered small business entities according to the size standards defined by Small Business Administration (SBA) regulations. Through early outreach efforts, EPA has learned that these small post-manufacturer marinizers may face at least two challenges not faced by large companies. First, they may have to redesign their end product, to

[27] See 61 FR 52087 (October 4, 1996).

incorporate a change made by their engine supplier in response to new emission requirements for CI land-based or marine engines. Second, many if not all of these companies will be facing compliance requirements for the first time. EPA requests comment on the burdens expected to be faced by these companies and potential flexibility provisions that may provide necessary relief. To identify potential flexibility provisions, commenters are encouraged to examine the proposed in the land-based nonroad NPRM.[28]

The second group of companies that may be affected by the proposed program are engine manufacturers that produce a wide variety of on-highway and nonroad engines. As noted above, CI marine engines produced by these manufacturers are typically derived from land-based nonroad or on-highway engines or are based on the same technology. Because these engine manufacturers have control over the manufacturing process for the base on-high or nonroad engine, they also have more control than the post-manufacturer marinizers over the internal design of the marine engines they market as well as more flexibility over the marinizing process. Typically, these engine manufacturers are considered large according to the SBA size standards. EPA requests comment on the degree to which these larger CI marine engine manufacturers will be affected by the proposed emission control program and, more specifically, the extent to which it would be appropriate to include flexibility provisions for these manufacturers.

The final group of companies that may be affected by the proposed program are vessel manufacturers. They may be affected to the extent that they need to accommodate changed engine designs from their engine suppliers. EPA expects that most of the application of emission control technology to achieve proposed emission limits will not affect vessel design. EPA seeks comment from vessel manufacturers and others on the potential impact on vessel design, as well as the appropriateness of equipment manufacturer flexibilities.

V. Public Participation

The Agency is committed to a full and open regulatory process and looks forward to input from a wide range of interested parties as the rulemaking process develops. If EPA proceeds as expected with a proposed rule, these opportunities will include a formal public comment period and a public hearing. EPA encourages all interested parties to become involved in this process as it develops.

With today's action, EPA opens a comment period for this ANPRM. Comments will be accepted through June 22, 1998. The Agency strongly encourages comment on all aspects of this proposal. The most useful comments are those supported by appropriate and detailed rationales, data, and analyses. All comments, with the exception of proprietary information, should be directed to the EPA Air Docket Section, Docket No. A–97–50 before the date specified above. Commenters who wish to submit proprietary information for consideration should clearly separate such information from other comments by (1) labeling proprietary information "Confidential Business Information" and (2) sending proprietary information directly to the contact person listed (see FOR FURTHER INFORMATION CONTACT) and not to the public docket. This will help ensure that proprietary information is not inadvertently placed in the docket. If a commenter wants EPA to use a submission of confidential information as part of the basis for an NPRM, then a nonconfidential version of the document that summarizes the key data or information should be sent to the docket.

Information covered by a claim of confidentiality will be disclosed by EPA only to the extent allowed and in accordance with the procedures set forth in 40 CFR part 2. If no claim of confidentiality accompanies the submission when it is received by EPA, it will be made available to the public without further notice to the commenter.

VI. Copies of Documents

This ANPRM is available in the public docket as described under ADDRESSES above. This document is also available electronically from the EPA internet Web site. This service is free of charge, except for any cost incurred for internet connectivity. The electronic **Federal Register** version is made available on the day of publication on the first Web site listed below. The EPA Office of Mobile Sources also publishes these notices on the second Web site listed below.

(either select desired date or use Search feature)

http://www.epa.gov/OMSWWW/

(look in What's New or under the specific rulemaking topic)

Please note that due to differences between the software used to develop the document and the software into which the document may be downloaded, minor changes in format, pagination, etc. may occur.

VII. Unfunded Mandates Reform Act

Under section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA), Public Law 104–4, EPA must prepare a budgetary impact statement to accompany any general notice of proposed rulemaking or final rule that includes a Federal mandate which may result in estimated costs to State, local, or tribal governments in the aggregate, or to the private sector, of $100 million or more. Under section 205, for any rule subject to section 202 EPA generally must select the least costly, most cost-effective, or least burdensome alternative that achieves the objectives of the rule and is consistent with statutory requirements. Under section 203, before establishing any regulatory requirements that may significantly or uniquely affect small governments, EPA must take steps to inform and advise small governments of the requirements and enable them to provide input.

EPA has determined that the requirements of UMRA do not extend to advance notices of proposed rulemaking such as this Advance Notice.

VIII. Administrative Designation and Regulatory Analysis

Under Executive Order (EO) 12866, the Agency must determine whether this regulatory action is "significant" and therefore subject to Office of Management and Budget (OMB) review and the requirements of the Executive Order.[29] The EO defines "significant regulatory action" as any regulatory action (including an advanced notice of proposed rulemaking) that is likely to result in a rule that may:

(1) Have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities;

(2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or,

(4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

A draft of this ANPRM was reviewed by OMB prior to publication, as

[28] See 62 FR 50152 (September 24, 1997).

[29] See 58 FR 51735 (October 4, 1993).

required by EO 12866. Any written comments from OMB and any EPA response to OMB comments have been placed in the public docket for this Notice.

List of Subjects in 40 CFR Part 89

Environmental protection, Administrative practice and procedure, Air pollution control, Confidential business information, Imports, Incorporation by reference, Labeling, Nonroad source pollution, Reporting and recordkeeping requirements.

Dated: May 11, 1998.

Carol M. Browner,

Administrator.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 300

[FRL–6101–2]

National Oil and Hazardous Substances Contingency Plan; National Priorities List

AGENCY: Environmental Protection Agency.

ACTION: Notice of intent to delete Operable Units 100–IU–1 and 100-IU–3 of the Hanford 100 Area Superfund Site from the National Priorities List.

SUMMARY: The Environmental Protection Agency (EPA) Region 10 announces its intent to delete portions of the Hanford 100 Area NPL Superfund Site. The portions proposed to be deleted are the 100–IU–1 and 100–IU–3 Operable Units from the National Priories List. The 100–IU–1 and IU–3 Operable Units are part of the Hanford 100 Area NPL Site located at the U.S. Department of Energy (DOE) Hanford Site, located in southeastern Washington State. EPA is requesting comment on this action.

The NPL constitutes Appendix B to the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), 40 CFR Part 300, which EPA promulgated pursuant to Section 105 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This partial deletion of the 100–IU–1 and 100–IU–3 Operable Units is proposed in accordance with 40 CFR 300.425(e) and the Notice of Policy Change: Partial Deletion of Sites Listed on the National Priorities List. 60 FR 55466 (Nov. 1995).

This proposal for partial deletion pertains to all known waste areas located in the 100–IU–1 and 100–IU–3 Operable Units. The waste areas in 100–IU–3 were associated with former military sites used to defend the Hanford Site during the Cold War. In addition, a 2–4,D burial ground is located in the 100–IU–3 Operable Unit. The primary waste areas in the 100–IU–1 Operable Unit were associated with decontamination of rail cars at the Riverland Railroad Car Wash Pit, a munitions cache, a pesticide container area, and a 2–4,D container area.

DATES: EPA will accept comments concerning its proposal for partial deletion for thirty (30) days after publication of this document in the **Federal Register** and a newspaper of record.

ADDRESSES: Comments may be sent to: Dennis Faulk, Superfund Site Manager, USEPA, 712 Swift #5, Richland, Washington 99352; (509) 376–8631.

Information Repositories: Information and the deletion docket is available for review at the information repository listed below:

U.S. Department of Energy, Public Reading Room, Washington State University, Tri-Cities Consolidated Information Center, Room 101L, 2770 University Drive, Richland, Washington 99352.

In addition, the Notice of Intent to Delete can be reviewed at the following information repositories: Portland State University, Branford Price Millar Library, Science and Engineering Floor, 934 SW Harrison and Park, Portland, Oregon; University of Washington, Suzzallo Library, Government Publications Room, Seattle, Washington; Gonzaga University, Foley Center, East 502 Boone, Spokane, Washington.

FOR FURTHER INFORMATION CONTACT: Dennis Faulk; (509)376–8631.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction
II. NPL Deletion Criteria
III. Deletion Procedures
IV. Basis for Intended Partial Site Deletion

I. Introduction

The United States Environmental Protection Agency (EPA) Region 10 announces its intent to delete the 100–IU–1 and 100–IU–3 Operable Units from the National Priories List. The 100–IU–1 and IU–3 Operable Units are part of the Hanford 100 Area NPL Site located at The U.S. Department of Energy(DOE) Hanford Site, located in southeastern Washington State. EPA is requesting comment on this action.

EPA proposes to delete the 100–IU–1 and 100–IU–3 Operable Units from the 100 Area NPL because all appropriate CERCLA response activities have been completed. The waste areas in the 100–IU–1 and 100–IU–3 Operable Units were cleaned up by the DOE between 1992 and 1994 using expedited response actions (ERA). At the Hanford Site, the term ERA is used to describe actions taken under CERCLA removal authority as described in 40 CFR 300.415. In February 1996, a no further action record of decision was signed documenting that previous ERA's had removed all contaminants from the waste areas in the 100–IU–1 and 100–IU–3 Operable Units to below cleanup levels for residential use established under the Washington State Model Toxics Control Act (MTCA). It should be noted, cleanup activities are continuing at other operable units of the Hanford 100 Area NPL Site.

The NPL is a list maintained by EPA of sites that EPA has determined present a significant risk to human health, welfare, or the environment. Sites on the NPL may be the subject of remedial actions financed by the Hazardous Substance Superfund (Fund). Pursuant to 40 CFR 300.425(e) of the NCP, any site or portion of a site deleted from the NPL remains eligible for remedial actions if conditions at the site warrant such action.

EPA will accept comments concerning its intent for partial deletion for thirty (30) days after publication of this notice in the **Federal Register** and a newspaper of record.

II. NPL Deletion Criteria

The NCP establishes the criteria that EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate to protect human health or the environment. In making such a determination pursuant to § 300.425(e), EPA will consider, in consultation with the State, whether any of the following criteria have been met:

Section 300.425(e)(1)(I). Responsible parties or other persons have implemented all appropriate response actions required; or

Section 300.425(e)(1)(ii). All appropriate response actions under CERCLA have been implemented under DOE's removal authority, and no further response action is deemed necessary; or

Section 300.425(e)(1)(iii). The remedial investigation has shown that the release poses no significant threat to human health or the environment and, therefore, taking of remedial measures is not appropriate.

Deletion of a portion of a site from the NPL does not preclude eligibility for subsequent remedial actions at the area deleted if future site conditions warrant

such actions. Section 300.425(e)(3) of the NCP provides that remedial actions may be taken at sites that have been deleted from the NPL. A partial deletion of a site from the NPL does not affect or impede EPA's ability to conduct CERCLA response activities at areas not deleted and remaining on the NPL. In addition, deletion of a portion of a site from the NPL does not affect the liability of responsible parties or impede agency efforts to recover costs associated with response efforts.

III. Deletion Procedures

Deletion of a portion of a site from the NPL does not itself create, alter, or revoke any person's rights or obligations. The NPL is designed primarily for information purposes and to assist Agency management.

The following procedures were used for the proposed deletion of the 100–IU–1 and 100–IU–3 Operable Units:

(1) EPA Region 10 has recommended the partial deletion and has prepared the relevant documents.

(2) The State of Washington, through the Washington Department of Ecology, concurs with this proposed partial deletion.

(3) Concurrent with this national Notice of Intent for Partial Deletion, a notice has been published in a newspaper of record and has been distributed to appropriate federal, State, and local officials and other interested parties. These notices announce a thirty (30) day public comment period on the deletion package, which commences on the date of publication of this notice in the **Federal Register** and newspaper of record.

(4) EPA has made all relevant documents available at the information repositories listed previously.

This **Federal Register** document, and a concurrent notice in a newspaper of record, announce the initiation of a thirty (30) day public comment period and the availability of the Notice of Intent of Partial Deletion. The public is asked to comment on EPA's proposal to delete the operable units from the NPL. All critical documents needed to evaluate EPA's decision are included in the Deletion Docket and are available for review at the information repository previously listed.

Upon completion of the thirty (30) day public comment period, EPA will evaluate all comments received before issuing the final decision on the partial deletion. EPA will prepare a Responsiveness Summary for comments received during the public comment period and will address concerns presented in the comments. The Responsiveness Summary will be made available to the public at the information repository previously listed. Members of the public are encouraged to contact EPA Region 10 to obtain a copy of the Responsiveness Summary. If, after review of all public comments, EPA determines that the partial deletion from the NPL is appropriate, EPA will publish a final notice of partial deletion in the **Federal Register**. Deletion of the operable units does not actually occur until the final Notice of Partial Deletion is published in the **Federal Register**.

IV. Basis for Intended Partial Site Deletion

The following provides EPA's rationale for deletion of the 100–IU–1 and 100–IU–3 Operable Units of the Hanford 100 Area NPL Site and EPA's finding that the criteria in 40 CFR 300.425(e) are satisfied.

Background

The Hanford 100 Area Site was added to the NPL in November 1989. EPA Region 10 is proposing deletion of portions of the Hanford 100 Area NPL Site. Specifically the 100–IU–1 Operable Unit and 100–IU–3 Operable Unit. The 100–IU–1 Operable Unit is a 13 square mile area with boundaries of Washington State Route 240 on the east, Washington State Highway 24 on the south, Hanford Site boundary on the west, and the Columbia River on the north. The 100–IU–3 Operable Unit is a 140 square mile area located at the northern most extent of the Hanford 100 Area NPL Site, north of the Columbia River.

100–IU–1 Operable Unit

Based on past disposal practices two waste areas; the Army Munitions Burial Site (munitions cache) and the Riverland Railroad Car Wash Pit were included as subunits in the 100–IU–1 Operable Unit. In addition, during investigations a pesticide container disposal area and a 2–4,D container area were also discovered and included as part of the operable unit.

The Riverland Railroad Car Wash Pit operated from 1943 until 1956 and was used to decontaminate railcars. Radioactive decontamination was required before railroad maintenance personnel could work on the railcars and locomotives.

An operable unit visual inspection found one homestead area containing a pile of empty pesticide containers. Characterization activities identified aldrin and dieldrin as contaminants of concern in the soil. Aldrin and dieldrin are carcinogenic and relatively immobile in soils. The chemicals were produced for about 10 years, from the early 1950s to early 1960s.

A 2–4,D container area was discovered in July 1994 during an archaeological survey performed by Pacific Northwest Laboratories. Two 5-gallon containers were found on the surface among some sage brush. In addition, nine 5-gallon containers, with just the pour spouts exposed, were found buried among the sage brush. Partial container markings indicated that the containers may have contained 2–4,D.

The munitions cache received various military explosives in the 1970s. The explosives were remnants left from various military exercises in the area. The area consisted of a wooden box placed in a hole in the ground about 0.6 m by 0.9 m by 0.6 m (2 ft by 3 ft by 2 ft) deep. On May 22, 1986, the box with contents went to the Yakima Firing Range for destruction.

Characterization activities confirmed the presence of diesel fuel contamination in the concrete and soil at the Riverland Railroad Car Wash Pit and pesticide soil contamination at the pesticide container area. Characterization of the 2–4,D container area did not find any contaminated soil around or beneath the containers. Based on results of sampling at the 2–4,D container area, the empty containers were designated nonregulated. At the pesticide container area, sampling indicated the primary hazardous constituents of concern were aldrin and dieldrin contaminated soils. The munitions cache was sampled and no contamination was present.

There is no known groundwater contamination associated with the 100–IU–1 Operable Unit. There are two shallow depth groundwater monitoring wells within the Operable Unit. One well is located down gradient of the Riverland Railroad Car Wash Pit and the second well is located down gradient and to the northwest. Sample analysis data from as far back as 1971 do not show groundwater contamination.

EPA and Ecology issued an action memorandum to DOE in June, 1993 requiring the removal of all pesticide contaminated soils, filling in the munitions cache hole, performing an explosive ordnance survey, and cleaning up the diesel contaminated concrete and soils at the Riverland Railroad Car Wash Pit.

The munitions cache hole was filled in on July 27, 1993. The Riverland Ordnance Survey was part of the Hanford Site-wide ordnance and explosive waste (OEW) archive search conducted by the U. S. Army Corps of Engineers. This search indicated that

the potential for ordnance in 100–IU–1 was minimal and, therefore, no further action was required regarding ordnance.

The pesticide container area cleanup activities started on July 6, 1993. On-site immunoassay field screening was used to monitor cleanup activity success. Drums containing crushed pesticide containers and drums containing aldrin and dieldrin contaminated soils were sent to an appropriate disposal facility located in the 200 Area of Hanford. The pesticide area was backfilled on September 1, 1993 after laboratory sample results confirmed that the soil contamination levels were below 2 parts per million (pmm) which is the cleanup level for aldrin and dieldrin as specified by the MTCA.

The Riverland Railroad Wash Car Pit cleanup activities started on July 12, 1993 when the soil covering the shop concrete pad was removed. The entire cleanup action was monitored with immunoassay field screening kits that detected diesel (TPH) concentrations at or above 200 ppm. Demolition of the concrete pad began on September 21, 1993 and diesel contaminated soil removal started on September 27, 1993. The contaminated material consisted of soils beneath the concrete pad, clay drain pipes and associated soils, and drainage ditch soils. A total of 430 cubic yards of material were removed and hauled to a bioremediation facility onsite. Bioremediation activities were completed in 1996. Sample results indicated that all soils were below the MTCA cleanup level of 200 ppm for TPH. All excavations were backfilled with clean soil.

100–IU–3

In April of 1992, Ecology and the EPA recommended that the 100–IU–3 Operable Unit be investigated and remediated using a non-time critical ERA. Results of field work which commenced in the summer of 1992 indicated that full scale hazard mitigation and the proper abandonment of water wells needed to be performed. Field work also indicated investigation and remediation of the 100–IU–3 military landfills was warranted. The H–O6–L landfill, considered to be the largest and suspected to contain the most hazardous waste, would be fully characterized (i.e., anomalous areas identified within the landfill boundaries would be fully excavated to undisturbed or natural horizons; excavated materials would be field screened, sampled and analyzed if necessary). Materials identified as hazardous or regulated would be stockpiled for treatment or off-site disposal.

Additional characterization and remediation of the other landfills would be dependent on the amounts and types of wastes found at the H–O6–L landfill. It was reasoned that because the military areas were under the same command, similar operating practices would be in place for each. Therefore, using an analogous approach, environmental waste found at the H–O6–L landfill would be expected to be present at the other landfills. Similarly, if no environmental waste was discovered at the H–O6–L landfill, the expectation was that the other landfills would also be free of contamination.

The Action Memorandum also required that DOE investigate the possible presence of ordnance in the 100–IU–3 Operable Unit. Ordnance, if found, was to be handled and disposed of in accordance with current U.S. Army regulations. An ordnance and explosive waste (OEW) record search was initiated in November of 1993. The search consisted of a records review and site visit, ordnance and explosive waste contamination analysis, and an archives search. The search concluded that there is a very small potential for the presence of OEW. Given the expanse of the 100–IU–3 Operable Unit, the likelihood of finding any ordnance through a field search would be minimal, and the costs would be great. Therefore, no further action was recommended.

Decommissioning of water wells began in June 1994 and was concluded in October 1994. In all, 9 water supply wells and one monitoring well were decommissioned in accordance with requirements set forth by the Washington State Department of Ecology. Localized contamination was discovered in three 100–IU–3 Operable Unit water supply wells. The contamination appeared to have been a result of vandals dumping oil and other debris down the well casing. In each case the contamination was contained within the casing. The oil and contaminated water were successfully purged from each well and the casings were steamed cleaned. Follow up water sampling and testing was conducted to confirm cleanup.

Full characterization and remediation at the H–06–L landfill began on April 19, 1994. Activities conducted consisted of geophysical investigations, excavation and field screening of buried wastes, sampling and analysis of suspect wastes, and segregation of confirmed hazardous or contaminated materials. Geophysical investigations employed electromagnetic profiling and magnetic techniques to locate buried metallic and non-metallic waste materials. Areas exhibiting anomalous geophysical response were marked in the field for subsequent excavation.

Excavated wastes were field screened using several criteria including visual observation, direct-reading instruments, and analyte-specific field analytical kits. Suspect wastes were sampled for characterization by an off-site laboratory under a quick turn-around schedule. Materials confirmed as hazardous were segregated pending determination of proper waste designation and disposition. Excavations were backfilled with clean material and graded to original conditions.

Approximately 600 cubic yards of DDT contaminated soil were discovered at the H–O6–L landfill. This material was disposed of at an off-site permitted landfill. Also, 200 cubic yards of petroleum contaminated soil was found and disposed of at an approved off-site facility. Six drums of soil contaminated with metals and soil from beneath several pesticide cans were disposed at an off-site facility. No ordnance or explosive waste was discovered.

The remaining 100–IU–3 military landfills received limited characterization and remediation that required excavation at each identified geophysical anomaly. Full excavations would only be required when field screening indicated the possible presence of contaminants. Characterization and remediation of 100–IU–3 landfills concluded on August 11, 1994.

In July of 1994, four exploratory holes were drilled under the buried tanks at the 2,4-D burial ground. The tanks were first located using a magnetometer. The holes were drilled at an incline in order to obtain samples from directly beneath the tanks. Eighteen samples were taken and no samples detected 2,4-D. In 1997, new information led to a re-investigation of the 2,4-D burial ground. Laboratory data showed elevated levels of 2,4-D and dioxin. The site was excavated and soils containing 2, 4-D and dioxin were shipped off-site for disposal. A portion of the soil was contaminated with 2,4-D only and was bioremediated onsite.

Community Involvement

Public participation activities for the cleanup of the 100–IU–1 and 100–IU–3 Operable Units were conducted as required under CERCLA Section 113(k), 42 U.S.C. 9613(k) and Section 117, 42 U.S.C. 9617. Public review included the following activities:

Public comment on the removal cleanup plan for 100–IU–1 from May 3 through June 9, 1993.

Public comment was accepted from November 8, 1993 through January 8,

1994 for the 100–IU–3 removal cleanup plan. A public meeting was held in Mattawa, Washington on December 14, 1993 for the 100–IU–3 Operable Unit.

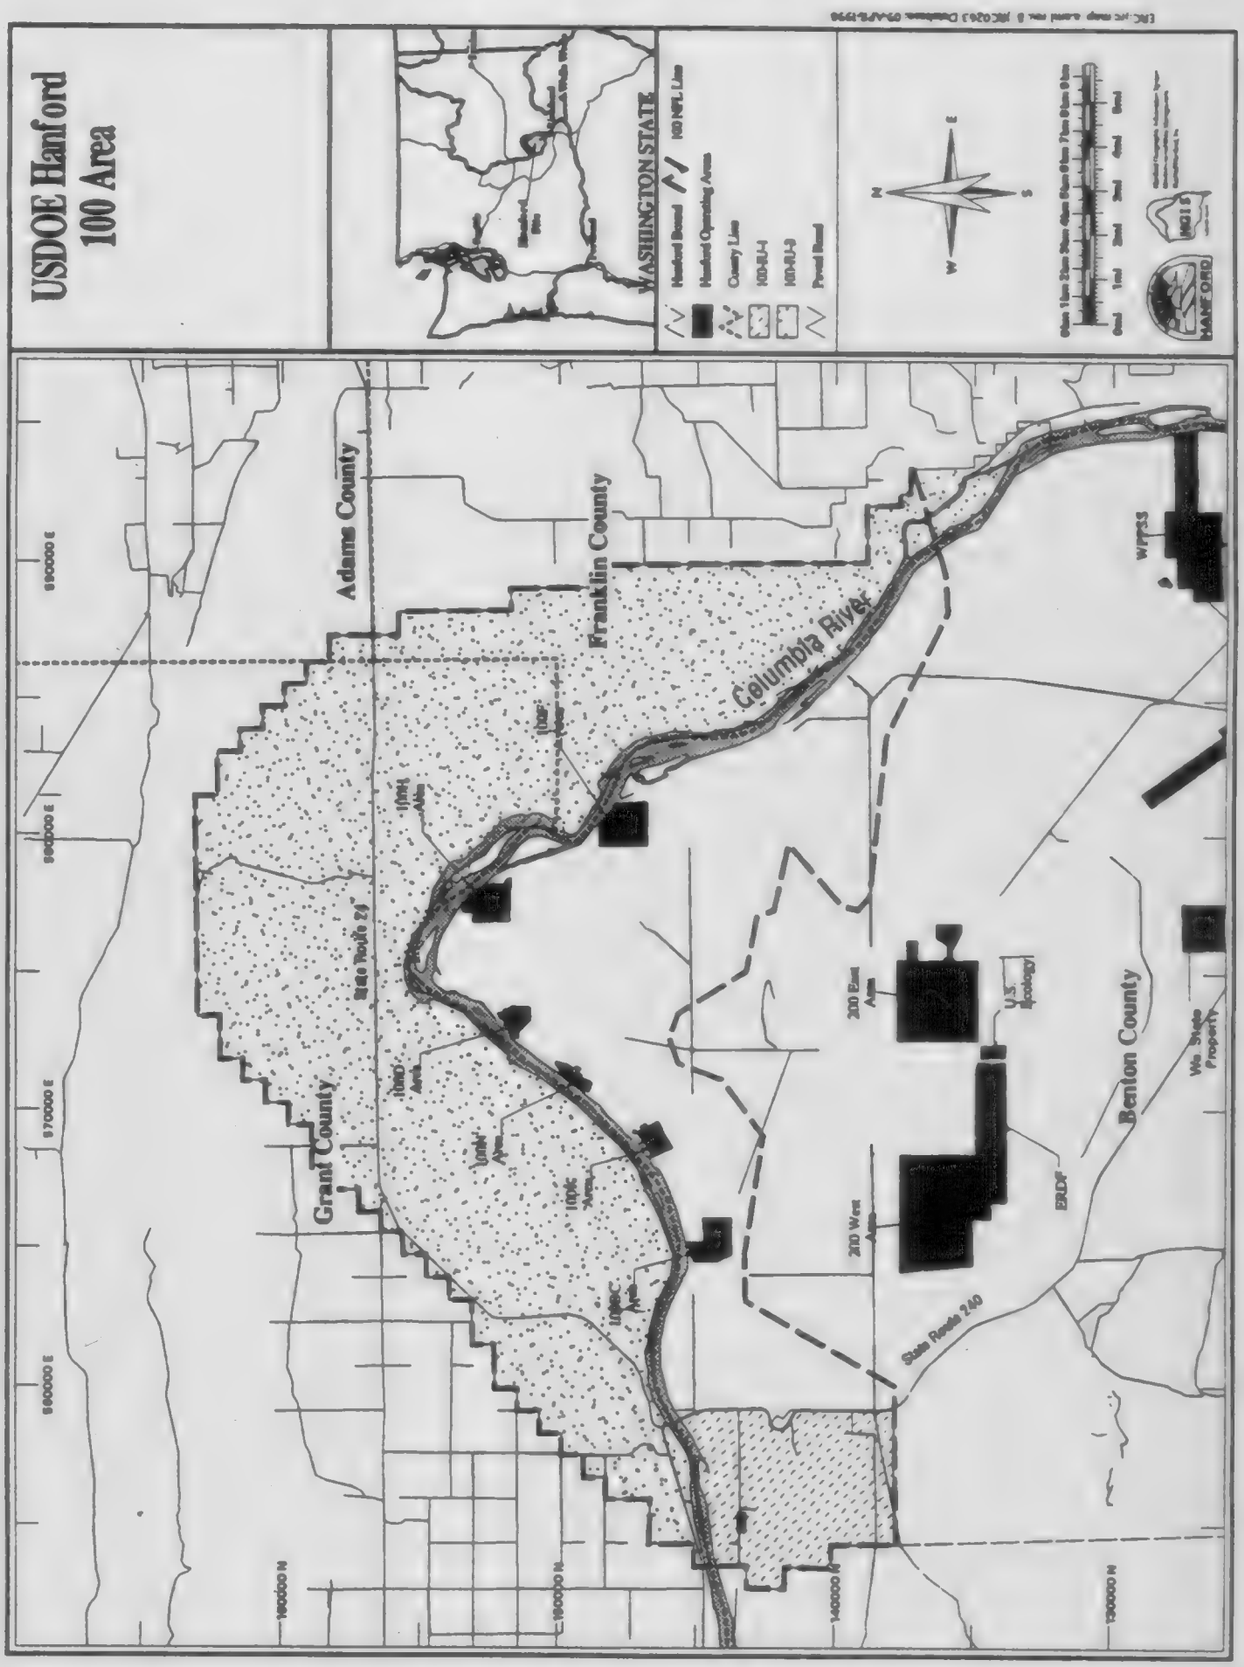
Public comment was held from June 25 through August 9, 1995 regarding the proposed plan for 100–IU–1 and 100–IU–3 Operable Units.

Current Status

In February 1996, a no further action record of decision was signed documenting that previous removal actions done in 1993 and 1994 removed all contaminants to below the Washington Administrative Code (WAC), WAC 173–340 Washington State Model Toxics Control Act (MTCA) and that these areas do not pose a threat to human health or the environment.

The State of Washington, through the Department of Ecology, concurs with EPA's final determination regarding this proposed partial deletion.

Dated: May 15, 1998.



Charles E. Findley,

Acting Regional Administrator, Region 10, Environmental Protection Agency.

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 67

[Docket No. FEMA–7246]

Proposed Flood Elevation Determinations

AGENCY: Federal Emergency Management Agency (FEMA).

ACTION: Proposed rule.

SUMMARY: Technical information or comments are requested on the proposed base (1% annual chance) flood elevations and proposed base flood elevation modifications for the communities listed below. The base flood elevations and modified base flood elevations are the basis for the floodplain management measures that the community is required either to adopt or to show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood InsuranceProgram (NFIP).

DATES: The comment period is ninety (90) days following the second publication of this proposed rule in a newspaper of local circulation in each community.

ADDRESSES: The proposed base flood elevations for each community are available for inspection at the office of the Chief Executive Officer of each community. The respective addresses are listed in the following table.

FOR FURTHER INFORMATION CONTACT: Matthew B. Miller, P.E., Chief, Hazards Study Branch, Mitigation Directorate, 500 C Street SW., Washington, DC 20472, (202) 646–3461.

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency proposes to make determinations of base flood elevations and modified base flood elevations for each community listed below, in accordance with Section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR 67.4(a).

These proposed base flood and modified base flood elevations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own, or pursuant to policies established by other Federal, State, or regional entities. These proposed elevations are used to meet the floodplain management requirements of the NFIP and are also used to calculate the appropriate flood insurance premium rates for new buildings built after these elevations are made final, and for the contents in these buildings.

National Environmental Policy Act

This proposed rule is categorically excluded from the requirements of 44 CFR Part 10, Environmental Consideration. No environmental impact assessment has been prepared.

Regulatory Flexibility Act

The Associate Director for Mitigation certifies that this proposed rule is exempt from the requirements of the Regulatory Flexibility Act because proposed or modified base flood elevations are required by the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and are required to establish and maintain community eligibility in the NFIP. No regulatory flexibility analysis has been prepared.

Regulatory Classification

This proposed rule is not a significant regulatory action under the criteria of Section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

Executive Order 12612, Federalism

This proposed rule involves no policies that have federalism implications under Executive Order 12612,Federalism, dated October 26, 1987.

Executive Order 12778, Civil Justice Reform

This proposed rule meets the applicable standards of Section 2(b)(2) of Executive Order 12778.

List of Subjects in 44 CFR Part 67

Administrative practice and procedure, Flood insurance, Reporting and recordkeeping requirements.

Accordingly, 44 CFR Part 67 is proposed to be amended as follows:

PART 67—[AMENDED]

1. The authority citation for part 67 continues to read as follows:

Authority: 42 U.S.C. 4001 *et seq.*; Reorganization Plan No. 3 of 1978, 3 CFR, 1978 Comp., p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp., p. 376.

§ 67.4 [Amended]

2. The tables published under the authority of § 67.4 are proposed to be amended as follows:

State	City/town/county	Source of flooding	Location	#Depth in feet above ground. *Elevation in feet. (NGVD)	
				Existing	Modified
Arizona	Quartzsite (Town) La Paz County.	Tyson Wash	Approximately 2,500 feet downstream of Tyson Drive.	None	*816
			Approximately 1,100 feet upstream of Tyson Drive.	None	*836
		Plymouth Wash	Approximately 500 feet upstream of confluence with Tyson Wash.	None	*830
			Just downstream of Plymouth Wash	None	*877
		Plomosa Wash	Approximately 750 feet upstream of confluence with Tyson Wash.	*851	*852
			Approximately 1,500 feet upstream of Plymouth Road.	None	*901
		La Cholla Wash-Main Branch.	At confluence with Tyson Wash	*838	*840
			Approximately 5,900 feet upstream of Kofa Road.	None	*917
		La Cholla Wash-North Branch.	Approximately 1,200 feet downstream of Tyson Drive.	None	*823
			Approximately 1,000 feet upstream of Kofa Road.	None	*870

State	City/town/county	Source of flooding	Location	#Depth in feet above ground. *Elevation in feet. (NGVD)

(Catalog of Federal Domestic Assistance No. 83.100, "Flood Insurance")

Dated: May 11, 1998.

Michael J. Armstrong,

Associate Director for Mitigation.

[FR Doc. 98–13737 Filed 5–21–98; 8:45 am]

BILLING CODE 6718–04–P

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 67

[Docket No. FEMA–7255]

Proposed Flood Elevation Determinations

AGENCY: Federal Emergency Management Agency, FEMA.

ACTION: Proposed rule.

SUMMARY: Technical information or comments are requested on the proposed base (1% annual chance) flood elevations and proposed base flood elevation modifications for the communities listed below. The base flood elevations are the basis for the floodplain management measures that the community is required either to adopt or to show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

DATES: The comment period is ninety (90) days following the second publication of this proposed rule in a newspaper of local circulation in each community.

ADDRESSES: The proposed base flood elevations for each community are available for inspection at the office of the Chief Executive Officer of each community. The respective addresses are listed in the following table.

FOR FURTHER INFORMATION CONTACT: Matthew B. Miller, P.E., Chief, Hazards Study Branch, Mitigation Directorate, 500 C Street SW., Washington, DC 20472, (202) 646–3461.

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency (FEMA or Agency) proposes to make determinations of base flood elevations and modified base flood elevations for each community listed below, in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR 67.4(a).

These proposed base flood and modified base flood elevations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own, or pursuant to policies established by other Federal, state or regional entities. These proposed elevations are used to meet the floodplain management requirements of the NFIP and are also used to calculate the appropriate flood insurance premium rates for new buildings built after these elevations are made final, and for the contents in these buildings.

National Environmental Policy Act

This proposed rule is categorically excluded from the requirements of 44 CFR Part 10, Environmental Consideration. No environmental impact assessment has been prepared.

Regulatory Flexibility Act

The Associate Director, Mitigation Directorate, certifies that this proposed rule is exempt from the requirements of the Regulatory Flexibility Act because proposed or modified base flood elevations are required by the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and are required to establish and maintain community eligibility in the National Flood Insurance Program. As a result, a regulatory flexibility analysis has not been prepared.

Regulatory Classification

This proposed rule is not a significant regulatory action under the criteria of section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

Executive Order 12612, Federalism

This proposed rule involves no policies that have federalism implications under Executive Order 12612, Federalism, dated October 26, 1987.

Executive Order 12778, Civil Justice Reform

This proposed rule meets the applicable standards of section 2(b)(2) of Executive Order 12778.

List of Subjects in 44 CFR Part 67

Administrative practice and procedure, Flood insurance, Reporting and recordkeeping requirements.

Accordingly, 44 CFR part 67 is proposed to be amended as follows:

PART 67—[AMENDED]

1. The authority citation for part 67 continues to read as follows:

Authority: 42 U.S.C. 4001 *et seq.*; Reorganization Plan No. 3 of 1978, 3 CFR, 1978 Comp., p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp., p. 376.

§ 67.4 [Amended]

2. The tables published under the authority of § 67.4 are proposed to be amended as follows:

State	City/town/county	Source of flooding	Location	#Depth in feet above ground. *Elevation in feet (NGVD)	
				Existing	Modified
Alabama	Birmingham (City) Jefferson County.	Tarrant Springs Branch	Approximately 25 feet upstream of confluence of Fivemile Creek.	*592	*591
			Approximately 500 feet downstream of Carson Road.	*708	*707
		Valley Creek	Approximately 750 feet upstream of U.S. Route 11.	*484	*486
			Approximately 1,200 feet upstream of 4th Avenue.	*570	*565
		Unnamed Creek 10	Approximately 700 feet downstream of Houston Road.	None	*659
			Approximately 500 feet upstream of Houston Road.	None	*672
		Black Creek (Fivemile Creek Basin)	At confluence with Fivemile Creek	*430	*426
			Approximately 911 feet downstream of Walker Chapel Road.	*430	*429
		Village Creek	Approximately 150 feet upstream of Avenue F.	*522	*523
			Approximately 9.8 miles upstream of West Boulevard.	None	*694
		Unnamed Creek 32	Approximately 0.4 mile downstream of 50th Street.	*595	*594
			Approximately 0.22 mile upstream of 64th Place South.	654	652
		Approximately 0.22 mile upstream of 64th Place South.	*654	*652	
		Old Unnamed Creek 34	At confluence with Village Creek	*665	*668
			At confluence with Unnamed Creek 34.	*683	*684
		Unnamed Creek 34	At confluence with Village Creek	None	*679
			Approximately 0.47 mile upstream of Private Road.	*696	*695

Maps available for inspection at the City Hall, Planning and Engineering Office, 710 North 20th Street, 5th Floor, Birmingham, Alabama.

Send comments to The Honorable Richard Arrington, Jr., Mayor of the City of Birmingham, Jefferson County, City Hall, 710 North 20th Street, Birmingham, Alabama 35203.

Alabama	Graysville (City)	Fivemile Creek	At downstream corporate limits	None	*323

[CC Docket 96–45, 97–160; DA 98–848]

Forward-Looking Economic Cost Mechanism For Universal Service Support

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: In this Public Notice, we seek to augment the record on certain issues relating to the creation of a federal forward-looking economic cost mechanism, including the appropriate input values for that mechanism and the level of the revenue benchmark.

DATES: Comments from interested parties are due on May 26, 1998, and reply comments are due on June 9, 1998.

ADDRESSES: Interested parties must file an original and five copies of their comments with the Office of Secretary, Federal Communications Commission, Room 222, 1919 M Street, NW., Washington, DC 20554. Parties should send three copies of their comments to Sheryl Todd, Common Carrier Bureau, Federal Communications Commission, 2100 M. St, NW., 8th Floor, Washington, DC 20554. Parties should send one copy of their comments to the Commission's copy contractor, International Transcription Service, 1231 20th Street, NW., Washington, DC 20036.

FOR FURTHER INFORMATION CONTACT: Brad Wimmer, Accounting Policy Division, Common Carrier Bureau, (202) 418–7400.

SUPPLEMENTARY INFORMATION:

1. On May 8, 1997, the Commission released a *Universal Service Order* on Universal Service CC Docket No. 96–45, FCC 97–157 (released May 8, 1997) 62 FR 32862 (June 17, 1997). In the *Universal Service Order*, the Commission adopted a plan for universal service support for rural, insular, and high cost areas that will replace existing implicit federal subsidies with explicit, competitively neutral federal universal service support mechanisms. The Commission adopted the Joint Board's recommendation that an eligible carrier's level of universal service support should be based upon the forward-looking economic cost of

1998
UMI

constructing and operating the network facilities and functions used to provide the services that will be supported by the federal universal service support mechanisms. The Commission determined that, beginning January 1, 1999, non-rural carriers will receive support based on the forward-looking economic cost of providing the supported services. The Commission further determined that high cost support for rural carriers should continue essentially unchanged and should not be based on forward-looking costs until further review has been completed, but no sooner than 2001.

2. Consistent with the Joint Board's recommendation, the Commission concluded in the *Universal Service Order* that it would need to determine costs based on a careful analysis of efficient network design, engineering practices, available technologies, and current technology costs. That is, to determine forward-looking costs, the Commission decided to look at all of the costs and cost-causative factors that go into building a network. The Commission decided to do this in two stages: First, it would look at the network design, engineering, and technology issues relevant to designing a network to provide the supported services. Second, the Commission said that it would look at the costs of the components of the network, such as cabling and switch costs, and various capital cost parameters, such as debt-equity ratios and depreciation rates ("input values").

3. In a Further Notice of Proposed Rulemaking (*Further Notice*) 62 FR 42457 (Aug. 7, 1997), the Commission established a multi-phase plan to develop a federal mechanism that would send the correct signals for entry, investment, and innovation.[1] In particular, the Commission sought comment on the platform design and input values that it should adopt in a federal mechanism to estimate the cost of each of the elements of the telephone network necessary for non-rural carriers to provide the supported services to high cost areas. On July 9, 1997, the Bureau sought information through a "Data Request" from certain non-rural local exchange carriers (LECs) and holding companies to assist the Commission in evaluating the models and selecting a federal mechanism.[2]

Issues for Comment

4. We have already received significant comment in response to the *Further Notice* and *Data Request*. In light of the passage of time, however, we wish to give parties the opportunity to update their comments regarding the input values that should be used in the federal mechanism and in setting the level of the revenue benchmark. We also seek further comment on certain issues that may not have been adequately addressed by commenters in response to the *Further Notice* or *Data Request*. We note that parties' arguments for and against specific input values are significantly more persuasive when accompanied by supporting empirical data, including the assumptions on which those data are based. If empirical data are unavailable, we encourage parties to explain how proposed input values are otherwise verifiable and appropriate. By seeking additional comments on specific input values, we are not prejudging the outcome of issues raised in the Report to Congress or in the Public Notice on Proposals to Revise the Methodology for Determining Universal Service Support.[3] We emphasize that we are not seeking comment in this Public Notice on the network design, engineering and technology issues.

5. The issues relating to input values were outlined in the *Further Notice* and *Data Request*, and parties are encouraged to review the *Further Notice* and *Data Request* closely before preparing any comments concerning inputs. Parties that have already filed thorough comments concerning inputs in response to the *Further Notice* and *Data Request* should not reiterate those comments; the Commission will consider inputs comments filed in response to the *Further Notice* and *Data Request*, as well as comments filed in response to this Public Notice, in selecting the input values for the federal mechanism.

A. Inputs Issues

i. Customer Location Data

6. In the *Further Notice*, the Commission requested comment on the use of data that associate the location of each customer with latitudinal and longitudinal coordinates (geocode data) in a forward-looking economic cost mechanism.[4] In a *Public Notice* released on November 13, 1997 (62 FR 65389 (Dec.12, 1997)), the Common Carrier Bureau (Bureau) recommended that "models be capable of accepting and using geocode data to the extent that such data are available and reliable."[5]

7. The only geocode data currently on the record are those provided by the proponents of the HAI model.[6] The Metromail database on which HAI's residential geocodes are based is a commercial database developed primarily for the purpose of direct marketing. HAI's geocodes for businesses are based on a database of business addresses compiled by Dun & Bradstreet.

8. We seek comment on any alternative source of geocode data, or databases that could be used to develop geocodes for use in 1999, including information on the openness, reliability, and cost of the data.[7] For example, WorldCom notes the availability of global positioning satellite (GPS) devices, which they contend can provide latitude and longitude coordinates that are more precise than geocoding methods utilized by HAI.[8] We seek comment on whether the benefits of geocoding using a GPS device outweigh the burdens associated with developing the data, compared to

[6] HAI was submitted by AT&T and MCI. See Letter from Richard N. Clarke, AT&T, to Magalie Roman Salas, FCC, dated Dec. 11, 1997). Versions of HAI filed before February 3, 1998, were known as the Hatfield Model.

[7] In filings with the Common Carrier Bureau, several incumbent LECs have represented that they have geocoded a relatively large percentage of their customers. See, *e.g.*, Letter from Ted Hackman, Cincinnati Bell, to Secretary, FCC, dated April 24, 1998 (99.8%,99.6%, and 99.2% of its customer accounts for Ohio, Kentucky, and Indiana, respectively); Letter from W. Scott Randolph, GTE, to Secretary, FCC, dated April 27, 1998.

[8] A GPS device can associate the physical structure to which a carrier provides services, such as a house, with coordinates identified by satellite technology. Letter from David Porter, WorldCom, to William Caton, FCC, dated Oct. 16, 1997 (World Com Oct. 16 *ex parte*) at 3.

alternative methods of obtaining geocoded data. We also request comment on other possible methods and technologies for geocoding business and residential locations, and their associated costs, in particular for partial use in determining support for 1999. Commenters suggesting alternative sources of data should include empirical evidence documenting and verifying the accuracy of these data sources, including how these data are typically used, who is currently using the data, the extent to which these data would be available for determining support in 1999, and the criteria used to develop these data.

ii. Maximum Copper Loop Length

9. In addition, we seek to augment the record on the appropriate maximum loop length that the federal mechanism should assume is permissible without the use of significantly more expensive electronics. The proponents of the BCPM model [9] assert that copper loops longer than 12,000 feet would require the use of a substantially more expensive extended-range card in the digital loop carrier (DLC), while the HAI proponents assert that copper lengths can extend to 18,000 feet using only a slightly more expensive card in the DLC. The resolution of this question has a significant effect on cost estimates because the maximum copper length constrains the maximum size of a serving area. We seek comment on this issue. In particular, we seek comment on the type and cost of line cards required to serve loops between 12,000 and 18,000 feet from a DLC remote terminal.

iii. Defining "Households"

10. We also seek further comment on the appropriate input value to measure the number of households used in the federal mechanism. The sixth criterion identified in the Universal Service Order specifies that a "model must estimate the cost of providing service for all businesses and households within a geographic region." [10] It appears that the Census Bureau uses the term "households" as a term of art to refer to occupied housing units.[11] Different parties have advocated alternative interpretations of the sixth criterion. BCPM identifies the cost of outside plant that would serve all housing units,[12] occupied or not, while HAI identifies the cost of serving Census-defined households with telephones.[13]

11. We encourage parties to submit additional comment on the appropriate universe of "households" that should be assumed for purposes of calculating the forward-looking cost of providing the supported services: total housing units (occupied and unoccupied), total households (housing units that are occupied), or households with telephones.[14] We also seek comment on the HAI proponents' assumption that uninhabited housing units or households without telephones are more likely to be located in remote areas than households with telephones.

12. In particular, we seek comment on alternative sources of data to those used in HAI [15] and BCPM [16] for determining the number of residential and business customers located in either the wire center, Census Block Group (CBG),[17] or CB.[18] Any such information should include empirical evidence documenting and verifying the accuracy, cost, and current availability of these data sources. We ask commenters to address whether we should require incumbent LECs to provide the universal service administrator with wire center boundary data and the number of residential, multi-line and single-line business lines served in each wire center.

iv. Depreciation

13. In the Universal Service Order, the Commission articulated a set of criteria that acceptable cost studies or models must meet in order to be used to determine federal high-cost support. These criteria were adopted to ensure consistency in the calculations of federal universal service support. In criterion five, the Commission noted that "(e)conomic lives and future net salvage percentages used in calculating depreciation expense should be within the FCC-authorized range and use currently authorized depreciation lives." [19]

14. We seek comment on the particular values of depreciation lives and future net salvage percentages we should use to determine the forward-looking cost of providing supported services in a competitive environment. Commenters submitting specific proposals should submit the data and a description of the methodologies used to derive their estimates of depreciation lives and future net salvage values for all classes of assets. Because economic lives may differ from physical lives for a variety of reasons, we ask commenters to identify all of the factors used to derive their estimates. Commenters should discuss and quantify the impact all factors considered in their analysis have on projected economic lives and salvage values. For example, commenters should address the effect potential or actual competition, changes in asset prices, or the desire to introduce new services may have on asset lives. Commenters should also explain fully why their approach is appropriate for a model being used to estimate the forward-looking cost of providing supported services in high-cost areas and whether determining the cost of supported services requires the use of depreciation lives and salvage rates

---

[9] BCPM is sponsored by BellSouth, U S West, and Sprint Local Telephone Company. *See Submission to CC Docket Nos. 96–45 and 97–160 by Bellsouth, U S West, and Sprint dated Dec. 11, 1997.*

[10] *Universal Service Order*, 12 FCC Rcd at 8915 para. 250.

[11] See the Census Bureau's website at http://www.census.gov/population/estimates/housing/prhuhht1.txt (defining a housing unit as "a house, an apartment, a mobile home, a group of rooms or a single room that is occupied (or if vacant, is intended for occupancy) as a separate living quarters."). *See also* the Census Bureau's website at http://www.census.gov/population/methods/sthhmet.txt ("A housing unit is classified as vacant if no one is living in it, unless its occupants are only temporarily absent * * *. Vacant units are excluded if they are open to the elements; that is, the roof, walls, windows, and/or doors no longer protect the interior from the elements, or if there is positive evidence that the unit is condemned or is to be demolished.")

[12] BCPM December 11 submission, Model Methodology at 8.

[13] AT&T and MCI *ex parte*, December 23, 1997.

[14] We note that the question of which "households" and business locations should be included for purposes of estimating the forward-looking cost of providing the supported services is distinct from the question of which lines should be supported. Indeed, we specified that the model must estimate the costs incurred to provide multi-line business services, special access, private lines and multiple residential connections. *Universal Service Order*, 12 FCC Rcd at 8915 para. 250. *Cf. Recommended Decision*, 12 FCC Rcd 87, 132–134, paras. 89–92 (1996) (recommending that support should be provided only for primary residential connections and single-line business connections, and that business connections should receive a lower level of support).

[15] In determining the number of customers in a Census Block (CB) or wire center, HAI utilizes the PNR National Access Line Model (NALM). The PNR NALM uses PNR survey information, the Local Exchange Routing Guide (LERG), Business Location Research (BLR) wire-center boundaries, a Dun & Bradstreet business database, the Metromail household database, the Claritas 1996 demographic database, and U.S. Census Bureau estimates to calculate both the number of residential and business locations and access lines in each CB, and in each wire center in the United States.

[16] BCPM also uses U.S. Census Bureau data and business line data obtained from PNR.

[17] A census block group is a collection of census blocks. The Bureau of the Census defines a "census block group" as "generally contain[ing] between 250 and 550 housing units, with the ideal size being 400 housing units." U.S. Census Bureau, 1990 Census of Population and Housing, at App. A, "Area Classifications" (issued Mar. 1992).

[18] We note that our request for a source of accurate and reliable data about the number of residential and business customers in a geographic area is related to our request for accurate, reliable, and extensive geocode data.

[19] *Universal Service Order*, 12 FCC Rcd at 8914 para. 250.

specifically designed for that purpose. Commenters recommending asset lives and salvage values that fall outside of Commission ranges should explain fully why such lives are appropriate. Finally, we note that BCPM and HAI use different methodologies for computing depreciation expenses. HAI uses straight-line depreciation,[20] while BCPM incorporates many different methodologies,[21] to compute depreciation and capital expenses. We seek comment on the specific advantages of the different methodologies available for calculating rates of economic depreciation (including those used in BCPM and HAI), the use of different methodologies for different assets, and the effect of their use on calculated costs. Commenters should provide studies supporting the methodologies advocated.

v. Cost of Installing Outside Plant

15. In the *Further Notice*, the Commission noted that a carrier's outside plant consists of a mix of aerial, underground, and buried cable. The cost of installing each type of outside plant depends on terrain conditions, line density, and other factors. For example, depending on the situation, cable can be placed in trenches dug by hand or with a backhoe, or it may be plowed directly into the ground. The total cost of construction depends upon the cost of each of these activities and the percentage of cable that is placed in each manner. In the *Further Notice*, the Commission tentatively concluded that installation costs for cable should vary based on terrain and line density and reached other tentative conclusions about the cost of installing outside plant.[22] The model proponents have filed default values for the cost of each of these activities and the percentage of cable that would be installed in each manner. We seek comment on the tentative conclusions in the *Further Notice* and the model proponents' default values. Additionally, Dr. David Gabel of Queens College has analyzed data from the Rural Utilities Service regarding the cost of installing cables. We seek comment on Dr. Gabel's analysis and whether it is applicable to non-rural carriers.[23] Parties supporting or refuting the appropriateness of the default values, or proposing alternate values, should provide documentation in support of their position. For example, parties may provide information on labor and capital tools rates, along with the quantity of inputs needed to construct the plant. Commenters should also address whether it is appropriate to use a composite rate for the nation or whether these rates should differ by state or region.

B. Revenues to be Included and Level of the Benchmark

16. In the *Universal Service Order*, the Commission determined that the level of federal high cost support that eligible non-rural carriers will receive will be 25 percent of the difference between the estimated forward-looking economic cost of providing the supported services and a revenue benchmark.[24] The Joint Board recommended that the Commission adopt a nationwide revenue benchmark to calculate such support. Because the "cost estimated by the proxy models includes the cost of the facilities used to provide (local, discretionary, access, and other) services," [25] the Joint Board concluded that the benchmark should include revenues generated by all of the services provided over the network being modeled.[26] Further, the Joint Board recommended that the Commission adopt separate benchmarks for residential and business services.[27] In April 1997, a majority of the state members of the Joint Board concluded that the Commission should establish a benchmark based on cost—specifically, the national average proxy cost—rather than revenue against which to compare costs in a given area in order to determine support for that area.[28]

17. In the *Universal Service Order*, the Commission adopted the Joint Board's recommendation to establish a revenue-based benchmark, but indicated its intention to seek comment on the specific benchmark or benchmarks that should be used.[29] In the *Universal Service Order*, the Commission found that the calculation of the revenue benchmarks must be consistent with the method of calculating the forward-looking cost of constructing and operating the network.[30] In particular, it indicated in the *Universal Service Order* that the Commission would clarify the appropriate amount of access charge revenue that should be included in the revenue benchmark.[31] We seek comment generally on the amount of access revenues that should be included in the benchmark. Also, in the *Universal Service Order*, the Commission noted that the models filed in this proceeding do not include estimates of the costs of all the elements used in the delivery of access services.[32] Because access charges currently are above cost, however, the Commission concluded that "unless and until both interstate and intrastate access charges have been reduced to recover only per-minute switch and transport costs, access revenues should be included in the benchmark." [33] Similarly, the Commission also stated that "(w)e will seek further information to clarify the appropriate amount of * * * intraLATA toll revenue that should be included in the revenue benchmark." [34] We, therefore, seek comment on whether we should exclude from the revenue-benchmark estimates, for purposes of determining universal service support, the incremental costs associated with the provision of services that are not supported by universal service but which contribute to the revenue benchmark. We seek comment on this issue and ask commenters to provide estimates of the amount that should be deducted from the benchmark. We note that the models exclude the costs of switching and transport for intraLATA toll and interstate and intrastate access services. Alternatively, we seek comment on whether the models should be altered to include the incremental costs associated with the provision of services that are not supported by

[20] HAI Dec. 11 submission, Model Description at 67.

April 10, 1998). See also Common Carrier Bureau Seeks Comment on Proposals to Revise the Methodology for Determining Universal Service Support, *Public Notice*, DA 98–715 (rel. April 15, 1998).

[25] The Joint Board stated that "[d]iscretionary services include services that are added on to basic local service, e.g., call waiting, call forwarding or caller ID." *Recommended Decision*, 12 FCC Rcd at 246 n.1002.

[26] *Recommended Decision*, 12 FCC Rcd at 246–47.

[27] *Recommended Decision*, 12 FCC Rcd at 247.

[28] Second State Proxy Models Report at 14.

[29] *Universal Service Order*, 12 FCC Rcd at 8919–20, 8923–24 paras. 259, 266.

[30] *Universal Service Order*, 12 FCC Rcd at 8924 para. 267. Specifically, for purposes of determining support, a revenue benchmark could be considered consistent with forward-looking cost estimates if all of the facilities used to deliver services included in the revenue benchmark are included in the cost estimates.

[31] *Universal Service Order*, 12 FCC Rcd at 8924 para. 267.

[32] *Universal Service Order*, 12 FCC Rcd at 8921 para. 262.

[33] *Universal Service Order*, 12 FCC Rcd at 8921 para. 262.

[34] *Universal Service Order*, 12 FCC Rcd at 8924 para. 267.

universal service but which contribute to the revenue benchmark.

18. We also encourage parties to provide further information about the services that can be provided over the network that the universal service mechanism is designed to support, and the revenues related to those services, because such information will enable us to set the benchmarks accurately. Based on 1994 data received in response to our earlier data request in CC Docket No. 80–286, the Commission suggested in the *Universal Service Order* that the benchmarks might be set at approximately $31 for residential service and $51 for business service.[35]

Final Regulatory Flexibility Analysis

19. In the *Universal Service Order* we conducted a Final Regulatory Flexibility Analysis (FRFA),[36] as required by the Regulatory Flexibility Act (RFA).[37] We received no petitions for reconsideration of that FRFA. In this present Public Notice, the Commission promulgates no additional final rules, and our action does not affect the previous analysis. If commenters believe that the proposals discussed in this Public Notice require additional RFA analysis, they should include a discussion of these issues in their comments.

Federal Communications Commission.

Magalie Roman Salas,

Secretary.

Fish and Wildlife Service

50 CFR Part 17

RIN 1018–AC13

Endangered and Threatened Wildlife and Plants; Reopening of Comment Period on Proposed Endangered Status for the San Xavier Talussnail

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule; notice of reopening of public comment period.

SUMMARY: The Fish and Wildlife Service (Service) provides notice that the public comment period for the proposal to list the San Xavier talussnail (*Sonorella eremita*) is reopened. This land snail is known to occur at a single site near Tucson, Arizona, in an area of limestone talus about 50 by 100 feet in size.

DATES: The comment period originally closed on May 24, 1994. This notice reopens the public comment period, which now closes on July 21, 1998.

ADDRESSES: Written comments and materials should be sent to the Field Supervisor, Arizona Ecological Services Field Office, U.S. Fish and Wildlife Service, 2321 W. Royal Palm Road, Suite 103, Phoenix, Arizona 85021. Comments and materials received will be available for public inspection during normal business hours, by appointment, at the above address.

FOR FURTHER INFORMATION CONTACT: Debra Bills, Arizona Ecological Services Field Office, at the above address or telephone (602) 640–2720.

SUPPLEMENTARY INFORMATION:

Background

The San Xavier talussnail was first proposed as endangered on March 23, 1994 (59 FR 13691). At that time, a 60-day public comment period was opened until May 23, 1994, and all interested parties were requested to submit factual reports or information that might contribute to the development of a final rule. A final determination of whether to list the San Xavier talussnail has not yet been made.

Following a recent examination of property boundaries, the Service discovered that the owner of the habitat occupied by the San Xavier talussnail is not the entity previously believed to be the owner. In consideration of the new information concerning ownership of the species' habitat and the length of time that has elapsed since the initial proposal, the Service has determined that reopening the comment period is necessary. The Service is seeking comments or suggestions from the public, other concerned governmental agencies, the scientific community, industry, or any other interested party concerning this proposed rule. The Service is seeking any new information that may have been developed since the proposal was published, and that may expand the current knowledge concerning the status, distribution, or threats surrounding the San Xavier talussnail.

Author: The primary author of this document is Jennifer Fowler-Probst, Arizona Ecological Services Field Office (see **ADDRESSES** section).

Authority

The authority for this action is the Endangered Species Act (16 U.S.C. 1532 *et seq.*).

Dated: May 13, 1998.

Jamie Rappaport Clark,

Director, Fish and Wildlife Service.

50 CFR Part 20

RIN 1018–AD74

Extension of Comment Period: Migratory Bird Hunting Regulations Regarding Baiting and Baited Areas

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule; extension of comment period.

SUMMARY: The Service is extending the comment period on the **Federal Register** rule dated March 25, 1998 (63 FR 14415) that invites public comments on proposed changes to the migratory bird hunting regulations regarding baiting and baited areas.

DATES: The deadline for receipt of comments will be extended form May 25, 1998 to October 1, 1998.

ADDRESSES: Comments regarding this proposed rulemaking should be addressed to: Director, U.S. Fish and Wildlife Service, Post Office Box 3247, Arlington, Virginia 22203–3247, or sent via electronic mail to: R9LE—WWW@FWS.GOV. Comments may be hand delivered to 4401 North Fairfax Drive, Suite 500, Arlington, Virginia 22203. The public may inspect comments during normal business hours at 4401 North Fairfax Drive, Suite 500, Arlington, Virginia 22203.

FOR FURTHER INFORMATION CONTACT: Keven Adams, Chief, Division of Law Enforcement, telephone 703/358–1949, or Paul Schmidt, Chief, Office of Migratory Bird Management, telephone 703/358–1714.

SUPPLEMENTARY INFORMATION:

Background

The Fish and Wildlife Service (Service) has authority (16 U.S.C. 703–712 and 16 U.S.C. 742a-j) to regulate activities involving the hunting and other taking of migratory game birds. The Service has promulgated regulations (50 CFR part 20) for the hunting of migratory game birds that

---

[35] *Universal Service Order*, 12 FCC Rcd at 8924 para. 267.

[36] *Universal Service Order*, 12 FCC Rcd at 9219–9260 paras. 870–983.

[37] See 5 U.S.C. 604. The RFA, see 5 U.S.C. 601 *et. seq.*, has been amended by the Contract With America Advancement Act of 1996, Pub. L. 104–121, 110 Stat. 847 (1996) (CWAAA). Title II of the CWAAA is the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA).

includes sections for *Methods of Take* and *Definitions of Terms.*

In a **Federal Register** notice dated March 25, 1998, the Service proposed new regulatory language for: accidental scattering of agricultural crops or natural vegetation incidental to hunting, normal agricultural and soil stabilization practices, baited areas, baiting, manipulation, natural vegetation, and top-sowing of seeds. Proposed changes also included new guidance with respect to hunting over natural vegetation that has been manipulated. However, no change was proposed regarding application of strict liability to the migratory game bird baiting regulations.

The Service has received request from a number of organizations to extend the comment period. The Service invites careful consideration by all parties, and welcomes serious scrutiny from those committed to the long-term conservation of migratory birds. Therefore, to facilitate substantive public review, the Service is extending the comment period through October 1, 1998.

Dated: May 19, 1998.

Donald J. Barry,

Acting Assistant Secretary for Fish and Wildlife and Parks.

Vol. 63, No. 99
Friday, May 22, 1998

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

May 18, 1998.

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Pub. L. 104–13. Comments regarding (a) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology should be addressed to: Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), Washington, DC 20503 *and* to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250–7602. Comments regarding these information collections are best assured of having their full effect if received within 30 days of this notification. Copies of the submission(s) may be obtained by calling (202) 720–6746.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

National Agricultural Statistics Service

Title: Respondent Information Evaluation.

OMB Control Number: 0535–New.

Summary of Collection: The National Agricultural Statistics Service's (NASS) primary function is to prepare and issue state and national estimates of crop and livestock production. Preparation of these estimates requires voluntary cooperation from thousands of crop and livestock producers regarding their operations each year. A serious threat to NASS data quality is nonresponse to surveys. NASS is initiating a coordinated effort to increase voluntary survey cooperation. This effort requires the collection of information on how NASS data is used and what data and services would be helpful in the future.

Need and Use of The Information: Information about the many uses of NASS reports will be used to enlist the cooperation of producers whose information the reports are based on. Public forums with producers will be used to develop potential educational material for use in conjunction with ongoing NASS survey programs. These materials will be tested in a variety of formats suited to different channels of communications with respondents including interviewers, State Statistical Office personnel, survey questionnaires, releases and publications, print and broadcast media, and educational settings.

Description of Respondents: Business or other for-profit.

Number of Respondents: 11,717.

Frequency of Responses: Reporting: Quarterly; annually.

Total Burden Hours: 572.

Grain Inspection, Packers and Stockyards Administration

Title: "Clear Title" Regulations to Implement Section 1324 of the Food Security Act of 1985.

OMB Control Number: 0580–0016.

Summary of Collection: In conjunction with Section 1324 of the Food Security Act of 1985, the Grain Inspection, Packers and Stockyards Administration (GIPSA), on behalf of the Secretary of Agriculture, is authorized to certify State central filing systems. The central filing systems are necessary in certain states to notify buyers of farm products of any mortgages or liens on the products. Information is collected from State agencies describing their proposed central filing systems.

Need and Use of the Information: GIPSA uses the information supplied by State agencies to carry out the Secretary's responsibility for determining whether a State's central filing system for notification of buyers of farm products of any mortgages or liens on the products meets certification requirements under Section 1324 of the Food Security Act of 1985.

Description of Respondents: State, Local or Tribal Government.

Number of Respondents: 1.

Frequency of Responses: Reporting: On occasion.

Total Burden hours: 12.

Food and Nutrition Service

Title: Issuance Reconciliation Report: FNS–46.

OMB Control Number: 0584–0080.

Summary of Collection: The Food and Nutrition Service (FNS), on behalf of the Secretary of Agriculture, administers the Food Stamp Program through State agencies. These State agencies are accountable for issuance and control of food stamp coupons. Accordingly, States are liable to USDA for any financial losses involved in the acceptance, storage, and issuance of food stamp coupons. Information is required from State agencies on wrongfully issued benefits including undocumented issuances, and returned benefits, stolen and transacted accountable issuance documents, replacement benefits, and obligations from the exchange of food stamp coupons for any reason.

Need and Use of the Information: FNS provides the FNS–46 form, Issuance Reconciliation Report, for State agencies to use in reporting reconciliation results from analyzes of the benefit issuances for all issuance systems with the record-for-issuance file. FNS uses this information to assess liability and to determine billing amounts.

Description of Respondents: State, Local or Tribal Government.

Number of Respondents: 388.

Frequency of Responses: Reporting: Monthly.

Total Burden hours: 37,248.

National Agricultural Statistics Service

Title: Beef Cattle Pesticide Use.

OMB Control Number: 0535–NEW.

Summary of Collection: The National Agricultural Statistics Service (NASS) has been asked by Colorado State University (CSU) to conduct a Beef Cattle Pesticide Use Survey in 12 Western States. The survey is designed to provide information on insecticides applied to beef cattle, insecticides used for cattle facilities, and non-pesticide insect management practices. Data collected will help provide quality information to fulfill certain requirements of the food Quality Protection Act of 1996. In order to do an effective risk assessment, accurate pesticide use information is essential. CSU will use the results from this survey to produce a Pesticide Benefit Assessments report for the Environmental Protection Agency (EPA). Information from this report will aid the EPA in evaluating the risks and the benefits of pesticide use.

Need and Use of the Information: NASS will collect data to develop a uniform survey system to determine the amount of active ingredients from insecticides applied to beef cattle and beef cattle facilities and to measure pest management practices on beef cattle. Data from the survey will provide the necessary insecticide use data needed by EPA. The data will provide factual information on the level of insecticide use and types of pest prevention measures being implemented.

Description of Respondents: Farm.

Number of Respondents: 2,000.

Frequency of Responses: Reporting: Other (One-time).

Total Burden hours: 467

National Agricultural Statistics Service

Title: Agricultural Prices.

OMB Control Number: 0535–0003.

Summary of Collection: Estimates of prices received by farmers and prices paid for production goods and services are needed by the U.S. Department of Agriculture, National Agricultural Statistics Service (NASS), to compute Parity Prices in accordance with requirements of the Agricultural Adjustment Act of 1938 as amended (Title III, Subtitle A, Section 301a) and estimate value of production, inventory values, and cash receipts from farming.

In addition, NASS provides commodity product prices used in the calculation of the Basic Formula Prices for Milk, determines the level for farmer owned reserves and provides guidelines for Risk Management Agency price selection options and determines Federal disaster prices to be paid and the grazing fee on Federal lands. General authority for these data collection activities is granted under U.S. Code Title 7, Section 2204. This status specifies that "The Secretary of Agriculture shall procure and preserve all information concerning agriculture which he can obtain by the collection of statistics * * * and shall distribute them among agriculturalists".

Need and Use of the Information: The NASS price program has undergone significant modifications including the updating of weights and changing the construction of prices and paid by farmers indexes. The indexes are used in computing the parity prices that NASS is required by statute to publish monthly. Parity prices are used to establish and maintain Federal Market Orders. Currently, there are 41 market orders that use these prices.

Description of Respondents: Business or other for-profit; farm.

Number of Respondents: 19,387.

Frequency of Responses: Reporting: On occasion; monthly; annually.

Total Burden Hours: 14,484.

Animal Plant and Health Inspection Service

Title: Exotic Newcastle Disease in Birds and Poultry; Chlamydiosis in Poultry.

OMB Control Number: 0579–0016.

Summary of Collection: Title 21, U.S.C. authorizes the United States Department of Agriculture and the Animal Plant and Health Inspection Service (APHIS) to take necessary actions to prevent, control and eliminate domestic diseases, as well as to prevent and to manage non-domestic diseases such as exotic Newcastle disease (END) and Chlamydiosis. Disease prevention is the most effective method for maintaining a healthy animal population and for enhancing our ability to compete in the world market of animals and animal product trade.

Need and Use of the Information: APHIS will collect information through the use of documents attesting to the health status of the birds or poultry being moved, the number and types of birds or poultry being moved in a particular shipment, the shipment's point of origin, the shipment's destination, and the reason for the interstate movement. These documents also provide useful "traceback" information in the event an infected bird or chicken is discovered and an investigation must be launched to determine where the bird or chicken originated. The information provided by these documents is critical to APHIS' ability to prevent the interstate spread of Exotic Newcastle Disease, which is highly contagious and capable of causing significant economic harm to the U.S. poultry industry.

Description of Respondents: Business or other for-profit; Individuals or households; farms; State, Local or Tribal Government.

Number of Respondents: 45.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 21.

Food and Nutrition Service

Title: Study of WIC Participants and Program Characteristics: 1998 and 2000.

OMB Control Number: 0584–New.

Summary of Collection: Section 17(g)(5) of the Child Nutrition Act of 1996 as amended through Public Law 105–24, July 3, 1997, authorizes the Food and Nutrition Service (FNS) to manage the Special Supplement Nutrition Program for Women, Infants, and Children (WIC) which was created by the Congress in 1972 as an adjunct to health care for low-income pregnant, postpartum, and breastfeeding women as well as for low-income infants and children (up to age five) who are at nutritional risk. The WIC Program provides nutritious food, nutritional needs of these individuals and to prevent health problems associated with poor nutrition during pregnancy and early childhood. The purpose of the 1998 and 2000 studies of WIC participant and program characteristics (PC98 and PC2000) are to collect data, to prepare a report, and to develop a set of analysis files on the characteristics of WIC participants and programs. The data collected for the study will be used by FNS to manage the WIC Program, prepare WIC budgets, answer specific analytic questions, and guide future research.

Need and Use of the Information: FNS will collect information through the use of questionnaires, surveys, and applications on the income and nutritional risk characteristics of WIC participants; data on WIC program participation for migrant farm worker families; and other information on WIC participation that is deemed appropriate by the Secretary of Agriculture. The information collected in the study will be used by FNS for general program monitoring such as reviewing State budget submissions and fiscal reports. Access to current data is crucial to meeting other management information needs such as preparing federal budget estimates, responding to congressional inquiries, and developing appropriate research initiatives for the WIC Program.

Description of Respondents: State, Local, or Tribal Government.

Number of Respondents: 447.

Frequency of Responses: Reporting: Biennially.

Total Burden Hours: 105.

Nancy Sternberg,

Departmental Information Clearance Officer.

[FR Doc. 98–13694 Filed 5–21–98; 8:45 am]

BILLING CODE 3410–01–M

DEPARTMENT OF AGRICULTURE

Agricultural Research Service

Notice of Intent to Request an Extension of a Currently Approved Information Collection

AGENCY: Agricultural Research Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13) and Office of Management and Budget (OMB) regulations at 5 CFR Part 1320 (60 FR 44978, August 29, 1995), this notice announces the Agricultural Research Service's (ARS) intention to request an extension of a currently approved information collection, Form AD–761, USDA Patent License Application for Government Invention that expires August 31, 1998.

DATES: Comments must be received by July 27, 1998 to be assured of consideration.

ADDITIONAL INFORMATION OR COMMENTS: Contact June Blalock, USDA, ARS, Office of Technology Transfer, Room 415, Building 005, BARC-West, Beltsville, Maryland 20705–2350; Telephone Number 301–504–5989.

SUPPLEMENTARY INFORMATION:

Title: USDA Patent License Application for Government Invention.

OMB Number: 0518–0003.

Expiration Date of Approval: August 31, 1998.

Type of Request: To extend a currently approved information collection.

Abstract: The USDA patent licensing program grants patent licenses to qualified businesses and individuals who wish to commercialize inventions arising from federally supported research. The objective of the program is to use the patent system to promote the utilization of inventions arising from such research. The licensing of federally owned inventions must be done in accordance with the terms, conditions and procedures prescribed under 37 CFR Part 404. Application for a license must be addressed to the Federal agency having custody of the invention. Licenses may be granted but only if the license applicant has supplied the Federal agency with a satisfactory plan for the development and marketing of the invention and with information about the applicant's capability to fulfill the plan. 37 CFR 404.8 sets forth the information which must be provided by a license applicant. For the convenience of the applicant, USDA has itemized the information needed on Form AD–761, and instructions for completing the form are provided to the applicant. The information submitted is used to determine whether the applicant has both a complete and sufficient plan for developing and marketing the invention and the necessary manufacturing, marketing, technical and financial resources to carry out the submitted plan.

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 3 hours per response.

Description of Respondents: Businesses or other for profit individuals.

Estimated Number of Respondents: 150.

Frequency of Responses: One time per invention.

Estimated Total Annual Burden on Respondents: 450 hours.

Copies of this information collection and related instructions can be obtained without charge from June Blalock, USDA, ARS, Office of Technology Transfer by calling 301–504–5989.

Comments

Comments are invited on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, such as through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology. Comments may be sent to: June Blalock, USDA, ARS, Office of Technology Transfer, Room 415, Bldg. 005, BARC-West, Beltsville, Maryland 20705–2350. All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Richard M. Parry, Jr.,

Assistant Administrator.

BILLING CODE 3410–03–P

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

[Docket No. 98–039–1]

Notice of Request for Extension of Approval of an Information Collection

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Extension of approval of an information collection; comment request.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Animal and Plant Health Inspection Service's intention to request an extension of approval of an information collection in support of the regulations for the importation of logs, lumber, and other unmanufactured wood articles.

DATES: Comments on this notice must be received by July 21, 1998 to be assured of consideration.

ADDRESSES: Send comments regarding the accuracy of burden estimate, ways to minimize the burden (such as through the use of automated collection techniques or other forms of information technology), or any other aspect of this collection of information to: Docket No. 98–039–1, Regulatory Analysis and Development, PPD, APHIS, suite 3C03, 4700 River Road, Unit 118, Riverdale, MD 20737–1238. Please send an original and three copies, and state that your comments refer to Docket No. 98–039–1. Comments received may be inspected at USDA, room 1141, South Building, 14th Street and Independence Avenue SW., Washington, DC, between 8 a.m. and 4:30 p.m., Monday through Friday, except holidays. Persons wishing to inspect comments are requested to call ahead on (202) 690–2817 to facilitate entry into the comment reading room.

FOR FURTHER INFORMATION CONTACT: For information regarding the regulations for the importation of logs, lumber, and other unmanufactured wood articles, contact Mr. Ronald C. Campbell, Staff Officer, Phytosanitary Issues Management, PPQ, APHIS, 4700 River Road, Unit 139, Riverdale, MD 20737–1236, (301) 734–6799. For copies of more detailed information on the information collection, contact Ms. Cheryl Groves, APHIS, Information Collection Coordinator, at (301) 734–5086.

SUPPLEMENTARY INFORMATION:

Title: Foreign Quarantine Notices, Logs and Lumber.

OMB Number: 0579–0119.

Expiration Date of Approval: September 30, 1998.

Type of Request: Extension of approval of an information collection.

Abstract: The Animal and Plant Health Inspection Service (APHIS) of the United States Department of Agriculture is responsible for, among other things, preventing the introduction and dissemination of plant pests into or through the United States. As part of this responsibility, APHIS regulates the importation of logs, lumber, and other unmanufactured wood articles.

In administering the regulations, we collect information from persons both within and outside the United States who are involved in growing, handling, processing, transporting, and importing unmanufactured wood articles. The information is provided on a number of forms and other documents, including applications for permits, various accompanying importer documents or certificates, notices of arrival, and compliance agreements. This information is vital to ensure that unmanufactured wood articles imported into the United States do not harbor plant pests.

We are asking the Office of Management and Budget (OMB) to approve the continued use of this information collection activity.

The purpose of this notice is to solicit comments from the public (as well as affected agencies) concerning our information collection. We need this outside input to help us:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of our estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, through use, as appropriate, of automated, electronic, mechanical, and other collection technologies, e.g., permitting electronic submission of responses.

Estimate of burden: The public reporting burden for this collection of information is estimated to average .15078 hours per response.

Respondents: Importers, processors, shippers, foreign plant health protection authorities.

Estimated annual number of respondents: 80,005.

Estimated annual number of responses per respondent: 12.530.

Estimated annual number of responses: 1,002,472.

Estimated total annual burden on respondents: 151,152 hours. (Due to rounding, the total annual burden hours may not equal the product of the annual number of responses multiplied by the average reporting burden per response.)

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Done in Washington, DC, this 18th day of May 1998.

Charles P. Schwalbe,

Acting Administrator, Animal and Plant Health Inspection Service.

[FR Doc. 98–13769 Filed 5–21–98; 8:45 am]

BILLING CODE 3410–34–P

DEPARTMENT OF AGRICULTURE

Forest Service

Proposed North Round Valley Timber Sale, Rapid River Roadless Area, Payette National Forest, Adams County, Idaho

AGENCY: Forest Service, USDA.

ACTION: Revised Notice of Intent to Prepare an Environmental Impact Statement.

SUMMARY: The USDA Forest Service published a Revised Notice of Intent to prepare an environmental impact statement (EIS) for the Lockwood and North Valley Timber Sales in the **Federal Register** on December 19, 1991 (Vol. 56, No. 244, page 65881). That revised notice is hereby revised to show three changes: (1) Separate EIS's for each proposed timber sale, (2) the name of the EIS's, and (3) the schedule for the North Round Valley Timber Sale EIS.

(1) The Lockwood and North Round Valley Timber Sales Draft EIS was released in January 1992. A Final EIS was completed in 1993 but was never released to the public because of the listing of Chinook salmon and subsequent delays with consultation under the Endangered Species Act. During the large wildfires on the Forest in 1994, the interdisciplinary team assigned to the Lockwood/North Round Valley projects was disbanded, and the Final EIS was put on hold through the post-fire landscape and salvage analyses conducted in 1994 and 1995. In 1996, the Forest formed a new interdisciplinary team to complete the Final EIS and to analyze changed conditions since 1993. As part of the analysis, the team recommended that the two timber sales be separated into two EIS's primarily due to differences in the level of effects and controversy associated with each project.

(2) This Revised Notice of Intent covers the proposed North Round Valley Timber Sale. A separate Revised Notice of Intent will be prepared for the proposed Lockwood Timber Sale.

(3) The North Round Valley Timber Sale Final EIS is scheduled to be released in the spring or early summer of 1998. The exact date will depend on when consultation on threatened and proposed species is completed with the National Marine Fisheries Services and U.S. Fish and Wildlife Service.

ADDRESSES: Send written comments or requests to David Alexander, Forest Supervisor, Payette National Forest, P.O. Box 1026, McCall, Idaho 83638.

FOR FURTHER INFORMATION CONTACT: Questions about the action should be directed to David Ede, Team Leader, at (208) 347–0331; or Kimberly Brandel, New Meadows District Ranger, at (208) 347–0300.

SUPPLEMENTARY INFORMATION: The USDA Forest Service is proposing to harevest and regenerate timber in the North Round Valley Timber Sale on the New Meadows Ranger District of the Payette National Forest in Adams County, Idaho. The area is located in the Round Valley Creek and Trail Creek subwatersheds, which drain into the Little Salmon River

The Preferred Alternative would harvest an estimated 184 acres with shelterwood prescriptions designed to thin out overstocked stands of mostly grand fir, which would leave a healthy overstory of mixed species that are within the historic range of variability for this area. Proposed logging systems include tractor and helicopter. Proposed harvest units are on or near existing roads, so no new road would be constructed. An estimated 0.5 mile of existing road would be reconstructed. All reconstructed road would be closed following sale-related activities. In addition, 6.3 miles of currently open roads in the Round Valley Creek subwatershed would be closed year-round to public motorized vehicles, and 4.0 miles of existing roads would be obliterated. Closures and obliteration would improve wildlife habitat and water quality over the long term.

An estimated 125 acres would be harvested in the Rapid River Roadless Area (0.6 percent of the roadless area), but no new road construction or reconstruction would occur in the roadless area. Three roadless units (90 acres) would be harvested by helicopter, and two roadless units would be tractor-

skidded to nearby existing roads. This portion of the roadless area is a narrow finger with roads and harvest units on three sides, which currently has relatively low potential for wilderness.

The responsible Official is David F. Alexander, Forest Supervisor, Payette National Forest.

Dated: May 11, 1998.

David F. Alexander,

Forest Supervisor.

BILLING CODE 3410–11–M

DEPARTMENT OF AGRICULTURE

Forest Service

Southwest Oregon Provincial Interagency Executive Committee (PIEC); Advisory Committee

AGENCY: Forest Service, USDA.

ACTION: Notice of meeting.

SUMMARY: The Southwest Oregon PIEC Advisory Committee will meet on June 1 at the Medford District of the Bureau of Land Management at 3040 Biddle Road, Medford, Oregon.

The meeting will begin at 9:00 a.m. and continue until 5:00 p.m. Agenda items to be covered include: (1) Coordinated watershed restoration between federal and non-federal land managers; (2) Province monitoring priorities; (3) Forest health issues; (4) Report from local BLM and Forest Service on local issues; (5) Coarse Wood Management evaluation process; (6) Review of Committee operating guides; and (7) Public comment. All Province Advisory Committee meetings are open to the public.

FOR FURTHER INFORMATION CONTACT: Direct questions regarding this meeting to Chuck Anderson, Province Advisory Committee staff, USDA, Forest Service, Rogue River National Forest, 333 W. 8th Street, Medford, Oregon 97501, phone 541–858–2322.

Dated: May 12, 1998.

DEPARTMENT OF AGRICULTURE

Natural Resources Conservation Service

New York City Watershed, Delaware, Schoharie, Greene, Ulster, and Sullivan Counties, New York State

AGENCY: Natural Resources Conservation Service.

ACTION: Notice of a Finding of No Significant Impact.

SUMMARY: Pursuant to Section 102(2)(c) of the National Environmental Policy Act of 1969; the Council on Environmental Quality Regulations (40 CFR Part 1500); and the Soil Conservation Service Regulations (7 CFR Part 650); the Natural Resources Conservation Service, U.S. Department of Agriculture, gives notice that an environmental impact statement is not being prepared for the New York City Watershed, Delaware, Schoharie, Greene, Ulster, and Sullivan Counties, New York State.

FOR FURTHER INFORMATION CONTACT: Richard D. Swenson, State Conservationist, Natural Resources Conservation Service, 441 S. Salina St., Suite 354, Syracuse, New York 13202–2450, telephone 315/477–6504.

SUPPLEMENTARY INFORMATION: The environmental assessment of this federally assisted action indicates that the project will not cause significant local, regional, or national impacts on the environment. As a result of these findings, Richard D. Swenson, State Conservationist, has determined that the preparation and review of an environmental impact statement are not needed for this project.

The project purposes are enhance existing programs and to develop new ones that will protect the drinking water supply of New York City. The planned works of improvement include better forestry practices, conservation easements, resource data inventory, technology development, education/outreach, and operation and maintenance of whole farm plans.

The Notice of a Finding of No Significant Impact (FONSI) has been forwarded to the Environmental Protection Agency and to various Federal, State, and local agencies and interested parties. A limited number of copies of the FONSI are available to fill single copy requests at the above address. Basic data developed during the environmental assessment are on file and may be reviewed by contacting Richard D. Swenson. No administrative action on implementation of the proposal will be taken until 30 days after the date of this publication in the **Federal Register**.

(This activity is listed in the Catalog of Federal Domestic Assistance under NO. 10.904, Watershed Protection and Flood Prevention, and is subject to the provisions of Executive Order 12372, which requires intergovernmental consultation with State and local officials.)

Melvin Womack,

Acting State Conservationist.

BILLING CODE 3410–16–P

DEPARTMENT OF AGRICULTURE

Natural Resources Conservation Service

Task Force on Agricultural Air Quality; Meeting

AGENCY: Natural Resources Conservation Service.

ACTION: Notice of meeting.

SUMMARY: The Task Force on Agricultural Air Quality will meet to discuss the relationship between agricultural production and air quality. The meeting is open to the public.

DATES: The meeting will convene Wednesday, June 17, 1998, at 8:30 a.m. and continue until 5:00 p.m. The meeting will resume Thursday, June 18, 1998, from 8:30 a.m. to 5:00 p.m. Written material and requests to make oral presentations should reach the Natural Resources Conservation Service on or before June 12, 1998.

ADDRESSES: The meeting will be held at the Doubletree Spokane City Center Hotel, 322 North Spokane Falls Court, Spokane, Washington 99201, telephone (509) 455–9600. Written material and requests to make oral presentations should be sent to George Bluhm, University of California, Land, Air, Water Resources, 151 Hoagland Hall, Davis, CA 95616–6827.

FOR FURTHER INFORMATION CONTACT: George Bluhm, Designated Federal Official, telephone (916) 752–1018, fax (916) 752–1552.

SUPPLEMENTARY INFORMATION: Notice of this meeting is given under the Federal Advisory Committee Act, 5 U.S.C. App. 2. Additional information about the Task Force on Agricultural Air Quality, including any revised agendas for the June 17–18, 1998, meeting that may appear after this **Federal Register** Notice is published, may be found on the World Wide Web at http://www.nhq.nrcs.usda.gov/faca/aaqtf.html.

Draft Agenda of the June 17–18, 1998, Meeting

A. Opening Remarks
1. Call meeting to order—George Bluhm, DFO
2. Introduce Chairperson and Chief of NRCS—Pearlie Reed
3. Welcome to Washington research—Keith Saxton
4. Welcome to Washington NRCS operations—Leonard Jordan, STC

B. Past Actions
1. Air quality within USDA—Pearlie Reed
2. Extension of Federal Advisory Committee Act Committee—George Bluhm
3. Revised recommendations on air quality research needs—Jim Trotter
4. USDA Air Quality Research Management Team—Richard Amerman, Berlie Schmidt

C. Status Reports
1. Agricultural Burning Subcommittee—Robert Quinn
2. Model MOU—volunteer program with bad actor clause—Dennis Tristao
3. EPA emission factors, communication with EMAD—Emmett Barker, Sally Shaver
4. Health effects—Thomas Ferguson
5. NRCS Air Resource Action Plan—George Bluhm
6. Particulate matter research issues—Robert Flocchini, Keith Saxton

D. New Issues
1. Conservation application and carbon sequestration in Iowa—Dr. Keith Paustian, Colorado State University
2. Air quality initiative, Research Subcommittee—Jim Trotter
3. Forest research on air quality—Bill Summers
4. Washington State CRP—Leonard Jordan
5. A Natural Events Action Plan for Eastern Washington—EPA Region X and Washington State Department of Ecology
6. Agricultural residue burning: needs and impacts on regional agriculture—regional grass seed and cereal producers, Washington State Department of Ecology

E. Set Date and Location for Next Meeting
F. Public Input

Procedural

This meeting is open to the public. At the discretion of the Chair, members of the public may present oral presentations during the June 17–18 meeting. Persons wishing to make oral presentations should notify George Bluhm no later than June 12, 1998. If a person submitting material would like a copy distributed to each member of the committee in advance of the meeting, that person should submit 25 copies to George Bluhm no later than June 12, 1998.

Information on Services for Individuals With Disabilities

For information on facilities or services for individuals with disabilities or to request special assistance at the meeting, contact George Bluhm as soon as possible.

Dated: April 15, 1998.

Danny D. Sells,

Associate Chief, Natural Resources Conservation Service.

BILLING CODE 3014–16–P

APPALACHIAN STATES LOW-LEVEL RADIOACTIVE WASTE COMMISSION

Meeting

TIME AND DATE: 9:00 a.m.–1:00 p.m., June 18, 1998.

PLACE: Harrisburg Hilton and Towers, One North Second Street, Harrisburg, PA 17101

STATUS: Most of the meeting will be open to the public. An executive session closed to the public will be held from about 9:15 a.m. to 10:00 a.m.

MATTERS TO BE CONSIDERED:

Portions Open to the Public: The primary purpose of this meeting is to hear a status report on the siting of the regional disposal facility; hear a report on the expenditure of a $2 million grant to the Pennsylvania Department of Environmental Protection (PADEP); consider the impact of high volume low-activity waste shipped to Envirocare of Utah; consider granting about $462,000 to the PADEP to continue the community partnering program; consider adoption of an interregional agreement for the uniform application of manifesting procedures; consider a revised budget for 1998–99; consider a budget for 1999–2000; and to elect officers.

Portions Closed to the Public: Executive Session from about 9:15 a.m. to 10:00 a.m. to discuss a personnel matter.

CONTACT PERSON FOR MORE INFORMATION: Marc S. Tenan, Executive Director, at 717–234–6295.

Marc S. Tenan,

Executive Director.

[FR Doc. 98–12574 Filed 5–21–98; 8:45 am]

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Additions and Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Additions to and deletions from the Procurement List.

SUMMARY: This action adds to the Procurement List a commodity and services to be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities, and deletes from the Procurement List commodities and a service previously furnished by such agencies.

EFFECTIVE DATE: June 22, 1998.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, Crystal Gateway 3, Suite 310, 1215 Jefferson Davis Highway, Arlington, Virginia 22202–4302.

FOR FURTHER INFORMATION CONTACT: Beverly Milkman (703) 603–7740.

SUPPLEMENTARY INFORMATION: On January 5, April 3 and 20, 1998, the Committee for Purchase From People Who Are Blind or Severely Disabled published notices (63 FR 203, 16470 and 19474) of proposed additions to and deletions from the Procurement List:

Additions

The following comments pertain to Shirt, Sleeping.

Comments were received from the current contractor for the sleeping shirts. The contractor indicated that the shirts are an important part of one of its plants' production during certain months of the year.

While these shirts may be important to one of the contractor's three plants for part of the year, the Committee looks at the overall impact of a Procurement List addition on the contractor's total sales when it makes its impact determinations. The impact of this addition on the contractor's total sales is very small, and well below the level which the Committee normally considers to be severe adverse impact. The Committee is only adding ten percent of the Government requirement for the shirts to the Procurement List at this time, which will leave 50 percent of the requirement available for competitive procurement from this contractor or its competitors. The Committee's earlier addition to the Procurement List of 40 percent of the Government requirement caused only a slight decline in the contractor's sales. Consequently, the Committee does not believe that addition of the sleeping shirts to the Procurement List will have a severe adverse impact on the contractor.

The following comments pertain to Central Facility Management, The Jimmy Carter Presidential Library, Atlanta, Georgia.

Comments were received from the current contractor for this service. The contractor noted that it expects a severe reduction in its total sales during this

year, due to cutbacks in Government funding for services such as those it provides and that, consequently, loss of this contract to the Procurement List would have a severe adverse impact on the company. The contractor further noted that it is in its eighth year of providing this service at this location. The contractor's projections assume that when the contracts it currently holds are re-bid to reduce the costs, it will not succeed in obtaining any of the new contracts. The Committee views this as an unrealistically pessimistic projection. Under the circumstances, even taking into account the contractor's greater dependence on this relatively small contract after eight years and the impact of another recent addition to the Procurement List, the Committee does not believe that the percentage of the firm's sales represented by this contract is substantial enough to result in a severe adverse impact on the contractor.

The following comments pertain to Food Service and Food Service Attendant, Postwide, Fort Hood, Texas.

Comments were received from the current contractor for this service. The contractor claimed that the addition of the service to the Procurement List would have a severe adverse impact on the contractor as it represents a substantial portion of the contractor's sales. The contractor also noted that it is performing the contract under the Small Business Administration's (SBA) 8(a) Program, that the service has been in the 8(a) Program for a while, and that addition of the service to the Procurement List would foreclose future 8(a) Program participants from performing the contract.

The Government contracting activity responsible for this service has informed the Committee that if the Committee does not add the service to the Procurement List, the service will remain in the 8(a) Program. The contractor will graduate from the 8(a) Program in June, 1998, so it would not be eligible for subsequent contracts for the service whether or not the Committee adds it to the Procurement List. Consequently, any impact the contractor suffers will not be a result of the addition of the service to the Procurement List.

The Committee's Javits-Wagner-O'Day (JWOD) Program, like the 8(a) Program, is the result of Congressional desire to use the Federal procurement system to assist specific disadvantaged groups. The JWOD Program's target population, people who are blind or have severe disabilities, has an unemployment rate well above that of other groups. Consequently, the Committee believes it should maximize the creation of jobs for its target population where it can do so within the limits of its statute and regulations. The 8(a) Program is considerably larger than the JWOD Program and, because it imposes no constraints on the types of individuals employed by participating firms, has access to a broader range of contracts than does the JWOD Program. Consequently, the Committee believes the 8(a) Program can more easily locate contracting opportunities for its target population than the JWOD Program can.

After consideration of the material presented to it concerning capability of qualified nonprofit agencies to provide the commodity and services and impact of the additions on the current or most recent contractors, the Committee has determined that the commodity and services listed below are suitable for procurement by the Federal Government under 41 U.S.C. 46–48c and 41 CFR 51–2.4.

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities other than the small organizations that will furnish the commodity and services to the Government.

2. The action will not have a severe economic impact on current contractors for the commodity and services.

3. The action will result in authorizing small entities to furnish the commodity and services to the Government.

4. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 46–48c) in connection with the commodity and services proposed for addition to the Procurement List.

Accordingly, the following commodity and services are hereby added to the Procurement List:

Commodity

Shirt, Sleeping
8415–00–890–2099
8415–00–890–2100
8415–00–890–2101
8415–00–890–2102
8415–00–890–2103
8415–00–935–6855
(Additional 10% of the Government's requirement)

Services

Base Supply Center, Tinker Air Force Base, Oklahoma

Central Facility Management, The Jimmy Carter Presidential Library, Atlanta, Georgia

Food Service and Food Service Attendant, Postwide, Fort Hood, Texas

Janitorial/Custodial, VA Outpatient Clinic, Winston-Salem, North Carolina

Janitorial/Custodial, Surface Warfare Officer School Navy Buildings, 52 C.H.I., 138 C.H.I., 370 C.P., 446 C.P., 1164 C.H.I., 1183 C.H.I., 1268 C.H.I. & 1284 C.H.I, Newport, Rhode Island

This action does not affect current contracts awarded prior to the effective date of this addition or options that may be exercised under those contracts.

Deletions

I certify that the following action will not have significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities.

2. The action will not have a severe economic impact on future contractors for the commodities and service.

3. The action will result in authorizing small entities to furnish the commodities and service to the Government.

4. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 46–48c) in connection with the commodities and service deleted from the Procurement List.

After consideration of the relevant matter presented, the Committee has determined that the commodities and service listed below are no longer suitable for procurement by the Federal Government under 41 U.S.C. 46–48c and 41 CFR 51–2.4.

Accordingly, the following commodities and service are hereby deleted from the Procurement List:

COMMODITIES

Cover, Generator Set
6115–00–945–7545

Cabinet, Storage
7125–00–378–4261
7125–00–449–6862
7125–00–693–4352

Pillowcase
7210–00–081–1380

Service

Commissary Shelf Stocking and Custodial, Naval Station, Charleston, South Carolina.

Beverly L. Milkman,

Executive Director.

BILLING CODE 6353–01–P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Proposed Additions and Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed additions to and deletions from Procurement List.

SUMMARY: The Committee has received proposal(s) to add to the Procurement List services to be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities, and to delete services previously furnished by such agencies.

COMMENTS MUST BE RECEIVED ON OR BEFORE: June 22, 1998.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, Crystal Gateway 3, Suite 310, 1215 Jefferson Davis Highway, Arlington, Virginia 22202–4302.

FOR FURTHER INFORMATION CONTACT: Beverly Milkman (703) 603–7740.

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 47(a)(2) and 41 CFR 51–2.3. Its purpose is to provide interested persons an opportunity to submit comments on the possible impact of the proposed actions.

Additions

If the Committee approves the proposed addition, all entities of the Federal Government (except as otherwise indicated) will be required to procure the services listed below from nonprofit agencies employing persons who are blind or have other severe disabilities.

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities other than the small organizations that will furnish the services to the Government.

2. The action does not appear to have a severe economic impact on current contractors for the services.

3. The action will result in authorizing small entities to furnish the services to the Government.

4. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 46–48c) in connection with the services proposed for addition to the Procurement List. Comments on this certification are invited. Commenters should identify the statement(s) underlying the certification on which they are providing additional information.

The following services have been proposed for addition to Procurement List for production by the nonprofit agencies listed:

Grounds Maintenance

Mifflin County USARC, Lewistown, Pennsylvania

NPA: Juniata Assocation for the Blind, Lewistown, Pennsylvania

Medical Transcription

97th Medical Group, Altus AFB, Oklahoma

NPA: Kentucky Industries for the Blind, Louisville, Kentucky

Deletions

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities.

2. The action does not appear to have a severe economic impact on future contractors for the services.

3. The action will result in authorizing small entities to furnish the services to the Government.

4. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 46–48c) in connection with the services proposed for deletion from the Procurement List.

The following services have been proposed for deletion from the Procurement List:

Grounds Maintenance

Naval Station, Mobile, Alabama

Grounds Maintenance

Portland Air National Guard Base, Portland, Oregon

Janitorial/Custodial

Pacific Highway Border Station, USDA Building, Blaine, Washington

Beverly L. Milkman,

Executive Director.

BILLING CODE 6353–01–P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Additions and Deletions to the Procurement List; Correction

In the document appearing on page 24152, F.R. Doc. 98–11628, in the issue of May 1, 1998, in the second column, a door knob conversion kit in 56 different varieties, each denominated by a National Stock Number (NSN), is listed as deleted from the Procurement List, effective June 1, 1998. The Committee voted to delete all 56 varieties of the kit based on information that Government orders did not justify continued production by nonprofit agencies for the blind. In addition, one of the services listed in the same document as deleted from the Procurement List is Grounds Maintenance, Naval and Marine Corps Reserve Center, Dayton, Ohio. The Committee voted to delete this service from the Procurement List based on information that this Reserve Center had closed. Since the May 1, 1998 deletion notice, the Committee has discovered that the Reserve Center has not closed and will remain open for the immediate future. The Committee also discovered that seven varieties of the door knob conversion kit had not been included on the list of NSNs requested for deletion because of a lack of Government orders.

Consequently, the Committee on May 14, 1998 reconsidered its decisions and voted not to delete the seven NSNs of the door knob conversion kit and the grounds maintenance service from the Procurement List. Accordingly, the notice of May 1, 1998 referenced above is corrected to remove Grounds Maintenance, Naval and Marine Corps Reserve Center, Dayton, Ohio from the list of services deleted from the Procurement List. The notice is also corrected to remove the following NSNs from the list of door knob conversion kit NSNs deleted from the Procurement List:

Door Knob Conversion Kit

5340–01–394–0237, 5340–01–394–0238, 5340–01–394–0239, 5340–01–394–

0240, 5340–01–394–0241, 5340–01–394–0242, 5340–01–394–3874

COMMISSION ON CIVIL RIGHTS

Agenda and Notice of Public Meeting of the District of Columbia Advisory Committee

Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights, that a meeting of the District of Columbia Advisory Committee to the Commission will convene at 9:30 a.m. and adjourn at 12:30 p.m. on June 9, 1998, at JC Penney, Government Relations Office, Suite 1015, 1156 15th Street NW, Washington, DC 20036. The purpose of the meeting is for the Committee to continue planning for the upcoming press conference to release its report entitled "Residential Mortgage Lending Disparities in Washington, DC."

Persons desiring additional information, or planning a presentation to the Committee, should contact Committee Chairperson Steven Sims, 202–862–4815 or Ki-Taek Chun, Director of the Eastern Regional Office, 202–376–7533 (TDD 202–376–8116). Hearing-impaired persons who will attend the meeting and require the services of a sign language interpreter should contact the Regional Office at least ten (10) working days before the scheduled date of the meeting.

The meeting will be conducted pursuant to the provisions of the rules and regulations of the Commission.

Dated at Washington, DC, May 12, 1998.

BILLING CODE 6335–01–P

DEPARTMENT OF COMMERCE

Bureau of Economic Analysis

Annual Survey of Reinsurance and Other Insurance Transactions by U.S. Insurance Companies With Foreign Persons

ACTION: Proposed collection; comment request.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general

public and other Federal agencies to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)).

DATES: Written comments must be submitted on or before July 21, 1998.

ADDRESSES: Direct all written comments to Linda Engelmeier, Departmental Forms Clearance Officer, Department of Commerce, Room 5327, 14th and Constitution Avenue, NW, Washington, DC 20230.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to: R. David Belli, U.S. Department of Commerce, Bureau of Economic Analysis, BE–50(OC), Washington, DC 20230 (Telephone: 202–606–9800).

SUPPLEMENTARY INFORMATION:

I. Abstract

The BE–48 Annual Survey of Reinsurance and Other Insurance Transactions by U.S. Insurance Companies With Foreign Persons will obtain data from U.S. insurance companies on their reinsurance and other insurance transactions with foreign persons. The information gathered is needed, among other purposes, to support U.S. trade policy initiatives and to compile the U.S. international transactions, input-output, and national income and product accounts. Apart from minor clarifications to the instructions for reporting commissions and changes to the pre-printed list of countries to reflect recent shifts in the geographic composition of cross-border insurance transactions, BEA is not proposing changes to the form or instructions at this time.

II. Method of Collection

The survey will be sent each year to potential respondents in January and responses are due by March 31. A U.S. person who engages in reinsurance transactions with foreign persons or who acts in the capacity of a primary insurer with foreign persons is required to report if, with respect to transactions with foreign persons, any of the following six items equaled or exceeded $1 million (positive or negative) in the reporting period: (1) Premiums earned, and (2) losses, on reinsurance assumed; (3) premiums incurred, and (4) losses, on reinsurance ceded; and (5) premiums earned, and (6) losses, on primary insurance sold. A U.S. person that receives a form but is not required to report data must file an exemption claim.

III. Data

OMB Number: 0608–0016.
Form Number: BE–48.
Type of Review: Regular submission.
Affected Public: U.S. insurance companies or groups engaging in reinsurance or other insurance transactions with foreign persons.
Estimated Number of Responses: 400.
Estimated Time Per Response: 4 hours.
Estimated Total Annual Burden Hours: 1,600.
Estimated Total Annual Cost: $48,000 (based on an estimated reporting burden of 1,600 hours and an estimated hourly cost of $30).

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: May 19, 1998.

Madeleine Clayton,

Management Analyst, Office of Management and Organization.

[FR Doc. 98–13794 Filed 5–21–98; 8:45 am]

BILLING CODE 3510–06–P

DEPARTMENT OF COMMERCE

Submission for OMB Review; Comment Request

DOC has submitted to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. chapter 35).

Agency: Bureau of the Census.
Title: Census 2000, Special Place Facility Questionnaire Operation and Military Installation Group Quarters Address List Operation.
Form Number(s): D–351, D–351(MIL).
Agency Approval Number: 0607–0786.
Type of Request: Reinstatement, with change, of an expired collection.
Burden: 112,618 hours.
Number of Respondents: 450,473.
Avg Hours Per Response: 15 minutes.
Needs and Uses: Planning is currently underway for the Census 2000. The Census Bureau must provide everyone in the United States and Outlying Areas the opportunity to be counted in Census 2000, including persons living at group quarters (GQs) (student dorms, shelters, group homes, etc.) and housing units (HUs) at and/or associated with special places (SPs). One of the major requirements for enumeration of persons at SP facilities is to identify the GQs and any associated HUs at each SP.

The Census Bureau will maintain a file of SPs and GQs that was created from the 1990 census GQ files and is being updated from ongoing programs and other activities that will be carried out prior to Census 2000.

We plan to phone each SP in our updated file of SPs and GQs and conduct a computer assisted interview to identify and collect updated information about the GQs and HUs at each SP. Personal visit interviews will be conducted for a small number of cases. This operation will be very similar to that conducted for the 1995 and 1996 Census Tests and the 2000 Census Dress Rehearsal currently being conducted. Additionally, we plan to conduct a listing operation at military installations to collect essentially the same information.

All information gathered during this operation will be used to help us in Census 2000 to properly enumerate individuals that live in the HUs and GQs associated with SPs in the United States and Outlying Areas.

Affected Public: Business or other for-profit, individuals or households, not-for-profit institutions, Federal government.
Frequency: One time.
Respondent's Obligation: Mandatory.
Legal Authority: Title 13 USC, Sections 141 and 193.
OMB Desk Officer: Nancy Kirkendall, (202) 395–7313.

Copies of the above information collection proposal can be obtained by calling or writing Linda Engelmeier, DOC Forms Clearance Officer, (202) 482–3272, Department of Commerce, room 5327, 14th and Constitution Avenue, NW, Washington, DC 20230.

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to Nancy Kirkendall, OMB Desk

Officer, room 10201, New Executive Office Building, Washington, DC 20503.

Dated: May 14, 1998.

Linda Engelmeier,

Departmental Forms Clearance Officer, Office of Management and Organization.

Brake Rotors From the People's Republic of China: Initiation of New Shipper Antidumping Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce has received a request to conduct a new shipper administrative review of the antidumping duty order on brake rotors from the People's Republic of China. In accordance with 19 CFR 351.214(d), we are initiating this administrative review.

EFFECTIVE DATE: May 22, 1998.

FOR FURTHER INFORMATION CONTACT: Brian Smith or Sunkyu Kim, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW, Washington, DC 20230; telephone (202) 482–1766 or 482–2613, respectively.

Applicable Statute and Regulations

Unless otherwise indicated, all citations to the Tariff Act of 1930, as amended ("the Act"), are references to the provisions effective January 1, 1995, the effective date of the amendments made to the Act by the Uruguay Round Agreements Act. In addition, unless otherwise indicated, all citations to the Department of Commerce ("the Department") regulations are to the provisions codified at 19 CFR part 351 (62 FR 27295, May 19, 1997).

SUPPLEMENTARY INFORMATION:

Background

The Department has received a timely request from Yantai Chen Fu Machinery Co., Ltd., ("YCFM"), in accordance with 19 CFR 351.214(d), for a new shipper review of the antidumping duty order on brake rotors from the People's Republic of China ("PRC"), which has an April anniversary date. YCFM ("the respondent") has certified that it did not export brake rotors to the United States during the period of investigation ("POI"), and that it is not affiliated with any exporter or producer which did export brake rotors during the POI.

In accordance with section 751(a)(2)(B) of the Act, as amended, and 19 CFR 351.214(b), and based on information on the record, we are initiating the new shipper review as requested.

It is the Department's usual practice in cases involving non-market economies to require that a company seeking to establish eligibility for an antidumping duty rate separate from the country-wide rate provide *de jure* and *de facto* evidence of an absence of government control over the company's export activities. Accordingly we will issue a separate rates questionnaire to the above-named respondent, allowing 30 days for response. If the response from the respondent provides sufficient indication that the YCFM is not subject to either *de jure* or *de facto* government control with respect to its exports of brake rotors, this review will proceed. If, on the other hand, YCFM does not demonstrate its eligibility for a separate rate, then YCFM will be deemed to be affiliated with other companies that exported during the POI and that did not establish entitlement to a separate rate, and this review will be terminated.

Initiation of Review

In accordance with section 751(a)(2)(B)(ii) of the Act and 19 CFR 351.214(d)(1), we are initiating a new shipper review of the antidumping duty order on brake rotors from the PRC. On May 11, 1998, YCFM agreed to waive the time limits in order that the Department, pursuant to 19 CFR 351.214(j)(3), may conduct this review concurrent with the first annual administrative review of this order for the period October 10, 1996–March 31, 1998, which is being conducted pursuant to section 751(a)(1) of the Act. See, Antidumping Duties, Countervailing Duties; Final Rule, (62 FR 27295, 27395, May 19, 1997). Therefore, we intend to issue the final results of this review not later than 245 days after the last day of the anniversary month.

Antidumping duty proceeding	Period to be reviewed
PRC: Brake Rotors, A–570–846:	
Yantai Chen Fu Machinery Co., Ltd ...	10/10/96–03/31/98

We will instruct the U.S. Customs Service to allow, at the option of the importer, the posting, until the completion of the review, of a bond or security in lieu of a cash deposit for each entry of the merchandise exported by the above listed company. This action is in accordance with 19 CFR 351.214(e) and (j)(3).

Interested parties that need access to the proprietary information in this new shipper review should submit applications for disclosure under administrative protective orders in accordance with 19 CFR 353.34(b).

This initiation and this notice are in accordance with section 751(a) of the Act (19 U.S.C. 1675(a)) and 19 CFR 351.214(d).

Dated: May 14, 1998.

Maria Harris Tildon,

Acting Deputy Assistant Secretary, Import Administration.

Ferrosilicon From Brazil: Notice of Final Results of Antidumping Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

ACTION: Notice of Final Results of Antidumping Duty Administrative Review.

SUMMARY: On January 16, 1998, the Department of Commerce published the preliminary results of the administrative review of the antidumping duty order on Ferrosilicon from Brazil. This review covers exports of this merchandise to the United States by one manufacturer/exporter, Companhia de Ferro Ligas da Bahia, during the period March 1, 1996, through February 28, 1997.

We gave interested parties an opportunity to comment on the preliminary results. Based on our analysis of the comments received, we have not changed the final results from those presented in the preliminary results.

EFFECTIVE DATE: May 22, 1998.

FOR FURTHER INFORMATION CONTACT: Wendy Frankel or Sal Tauhidi, AD/CVD Enforcement Group II, Office Four, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW, Washington, DC 20230; telephone: (202) 482–5849 or (202) 482–4851, respectively.

SUPPLEMENTARY INFORMATION:

The Applicable Statute and Regulations

Unless otherwise indicated, all citations to the Tariff Act of 1930, as amended (the Act) are references to the provisions effective January 1, 1995, the effective date of the amendments to the Act by the Uruguay Round Agreements Act (URAA). In addition, unless otherwise indicated, all references to the Department of Commerce's (the Department's) regulations refer to the regulations as codified at 19 CFR part 353 (April 1, 1997).

Background

The Department published the antidumping duty order on ferrosilicon from Brazil on March 14, 1994 (59 FR 11769). On January 16, 1998, the Department published the preliminary results of the 1996–1997 administrative review of that antidumping duty order (63 FR 2661). On March 4, 1998, and March 16, 1998, we received case and rebuttal briefs from Companhia de Ferro Ligas da Bahia (Ferbasa), and Aimcor and SKW Metals & Alloys, Inc. (the petitioners). Based on our analysis of the comments received, we have not changed the final results from those presented in the preliminary results.

Scope of Review

The merchandise subject to this review is ferrosilicon, a ferro alloy generally containing, by weight, not less than four percent iron, more than eight percent but not more than 96 percent silicon, not more than 10 percent chromium, not more than 30 percent manganese, not more than three percent phosphorous, less than 2.75 percent magnesium, and not more than 10 percent calcium or any other element. Ferrosilicon is a ferro alloy produced by combining silicon and iron through smelting in a submerged-arc furnace. Ferrosilicon is used primarily as an alloying agent in the production of steel and cast iron. It is also used in the steel industry as a deoxidizer and a reducing agent, and by cast iron producers as an inoculant.

Ferrosilicon is differentiated by size and by grade. The sizes express the maximum and minimum dimensions of the lumps of ferrosilicon found in a given shipment. Ferrosilicon grades are defined by the percentages by weight of contained silicon and other minor elements. Ferrosilicon is most commonly sold to the iron and steel industries in standard grades of 75 percent and 50 percent ferrosilicon. Calcium silicon, ferrocalcium silicon, and magnesium ferrosilicon are specifically excluded from the scope of this review. Calcium silicon is an alloy containing, by weight, not more than five percent iron, 60 to 65 percent silicon, and 28 to 32 percent calcium. Ferrocalcium silicon is a ferro alloy containing, by weight, not less than four percent iron, 60 to 65 percent silicon, and more than 10 percent calcium. Magnesium ferrosilicon is a ferro alloy containing, by weight, not less than four percent iron, not more than 55 percent silicon, and not less than 2.75 percent magnesium. Ferrosilicon is currently classifiable under the following subheadings of the Harmonized Tariff Schedule of the United States (HTSUS): 7202.21.1000, 7202.21.5000, 7202.21.7500, 7202.21.9000, 7202.29.0010, and 7202.29.0050. The HTSUS subheadings are provided for convenience and customs purposes. Our written description of the scope of this review is dispositive.

Ferrosilicon in the form of slag is included within the scope of this order if it meets, in general, the chemical content definition stated above and is capable of being used as ferrosilicon. Parties that believe their importations of ferrosilicon slag do not meet these definitions should contact the Department and request a scope determination.

Analysis of Comments Received

Comment 1

Ferbasa maintains that the Department's recalculation of cost of manufacturing (COM) for ferrosilicon based on the six-month period, September 1, 1996 through February 28, 1997, instead of the twelve-month fiscal year, January 1, 1996 through December 31, 1996, is inconsistent with the instructions set forth in the Department's questionnaire. Ferbasa notes the fact that, in a letter from the Department dated June 19, 1997, the Department allowed the company to report home market sales data for the six-month period. (See, the Department's letter from Holly Kuga to Gilvan Durao, Executive Director of Ferbasa.) At the same time, however, Ferbasa observes that it followed the Department's questionnaire instructions which allow respondents to report production costs on a fiscal-year basis in certain circumstances.

Ferbasa adds that the Department verified its submitted fiscal year costs and notes that the recalculation of COM based on a six-month period is inconsistent with the full-year selling, general and administrative expenses (SG&A) and interest ratio calculations used by the Department to compute cost of production (COP) in the preliminary results of this case. For these reasons, Ferbasa contends that the Department must use the company's full fiscal-year cost data to compute COP for the final results of this administrative review.

The petitioners argue that the Department correctly calculated Ferbasa's COM based on the six-month period rather than the submitted fiscal year data. The petitioners note that the Department reasonably recalculated COM based on the period of time which coincides with Ferbasa's reported home market sales data. Moreover, the petitioners maintain that the fact Ferbasa reported its cost data on a fiscal-year basis does not obligate the Department to use that information in its sales-below-cost analysis.

The petitioners further note that both the fiscal year and the six-month data were tested at verification and, therefore, the Department is not compelled to use only the submitted fiscal-year data. Finally, the petitioners conclude that the Department's normal calculation of SG&A and interest expense ratios based on the fiscal year data is appropriate.

Department's Position

We agree with petitioners that it was appropriate in this case for us to revise Ferbasa's submitted COM figures to reflect the six-month period. Based on a timely request from Ferbasa, we permitted the company to limit its reporting of home market sales to only those months that were contemporaneous to its one U.S. sale. We further note that the Department's questionnaire reflects our general practice of allowing a respondent to report costs for its normal fiscal year *if* this fiscal period corresponds closely with the period under investigation or review.

In the instant proceeding, although Ferbasa's fiscal year corresponds closely with the entire period under review it was not sufficiently correlated to the sales reporting period. We advised Ferbasa of our intent to examine at verification the extent to which the submitted fiscal year costs were representative of costs incurred during the six-month sales reporting period. (See, Cost Verification Agenda, October 27, 1997, Section IV. C., at 5.)

Based on our testing at verification, we determined that the reported fiscal year costs were *not* reasonably reflective of the costs incurred to produce the subject merchandise sold during the six-month sales reporting period. (See, Memorandum to the Official File re: Verification of Cost of Production and Constructed Value Information (Cost Verification Report), at 2, and Section IV.C., at 10 (January 12, 1998); see also,

Memorandum to the Official File re: Adjustments to Cost of Production and Constructed Value (January 12, 1998).)

Accordingly, in reaching our preliminary determination we relied on the actual costs incurred to produce the subject merchandise during the six-month period contemporaneous to the reported sales. This approach is consistent with the Department's obligation to ensure that the calculations are based on costs which "* * * reasonably reflects and accurately captures all of the actual costs incurred in producing * * * the product under investigation or review." (See, Statement of Administrative Action accompanying the URRA, H.R. 5110, H.R. Doc. No. 103–316, vol. 1 (1994) at 834 (SAA); see also Final Results of Antidumping Duty Administrative Reviews: Certain Cold-Rolled and Corrosion-Resistant Carbon Steel Flat Products From Korea, 63 FR 13170, 13192 (March 18, 1998), where the Department determined that the POR costs differed from the company's fiscal year costs, and after reviewing the information, based the margin calculations on the POR costs rather than on the fiscal year costs.) Accordingly, we continue to rely on costs incurred during the six-month period in these final results.

As to Ferbasa's comment that the Department's general practice of calculating SG&A and interest expense based on the fiscal year requires that COM be based on that same period, we disagree. The Department normally calculates SG&A and interest expenses over the closest corresponding fiscal year's audited financial statements. We then use these ratios to determine the per-unit SG&A and interest expense associated with each product. This calculation measures, over a full fiscal year, the level of G&A expenses associated with the company's sales. The basis for calculating these ratios over the full fiscal year is not because it is the exact same period as that examined for the cost calculation, but rather because using the annual ratio is most reflective of these type of expenses, which are typically incurred unevenly throughout the year. (See Final Determination of Sales at Less Than Fair Value: Oil Country Tubular Goods from Argentina, 60 FR 33,539, 33,549 (June 28, 1995); and Final Determination of Sales at Less Than Fair Value: Hot-Rolled Carbon Steel Flat Products, Cold-Rolled Carbon Steel Flat Products, Corrosion-Resistant Carbon Steel Flat Products, and Cut-to Length Carbon Steel Plate from Canada, 58 FR 37105, 37113 (July 9, 1993).)

Comment 2

Ferbasa contends that the Department should not have included valued added taxes (IPI and ICMS) in the calculation of constructed value (CV). According to Ferbasa, section 773(a)(6)(B) of the Act provides for the exclusion of home market consumption taxes from normal value (NV) in order to maintain a tax neutral comparison for purposes of measuring whether dumping has occurred.

The petitioners contend that the Department properly included the IPI and ICMS taxes in CV. According to the petitioners, section 773(e) of the Act provides that any home market tax imposed on export goods should be included in CV unless the tax is refunded or remitted upon exportation. The petitioner argues that Ferbasa has not stated nor did the verification conclude that these IPI and ICMS taxes have been remitted or refunded upon exportation.

Department's Position:

Because the NV in these final results was based on Ferbasa's home market prices and not on CV, this issue is moot. Therefore, we are not addressing it here.

Final Results of Review

Our final results are unchanged from those presented in our preliminary results. Therefore, the dumping margin for Ferbasa remains at zero percent for the period March 1, 1996, through February 28, 1997.

The following deposit requirement will be effective for all shipments of subject merchandise from Brazil entered, or withdrawn from warehouse, for consumption on or after the publication date of the final results of this administrative review, as provided by section 751(a)(1) of the Act: (1) The cash deposit rate for the reviewed company will be zero; (2) for merchandise exported by manufacturers or exporters not covered in this review but covered in previous reviews or the original less-than-fair-value (LTFV) investigation, the cash deposit rate will continue to be the rate published in the most recent final results or determination for which the manufacturer or exporter received a company-specific rate; (3) if the exporter is not a firm covered in this review, a previous review, or the LTFV investigation, but the manufacturer is, the cash deposit rate will be the rate established for the manufacturer of the merchandise in the final results of this review, earlier review or the LTFV investigation, whichever is the most recent; (4) if neither the exporter nor the manufacturer is a firm covered in this or any previous reviews, the cash deposit will be 35.95 percent, the "All Others" rate made effective by the antidumping duty order (59 FR 11769, March 14, 1994).

This notice serves as a final reminder to importers of their responsibility under 19 CFR 353.26 to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Secretary's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

This notice also serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 353.34(d) of the Department's regulations. Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of the APO is a sanctionable violation.

This administrative review and notice are in accordance with sections 751(a)(1) and 777(i)(1) of the Act.

Dated: May 14, 1998.

Robert S. LaRussa,

Assistant Secretary for Import Administration.

Small Diameter Circular Seamless Carbon and Alloy Steel Standard, Line and Pressure Pipe From Brazil; Notice of Initiation and Preliminary Results of Changed Circumstances Antidumping Duty Administrative Review, and Intent to Revoke Order in Part

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

ACTION: Notice of initiation and preliminary results of changed circumstances antidumping duty administrative review, and intent to revoke order in part.

SUMMARY: In response to a request made on April 27, 1998, by the Gulf States Tube Division of Vision Metals ("Gulf

States")[1], a petitioner in this case, the Department of Commerce (the Department) is initiating a changed circumstances antidumping duty administrative review and issuing a preliminary intent to revoke in part the antidumping duty order on small diameter circular seamless carbon and alloy steel standard, line and pressure pipe from Brazil, the scope of which currently includes certain glass-lined seamless pressure pipe. Gulf States and Koppel Steel Corporation, the petitioners in this case, have expressed no further interest in the relief provided by the antidumping duty order with respect to certain glass-lined seamless pressure pipe imported from Brazil. Accordingly, we intend to revoke this order in part.

Interested parties are invited to comment on these preliminary results.

EFFECTIVE DATE: May 22, 1998.

FOR FURTHER INFORMATION CONTACT: Helen M. Kramer or Linda Ludwig, AD/CVD Enforcement Group III, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, N.W., Washington D.C. 20230; telephone (202) 482–0405 or (202) 482–3833, respectively.

SUPPLEMENTARY INFORMATION:

Applicable Statute and Regulations

Unless otherwise indicated, all citations to the statute are references to the provisions effective January 1, 1995, the effective date of the amendments made to the Tariff Act of 1930 (the Act) by the Uruguay Round Agreements Act (URAA). In addition, unless otherwise indicated, all citations to the Department's regulations are to the regulations at 19 CFR Part 351 (62 FR 27296, May 19, 1997).

Background

On August 3, 1995, the Department published the amended final determination and antidumping duty order in the less-than-fair-value (LTFV) investigation of small diameter circular seamless carbon and alloy steel standard, line and pressure pipe from Brazil (60 FR 39707). On April 27, 1998, Gulf States, a petitioner, requested partial revocation of the antidumping duty order due to changed circumstances, pursuant to 19 U.S.C. 1675(b)(1) and 19 CFR 351.222(g), 62 FR 27,296 at 27,400–01 (May 19, 1997), with respect to imports from Brazil of certain glass-lined seamless pressure pipe. On May 1, 1998, the second petitioner, Koppel Steel Corporation, informed the Department by telephone that it has no interest in continuing the application of the order to glass-lined seamless pressure pipe. See Memorandum for the File from Helen M. Kramer, Case Analyst, to Linda Ludwig, Program Manager (May 1, 1998).

Scope of the Review

Imports covered by this review and partial revocation are shipments of seamless carbon and alloy (other than stainless) steel pipes, of circular cross-section, not more than 114.3 mm (4.5 inches) in outside diameter, regardless of wall thickness or manufacturing process (hot-finished or cold-drawn) that (1) has been cut into lengths of six to 120 inches, (2) has had the inside bore ground to a smooth surface, (3) has had multiple layers of specially formulated corrosion resistant glass permanently baked on at temperatures of 1,440 to 1,700 degrees Fahrenheit in thicknesses from 0.032 to 0.085 inch (40 to 80 mils), and (4) has flanges or other forged stub ends welded on both ends of the pipe. The special corrosion resistant glass referred to in this definition may be glass containing by weight (1) 70 to 80 percent of an oxide of silicone, zirconium, titanium or cerium (Oxide Group RO_2), (2) 10 to 15 percent of an oxide of sodium, potassium, or lithium (Oxide Group RO), (3) from a trace amount to 5 percent of an oxide of either aluminum, cobalt, iron, vanadium, or boron (Oxide Group R_2O_3, or (4) from a trace amount to 5 percent of a fluorine compound in which fluorine replaces the oxygen in any one of the previously listed oxide groups. These glass-lined pressure pipes are commonly manufactured for use in glass-lined equipment systems for processing corrosive or reactive chemicals, including acrylates, alkanolamines, herbicides, pesticides, pharmaceuticals and solvents.

The glass-lined pressure pipes subject to this review are currently classifiable under subheadings 7304.39.0020, 7304.39.0024 and 7304.39.0028 of the Harmonized Tariff Schedule of the United States (HTSUS). The HTSUS subheadings are provided for convenience and U.S. Customs' purposes only. The written description of the scope of this review remains dispositive.

Initiation and Preliminary Results of Changed Circumstances Antidumping Duty Administrative Review, and Intent to Revoke in Part

At the request of the petitioner, Gulf States, in accordance with section 751(b) of the Act and section 351.216 of the Department's regulations, the Department is initiating a changed circumstances review of small diameter circular seamless carbon and alloy steel standard, line and pressure pipe from Brazil to determine whether partial revocation of the antidumping duty order is warranted with respect to glass-lined seamless pressure pipe. Section 782(h)(2) of the Act and section 351.222(g)(1)(i) of the Department's regulations provide that the Department may revoke an order if it determines that producers accounting for substantially all of the production of the domestic like product have no further interest in the order. In addition, in the event the Department determines that expedited action is warranted, section 351.221(c)(3)(ii) of the regulations permits the Department to combine the notices of initiation and preliminary results.

In accordance with section 751(b) of the Act and sections 351.222(g)(1)(i) and 351.221(c)(3), we are initiating this changed circumstances administrative review and have determined that expedited action is warranted. Our decision to expedite this review stems from the domestic industry's lack of interest in applying the antidumping duty order to glass-lined seamless pressure pipe.

Based on the expression of no interest by Gulf States and Koppel Steel and absent any objection by any other domestic interested parties, we have preliminarily determined that substantially all of the domestic producers of the like product have no interest in continued application of the antidumping duty order to glass-lined seamless pressure pipe from Brazil.

Because we have concluded that expedited action is warranted, we are combining these notices of initiation and preliminary results. Therefore, we are hereby notifying the public of our intent to revoke, in part, the antidumping duty order as it relates to imports of certain glass-lined seamless pressure pipe from Brazil.

Interested parties may submit case briefs and/or written comments no later than 30 days after the date of publication of these preliminary results. Rebuttal briefs and rebuttals to written comments, limited to issues raised in such briefs or comments, may be filed no later than 37 days after the date of publication. The Department will issue the final results of this changed circumstances review, which will include the results of its analysis raised in any such written comments, no later than 270 days after the date on which this review was initiated, or within 45 days if all parties agree to our

[1] Gulf States was previously a division of Quanex Corporation.

preliminary determination. See section 351.216(e) of the Department's regulations.

If final revocation occurs, we will instruct the U.S. Customs Service to end the suspension of liquidation and to refund, with interest, any estimated antidumping duties collected for all unliquidated entries of glass-lined seamless pressure pipe from Brazil. The current requirement for a cash deposit of estimated antidumping duties on all subject merchandise will continue unless and until it is modified pursuant to the final results of this changed circumstances review.

This initiation of review and notice are in accordance with sections 751(b) of the Act, as amended (19 U.S.C. 1675(b)), and 19 CFR 351.216, 351.221, and 351.222 (62 FR 27396, 27398–9, May 19, 1997).

Dated: May 18, 1998.

Robert S. LaRussa,

Assistant Secretary for Import Administration.

[I.D. 011996A]

Endangered and Threatened Wildlife; Recovery Plans for Listed Sea Turtles

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of availability.

SUMMARY: NMFS and the Fish and Wildlife Service (FWS), Department of the Interior, (collectively, the Services) announce the availability of the final recovery plans for U.S. Pacific populations of endangered and threatened sea turtles, as required by the Endangered Species Act of 1973 (ESA).

DATES: May 22, 1998.

ADDRESSES: Requests for copies of the recovery plans may be submitted to the Chief, Endangered Species Division, Office of Protected Resources, NMFS, 1315 East-West Highway, Silver Spring, MD 20910. Copies may be purchased from the U.S. Fish and Wildlife Reference Service, 5430 Grosvenor Lane, Suite 110, Bethesda, MD 20814, 1–800–582–3421. Electronic copies in .pdf format are also available at NMFS' Protected Resources internet website (www.nmfs.gov/prot_res/).

FOR FURTHER INFORMATION CONTACT: Barbara Schroeder, Office of Protected Resources, NMFS, 1315 East-West Highway, Silver Spring, MD 20910, Phone: 301–713–1401, or Sandy MacPherson, FWS, 6620 Southpoint Dr. South, Jacksonville, FL 32216, Phone: 904–232–2580.

SUPPLEMENTARY INFORMATION:

Background

The ESA is administered jointly by the Services. NMFS has jurisdiction over most species in the marine system while FWS has jurisdiction elsewhere. Listed endangered and threatened species under NMFS jurisdiction are enumerated in 50 CFR 222.23(a) and 50 CFR 227.4, respectively. The List of Endangered and Threatened Wildlife, which contains species under the jurisdiction of both Services, is found in 50 CFR 17.11(h).

Pursuant to a Memorandum of Agreement between the two Services, the jurisdiction over listed sea turtles is shared: FWS has responsibility for sea turtles primarily in the terrestrial environment, while NMFS has responsibility for sea turtles primarily in the marine environment. Presently, all sea turtle species found in the United States are listed as follows: Kemp's ridley (*Lepidochelys kempii*), leatherback (*Dermochelys coriacea*), and hawksbill (*Eretmochelys imbricata*) are listed as endangered; loggerhead (*Caretta caretta*), green (*Chelonia mydas*), and olive ridley (*Lepidochelys olivacea*) turtles are listed as threatened, except for breeding populations of green turtles in Florida and on the Pacific coast of Mexico, and for breeding populations of olive ridleys on the Pacific coast of Mexico, which are listed as endangered.

Section 4(f)(1) of the ESA requires that the Secretary of the Interior or the Secretary of Commerce develop and implement recovery plans for the conservation and survival of endangered and threatened species listed pursuant to section 4(c) of the ESA, unless such plans would not promote the conservation of the species. Pursuant to section 4(f)(4) of the ESA, prior to final approval and implementation of a new or revised recovery plan, the Secretary shall provide public notice and an opportunity for public review and comment. The Services published a notice of availability of the draft recovery plans in the **Federal Register** on March 12, 1996 (61 FR 9978). No comments were received during the 60-day comment period.

The recovery plans are for the U.S. Pacific populations of the loggerhead, olive ridley, leatherback, hawksbill, green turtle and the East Pacific population of the green turtle. These are the first comprehensive recovery plans for sea turtle populations in the U.S. Pacific. To accomplish the drafting of the recovery plans, a team was formed consisting of professional biologists with experience in the region and with marine turtles.

While similar in format to previous sea turtle recovery plans for the Atlantic and the Caribbean, the unique nature of the Pacific required some changes to that format. The geographic scope of these plans is much larger than any previously attempted, with over 5,000 islands and 3,000 miles (4,827 km) of ocean, as well as the mainland United States, to consider. Furthermore, the amount of jurisdictional overlap between nations, commonwealths, territories, and compact-of-free-association-states and the various turtle populations required a broader management perspective than has been attempted previously. Finally, sea turtles have not been studied as intensively in the Pacific as in other U.S. areas, and thus there is a large void in basic biological information. For these reasons, these plans have more extensive text on the general biology of the turtles, so that they might act as a resource to managers seeking a handy reference to the species. The plans are also subdivided into U.S. jurisdictional areas (i.e. the various commonwealths and territories), so that local managers can address issues within their respective regions more easily.

To implement these plans, NMFS will form implementation teams, where needed, consisting of representatives from Federal agencies, states, territories, and commonwealths. The team(s) will produce a plan that identifies solutions for achieving recovery of these populations.

Authority: 16 U.S.C. 1531–1543 *et seq.*

Dated: May 15, 1998.

Hilda Diaz-Soltero,

Director, Office of Protected Resources, National Marine Fisheries Service.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[I.D. 051398F]

North Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and

Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of a committee meeting.

SUMMARY: The North Pacific Fishery Management Council's Community Development Quota (CDQ) Committee will meet in Juneau, AK.

DATES: The meeting will be held on Thursday, June 18, 1998.

ADDRESSES: The meeting will be held in Room 445C at the NMFS Regional Office, 709 W. 9th Street, Juneau, AK 99801.

Council address: North Pacific Fishery Management Council, 605 W. 4th Ave., Suite 306, Anchorage, AK 99501–2252.

FOR FURTHER INFORMATION CONTACT: Jane DiCosimo, telephone: 907–271–2809.

SUPPLEMENTARY INFORMATION: The Committee will meet to discuss halibut small-boat fleet composition and enforcement issues related to the possibility of moving the CDQ program out of the NMFS Restricted Access Management Division.

Although other issues not contained in this agenda may come before this committee for discussion, in accordance with the Magnuson-Stevens Fishery Management Conservation Act, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically identified in the agenda listed in this notice.

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Helen Allen, 907–271–2809, at least 5 working days prior to the meeting date.

Dated: May 15, 1998.

Bruce C. Morehead,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

[I.D. 051398G]

North Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of committee meeting.

SUMMARY: The North Pacific Fishery Management Council's Halibut Guideline Harvest Committee will meet in Anchorage, AK.

DATES: The meeting will be held on Friday, June 19, 1998.

ADDRESSES: The meeting will be held in Room 229, of the Old Federal Building, 605 W. 4th Avenue, Anchorage, AK 99501.

Council address: North Pacific Fishery Management Council, 605 W. 4th Ave., Suite 306, Anchorage, AK 99501–2252.

FOR FURTHER INFORMATION CONTACT: Jane DiCosimo, telephone: 907–271–2809.

SUPPLEMENTARY INFORMATION: The Committee will meet to discuss a proposed banking program for the halibut charter boat fleet, whereby unharvested halibut would accrue for use in a year when the charter fleet's allocation is projected to be below a minimum amount needed to meet the committee's goal of not shortening the fishing season or reducing the 2–fish bag limit. Other topics will include the proposed moratorium on halibut charter vessels and a rod permit program.

Although other issues not contained in this agenda may come before this committee for discussion, according to the Magnuson-Stevens Fishery Conservation and Management Act, those issues may not be of formal discussion during this meeting. Action will be restricted to those issues specifically identified in the agenda in this notice.

Special Accommodations

The meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Helen Allen, 907–271–2809, at least 5 working days prior to the meeting date.

Dated: May 15, 1998.

[I.D. 051498B]

Marine Mammals

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Receipt of application for amendment.

SUMMARY: Notice is hereby given that the Southwest Fisheries Science Center, Honolulu Laboratory, National Marine Fisheries Service, 2570 Dole Street, Honolulu, Hawaii 96822–2396, has requested an amendment to scientific research Permit No. 848–1335.

DATES: Written or telefaxed comments must be received on or before June 22, 1998.

ADDRESSES: The amendment request and related documents are available for review upon written request or by appointment in the following office(s):

Permits Division, Office of Protected Resources, NMFS, 1315 East-West Highway, Room 13705, Silver Spring, MD 20910 (301/713–2289);

Regional Administrator, Southwest Region, National Marine Fisheries Service, 501 West Ocean Blvd., Suite 4200, Long Beach, CA 90802–4213 (562/980–4001); and

Protected Species Program Manager, Pacific Islands Area Office, 2570 Dole Street, Room 106, Honolulu, HI 96822–2396 (808/973–2941).

Written data or views, or requests for a public hearing on this request should be submitted to the Chief, Permits and Documentation Division, F/PR1, Office of Protected Resources, National Marine Fisheries Service, Silver Spring, MD 20910. Those individuals requesting a hearing should set forth the specific reasons why a hearing on this particular request would be appropriate.

Comments may also be submitted by facsimile at (301) 713–0376, provided the facsimile is confirmed by hard copy submitted by mail and postmarked no later than the closing date of the comment period. Please note that comments will not be accepted by e-mail or other electronic media.

FOR FURTHER INFORMATION CONTACT: Jeannie Drevenak, 301/713–2289.

SUPPLEMENTARY INFORMATION: The subject amendment to Permit No. 848–1335, issued on June 10, 1997 (62 FR 32586) is requested under the authority of the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*), the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR part 216), the endangered species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), and the regulations governing the taking, importing, and exporting of endangered fish and wildlife (50 FR 222.23).

The permit holder is currently authorized to conduct population assessment, disease assessment, recovery actions, and pelagic ecology

studies of Hawaiian monk seals (*Monachus* schauinslandi) at all locations within the Hawaiian Archipelago and at Johnston Atoll, through May 31, 2002. The permit holder is now requesting that the permit be amended to authorize the relocation or removal of up to 10 adult male Hawaiian monk seals from the Northwestern Hawaiian Islands, in the event that such seals are known to cause mortality to nursing or weaned pups.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of this application to the Marine Mammal Commission and its Committee of Scientific Advisors.

Dated: May 15, 1998.

Ann D. Terbush,

Chief, Permits and Documentation Division, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510–22–F

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[I.D. 051198A]

Marine Mammals; File No. 704–1444

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Issuance of permit.

SUMMARY: Notice is hereby given that University of Alaska Museum, 907 Yukon Drive, Fairbanks, AK 99775–1200, (Principal Investigator: Gordon H. Jarrell, Ph.D.) has been issued a permit to collect, import/export marine mammal specimens for purposes of scientific research.

ADDRESSES: The permit and related documents are available for review upon written request or by appointment in the following office(s):

Permits and Documentation Division, Office of Protected Resources, NMFS, 1315 East-West Highway, Room 13705, Silver Spring, MD 20910 (301/713–2289); and

Alaska Region, NMFS, P.O. Box 21668, Juneau, AK 99802–1668 (907/586–7221).

FOR FURTHER INFORMATION CONTACT: Ruth Johnson, 301/713–2289.

SUPPLEMENTARY INFORMATION: On February 13, 1998, notice was published in the **Federal Register** (63 FR 7403) that a request for a scientific research permit to collect, import/export marine mammal specimens had been submitted by the above-named organization. The requested permit has been issued under the authority of the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*), the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR part 216), the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*), the regulations governing the taking, importing, and exporting of endangered fish and wildlife (50 CFR parts 217–227), and the Fur Seal Act of 1966, as amended (16 U.S.C. 1151 *et seq.*).

Issuance of this permit, as required by the ESA, was based on a finding that such permit (1) was applied for in good faith, (2) will not operate to the disadvantage of the endangered species which is the subject of this permit, and (3) is consistent with the purposes and policies set forth in section 2 of the ESA.

Dated: May 15, 1998.

DEPARTMENT OF COMMERCE

National Telecommunications and Information Administration (NTIA)

Advisory Committee on Public Interest Obligations of Digital Television Broadcasters; Notice of Open Meeting

ACTION: Notice is hereby given of a meeting of the Advisory Committee on Public Interest Obligations of Digital Television Broadcasters, created pursuant to Executive Order 13038.

SUMMARY: The President established the Advisory Committee on Public Interest Obligations of Digital Television Broadcasters (PIAC) to advise the Vice President on the public interest obligations of digital broadcasters. The Committee will study and recommend which public interest obligations should accompany broadcasters' receipt of digital television licenses. The President designated the National Telecommunications and Information Administration as secretariat for the Committee.

AUTHORITY: Executive Order 13038, signed by President Clinton on March 11, 1997.

DATES: The meeting will be held on Monday, June 8, 1998 from 9:30 a.m. to 5:30 p.m.

ADDRESSES: The meeting is scheduled to take place at the Marquette Hotel, 710 Marquette Avenue, Minneapolis, MN 55402. This location is subject to change. If the location changes, another **Federal Register** notice will be issued. Updates about the location of the meeting will also be available on the Advisory Committee's homepage at www.ntia.doc.gov/pubintadvcom/pubint.htm or you may call Karen Edwards at 202–482–8056. The meeting will also be broadcast over the Internet. The broadcast can be accessed via the Advisory Committee's homepage at www.ntia.doc.gov/pubintadvcom/pubint.htm.

FOR FURTHER INFORMATION CONTACT: Karen Edwards, Designated Federal Officer and Telecommunications Policy Specialist, at the National Telecommunications and Information Administration, U.S. Department of Commerce, Room 4720, 14th Street and Constitution Avenue, N.W., Washington, DC 20230. Telephone: 202–482–8056; Fax: 202–482–8058; E-mail: piac@ntia.doc.gov.

Media Inquiries: Please contact Paige Darden at the Office of Public Affairs, at 202–482–7002.

Agenda

Monday, June 8
- Opening remarks
- Committee deliberations
- Public Comment
- Closing remarks

This agenda is subject to change. For an updated, more detailed agenda, please check the Advisory Committee at www.ntia.doc.gov/pubintadvcom/pubint.htm.

Public Participation: The meeting will be open to the public, with limited seating available on a first-come, first-served basis. This meeting is physically accessible to people with disabilities. Any member of the public requiring special services, such as sign language interpretation or other ancillary aids, should contact Karen Edwards at least five (5) working days prior to the meeting at 202–482–8056 or at piac@ntia.doc.gov.

Members of the public may submit written comments concerning the Committee's affairs at any time before or after the meeting. The Secretariat's

guidelines for public comment are described below and are available on the Advisory Committee homepage (www.ntia.doc.gov/pubintadvcom/pubint.htm) or by calling 202–482–8056.

Guidelines for Public Comment: The Advisory Committee on Public Interest Obligations of Digital Television Broadcasters welcomes public comments.

Oral Comment: In general, opportunities for oral comment will usually be limited to no more than five (5) minutes per speaker and no more than thirty (30) minutes total at each meeting.

Written Comment: Written comments must be submitted to the Advisory Committee Secretariat at the address listed below. Comments can be submitted either by letter addressed to the Committee (please place "Public Comment" on the bottom left of the envelope and submit at least thirty-five (35) copies) or by electronic mail to piac@ntia.doc.gov (please use "Public Comment" as the subject line). Written comments received within three (3) workings days of a meeting and comments received shortly after a meeting will be compiled and sent as briefing material to Committee members prior to the next scheduled meeting.

Obtaining Meeting Minutes: Within thirty (30) days following the meeting, copies of the minutes of the meeting may be obtained over the Internet at www.ntia.doc.gov/pubintadvcom/pubint.htm, by phone request at 202–482–8056, by email request at piac@ntia.doc.gov or by written request to Karen Edwards; Advisory Committee on Public Interest Obligations of Digital Television Broadcasters; National Telecommunications and Information Administration; U.S. Department of Commerce, Room 4720; 14th Street and Constitution Avenue NW, Washington, DC 20230.

Larry Irving,

Assistant Secretary for Communications and Information.

BILLING CODE 3510–60–P

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Amendment of Quota and Visa Requirements for Certain Cotton Textile Products Produced or Manufactured in Turkey

May 18, 1998.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner of Customs amending quota and visa requirements.

EFFECTIVE DATE: June 2, 1998.

FOR FURTHER INFORMATION CONTACT: Roy Unger, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 482–4212.

SUPPLEMENTARY INFORMATION:

Authority: Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended.

In exchange of notes dated January 16, 1998 and March 27, 1998, the Governments of the United States and Turkey agreed that discharge printed fabric classified in Harmonized Tariff Schedule (HTS) numbers 5208.52.3035, 5208.52.4035, 5209.51.6032 (Category 313); 5209.51.6015 (Category 314); 5208.52.4055 (Category 315); 5208.59.2085 (Category 317); 5208.59.2015, 5209.59.0015 and 5211.59.0015 (Category 326) which is produced or manufactured in Turkey and imported on or after June 2, 1998 will no longer be subject to visa requirements. Also, for quota purposes, discharge printed fabric classified in the aforementioned HTS numbers, produced or manufactured in Turkey and imported on or after June 2, 1998 will not be subject to 1998 limits, regardless of the date of export. The new designations for Categories 313, 314, 315, 317 and 326 will be 313–O, 314–O, 315–O, 317–O and 326–O. The 1998 quota levels for the new part-categories remain unchanged.

Effective on June 2, 1998, products in Categories 313, 314, 315, 317 and 326, produced or manufactured in Turkey and exported from Turkey on or after March 27, 1998 must be accompanied by a 313–O, 314–O, 315–O, 317–O and 326–O part-category visa. There will be a grace period from March 27, 1998 through June 30, 1998 during which products exported from Turkey in Categories 313, 314, 315, 317 and 326 may be accompanied by the whole or new part-category visa.

In the letter published below, the Chairman of CITA directs the Commissioner of Customs to amend the export quota and visa requirements.

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 62 FR 66057, published on December 17, 1997). Also see 52 FR 6859, published on March 5, 1987; and 62 FR 67839, published on December 30, 1997.

Troy H. Cribb,

Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

May 18, 1998.

Commissioner of Customs,
Department of the Treasury, Washington, DC 20229.

Dear Commissioner: This directive amends, but does not cancel, the directive issued to you on December 22, 1997, by the Chairman, Committee for the Implementation of Textile Agreements. That directive concerns imports of certain cotton, wool and man-made fiber textile products, produced or manufactured in Turkey and exported during the twelve-month period which begins on January 1, 1998 and extends through December 31, 1998.

Effective on June 2, 1998, pursuant to exchange of notes dated January 16, 1998 and March 27, 1998 between the Governments of the United States and Turkey and under the terms of the Uruguay Round Agreement on Textiles and Clothing, discharge printed fabric classified in Harmonized Tariff Schedule (HTS) numbers 5208.52.3035, 5208.52.4035, 5209.51.6032 (Category 313); 5209.51.6015 (Category 314); 5208.52.4055 (Category 315); 5208.59.2085 (Category 317); 5208.59.2015, 5209.59.0015 and 5211.59.0015 (Category 326) which is produced or manufactured in Turkey and imported on or after June 2, 1998 will no longer be subject to visa requirements. Also, for quota purposes, discharge printed fabric classified in the aforementioned HTS numbers, produced or manufactured in Turkey and imported on or after June 2, 1998 will not be subject to 1998 limits, regardless of the date of export. The new designations for Categories 313, 314, 315, 317 and 326 will be 313–O [1], 314–O [2], 315–O [3], 317–O [4] and 326–O [5].

The import restraint limits for the new part-categories remain the same as the 1998

[1] Category 313–O: all HTS numbers except 5208.52.3035, 5208.52.4035 and 5209.51.6032.

[2] Category 314–O: all HTS numbers except 5209.51.6015.

[3] Category 315–O: all HTS numbers except 5208.52.4055.

[4] Category 317–O: all HTS numbers except 5208.59.2085.

[5] Category 326–O: all HTS numbers except 5208.59.2015, 5209.59.0015 and 5211.59.0015.

sublimits in the Fabric Group for Categories 313, 314, 315, 317 and 326.

Effective on June 2, 1998, you are directed to amend further the directive dated March 2, 1987 to require a part-category visa for products in Categories 313–O, 314–O, 315–O, 317–O and 326–O, produced or manufactured in Turkey and exported on or after March 27, 1998. There will be a grace period from March 27, 1998 through June 30, 1998 during which products exported from Turkey in Categories 313, 314, 315, 317 and 326 may be accompanied by the whole or new part-category visa.

Shipments entered or withdrawn from warehouse according to this directive which are not accompanied by an appropriate export visa shall be denied entry and a new visa must be obtained.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception to the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

Troy H. Cribb,

Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510–DR–F

COMMODITY FUTURES TRADING COMMISSION

Chicago Board of Trade Futures Contracts in Corn and Soybeans; Order to Designate Contract Markets and Amendment Order of November 7, 1997, as Applied to Such Contracts; Correction

AGENCY: Commodity Futures Trading Commission.

ACTION: Final order to Chicago Board of Trade; correction.

SUMMARY: On May 13, 1998, the Commission published in the **Federal Register** (63 FR 26575) a final Order to the Chicago Board of Trade. The purpose of the Order was to designate the Chicago Board of Trade as a contract market in corn and soybeans futures contracts and amend the Order of November 7, 1997, as applied to such contracts. This correction includes Attachments 1 and 2 which were inadvertently omitted.

DATES: This Order became effective on May 7, 1998.

ADDRESSES: Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street, NW., Washington, DC 20581.

FOR FURTHER INFORMATION CONTACT: Steve Manaster, Director, or Paul M. Architzel, Chief Counsel, Division of Economic Analysis, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street, NW., Washington, DC 20581, (202) 418–5260, or electronically, Mr. Architzel at [PArchitzel@cftc.gov].

SUPPLEMENTARY INFORMATION: The Commission is correcting inadvertent omissions in the publication of the final Order to the Chicago Board of Trade whereby the Commodity Futures Trading Commission ordered that the applications for contract market designation in corn and in soybeans submitted by the Board of Trade of the City of Chicago (CBT) on December 19, 1997 and supplemented on March 20, 1998, be granted and amended its Order under section 5a(a)(10), dated November 7, 1997, to permit the applications for designation to be granted. Under this Order, the Commission took the following actions:

(1) Granted under section 5 of the Commodity Exchange Act (Act) the CBT's application for designation as a contract market in soybeans and approved under section 5a(a)(12) of the Act all of the proposed rules of the contract market contained in Attachment 1 to the Order;

(2) Granted under section 5 of the Act the CBT's application for designation as a contract market in corn and approved under section 5a(a)(12) of the Act all of the proposed rules of the contract market contained in Attachment 2 to the Order;

The Commission is publishing Attachments 1 and 2 which were inadvertently omitted and were referred to on page 26575, column 3, paragraphs (1) and (2).

Issued in Washington, DC on May 14, 1998.

Jean A. Webb,

Secretary of the Commission, Commodity Futures Trading Commission.

XS11.01 Disputes—All disputes between interested parties may be settled by arbitration as provided in the Rules and Regulations.

XS12.01 Position Limits and Reportable Positions—(see 425.01)

ChXS Delivery Procedures

XS36.00 Grade Differentials—(see 1036.00)

XS36.01 Soybean Location Delivery Differentials—Soybeans for shipment from regular shipping stations located within the Chicago Switching District or the Burns Harbor, Indiana Switching District may be delivered in satisfaction of Soybean futures contracts at contract price, subject to the differentials for class and grade outlined above. Soybeans for shipment from regular shipping stations located within the Lockport-Seneca Shipping District may be delivered in satisfaction of soybean futures contracts at a premium of 2¢ per bushel over contract price, subject to the differentials for class and grade outlined above. Soybeans for shipment from regular shipping stations located within the Ottawa-Chillicothe Shipping District may be delivered in satisfaction of Soybean futures contracts at a premium of 2½¢ per bushel over contract price, subject to the differentials for class and grade outlined above. Soybeans for shipment from regular shipping stations located within the Peoria-Pekin Shipping District may be delivered in satisfaction of Soybean futures contracts at a premium of 3¢ per bushel over contract price, subject tot he differentials for class and grade outlined above. Soybeans for shipment from regular shipping stations located within the Havana-Grafton Shipping District may be delivered in satisfaction of soybean futures contracts at a premium of 3½¢ per bushel over contract price, subject to the differentials for class and grade outlined above. Soybeans for shipment from regular shipping stations located in the St. Louis-East St. Louis and Alton Switching Districts may be delivered in satisfaction of Soybean futures contracts at a premium of 6¢ per bushel over contract price, subject to the differentials for class and grade outlined above.

XS38.01 Grades—(see 1038.00 and 1038.01)

XS41.01 Delivery Points—Soybean Shipping Certificates shall specify shipment from one of the warehouses or shipping stations currently regular for delivery and located in one of the following territories:

A. Chicago and Burns Harbor, Indiana Switching District—When used in these Rules and Regulations, the Chicago Switching District will be that area

geographically defined by Tariff ICC WTL 8020-Series and that portion of the Illinois Waterway at or above river mile 304 which includes the Calumet Sag Channel and the Chicago Sanitary & Ship Canal. When used in these Rules and Regulations, Burns Harbor, Indiana Switching District will be that area geographically defined by the boundaries of Burns Waterway Harbor at Burns Harbor, Indiana which is owned and operated by the Indiana Port Commission.

B. Lockport-Seneca Shipping District—When used in these Rules and Regulations, the Lockport-Seneca Shipping District will be that portion of the Illinois Waterway below river mile 304 at the junction of the Calumet Sag Channel and Chicago Sanitary & Ship Canal and above river mile 244.6 at the Marseilles Lock and Dam. Shipping stations within the Lockport-Seneca Shipping District must deliver 5,000 bushel shipping certificates of a like kind and quality of grain in multiples of 55,000 bushes against the futures contracts.

C. Ottawa-Chillicothe Shipping District—When used in these Rules and Regulations, the Ottawa-Chillicothe Shipping District will be that portion of the Illinois Waterway below river mile 244.6 at the Marseilles Lock and Dam and at or above river mile 170 between Chillicothe and Peoria, IL. Shipping stations within the Ottawa-Chillicothe Shipping District must deliver 5,000 bushel shipping certificates of a like kind and quality of grain in multiples of 55,000 bushels against the futures contracts.

D. Peoria-Pekin Shipping District—When used in these Rules and Regulations, the Peoria-Pekin Shipping District will be that portion of the Illinois Waterway below river mile 170 between Chillicothe and Peoria, IL and at or above river mile 151 at Pekin, IL. Shipping stations within the Peoria-Pekin Shipping District must deliver 5,000 bushel shipping certificates of a like kind and quality of grain in multiples of 55,000 bushels against the futures contracts.

E. Havana-Grafton Shipping District—When used in these Rules and Regulations, the Havana-Grafton Shipping District will be that portion of the Illinois Waterway below river mile 151 at Pekin, IL to river mile 0 at Grafton, IL. Shipping stations within the Havana-Grafton Shipping District must deliver 5,000 bushel shipping certificates of a like kind and quality of grain in multiples of 55,000 bushels against the futures contracts.

F. St. Louis-East St. Louis and Alton Switching Districts—When used in these Rules and Regulations, St. Louis-East St. Louis and Alton Switching Districts will be that portion of the upper Mississippi River below river mile 218 at Grafton, IL and above river mile 170 at Jefferson Barracks Bridge in south St. Louis, MO. Shipping stations on the St. Louis-East St. Louis and Alton Switching Districts must deliver 5,000 bushel shipping certificates of a like kind and quality of grain in multiples of 55,000 bushels against the futures contracts.

XS43.01 Deliveries by Soybean Shipping Certificate—(see 1043.01)

XS43.02 Registration of Soybean Shipping Certificates—(see 1043.02)

XS43.03 Reissuance of Shipping Certificates—(see 1043.03)

XS44.01 Certificates Format—The following form of Soybean Shipping Certificate shall be used with proper designation, indicating shipping station.

Board of Trade of the City of Chicago
Soybean Shipping Certificate for Delivery in Satisfaction of Contract for 5,000 Bushels of Soybeans

This certificate not valid unless registered by the Registrar of the Board of Trade of the City of Chicago.

Soybeans Shipping Station of (grade) _____
Located at _____
Registered total daily rate of loading of _____ bushes.

Total rate of loading per day shall be in accordance with Regulation 1081.01 (12) G and H. A premium charge of $_____ cents per bushel per calendar day for each day is to be assessed starting the day after registration by the Registrar of this Certificate through the business day loading is complete.

For value received and receipt of this document properly endorsed and lien for payment of premium charges the undersigned shipper, regular for delivery under the Rules and Regulations of the Board of Trade of the City of Chicago, hereby agrees to deliver 5,000 bushels of Soybeans in bulk conforming to the standards of the Board of Trade of the City of Chicago and ship said Soybeans in accordance with orders of the lawful owner of this document and in accordance with Rules and Regulations of the Board of Trade of the City of Chicago. Delivery shall be by water or rail conveyance according to the registered loading capability of the shipper.

XS51.01 Office Delivers Prohibited-(see 1051.01)

XS54.01 Failure to Accent Delivery-(see 1054.00 and 1054.00A)

XS56.01 Payment of Premium Charges-To be valid for delivery on futures contracts, all shipping certificates covering Soybeans under obligation for shipment must indicate the applicable premium charge. No shipping certificates shall be valid for delivery on futures contracts unless the premium charges on such Soybeans shall have been paid up to and including the 18th calendar day of the preceding month, and such payment endorsed on the shipping certificate. Unpaid accumulated premium charges at the posted rate applicable to the warehouse or

shipping station where the grain under obligation for shipment shall be allowed and credited to the buyer by the seller to and including date of delivery. Further, no shipping certificate shall be valid for delivery if the shipping certificate has expired prior to delivery or has an expiration date in the month in which delivered.

If premium charges are not paid on-time up to and including the 18th calendar day preceding the delivery months of March, July and September and by the first Calendar day of each of these delivery months, a late charge will apply. The late charge will be an amount equal to the total unpaid accumulated premium charges rates multiplied by the "prime interest rate" in effect on the day that the accrued premium charges are paid plus a penalty of 5 percentage points, all multiplied by the number of calendar days that premium is overdue, divided by 360 days. The terms "prime interest rate" shall mean the lowest of the rates announced by each of the following four banks at Chicago, Illinois, at its "prime rate": Bank of America-Illinois, the First National Bank of Chicago, Harris Trust & Savings Bank, and the Northern Trust Company.

The premium charges on Soybeans for delivery from regular shippers within the Chicago Switching District or the Burns Harbor, Indiana Switching District shall not exceed 12/100 of one cent per bushel per day.

The premium charges on Soybeans for delivery from regular shippers within the Lockport-Seneca Shipping District shall not exceed 10/100 of one cent per bushel per day.

The premium charges on Soybeans for delivery from regular shippers within the Ottawa-Chillicothe Shipping District shall not exceed 10/100 of one cent per bushel per day.

The premium charges on Soybeans for delivery from regular shippers within the Peoria-Pekin Shipping District shall not exceed 10/100 of one cent per bushel per day.

The premium charges on Soybeans for delivery from regular shippers within the Havana-Grafton Shipping District shall not exceed 10/100 of one cent per bushel per day.

The premium charges on Soybeans for delivery from regular shippers in the St. Louis-East St. Louis and Alton Switching Districts shall not exceed 10/100 of one cent per bushel per day.

ChXS Regularity of Issuers of Shipping Certificates

XS81.01 Regularity of Warehouses and Issuers of Shipping Certificates—

Persons operating grain warehouses or shippers who desire to have such warehouses or shipping stations made regular for the delivery of grain under the Rules and Regulations shall make application for an initial Declaration of Regularity on a form prescribed by the Exchange prior to May 1, 1994, and every even year thereafter, for a two-year term beginning July 1, 1994, and every even year thereafter, and at any time during a current term for the balance of that term. Regular grain warehouses or shippers who desire to increase their regular capacity during a current term shall make application for the desired amount of total regular capacity on the same form. Initial regularity for the current term and increases in regularity shall be effective either thirty days after a notice that a bona fide application has been received is posted on the floor of the exchange, or the day after the application is approved by the Exchange, whichever is later. Applications for a renewal of regularity shall be made prior to May 1, 1994, and every even year thereafter, for the respective years beginning July 1, 1994, and every even year thereafter, and shall be on the same form.

The following shall constitute the requirements and conditions for regularity:

(1) The warehouse or shipping station making application shall be inspected by the Registrar or the United States Department of Agriculture. Where application is made to list as regular a warehouse which is not regular at the time of such application, the applicant may be required to remove all grain from the warehouse and to permit the warehouse to be inspected and the grain graded, after which such grain may be returned to the warehouse and receipts issued therefor.

The operator of a shipping station issuing Soybean Shipping Certificates shall limit the number of Shipping Certificates issued to an amount not to exceed:

(a) 30 times his registered total daily rate of loading barges,

(b) a value greater than 25 percent of the operator's net worth,

(c) and in the case of Chicago, Illinois and Burns Harbor, Indiana Switching Districts only, his registered storage capacity.

The shipper issuing Soybean Shipping Certificates shall register his total daily rate of loading barges at his maximum 8 hour loadout capacity in an amount not less than:

(a) one barge per day at each shipping station within the Lockport-Seneca Shipping District, within the Ottawa-Chillicothe Shipping District, within the Peoria-Pekin Shipping District, within the Havana-Grafton Shipping District, and within the St. Louis-East St. Louis and Alton Switching Districts and

(b) three barges per day at each shipping station in the Chicago, Illinois and Burns Harbor, Indiana Switching District.

(2) Shippers located in the Chicago, Illinois and Burns Harbor, Indiana Switching District shall be connected by railroad tracks with one or more railway lines.

XS81.01(3) through XS81.01(12)G(8)—(see 1081.01(3) through 1081.01(12)G(8))

XS81.01(12)G (9) In the event that it had been announced that river traffic will be obstructed for a period of fifteen days or longer as a result of one of the conditions of impossibility listed in regulation 1081.01(12)(G)(8) and in the event that the obstruction will affect a majority of regular shipping stations, then the following barge load-out procedures for soybeans shall apply to shipping stations upriver from the obstruction.

(a) The maker and taker of delivery may negotiate mutually agreeable terms of performance.

(b) If the maker and/or the taker elect not to negotiate mutually agreeable terms of performance, then the maker is obligated to provide the same quantity and like quality of grain pursuant to the terms of the shipping certificate(s) with the following exceptions and additional requirements:

(i) The maker must provide loaded barge(s) to the taker on the Illinois River between the lowest closed lock and St. Louis, inclusive, or on the Mid-Mississippi River between Lock 11 at Dubuque, Iowa and St. Louis, inclusive.

(ii) The loaded barge(s) provided to the taker must have a value equivalent to C.I.F. NOLA, with the maker of delivery responsible for the equivalent cost, insurance and freight.

(iii) The taker of delivery shall pay the maker 18¢ per bushel for Chicago and Burns Harbor Switching District shipping certificates, 16¢ per bushel for Lockport-Seneca District shipping certificates. 15½¢ per bushel for Ottawa-Chillicothe District shipping certificates, 15¢ per bushel for Peoria-Pekin District shipping certificates, and 14 ½¢ per bushel for Havana-Grafton District shipping certificates as a reimbursement for the cost of barge freight.

(c) In the event that the obstruction or condition of impossibility listed in regulation 1081.01(12)(G)(8) will affect a

majority of regular shipping stations, but no announcement of the anticipated period of obstruction is made, then shipment may be delayed for the number of days that such impossibility prevails.

XS81.01(12)H Barge Load-Out Rates for Soybeans—(see 1081.01(12)(H)

XS81.01(13) Location—For the delivery of Soybeans, regular warehouses or shipping stations may be located within the Chicago Switching District or within the Burns Harbor, Indiana Switching District or within the Lockport—Senaca Shipping District or within the Ottawa—Chillicothe Shipping District or within the Peoria-Pekin Shipping District or within the Havana-Grafton Shipping District or in the St. Louis-East St. Louis and Alton Switching Districts.

No such warehouse or shipping station within the Chicago Switching District shall be declared regular unless it is conveniently approachable by vessels of ordinary draft and has customary shipping facilities. Ordinary draft shall be defined as the lesser of (1) channel draft as recorded in the Lake Calumet Harbor Draft Gauge, as maintained by the Corps of Engineers, U.S. Army, minus one (1) foot, or (2) 20 feet.

Delivery in Burns Harbor must be made "in store" in regular elevators or by shipping certificate at regular shipping stations providing water loading facilities and maintaining water depth equal to normal seaway draft of 27 feet.

In addition, deliveries of grain may be made in regular elevators or shipping stations within the Burns Harbor Switching District PROVIDED that:

(a) When grain represented by shipping certificates is ordered out for shipment by a barge, it will be the obligation of the party making delivery to protect the barge freight rate from the Chicago Switching District (i.e. the party making delivery and located in the Burns Harbor Switching District will pay the party taking delivery an amount equal to all expenses for the movement of the barge from the Chicago Switching District, to the Burns Harbor Switching District and the return movement back to the Chicago Switching District).

If inclement weather conditions make the warehouse or shipping station located in the Burns Harbor Switching District unavailable for barge loadings for a period of five or more calendar days, the party making delivery will make grain available on the day following this five calendar day period to load into a barge at one mutually agreeable water warehouse or shipping station located in the Chicago Switching District; PROVIDED that the party making delivery is notified on the first day of that five-day period of inclement weather that the barge is available for movement but cannot be moved from the Chicago Switching District to the Burns Harbor Switching District, and is requested on the last day of this five day calendar period in which the barge cannot be moved.

(b) When grain represented by shipping certificates is ordered out for shipment by vessel, and the party taking delivery is a recipient of a split delivery of grain between a warehouse or shipping station located in Burns Harbor and a warehouse or shipping station in Chicago, and the grain in the Chicago warehouse or shipping station will be loaded onto this vessel; it will be the obligation of the party making delivery at the request of the party taking delivery to protect the holder of the shipping certificates against any additional charges resulting from loading at one berth in the Burns Harbor Switching District and at one berth in the Chicago Switching District as compared to a single berth loading at one location. The party making delivery, at his option, will either make the grain available at one water warehouse or shipping station operated by the party making delivery and located in the Chicago Switching District for loading onto the vessel, make grain available at the warehouse or shipping station in Burns Harbor upon the surrender of shipping certificates issued by other regular elevators or shipping stations located in the Chicago Switching District at the time vessel loading orders are issued, or compensate the party taking delivery in an amount equal to all applicable expenses, including demurrage charges, if any, for the movement of the vessel between a berth in the other switching district. On the day that the grain is ordered out for shipment by vessel, the party making delivery will declare the regular warehouse or shipping station in which the grain will be available for loading.

Delivery within the Lockport-Seneca Shipping District or within the Ottawa-Chilicothe Shipping District or within the Peoria-Pekin Shipping District of within the Havana-Grafton Shipping District must be made at regular shipping station providing water loading facilities and maintaining water depth equal to the draft of the Illinois River maintained by the Corp of Engineers

Delivery in the St. Louis-East St. Louis and Alton Switching Districts must be made at regular shipping stations providing water loading facilities and maintaining water depth equal to the draft of the Mississippi River maintained by the Corp of Engineers.

XC56.01 Payment of Premium Charges—To be valid for delivery on futures contracts, all shipping certificates covering Corn under obligation for shipment must indicate the applicable premium charge. No shipping certificates shall be valid for delivery on futures contracts unless the premium charges on such Corn shall have been paid up to and including the 18th calendar day of the preceding month, and such payment endorsed on the shipping certificate. Unpaid accumulated premium charges at the posted rate applicable to the warehouse or shipping station where the grain under obligation for shipment shall be allowed and credited to the buyer by the seller to and including date of delivery. Further, no shipping certificate shall be valid for delivery if the shipping certificate has expired prior to delivery or has an expiration date in the month in which delivered.

If premium charges are not paid on-time up to and including the 18th calendar day preceding the delivery months of March, July and September and by the first calendar day of each of these delivery months, a late charge will apply. The late charge will be an amount equal to the total unpaid accumulated premium charges rates multiplied by the "prime interest rate" in effect on the day that the accrued premium charges are paid plus a penalty of 5 percentage points, all multiplied by the number of calendar days that premium is overdue, divided by 360 days. The terms "prime interest rate" shall mean the lowest of the rates announced by each of the following four banks at Chicago, Illinois, at its "prime rate": Bank of America-Illinois, The First National Bank of Chicago, Harris Trust & Savings Bank, and the Northern Trust Company.

The premium charges on Corn for delivery from regular shippers within the Chicago Switching District or the Burns Harbor, Indiana Switching District shall not exceed 12/100 of one cent per bushel per day.

The premium charges on Corn for delivery from regular shippers within the Lockport-Seneca Shipping District shall not exceed 10/100 of one cent per bushel per day.

The premium charges on Corn for delivery from regular shippers within the Ottawa-Chillicothe Shipping District shall not exceed 10/100 of one cent per bushel per day.

The premium charges on Corn for delivery from regular shippers within the Peoria-Pekin Shipping District shall not exceed 10/100 of one cent per bushel per day.

ChXC Regularity of Issuers of Shipping Certificates

XC81.01 Regularity of Warehouses and Issuers of Shipping Certificates—Persons operating grain warehouses or shippers who desire to have such warehouses or shipping stations made regular for the delivery of grain under the Rules and Regulations shall make application for an initial Declaration of Regularity on a form prescribed by the Exchange prior to May 1, 1994, and every even year thereafter, for a two-year term beginning July 1, 1994, and every even year thereafter, and at any time during a current term for the balance of that term. Regular grain warehouses or shippers who desire to increase their regular capacity during a current term shall make application for the desired amount of total regular capacity on the same form. Initial regularity for the current term and increases in regularity shall be effective either thirty days after a notice that a bona fide application has been received is posted on the floor of the exchange, or the day after the application is approved by the Exchange, whichever is later. Applications for a renewal of regularity shall be made prior to May 1, 1994, and every even year thereafter, for the respective years beginning July 1, 1994, and every even year thereafter, and shall be on the same form.

The following shall constitute the requirements and conditions for regularity:

(1) The warehouse or shipping station making application shall be inspected by the Registrar or the United States Department of Agriculture. Where application is made to list as regular a warehouse which is not regular at the time of such application, the applicant may be required to remove all grain from the warehouse and to permit the warehouse to be inspected and the grain graded, after which such grain may be returned to the warehouse and receipts issued therefor.

The operator of a shipping station issuing Corn Shipping Certificates shall limit the number of Shipping Certificates issued to an amount not to exceed:

(a) 30 times his registered total daily rate of loading barges,

(b) a value greater than 25 percent of the operator's net worth,

(c) and in the case of Chicago, Illinois and Burns Harbor, Indiana Switching Districts only, his registered storage capacity.

The shipper issuing Corn Shipping Certificates shall register his total daily rate of loading barges at his maximum 8 hour loadout capacity in an amount not less than:

(a) one barge per day at each shipping station within the Lockport-Seneca Shipping District, within the Ottawa-Chillicothe Shipping District, and within the Peoria-Pekin Shipping District and

(b) three barges per day at each shipping station in the Chicago, Illinois and Burns Harbor, Indiana Switching District.

(2) Shippers located in the Chicago, Illinois and Burns Harbor, Indiana Switching District shall be connected by railroad tracks with one or more railway lines.

XC81.01(3) through XC81.01(12)G(8)–(see 1081.01(3) through 1081.01(12)G(8))

XC81.01(12)G(9) In the event that it has been announced that river traffic will be obstructed for a period of fifteen days or longer as a result of one of the conditions of impossibility listed in regulation XC81.01(12)(G)(8) and in the event that the obstruction will affect a majority of regular shipping stations, then the following barge load-out procedures for corn shall apply to shipping stations upriver from the obstruction:

(a) The maker and taker of delivery may negotiate mutually agreeable terms of performance.

(b) If the maker and/or the taker elect not to negotiate mutually agreeable terms of performance, then the maker is obligated to provide the same quantity and like quality of grain pursuant to the terms of the shipping certificate(s) with the following exceptions and additional requirements:

(i) The maker must provide loaded barge(s) to the taker on the Illinois River between the lowest closed lock and St. Louis, inclusive, or on the Mid-Mississippi River between Lock 11 at Dubuque, Iowa and St. Louis, inclusive.

(ii) The loaded barge(s) provided to the taker must have a value equivalent to C.I.F. NOLA, with the maker of delivery responsible for the equivalent cost, insurance and freight.

(iii) The taker of delivery shall pay the maker 18¢ per bushel for Chicago and Burns Harbor Switching District shipping certificates, 16¢ per bushel for Lockport-Seneca District shipping certificates, 15½¢ per bushel for Ottawa-Chillicothe District shipping certificates, and 15¢ per bushel for Peoria-Pekin District shipping certificates as a reimbursement for the cost of barge freight.

(c) In the event that the obstruction or condition of impossibility listed in

regulation XC81.01(12)(G)(8) will affect a majority of regular shipping stations, but no announcement of the anticipated period of obstruction is made, then shipment may be delayed for the number of days that such impossibility prevails.

XC81.01(12)H Barge Load-Out Rates for Corn—(see 1081.01(12)H)

XC81.01(13) Location—For the delivery of corn, regular warehouses or shipping stations may be located within the Chicago Switching District or within the Burns Harbor, Indiana Switching District or within the Lockport-Seneca Shipping District, or within the Ottawa-Chillicothe Shipping District or within the Peoria-Pekin Shipping District.

No such warehouse or shipping station within the Chicago Switching District shall be declared regular unless it is conveniently approachable by vessels of ordinary draft and has customary shipping facilities. Ordinary draft shall be defined as the lesser of (1) channel draft as recorded in the Lake Calumet Harbor Draft Gauge, as maintained by the Corps of Engineers, U.S. Army, minus one (1) foot, or (2) 20 feet.

Delivery in Burns Harbor must be made "in store" in regular elevators or by shipping certificate at regular shipping stations providing water loading facilities and maintaining water depth equal to normal seaway draft of 27 feet.

In addition, deliveries of grain may be made in regular elevators or shipping stations within the Burns Harbor Switching District PROVIDED that:

(a) When grain represented by shipping certificates is ordered out for shipment by a barge, it will be the obligation of the party making delivery to protect the barge freight rate from the Chicago Switching District (i.e. the party making delivery and located in the Burns Harbor Switching District will pay the party taking delivery an amount equal to all expenses for the movement of the barge from the Chicago Switching District, to the Burns Harbor Switching District and the return movement back to the Chicago Switching District).

If inclement weather conditions make the warehouse or shipping station located in the Burns Harbor Switching District unavailable for barge loadings for a period of five or more calendar days, the party making delivery will make grain available on the day following this five calendar day period to load into a barge at one mutually agreeable water warehouse or shipping station located in the Chicago Switching District; PROVIDED that the party making delivery is notified on the first day of that five-day period of inclement weather that the barge is available for movement but cannot be moved from the Chicago Switching District to the Burns Harbor Switching District, and is requested on the last day of this five day calendar period in which the barge cannot be moved.

(b) When grain represented by shipping certificates is ordered out for shipment by vessel, and the party taking delivery is a recipient of a split delivery of grain between a warehouse or shipping station located in Burns Harbor and a warehouse or shipping station in Chicago, and the grain in the Chicago warehouse or shipping station will be loaded onto this vessel; it will be the obligation of the party making delivery at the request of the party taking delivery to protect the holder of the shipping certificates against any additional charges resulting from loading at one berth in the Burns Switching District and at one berth in the Chicago Switching District as compared to a single berth loading at one location. The party making delivery, at his option, will either make the grain available at one water warehouse or shipping station operated by the party making delivery and located in the Chicago Switching District for loading onto the vessel, make grain available at the warehouse or shipping station in Burns Harbor upon the surrender of shipping certificates issued by other regular elevators or shipping stations located in the Chicago Switching District at the time vessel loading orders are issued, or compensate the party taking delivery in an amount equal to all applicable expenses, including demurrage charges, if any, for the movement of the vessel between a berth in the other switching district. On the day that the grain is ordered out for shipment by vessel, the party making delivery will declare the regular warehouse or shipping station in which the grain will be available for loading.

Delivery within the Lockport-Seneca Shipping District, or within the Ottawa-Chillicothe Shipping District or within the Peoria-Pekin Shipping District must be made at regular shipping stations providing water loading facilities and maintaining water depth equal to the draft of the Illinois River maintained by the Corp of Engineers.

Meeting of the Historical Records Declassification Advisory Panel

AGENCY: Department of Defense, Historical Advisory Committee.

ACTION: Notice.

SUMMARY: Notice is hereby given of the forthcoming meeting of the Historical Records Declassification Advisory Panel. The purpose of this meeting is to discuss recommendations to the Department of Defense on topical areas of interest that, from a historical perspective, would be of the greatest benefit if declassified. The OSD Historian will chair these meetings.

DATE: Friday, June 19, 1998.

TIME: Meeting will begin at 9:00 a.m.

ADDRESS: The National Archives Building, Room 410, 7th and Pennsylvania Avenue, N.W., Washington, D.C. 20408.

FOR FURTHER INFORMATION CONTACT: Cynthia Kloss, Room 3C281, Office of the Deputy Assistant Secretary of Defense (Intelligence & Security), Office of the Assistant Secretary of Defense (Command, Control, Communications and Intelligence), 6000 Defense Pentagon, Washington, DC 20301–6000, telephone (703) 695–2289/2686.

Dated: May 18, 1998.

L.M. Bynum,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

Joint Service Committee on Military Justice: Public Meeting

AGENCY: Joint Service Committee on Military Justice (JSC).

ACTION: Notice of public meeting.

SUMMARY: This notice sets forth the schedule and proposed agenda for the 1998 annual public meeting of the JSC. This notice also describes the functions of the JSC.

DATES AND TIMES: Wednesday, 15 July 1998 at 2:00 p.m.

ADDRESSES: Room 808, 1501 Wilson Blvd, Arlington, VA 22209–2403.

FUNCTION: The JSC was established by the Judge Advocates General in 1972. The JSC currently operates under Department of Defense Directive 5500.17, May 8, 1996. The function of the JSC is to improve military justice through preparation and evaluation of proposed amendments and changes to the Uniform Code of Military Justice and the Manual for Courts-Martial.

AGENDA: The JSC will receive public comment concerning its 1998 draft review of the Manual for Courts-Martial as published on May 11, 1998.

This notice is provided in accordance with DoD Directive 5500.17, "Role and Responsibilities of the Joint Service Committee (JSC) on Military Justice," May 8, 1996. This notice is intended only to improve the internal management of the Federal Government. It is not intended to create any right or benefit, substantive or procedural, enforceable at law by any party against the United States, its agencies, its officers, or any person.

FOR FURTHER INFORMATION CONTACT: LtCol Thomas C. Jaster, U.S. Air Force, Air Force Legal Services Agency, 112 Luke Avenue, Room 343, Bolling Air Force Base, Washington, DC 20332–8000, (202) 767–1539; FAX (202) 404–8755.

Dated: May 18, 1998.

L.M. Bynum,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

Air Force A–76 Initiatives Cost Comparisons and Direct Conversions (As of April 1998)

Air Force is in the process of conducting the following A–76 initiatives. Cost comparisons are public-private competitions. Direct conversions are functions that may result in a conversion to contract without public competition. These initiatives were announced and in-progress as of April 1998, include the installation and state where the cost comparison is being performed, the total authorizations under study, public announcement date and anticipated solicitation date. The following initiatives are in various stages of completion.

The Community College of the Air Force (CCAF) Board of Visitors Meeting

The Community College of the Air Force (CCAF) Board of Visitors will hold a meeting on June 4, 1998 at 8:00 a.m. on the First Floor Conference Room, 363 Training Squadron, Bldg. 1025, Missile Road, Sheppard Air Force Base, Texas. The meeting will be open to the public.

The purpose of the meeting is to review and discuss academic policies and issues relative to the operation of the CCAF. Agenda items include a review of the operations of the CCAF and an update on the activities of the CCAF Policy Council.

Members of the public who wish to make oral or written statements at the meeting should contact 1st Lt Cornel Taite, Designated Federal Officer for the Board, at the address below no later than 4:00 p.m. on May 25,1998. Please mail or electronically mail all requests. Telephone requests will not be honored. The request should identify the name of the individual who will make the presentation and an outline of the issues to be addressed. At least 35 copies of the presentation materials must be given to 1st Lt Cornel Taite no later than three days prior to the time of the board meeting for distribution. Visual aids must be submitted to 1st Lt Cornel Taite on a 3 ½" computer disc in Microsoft PowerPoint format no later than 4:00 p.m. on May 25, 1998 to allow sufficient time for virus scanning and formatting of the slides.

For further information, contact Lieutenant Cornel Taite, (334) 953–7322, Community College of the Air Force, 130 West Maxwell Boulevard, Maxwell Air Force Base, Alabama, 36112–6613, or through electronic mail at cotaite@max1.au.af.mil.

Barbara A. Carmichael,

Alternate Air Force Federal Register Liaison Officer.

Department of the Army

Environmental Assessment and Finding of no Significant Impact for the Realignment of Missions and Personnel at Fort Meade, Maryland

AGENCY: Department of the Army, DoD.

ACTION: Notice of availability.

SUMMARY: In accordance with Public Law 101–510, the Defense Base Closure and Realignment Act of 1990, the Defense Base Closure and Realignment Commission recommended relocating the Defense Investigative Service (DIS) from Fort Holabird, Maryland, to a new facility to be built on Fort Meade, Maryland, and closing the leased space at Crown Ridge in Fairfax County, Virginia, and relocating the Information Systems Software Center (ISSC) to Fort Meade. ISSC has two component elements, the Software Development Center-Washington (SDC–W) and the Executive Software Systems Directorate (ESSD). The Commission also recommended realigning Fort Meade by eliminating inpatient services at Kimbrough Army Community Hospital (KACH) and reducing the facility to a clinic and outpatient surgical center.

An Environmental Assessment (EA) examined the proposed transfer of personnel and missions to 445 civilian and 67 military positions and Form 71 civilian and 57 military positions at Fort Meade, Maryland. Plans for relocation include construction of a new facility for the DIS in the Central Administrative Area and renovation of a portion of Pershing Hall to house the ISSC elements of SDC–W and ESSD. This allows for construction of DIS in a developed area and collocates the two ISSC functions in the same building, enhancing mission effectiveness.

No significant adverse impacts are anticipated from any of the alternatives analyzed in the EA. All of the alternatives, including the Army's preferred alternative, could result in some minor adverse impacts that can be avoided or minimized. Minor adverse impacts may occur in the areas of noise, stormwater, soil, traffic and transportation, and asbestos and lead-based paint management. Noise will be minimized by limiting construction hours. Stormwater and soil erosion control plans will minimize impacts to water resources. Asbestos and lead-based paint, if encountered during renovation, will be removed, encapsulated, or disposed of in accordance with all applicable laws. Additionally, the Fort Meade Transportation Master Plan will reduce impacts on traffic. Unsuitable soil, wetlands and cultural resources are present only on the DIS Alternative B site and would be avoided if that site were selected. Section 106 consultation with the Maryland State Historic Preservation Office has been completed for the preferred alternative sites.

Therefore, based on the analysis found in EA, which was incorporated into the Finding of No Significant Impact (FNSI), it has been determined that implementation of the proposed action will not have significant individual or cumulative impacts on the quality of the natural or the human environment. Because no significant environmental impacts will result from implementation of the proposed action, an Environmental Impact Statement is not required and will not be prepared.

DATES: Public comments must be submitted on or before June 22, 1998. The Army will not initiate the proposed action for 30 days following completion of the EA and publication of this Notice of Availability.

ADDRESSES: Individuals wishing to review the EA may obtain a copy and may provide comments during this 30-day period by writing to the U.S. Army Corps of Engineers, ATTN: Ms. Maria de la Torre (CENAB–PL–E), P.O. Box 1715, Baltimore, Maryland 21203–1715 or by sending a telefax to (410) 962–4698. Individuals wishing to review the EA may examine a copy at the following locations: Fort George G. Meade Library, Building 4418, Fort Meade, Maryland; and the Provinces Library, 2624 Annapolis Road, Severn, Maryland.

Dated: May 14, 1998.

Raymond J. Fatz,

Deputy Assistant Secretary of the Army, (Environment, Safety and Occupational Health) OASA (I,L&E).

BILLING CODE 3710–08–M

DEPARTMENT OF DEFENSE

Department of the Army

Release of the Notice of Availability on the Final Environmental Impact Statement (Final EIS) on the Disposal and Reuse of Fort Ritchie, Maryland

AGENCY: Department of the Army, DoD.

ACTION: Notice of Availability.

SUMMARY: The proposed action evaluated by this Final EIS is the disposal of Fort Ritchie, Maryland, in accordance with the Defense Base Closure and Realignment Act of 1990, Public Law 101–510.

The EIS analyzes the environmental consequences of the disposal and subsequent reuse of the 638 acres comprising Fort Ritchie. Two disposal alternatives were analyzed: (1) The No Action Alternative, which entails maintaining the property in caretaker status after closure; and (2) the Encumbered Disposal Alternative, which entails transferring the property to future owners with Army-imposed limitations, or encumbrances, on the future use of the property. Additionally, the Final EIS analyses the potential environmental and socioeconomic consequences of three reuse alternatives: (1) Low Intensity Reuse Alternative; (2) Low-Medium Intensity Reuse Alternative; and (3) Medium Intensity Reuse Alternative. Disposal alternatives were developed by the Army. Reuse alternatives were developed by the Fort Ritchie Local Redevelopment Authority. The resources areas evaluated for potential impacts by the proposed action (disposal) and the secondary action (reuse) include: Land Use; Climate; Air Quality; Noise; Geology, Soils, and Topography; Water Resources; Infrastructure; Hazardous and Toxic Substances; Biological Resources and Ecosystems; Cultural Resources; Legacy Resources; Sociological Environment; Economic Development; Quality of Life; Installation Agreement, and Permits and Regulatory Authorizations. The Army's preferred alternative for disposal of Fort Ritchie is disposal with encumbered title on all Fort Ritchie property transfers. An encumbrance is any Army-imposed or legal constraint on the future use or development of the property. Encumbrances support future Army interests, regulatory and statutory compliance, promote continued protection of sensitive resources to foster environmentally sustainable redevelopment, hasten availability of property, or provide mitigation requirements. Encumbrances determined relevant in the EIS to disposal of Fort Ritchie relate to wetlands, historical resources, threatened and endangered species, utilities easements, easements and rights-of-way, access easements, utility interdependencies, remedial activities, and lead-based paint. Property will be remediated as appropriate and retained in caretaker status until transfer by encumbered title.

The Army proposes to make the 638 acres available for conveyance to, and subsequent reuse by, the Fort Ritchie Local Redevelopment Authority (LRA).

COPIES: Comments received on the Draft EIS have been considered and responses included in a document dated January 1998. This document, together with the Draft EIS dated July 1997, constitute the Final EIS. Copies of the January 1998 document, along with the July 1997 Draft EIS, will be available for review at the following locations: Adams County Library, Gettysburg, PA; Alexander Hamilton Library, Waynesboro, PA; Blue Ridge Summit Library, Blue Ridge Summit, PA; C. Burr Artz Central Library, Frederick, MD; Robert F. Barrick Library, Fort Ritichie, MD; and the Washington County Free Library, Hagerstown, MD.

DATES: Written pubic comments and suggestions received within 30 days of the publication of the Environmental Protection Agency's Notice of Availability for this action will be considered by the Army during final decision making.

ADDRESSES: A copy of the January 1998 document and the July 1997 Draft EIS, together which constitute the Final Impact Statement, may be obtained from, and comments provided to, the U.S. Army Corps of Engineers, ATTN: Mr. Clifford Kidd (CENAB–PL–EM), Baltimore District, P.O. Box 1715, Baltimore, Maryland 21203–1715, or by calling direct to (410) 962–3100.

Dated: May 14, 1998.

Raymond J. Fatz,

Deputy Assistant Secretary of the Army (Environment, Safety and Occupational Health) OASA (I,L&E).

BILLING CODE 3710–08–M

DEPARTMENT OF DEFENSE

Department of the Army, Corps of Engineers

Notice of Availability and Public Hearings for Draft Environmental Impact Statement for Beaufort Sea Oil and Gas Development/Northstar Project, Beaufort Sea, Alaska

AGENCY: U.S. Army Corps of Engineers, DoD.

ACTION: Notice of availability.

SUMMARY: Pursuant to the National Environmental Policy Act of 1969 (NEPA), as amended (42 U.S.C. 4371 et seq.), the Army Corps of Engineers, Alaska District, in coordination with the Environmental Protection Agency (EPA); the Minerals Management Service (MMS); the U.S. Fish and Wildlife Service (USFWS); the National Marine Fisheries Service (NMFS); and the North Slope Borough as cooperating agencies, is issuing a Draft Environmental Impact Statement (DEIS) for oil and gas development activities within the Northstar Unit in the Beaufort Sea, Alaska.

DATES: Written comments on the DEIS, draft National Pollutant Discharge Elimination System (NPDES) permit, or draft 1422 Underground Injection Control (UIC) permit will be accepted during the public review period, beginning June 1, 1998 and ending July 30, 1998. All written comments on the DEIS and related federal permits and approvals should be sent to the Alaska District Army Corps of Engineers, Regulatory Branch no later than July 30, 1998.

FOR FURTHER INFORMATION CONTACT: Copies of the DEIS including appendices, or information on matters pertaining to this notice can be obtained on request from: Ms. Terry Carpenter, Project Manager, Alaska District Army Corps of Engineers, Regulatory Branch, P.O. Box 898, Anchorage, AK 99506–0898, fax (907) 753–5567.

SUPPLEMENTARY INFORMATION: 1. BP Exploration (Alaska) Inc. (BPXA) proposes to develop and produce oil and gas from the Northstar Unit, located between 2 and 8 miles offshore of Point Storkersen in the Alaskan Beaufort Sea. Oil and gas drilling, processing, and production is proposed to be located at Seal Island, a manmade gravel island built during the 1980s. BPXA's proposed project includes reconstructing and enlarging Seal Island and directionally drilling production, gas injection, and disposal wells from the island. Transportation of oil and gas would be by buried subsea pipelines from Seal Island to shore and above-ground pipelines from the shore to onshore facilities and the beginning of the TransAlaska Pipeline System (TAPS) at Pump Station 1.

2. Because this project represents the first development of Outer Continental Shelf oil and gas resources in the Alaskan Beaufort Sea, the DEIS addresses a range of potentially applicable technologies and development/production options and provides useful information to evaluate future development proposals.

3. Analysis of these options for the Northstar reservoir resulted in identification of 4 action alternatives for development/production of oil and gas from the Northstar Unit. The DEIS evaluates the impacts of the 4 action alternatives and a no action alternative, and identifies an environmentally preferred alternative.

4. The DEIS consists of 4 volumes, with an additional 3 volumes of appendices (A-Project Description; B-Biological Assessment; C-J-other

information, including NPDES documents). The DEIS Executive Summary can also be viewed at the following web site: http://www.northstareis.com.

5. Copies of the DEIS and appendices are also available for public review at:

a. Alaska Resources Library and Information Services, 3150 C Street, Suite 100, Anchorage, Alaska 99503.

b. Z.J. Loussac Library, 3600 Denali Street, Anchorage, Alaska 99503.

c. Tuzzy Consortium Library, Barrow, Alaska.

d. North Slope Borough Office, Barrow, Alaska.

e. Barrow City Office, Barrow, Alaska.

f. Alaska Eskimo Whaling Commission Office, Barrow, Alaska.

g. Nuiqsut City Office, Nuiqsut, Alaska.

h. Kaktovik City Office, Kaktovik, Alaska.

i. Noel Wien Public Library, 1215 Cowles Street, Fairbanks, Alaska 99701.

j. Valdez Consortium Library, P.O. Box 609, Valdez, Alaska 99686.

k. Juneau Public Library, 292 Marine Way, Juneau, Alaska 99801.

6. This DEIS is intended to meet the NEPA compliance and/or other public notice requirements for the following agency actions:

a. *Corps of Engineers:* Section 10, Rivers and Harbors Act; Section 404, Clean Water Act; Section 103, Marine Protection, Resources, and Sanctuary Act.

b. *Environmental Protection agency:* Section 402, Clean Water Act (NPDES); Part C, Safe Drinking Water Act (UIC).

c. *Minerals Management Service:* Outer Continental Shelf (OCS) Development and Production Plan.

7. EPA's draft 402 NPDES and UIC permits and explanatory fact sheets are included in this DEIS as Appendices F, G, H, and J and are intended for public review and comment.

8. The MMS is requesting comments on the Northstar Project Description (Appendix A of the DEIS, and analyzed as Alternative 2 in the DEIS). The Northstar development project includes drilling wells into, and producing oil from, two OCS leases, and requires an approved Development and Production Plan (DPP). The Northstar Project Description (Appendix A) was developed to meet the submission requirements under 30 CFR 250.34 for a DPP. The MMS has determined that the Project Description, in conjunction with the DEIS, meets the requirements under 30 CFR 250.34(f). The Northstar development offshore facilities will be located on State of Alaska submerged lands. An oil spill contingency plan will be submitted pursuant to 30 CFR 254.50 and 254.53. The plan will be reviewed under the State of Alaska Department of Environmental Conservation process, and is not part of either the DEIS or DPP.

9. No OCS action to approve, disapprove, or require modification to the DPP will be taken by MMS until the Final EIS is released. No OCS development and production activities can be conducted unless and until the DPP is approved as required by 30 CFR 250.34(1).

10. A Biological Assessment, as required by the Endangered Species Act, is included as Appendix B to the DEIS. This document will be used to initiate formal consultation under Section 7 of the Endangered Species Act with the USFWS and NMFS on three species: the endangered bowhead whale, and the threatened spectacled and Steller's eiders.

11. All written comments on the DEIS, draft NPDES permit, draft UIC permit, or DPP should be sent to: Ms. Terry Carpenter, Project Manager, Regulatory Branch, Alaska District Army Corps of Engineers, P.O. Box 898, Anchorage, AK 99506–0898. Comments specific to EPA's draft permit will be forwarded to EPA for their consideration, and those specific to MMS's DPP will be forwarded to MMS.

12. The U.S. Army Corps of Engineers will be conducting public workshops at 5 locations in Alaska early in the 60-day comment period. These workshops are intended to help the public become familiar with the DEIS and the draft NPDES and UIC permits.

13. To collect oral and written comments on the DEIS (Corps), the draft NPDES and UIC permits (EPA), or the DPP (MMS), separately scheduled public hearings will be held at the same 5 locations in Alaska. A court reporter will record the proceedings at each public hearing.

14. The public workshops and public hearings will be held on the following dates:

a. *Public Workshops:*

(1) Tuesday, June 23, 1998, 7:30 p.m.—Nuiqsut Community Center, Nuiqsut, Alaska.

(2) Wednesday, June 24, 1998, 6:00 p.m.—Kaktovik Community Center, Kaktovik, Alaska.

(3) Thursday, June 25, 1998, 7:30 p.m.—North Slope Borough Assembly Room, Barrow, Alaska.

(4) Tuesday, June 30, 1998, 7:00 p.m.—BLM Conference Room, Fairbanks, Alaska.

(5) Wednesday, July 1, 1998, 7:00 p.m.—Federal Building Conference Room, Anchorage, Alaska.

b. *Public Hearings:*

(1) Monday, July 13, 1998, 7:30 p.m.—North Slope Borough Assembly Room, Barrow, Alaska.

(2) Tuesday, July 14, 1998, 7:00 p.m.—Kaktovik Community Center, Kaktovik, Alaska.

(3) Wednesday, July 15, 1998, 7:00 p.m.—Nuiqsut Community Center, Nuiqsut, Alaska.

(4) Thursday, July 16, 1998, 7:00 p.m.—BLM Conference Room, Fairbanks, Alaska.

(5) Monday, July 20, 1998, 7:00 p.m.—Wilda Marston Theatre at Z.J. Loussac Library, Anchorage, Alaska.

15. An Inupiat translator will be available at the public hearings held in Barrow, Kaktovik and Nuiqsut. Oral and written comments on the DEIS received during the public review period will be addressed in the Final Environmental Impact Statement.

16. The federal permits and approvals are also subject to review for consistency with the State Coastal Management Program. Coastal Consistency review of the Northstar development project will be initiated on June 1, 1998 with release of the DEIS.

Gregory D. Showalter,

Army Federal Register Liaison Officer.

[FR Doc. 98–13751 Filed 5–21–98; 8:45 am]

BILLING CODE 3710–NL–P

DEPARTMENT OF DEFENSE

Department of the Navy

Public Hearing for the Draft Environmental Impact Statement for Increased Flight and Related Operations in the Patuxent River Complex, Patuxent River, MD

AGENCY: Department of the Navy, DOD.

ACTION: Announcement of public hearing.

SUMMARY: The Department of the Navy has prepared and filed with the Environmental Protection Agency the Draft Environmental Impact Statement (DEIS) for Increased Flight and Related Operations in the Patuxent River Complex, Patuxent River, MD. A public hearing will be held for the purpose to receive oral and written comments on the DEIS. Federal, state and local agencies, and interested individuals are invited to be present or represented at the hearing.

DATES: Hearing dates are as follows:

1. June 10, 1998, 7:00 to 8:30 p.m., Lusby, MD
2. June 15, 1998, 7:00 to 8:30 p.m., Cambridge, MD
3. June 17, 1998, 7:00 to 8:30 p.m., Heathsville, VA

ADDRESSES: Hearing locations are as follows:

1. Lusby—Patuxent High School, 12485 Rousby Hall Road, Lusby, MD
2. Cambridge—Cambridge-South Dorchester High School, 2474 Cambridge Bypass, Cambridge, MD
3. Heathsville—Northumberland High School, 6234 Northumberland Highway (US Route 360), Heathsville, VA

FOR FURTHER INFORMATION CONTACT: Ms. Sue Evans or Ms. Kelly Burdick, (888) 276–5201.

SUPPLEMENTARY INFORMATION: Pursuant to Council on Environmental Quality regulations (40 CFR Parts 1500–1508) implemental procedure provisions of the National Environmental Policy Act (NEPA), the Department of the Navy has prepared and filed with the U.S. Environmental Protection Agency the Draft Environmental Impact Statement (DEIS) for Increased Flight and Related Operations in the Patuxent River Complex, Patuxent River, MD. This notice announces the dates and locations of the public hearings.

The DEIS identifies and evaluates the potential environmental impacts of increasing flight and related ground operations in test areas of the Patuxent River Complex that are controlled and scheduled by the Naval Air Warfare Center, Aircraft Division (NAWCAD). The complex includes all the flight and ground test facilities at NAS Patuxent River and OLF Webster Field Annex, as well as the restricted airspaces, aerial and surface firing range, and targets (Hooper, Hannibal, and Tangier Island) comprising the Chesapeake Test Range (CTR). The DEIS assesses the impacts of the no action alternative and three proposed future operations workload alternatives. The no action alternative would maintain the complex's current level of flight hours into the future (18,400 annually, which represents an approximate ten-year average of annual flight hours). The three workload alternatives propose increases in baseline operations by as few as 2,500 annual flight hours or as many as 6,200 annual flight hours.

A Notice of Intent to prepare the EIS was published in the **Federal Register** on April 1, 1997 and five public scoping meetings were held between May 6 and May 15, 1997. A Notice of Availability of the DEIS was published in the **Federal Register** on May 15, 1998.

The DEIS has been distributed to various federal, state, and local agencies, elected officials, special interest groups, the public, and the media. In addition, copies are available for review at 18 repositories around the Chesapeake Bay:

—Anne Arundel South County Branch Library, Deale, MD.
—Caroline County Public Library, Denton, MD.
—Calvert County Public Library, Prince Frederick, MD.
—Dorchester County Central Library, Cambridge, MD.
—Somerset County Libraries, Deale Island, Princess Anne, and Ewell (Smith Island), MD.
—St. Mary's County Libraries, Lexington Park and Leonardtown, MD.
—St. Mary's College Library, St. Mary's City, MD.
—Talbot County Libraries, Easton and Oxford, MD.
—Worcester County Library, Pocomoke City, MD.
—Eastern Shore Public Library, Accomac, VA.
—Central Rappahannock Law Library, Fredericksburg, VA.
—Northumberland County Library, Heathsville, VA.
—Tangier Island Public School Library, Tangier, VA.
—Laurel Public Library, Laurel, DE.

Three public hearings will be held to inform the public of the DEIS findings and to solicit and receive oral and written comments. From 5:00 p.m. to 8:30 p.m., the Navy will set up information stations that will describe the findings of the DEIS. Navy staff will be available to answer questions from meeting attendees and receive comments. At 7:00 p.m., a formal public hearing will be held where oral statements will be heard and transcribed by a stenographer; however, to ensure accuracy of the record, all statements delivered at the public hearing should be submitted in writing. All comments, both oral and written, will become part of the public record in the study. In the interest of available time, each speaker will be asked to limit oral comments to three minutes. Longer comments should be summarized at the public hearing and submitted in writing either at the hearing or mailed to Ms. Sue Evans at Office of Legal Counsel, 47031 Liljencrantz Road, Bldg. 435, Mail Stop 39, Patuxent River, MD 20670–5440, fax (301) 342–1840. Written comments are requested not later than June 29, 1998.

Dated: May 19, 1998.

Lou Rae Langevin,

LT, JAGC, USN, Alternate Federal Register Liaison Officer.

BILLING CODE 3810–FF–P

DEPARTMENT OF EDUCATION

Submission for OMB Review; Comment Request

AGENCY: Department of Education.

ACTION: Submission for OMB review; comment request.

SUMMARY: The Acting Deputy Chief Information Officer, Office of the Chief Information Officer, invites comments on the submission for OMB review as required by the Paperwork Reduction Act of 1995.

DATES: Interested persons are invited to submit comments on or before June 22, 1998.

ADDRESSES: Written comments should be addressed to the Office of Information and Regulatory Affairs, Attention: Danny Werfel, Desk Officer, Department of Education, Office of Management and Budget, 725 17th Street, NW., Room 10235, New Executive Office Building, Washington, DC 20503. Requests for copies of the proposed information collection requests should be addressed to Patrick J. Sherrill, Department of Education, 600 Independence Avenue, S.W., Room 5624, Regional Office Building 3, Washington, DC 20202–4651.

FOR FURTHER INFORMATION CONTACT: Patrick J. Sherrill (202) 708–8196. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8 a.m. and 8 p.m., Eastern time, Monday through Friday.

SUPPLEMENTARY INFORMATION: Section 3506 of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations. The Acting Deputy Chief Information Officer, Office of the Chief Information Officer, publishes this notice containing proposed information collection requests prior to submission of these requests to OMB. Each proposed information collection, grouped by office, contains the following: (1) Type of review requested, e.g., new, revision, extension, existing or reinstatement; (2) Title; (3) Summary of the collection; (4) Description of the

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Agency Information Collection Extensions: Proposed Collection Comment Request

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Agency Information Collection Extensions: proposed collection comment request.

SUMMARY: The Department of Energy (DOE) has submitted an information collection package to the Office of Management and Budget (OMB) for extension under the Paperwork Reduction Act of 1995 (Pub. L. 104–13). The package covers the collection of information concerning annual applications from the owners of qualified renewable energy generation facilities for the consideration of renewable energy production incentive payments. This information is used by the Department to determine if the applicant's facility qualifies for these payments and to determine the amount of net electricity produced for sale that qualifies for these payments. This information is critical to ensure that the Government has sufficient information to ensure the proper use of public funds for these incentive payments.

DATES: Comments regarding the information collection package should be submitted to the OMB Desk Officer at the following address no later than June 22, 1998. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the OMB Desk officer of your intention to do so as soon as possible. The Desk Officer may be telephoned at (202) 395–3084. (Also, please notify the DOE contact listed in this notice.)

ADDRESSES: Address comments to DOE Desk Officer, Office of Management and Budget, Office of Information and Regulatory Affairs (OIRA), Room 10102, New Executive Office Building, 725 17th Street, NW, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Robert H. Brewer, Office of Utility Technologies (EE–10), Department of Energy, Washington, DC 20585, (202) 586–2206.

SUPPLEMENTARY INFORMATION: The package contains the following information: (1) Title of the information collection package; (2) current OMB control number; (3) type of respondents; (4) estimated number of responses; (5) estimated total burden hours, including record keeping hours, required to provide the information; (6) purpose; and (7) number of collections.

Package Title: Renewable Energy Production Incentives.
Current OMB No.: 1910–0068.
Type of Respondents: State, municipal, county, and non-profit electric cooperative owners of qualified renewable energy generation facilities that produce electricity for sale.
Estimated Number of Respondents: 18
Estimated Total Burden Hours: 205
Purpose: To receive annual payment consideration for electricity produced in the prior fiscal year, an annual application has to be submitted by the owner/agent of the owner that provides information which establishes the qualification of the facility (ownership qualifications, type of renewable energy source used, time of first use for new or converted facilities, sale of electricity produced, and location in a State) and information on the metered/calculated amount of electricity produced. An owner of a qualified facility can submit an annual application for each of the first ten fiscal years of that facility's operation.

Statutory Authority: Paperwork Reduction Act of 1995, Pub. L. No 104–13, 44 U.S.C. 3507 (g) and (h).

Issued in Washington, DC, on May 18, 1998.

Dan W. Reicher,

Assistant Secretary, Energy Efficiency and Renewable Energy.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Office of Energy Efficiency and Renewable Energy

State Energy Program Special Projects Financial Assistance

AGENCY: The Department of Energy.

ACTION: Notice for second round funding for 1998 State Energy Program special projects.

SUMMARY: As options offered under the State Energy Program (SEP) for fiscal year 1998, the Office of Energy Efficiency and Renewable Energy is announcing the availability of financial assistance to States for special project activities for Remote Applications of Solar and Renewable Energy to Reduce or Avoid Diesel and Gasoline Power Generation. Funding is being provided by the Office of Utility Technologies in the Office of Energy Efficiency and Renewable Energy. States that are awarded funding for special projects will carry out their projects in conjunction with their efforts under SEP, with the special projects funding and activities tracked separately so that the end-use sector programs may follow the progress of their projects.

The projects must meet the relevant requirements of the program providing the funding, as well as of SEP, as specified in the program guidance/solicitation. Among the goals of the special projects activities are to assist States to: accelerate deployment of energy efficiency and renewable energy technologies; facilitate the acceptance of emerging and underutilized energy efficiency and renewable energy technologies; and increase the responsiveness of Federally funded technology development efforts to private sector needs.

DATES: The program guidance/solicitation is available on May 22, 1998. Applications must be received by July 20, 1998.

ADDRESSES AND FOR FURTHER INFORMATION CONTACT: Ms. Faith Lambert at the U.S. Department of Energy Headquarters, 1000 Independence Avenue, SW, Washington, DC 20585, (202) 586–2319, for referral to the appropriate DOE Regional Support Office.

SUPPLEMENTARY INFORMATION: Funding for this category of SEP Special Projects was offered in the original 1998 Special Projects notice published in the **Federal Register** dated December 4, 1997 (62 FR 64211). Applications received in response to that notice did not cover the total amount of funding available, so DOE is offering States another opportunity to apply for this category of Special Projects.

Availability of Fiscal Year 1998 Funds

With this publication, DOE is announcing the availability of at least $1,200,000 in financial assistance funds for fiscal year 1998. The awards will be made though a competitive process. The end-use sector program that is participating in this SEP special projects offering for fiscal year 1998, is:

- Utility Technologies: Projects to promote remote applications of solar and renewable energy to reduce or avoid diesel and gasoline power generation.

Restricted Eligibility

Eligible applicants for purposes of funding under this program are limited to the 50 States, the District of Columbia, Puerto Rico, or any territory or possession of the United States, specifically, the State energy or other agency responsible for administering the State Energy Program pursuant to 10 CFR part 420. For convenience, the term State in this notice refers to all eligible State applicants.

The Catalog of Federal Domestic Assistance number assigned to the State Energy Program is 81.041.

Requirements for cost sharing contributions will be addressed in the program guidance/solicitation for the special project activity, as appropriate. Cost sharing beyond any required percentage is desirable.

Any application must be signed by an authorized State official, in accordance with the program guidance/solicitation.

Evaluation Review and Criteria

A first tier review for completeness will occur at the appropriate DOE Regional Support Office. Applications found to be complete will undergo a merit review process by panels comprised of members representing the participating end-use sector program in DOE's Office of Energy Efficiency and Renewable Energy. A decision as to the applications selected for funding will then be made by the Director, Office of State and Community Programs, or designee, based on the findings of the technical merit review and any stated program policy factors. DOE reserves the right to fund, in whole or in part, any, all or none of the applications submitted in response to this notice.

More detailed information is available from the U.S. Department of Energy Headquarters at (202) 586–2319.

Issued in Washington, DC, on May 18, 1998.

Dan W. Reicher,

Assistant Secretary, Energy Efficiency and Renewable Energy.

[Docket No. ER98–2498–000]

Cobisa-Person Limited Partnership; Notice of Filing

May 18, 1998.

Take notice that on April 22, 1998, the Public Service Company of New Mexico tendered for filing a Certificate of Concurrence the above-referenced docket.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 18 CFR 385.214). All such motions and protests should be filed on or before May 27, 1998. Protests will be considered by the Commission to determine the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

David P. Boergers,

Acting Secretary.

[Docket No. EL98–10–001]

Pacific Gas and Electric Company; Notice of Filing

May 18, 1998.

Take notice that on April 20, 1998, Pacific Gas and Electric Company (PG&E), tendered for filing the following unilateral contracts between itself and the San Francisco Bay Area Rapid Transit District (BART): (1) A Service Agreement for Network Integration Transmission Service, and (2) a Network Operating Agreement.

PG&E is filing these Agreements in compliance with the Commission's March 20, 1998, Order Requiring Utility to Provide Network Transmission Service in Docket No. EL98–10–000. This Order required PG&E to file, within thirty days of the March 20, 1998, Order a network transmission service agreement for BART.

Copies of this filing have been served upon the California Public Utilities Commission, BART, the California Independent System Operator and other intervenors to this proceeding.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 18 CFR 385.214). All such motions and protests should be filed on or before May 29, 1998. Protests will be considered by the Commission to determine the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on the file with the Commission and are available for public inspection.

ENVIRONMENTAL PROTECTION AGENCY

[FRL–6101–7]

Agency Information Collection Activities; Submission for OMB Review, Comment Request

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), this document announces that the following Information Collection Request (ICR) has been forwarded to the Office of Management and Budget (OMB) for review and approval: Superfund Site Evaluation and Hazard Ranking System, OMB Control No. 2050–0005 to expire on July 31, 1998. The ICR describes the nature of the information collection and its expected cost and burden; where appropriate, it includes the actual data collection instrument.

DATES: Comments must be submitted on or before June 22, 1998.

FOR FURTHER INFORMATION CONTACT: Contact Sandy Farmer at EPA by phone (202) 260–2740, by email at farmer.sandy@epamail.epa.gov, or download off the Internet at http://www.epa.gov/icr and refer to EPA ICR No. 1488.04.

SUPPLEMENTARY INFORMATION:

Title: Superfund Site Evaluation and Hazard Ranking System, (EPA ICR No. 1488.04, OMB Control No. 2050–0005) expiring July 31, 1998. This ICR requests an extension of a currently approved collection.

Abstract: Section 105 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA, 1980 and 1986) amends the National Oil and Hazardous Substances Contingency Plan (NCP) to include criteria prioritizing releases throughout the U.S. before undertaking remedial action at uncontrolled hazardous waste sites. The Hazard Ranking System (HRS) is a model that is used to evaluate the relative threats to human health and the environment posed by actual or potential releases of hazardous substances, pollutants, and contaminants. The HRS criteria take into account the population at risk, the hazard potential of the substances, as well as the potential for contamination of drinking water supplies, direct human contact, destruction of sensitive ecosystems, damage to natural resources affecting the human food chain, contamination of surface water used for recreation or potable water consumption, and contamination of ambient air.

Under this ICR the States will apply the HRS by identifying and classifying those releases that warrant further investigation. The HRS score is crucial since it is the primary mechanism used to determine whether a site is eligible to be included on the National Priorities List (NPL). Only sites on the NPL are eligible for Superfund-financed remedial actions.

HRS scores are derived from the sources described in this information collection, including field reconnaissance, taking samples at the site, and reviewing available reports and documents. States record the collected information on HRS documentation worksheets and include this in the supporting reference package. States then send the package to the EPA region for a completeness and accuracy review, and the Region then sends it to EPA Headquarters for a final quality assurance review. If the site scores above the NPL designated cutoff value, and if it meets the other criteria for listing, it is then eligible to be proposed on the NPL.

An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations are listed in 40 CFR part 9 and 48 CFR Chapter 15. The **Federal Register** Notice required under 5 CFR 1320.8(d), soliciting comments on this collection of information was published on March 4, 1998 (63 FR 10607). Three requests for copies of the ICR were received; however, EPA received no comments.

Burden Statement: Depending on the number and type of activities performed, burden for the collection of site assessment information is estimated to range from 53 to 1,899 hours per site. The number of hours required to assess a particular site depends on how far a site progresses through the site assessment process. Sites where only a pre-CERCLIS screening is performed will typically require approximately 53 hours, while sites that progress to NPL listing will require approximately 1,899 hours. The burden estimates include reporting activities and minimal record keeping activities. The States are reimbursed 100 percent of their costs, except for record maintenance. The ICR does not impose burden for HRS activities on local governments or private businesses. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents: State agencies or Indian Tribes requesting oversight of the site.

Estimated Number of Respondents: 60 States or Indian Tribes.

Estimated Total Annual Burden on Respondents: 203,373 hours.

Estimated Total Annualized Cost Burden: 0 (reimbursed by EPA).

Frequency of Response: Periodically/ Per SARA Section 116(b).

Send comments on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including through the use of automated collection techniques to the following addresses. Please refer to EPA ICR No. 1488.04 and OMB Control No. 2050–0005 in any correspondence.

BILLING CODE 6560–60–U

ENVIRONMENTAL PROTECTION AGENCY

[ER–FRL–5492–2]

Environmental Impact Statements and Regulations; Availability of EPA Comments

Availability of EPA comments prepared May 4, 1998 Through May 8, 1998 pursuant to the Environmental Review Process (ERP), under Section 309 of the Clean Air Act and Section 102(2)(c) of the National Environmental Policy Act as amended. Requests for copies of EPA comments can be directed to the Office of Federal Activities at (202) 564–7167.

An explanation of the ratings assigned to draft environmental impact statements (EISs) was published in FR dated April 10, 1998 (63 FR 17856).

Draft EISs

ERP No. D–AFS–B61023–NH

Rating EC2, Waterville Valley Ski Resort Project, Development of Snowmaking Water Impoundments Project, Special-Use-Permits, Dredge and Fill Permit and COE Section 404 Permit, White Mountain National Forest, Pemigewasset Ranger District, Town of Waterville Valley, Grafton County, NH.

Summary: EPA expressed environmental concerns and suggested that the impact to water quality from alternatives two and four be further developed in the FEIS. EPA recommended mitigation option two to offset unavoidable wetland impacts associated with the project.

ERP No. D–COE–K32050–CA

Rating EO2, Oakland Harbor Inner and Outer Deep Navigation (–50 Foot) Improvement Project, Implementation, Feasibility Study, Port of Oakland, Alameda and San Francisco Counties, CA.

Summary: EPA expressed environmental objections due to potential air quality impacts, especially emissions of oxides of nitrogen (NOx) associated with dredging, dredged material transport/disposal and related construction work. Despite these significant NOx emissions, there is no indication from the DEIS that NOx mitigation measures proposed by the Corps would suffice for purposes of making a positive conformity finding. EPA expressed serious concerns that the EIS may have unnecessarily constrained the range of reasonable action alternatives by eliminating a detailed analysis of dredge depths less than –50 feet. EPA asked the Corps to determine

if other dredging alternatives that provide less depth overall, less depth over portions of the project and/or phasing in –50 foot depths at key areas first may constitute reasonable alternatives for purposes of NEPA analysis.

ERP No. D–COE–K36124–CA

Rating EC2, Yuba River Basin Investigation Study, Flood Protection, also portions of the Feather River Basin below Oroville Dam, City of Maryville, Yuba County, CA.

Summary: EPA expressed environmental concerns over potential adverse impacts to water quality due to stormwater runoff during construction activities. EPA also recommended that the Corps conduct the necessary hazardous, toxic and radioactive waste site investigations during the current feasibility phase in order to achieve full public disclosure. EPA also recommended that the FEIS analyze the indirect/cumulative effects of induced growth in the floodplain.

ERP No. D–COE–K36125–CA

Rating EC2, Hansen Dam Water Conservation and Supply Study, Flood Protection, Implementation, Los Angeles County, CA.

Summary: EPA expressed environmental concerns that the DEIS did not specifically analyze an "end of pipe" water conservation alternative as an alternative to increasing water supply, or as a means of augmenting water conservation, at Hansen Dam. EPA believed that an actual "end of pipe" water conservation alternative may constitute a reasonable alternative for purposes of the Corps' NEPA analysis. EPA noted that the three action alternatives analyzed in detail in the DEIS are not true "water conservation" alternatives but are actually alternatives to "increase storage capacity" at Hansen Dam for release during peak summer use periods. Implementation and/or expansion of water conservation programs and efforts in the dam's service area should be an integral element of the project.

ERP No. D–COE–K39047–CA

Rating EO2, Santa Clara River and Major Tributaries Project, Approval of 404 Permit and 1603 Streambed Alteration Agreement, In portions of the City of Santa Clarita, Los Angeles County, CA.

Summary: EPA expressed environmental objection because of the project's potential to adversely impact the physical and biological qualities of the Santa Clara River System and because the measures to avoid and/or mitigate such impacts were not fully developed and presented in the DEIS. EPA also expressed concern that the DEIS did not address the full scope of the anticipated (development-related) actions and impacts directly and indirectly associated with the proposed project.

ERP No. D–FAA–E51045–FL

Rating EC2, Miami International Airport Master Plan Update for the Proposed New Runway, Funding and COE Section 404 Permit, Miami-Dade County, FL.

Summary: EPA continued to have environmental concerns; though noise impacts will be reduced by the year 2000 and 2005, significant noise-impacts to the adjacent community remain. The need for additional noise mitigation was stated.

ERP No. D–FRC–L05219–WA

Rating LO, Sullivan Creek Hydroelectric (FERC No. 2225) Project, An Application for Amendment of License, Public Utility District No. 1, Sullivan Creek, Pend Oreille County, WA.

Summary: EPA had no objection to the project as proposed. No formal comment letter was sent to the preparing agency.

ERP No. DS–COE–C32030–00

Rating LO, Arthur Kill Channel-Howland Hook Marine Terminal, Deepening and Realignment, Limited Reevaluation Report (LRR) Port of New York and New Jersey, NY and NJ.

Summary: EPA believed that there has not been a significant change in the environmental conditions of the project area since the issuance of the FEIS. EPA does not anticipate that the proposed project would result in significant adverse environmental impacts. Therefore, EPA has no objection to the project's implementation.

Final EISs

ERP No. F–AFS–L65292–ID

Caribou National Forest, Implementation, Federal Phosphate Leasing Proposal for the Manning Creek and Dairy Syncline Tracts, Caribou County, ID.

Summary: Review of the Final EIS was not deemed necessary. No formal comment letter was sent to the preparing agency.

ERP No. F–USN–C11013–NY

Naval Weapons Industrial Reserve Plant Calverton Disposal and Reuse, Implementation, Towns of Riverhead and Brookhaven on Long Island, Suffolk County, NY.

Summary: EPA continued to express environmental concern regarding wetland avoidance and requested that the Record of Decision include additional information on contaminant remediation, endangered/threatened species, historic/cultural resources and environmental justice.

Dated: May 19, 1998.

Underground Injection Control Program; Hazardous Waste Injection Restrictions; Petition for Exemption—Class I Hazardous Waste Injection; Great Lakes Chemical Corporation

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of final decision on injection well no migration petition.

SUMMARY: Notice is hereby given that an exemption to the land disposal restrictions under the 1984 Hazardous and Solid Waste Amendments to the Resource Conservation and Recovery Act has been granted to Great Lakes Chemical Corporation (GLCC), for two Class I injection wells located at El Dorado, Arkansas. As required by 40 CFR part 148, the company has adequately demonstrated to the satisfaction of the Environmental Protection Agency by petition and supporting documentation that, to a reasonable degree of certainty, there will be no migration of hazardous constituents from the injection zone for as long as the waste remains hazardous. This final decision allows the underground injection by GLCC, of the specific restricted hazardous wastes identified in the exemption, into two Class I hazardous waste injection wells (WDW–5 and WDW–6) at the El Dorado, Arkansas facility, until July 1, 2005, unless EPA moves to terminate the exemption under provisions of 40 CFR 148.24. As required by 40 CFR 148.22(b) and 124.10, a public notice was issued March 6, 1998. The public comment period closed on April 20, 1998. No comments were received. This decision constitutes final Agency action and there is no Administrative appeal.

DATES: This action is effective as of May 13, 1998.

ADDRESSES: Copies of the petition and all pertinent information relating thereto

are on file at the following location: Environmental Protection Agency, Region 6, Water Quality Protection Division, Source Water Protection Branch (6WQ–SG) 1445 Ross Avenue, Dallas, Texas 75202–2733.

Water Conservation Plan Guidelines Subcommittee Conference Call

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: On June 4, 1998, the Water Conservation Plan Guidelines Subcommittee of the Local Government Advisory Committee (LGAC) will hold a conference call. The Subcommittee will discuss public comments received on the draft Water Conservation Plan Guidelines and make changes they deem appropriate to their final recommendations for advice and guidance to the Agency on the water conservation plan guidelines for public water systems, including the section of the draft guidelines which provides information to States on implementation of the guidelines.

Section 1455 of the Safe Drinking Water Act, as amended, requires EPA to publish guidelines for water conservation plans for three size ranges of public water systems. States may require water systems to submit a water conservation plan consistent with EPA's guidelines as a condition of receiving a loan from a State Drinking Water Loan Fund. The Subcommittee conference call is open and all interested persons are invited to attend on a space-available basis. Members of the public interested in attending the Subcommittee conference call should call the Designated Federal Official to reserve space.

DATES: The Subcommittee conference call will be held from 1:00 p.m. to 3:00 p.m. on Thursday, June 4, 1998.

ADDRESSES: The conference call will be held at the U.S. Environmental Protection Agency, Washington Information Center, Conference Room 8 South, 401 M Street, SW, Washington, DC 20460. Requests for a summary of the call can be obtained by writing to John E. Flowers, U. S. Environmental Protection Agency, Office of Wastewater Management (Mail Code 4204), 401 M Street, SW, Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: The Designated Federal Official for this Subcommittee is John E. Flowers. He is the point of contact for information concerning any Subcommittee matters and can be reached by calling (202) 260–7288.

Dated: May 15, 1998.

Michael B. Cook,

Director, Office of Wastewater Management.

BILLING CODE 6560–60–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL–6101–6]

Meeting of the Local Government Advisory Committee

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This will be the first meeting of the Local Government Advisory Committee in 1998 and the first meeting since the appointment of 23 new members. The full Committee will spend time during the first day in orientation, but will also consider recommendations put forward by the Water Conservation Subcommittee and review and discuss the Community-Based Environmental Protection Framework, a draft Agency document. During the second day, the subcommittees will meet and develop their agendas and work plans.

From 11:30–11:45 p.m. on the 11th, the Committee will hear comments from the public. Each individual or organization wishing to address the Committee will be allowed three minutes. Please contact the Designated Federal Officer (DFO) at the number listed below to schedule agenda time. Time will be allotted on a first come, first serve basis.

This is an open meeting and all interested persons are invited to attend. Meeting minutes will be available after the meeting and can be obtained by written request from the DFO. Members of the public are requested to call the DFO at the number listed below if planning to attend so that arrangements can be made to comfortably accommodate attendees as much as possible. However, seating will be on a first come, first serve basis.

DATES: The meeting will begin at 8:30 a.m. on Thursday, June 11th and conclude at 4:00 p.m. on the 12th.

ADDRESSES: The meeting will be held in Chicago, Illinois at DePaul University, located at 333 South State Street, Suite 520.

Requests for Minutes and other information can be obtained by writing to 401 M Street, SW (1306), Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: The DFO for this Committee is Denise Zabinski Ney. She is the point of contact for information concerning any Committee matters and can be reached by calling (202) 260–0419.

Dated: May 18, 1998.

Denise Zabinski Ney,

Designated Federal Officer, Local Government Advisory Committee.

BILLING CODE 6560–60–P

EXPORT-IMPORT BANK OF THE UNITED STATES

Notice of Open Special Meeting of the Sub-Saharan Africa Advisory Committee of the Export-Import Bank of the United States (Export-Import Bank)

SUMMARY: The Sub-Saharan Africa Advisory Committee was established by Public Law 105–121, November 26, 1997, to advise the Board of Directors on the development and implementaion of policies and programs designed to support the expansion of the Bank's financial commitments in Sub-Saharan Africa under the loan, guarantee and insurance programs of the Bank. Further, the committee shall make recommendations on how the Bank can facilitate greater support by U.S. commercial banks for trade with Sub-Saharan Africa.

Time and place: Tuesday, June 9, 1998, at 10:00 a.m. to 12:00 noon. The meeting will be held at the Export-Import Bank in room 1143, 811 Vermont Avenue, NW, Washington, D.C. 20571.

Agenda: The meeting will include a discussion of the development and implementation of policies and programs designed to support the expansion of Ex-Im Bank's financial commitments in Sub-Saharan Africa. The discussion will focus on the innovative financial structures necessary to meet the challenges in risk-taking posed for Ex-Im in Sub-Saharan Africa and insights in marketing in the region.

Public participation: The meeting will be open to public participation, and the last 10 minutes will be set aside for oral questions or comments. Members of the public may also file written statement(s) before or after the meeting. If any person wishes auxiliary aids (such as a sign language interpreter) or other special accommodations, please contact, prior to June 2, 1998, Megan Becher, Room 1210, Vermont Avenue, NW, Washington, DC 20571, Voice: (202) 565–3507 or TDD (202) 565–3377.

FOR FURTHER INFORMATION CONTACT: Megan Becher, Room 1210, 811 Vermont Ave., NW, Washington, DC 20571, (202) 565–3507.

Kenneth Hansen,

General Counsel.

FEDERAL MARITIME COMMISSION

Notice of Agreement(s) Filed

The Commission hereby gives notice of the filing of the following agreement(s) under the Shipping Act of 1984.

Interested parties can review or obtain copies of agreements at the Washington, DC offices of the Commission, 800 North Capitol Street, NW, Room 962. Interested parties may submit comments on an agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within 10 days of the date this notice appears in the **Federal Register**.

Agreement No.: 232–011539–002

Title: CMN/Ivaran/TMM Space Charter and Sailing Agreement

Parties:

Compania Maritima Nacional (d/b/a Grupo, Libra) ("CMN"), A/S Ivaran Rederi, Transportacion Maritima Mexicana, S.A. de C.V.

Synopsis: The proposed amendment reflects a change in the ownership of party A/S Ivaran Rederi and notes a change in their corporate name to "Ivaran Lines Limited." It also reflects the addition of a d/b/a/ name for Agreement party CMN. The parties have requested a shortened review period.

Agreement No.: 224–201053

Title: Alabama State Docks Department/ T&S Services, Inc., Terminal Agreement

Parties:

Alabama State Docks Department
T&S Services, Inc. ("T&S")

Synopsis: The Agreement permits T&S to perform cargo and freight handling services at the Port of Mobile. The Agreement will terminate on December 31, 2002.

Dated: May 18, 1998.

By Order of the Federal Maritime Commission.

Joseph C. Polking,

Secretary.

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of Banks or Bank Holding Companies

The notificants listed below have applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. The notices also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than June 9, 1998.

A. Federal Reserve Bank of Chicago (Philip Jackson, Applications Officer) 230 South LaSalle Street, Chicago, Illinois 60690-1413:

1. John Douglas Dreier, Sparta, Wisconsin; to acquire additional voting shares of Community Bancorp, Inc., Norwalk, Wisconsin, and thereby indirectly acquire additional voting shares of Community State Bank, Norwalk, Wisconsin.

Board of Governors of the Federal Reserve System, May 19, 1998.

Jennifer J. Johnson,

Deputy Secretary of the Board.

BILLING CODE 6210–01–F

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR Part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The application also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act. Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than June 19, 1998.

A. Federal Reserve Bank of Richmond (A. Linwood Gill III, Assistant Vice President) 701 East Byrd Street, Richmond, Virginia 23261-4528:

1. NationsBank Corporation and NationsBank (DE) Corporation, both in Charlotte, North Carolina (collectively, NationsBank); to merge with BankAmerica Corporation, San Francisco, California (BankAmerica), and thereby acquire the following bank subsidiaries of BankAmerica: Bank of America National Trust and Savings Association, San Francisco, California; Bank of America Texas, National Association, Dallas, Texas; Bank of America National Association, Phoenix, Arizona; and Bank of America Community Development Bank, Walnut Creek, California. On consummation of the proposed transaction, NationsBank would be renamed BankAmerica Corporation. NationsBank may form one or more intermediate bank holding companies.

In connection with the proposed transaction, NationsBank has provided notice to acquire all of the nonbank subsidiaries of BankAmerica and to engage, directly or indirectly through such nonbank subsidiaries, in a variety of nonbanking activities that previously have been determined to be permissible for bank holding companies. NationsBank also would continue to control all of its existing bank and nonbank subsidiaries. The nonbanking companies that NationsBank proposes to acquire are listed in the notice filed with the Board and include Bank of America, FSB, Portland, Oregon; BA Futures, Incorporated, Chicago, Illinois; BankAmerica Insurance Group, Inc.,

San Diego, California; DFO Partnership, San Francisco, California; First Franklin Financial Corporation, San Jose, California; First Franklin Funding Corporation, San Jose, California; General Fidelity Life Insurance Company, San Diego, California; Security Pacific Capital Leasing Corporation, San Francisco, California; and Security Pacific Housing Services, Inc., San Diego, California. The nonbanking activities of the companies to be acquired also are listed in the notice and include extending credit and servicing loans, pursuant to 12 CFR 225.28(b)(1); leasing personal and real property, pursuant to 12 CFR 225.28(b)(3); operating a savings association through Bank of America, FSB, Portland, Oregon, pursuant to 12 CFR 225.28(b)(4)(ii); providing financial and investment advisory services, pursuant to 12 CFR 225.28(b)(6); providing securities brokerage, riskless principal, private placement, futures commission merchant, and other agency transactional services, pursuant to 12 CFR 225.28(b)(7); underwriting and dealing in certain government obligations and money market instruments that state member banks may underwrite or deal in, pursuant to 12 CFR 225.28(b)(8)(i); acting as principal, agent, or broker in connection with the sale of credit-related insurance, pursuant to 12 CFR 225.28(b)(11)(i); engaging in community development activities, pursuant to 12 CFR 225.28(b)(12); providing data processing and data transmission services, pursuant to 12 CFR 225.28(b)(14); and engaging in all activities that BankAmerica currently is authorized by Board Order to conduct. As part of the proposed transaction, NationsBank proposes to engage through BancAmerica Robertson Stephens, San Francisco, California, in underwriting and dealing in all types of debt and equity securities (other than interests in open-end investment companies) to a limited extent in accordance with previous Board decisions. In addition, NationsBank proposes to engage, directly or indirectly through its subsidiaries, in certain other activities that the Board previously has approved by Order, including providing administrative services to open-end and closed-end investment companies.

In connection with the proposed transaction, NationsBank also has applied to acquire an option to purchase up to 19.9 percent of the outstanding shares of BankAmerica's common stock. BankAmerica also has applied to acquire an option to purchase up to 19.9 percent of the outstanding shares of NationsBank Corporation's common stock. These options would expire upon consummation of the merger. Comments regarding this application must be received not later than June 24, 1998.

B. Federal Reserve Bank of Chicago (Philip Jackson, Applications Officer) 230 South LaSalle Street, Chicago, Illinois 60690-1413:

1. Associated Banc-Corp, Green Bay, Wisconsin; to merge with Citizens Bankshares, Inc., Shawano, Wisconsin, and thereby indirectly acquire Citizens Bank, National Association, Shawano, Wisconsin.

In connection with this application, Applicant also has applied to acquire Wisconsin Finance Corporation, Shawano, Wisconsin, and thereby indirectly acquire Citizens Financial Services, Inc., Shawano, Wisconsin, and thereby engage in extending credit and servicing loans and acting as principal, agent, or broker for credit related insurance, pursuant to §§ 225.28(b)(1) and 225.28(b)(11)(ii) of the Board's Regulation Y.

2. West Burlington Bancorporation, Inc., West Burlington, Iowa; to become a bank holding company by acquiring 100 percent of the voting shares of West Burlington Bank, West Burlington, Iowa.

C. Federal Reserve Bank of Minneapolis (Karen L. Grandstrand, Vice President) 90 Hennepin Avenue, P.O. Box 291, Minneapolis, Minnesota 55480-0291:

1. M.I.F. Limited, Chisholm, Minnesota; to become a bank holding company by acquiring 100 percent of the voting shares of Chisholm Bancshares, Inc., Chisholm, Minnesota, and thereby indirectly acquire First National Bank, Chisholm, Minnesota.

2. Norwest Corporation, Minneapolis, Minnesota; to acquire 100 percent of the voting shares of First Bancshares, of Valley City, Inc., Valley City, North Dakota, and thereby indirectly acquire First State Bank of Casselton, Casselton, North Dakota; Litchville State Bank, Litchville, North Dakota; and First National Bank of Valley City, Valley City, North Dakota.

In connection with this application, Applicant also has applied to acquire Peoples Insurance Agency, Inc., Valley City, North Dakota, and thereby engage in general insurance agency activities, pursuant to § 225.28(b)(1)(vii) of the Board's Regulation Y.

3. Norwest Corporation, Minneapolis, Minnesota; to acquire 100 percent of the voting shares of Little Mountain Bancshares, Inc., Monticello, Minnesota, and thereby indirectly acquire First National Bank of Monticello, Monticello, Minnesota.

In connection with this application, Applicant proposes to transfer the mortgage origination and servicing business of the First National Bank of Monticello to its wholly owned subsidiary, Norwest Mortgage, Inc., Des Moines, Iowa. Norwest Mortgage Inc., proposes to engage in these activities, pursuant to § 225.28(b)(1) of the Board's Regulation Y.

D. Federal Reserve Bank of San Francisco (Maria Villanueva, Manager of Analytical Support, Consumer Regulation Group) 101 Market Street, San Francisco, California 94105-1579:

1. UCBH Holdings, Inc., San Francisco, California; to become a bank holding company by acquiring 100 percent of the voting shares of United Commercial Bank, F.S.B., San Francisco, California. United Commercial Bank, F.S.B., will convert to a bank charter.

Board of Governors of the Federal Reserve System, May 19, 1998.

Jennifer J. Johnson,

Deputy Secretary of the Board.

BILLING CODE 6210–01–F

FEDERAL RESERVE SYSTEM

Notice of Proposals to Engage in Permissible Nonbanking Activities or to Acquire Companies that are Engaged in Permissible Nonbanking Activities

The companies listed in this notice have given notice under section 4 of the Bank Holding Company Act (12 U.S.C. 1843) (BHC Act) and Regulation Y, (12 CFR Part 225) to engage *de novo*, or to acquire or control voting securities or assets of a company, including the companies listed below, that engages either directly or through a subsidiary or other company, in a nonbanking activity that is listed in § 225.28 of Regulation Y (12 CFR 225.28) or that the Board has determined by Order to be closely related to banking and permissible for bank holding companies. Unless otherwise noted, these activities will be conducted throughout the United States.

Each notice is available for inspection at the Federal Reserve Bank indicated. The notice also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether the proposal complies with the standards of section 4 of the BHC Act.

Unless otherwise noted, comments regarding the applications must be received at the Reserve Bank indicated

or the offices of the Board of Governors not later than June 9, 1998.

A. Federal Reserve Bank of Philadelphia (Michael E. Collins, Senior Vice President) 100 North 6th Street, Philadelphia, Pennsylvania 19105-1521:

1. Commerce Bancorp, Cherry Hill, Pennsylvania; to acquire Commerce Capital, Philadelphia, Pennsylvania, and thereby engage in Tier II securities underwriting and dealing and related activites, including bonds issued by not-for-profit entities that qualify under Section 501(c)(3) of the Internal Revenue Code for a tax exempt status; and bonds issued by private entities that qualify under Section 142(d) of the Internal Revenue Code for a partially tax exempt status (subject to only to the alternative minimum tax). *See* Citicorp, 75 Fed. Res. Bull., 751 (1989) & 83 Fed. Res. Bull. 510 (1997).

B. Federal Reserve Bank of Chicago (Philip Jackson, Applications Officer) 230 South LaSalle Street, Chicago, Illinois 60690-1413:

1. CITBA Financial Corporation, Mooresville, Indiana; to acquire Independent Bankers Life Insurance Company of Indiana, Phoenix, Arizona, a reinsurance subsidiary, and thereby indirectly engage in underwriting credit life, accident and health insurance directly related to extensions of credit by the banks and bank holding companies owning stock in the insurance agency, pursuant to § 225.28(b)(11)(i) of the Board's Regulation Y.

Board of Governors of the Federal Reserve System, May 19, 1998.

BILLING CODE 6210–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. 98P–0160]

Determination That Cimetidine 100 mg Tablets Were Not Withdrawn From Sale for Reasons of Safety or Effectiveness

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) has determined that cimetidine 100 milligram (mg) tablets were not withdrawn from sale for reasons of safety or effectiveness. This determination will allow FDA to approve abbreviated new drug applications (ANDA's) for drugs that refer to cimetidine 100 mg tablets.

FOR FURTHER INFORMATION CONTACT: Virginia G. Beakes, Center for Drug Evaluation and Research (HFD–7), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–594–2041.

SUPPLEMENTARY INFORMATION: In 1984, Congress enacted the Drug Price Competition and Patent Term Restoration Act of 1984 (Pub. L. 98–417)(the 1984 amendments), which authorized the approval of duplicate versions of drug products approved under an ANDA procedure. ANDA sponsors must, with certain exceptions, show that the drug for which they are seeking approval contains the same active ingredient in the same strength and dosage form as the "listed drug," which is a version of the drug that was previously approved under a new drug application (NDA). Sponsors of ANDA's do not have to repeat the extensive clinical testing otherwise necessary to gain approval of an NDA. The only clinical data required in an ANDA are data to show that the drug that is the subject of the ANDA is bioequivalent to the listed drug.

The 1984 amendments included what is now section 505(j)(6) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(j)(6)), which requires FDA to publish a list of all approved drugs. FDA publishes this list as part of the "Approved Drug Products with Therapeutic Equivalence Evaluations," which is generally known as the "Orange Book." Under FDA's regulations, drugs are withdrawn from the list if the agency withdraws or suspends approval of the drug's NDA or ANDA for reasons of safety or effectiveness, or if FDA determines that the listed drug was withdrawn from sale for reasons of safety or effectiveness (21 CFR 314.162). Regulations also provide that the agency must make a determination as to whether a listed drug was withdrawn from sale for reasons of safety or effectiveness before an ANDA that refers to that listed drug may be approved (§ 314.161(a)(1) (21 CFR 314.161(a)(1))). FDA may not approve an ANDA that does not refer to a listed drug.

In citizen petitions dated March 9, 1998 (Docket No. 98P–0160/CP 1), and March 13, 1998 (Docket No. 98P–0160/CP 2), submitted in accordance with 21 CFR 314.122, Apotex Corp. and Novopharm Limited, respectively, requested that the agency determine whether cimetidine (Tagamet HB) 100 mg tablets were withdrawn from sale for reasons of safety or effectiveness. Cimetidine 100 mg tablets are the subject of approved NDA 20–238 held by SmithKline Beecham Consumer Healthcare LP (SmithKline Beecham). In 1997, SmithKline Beecham withdrew cimetidine 100 mg tablets from sale.

FDA has reviewed its records and, under § 314.161, has determined that cimetidine 100 mg tablets were not withdrawn from sale for reasons of safety or effectiveness. Accordingly, the agency will maintain cimetidine 100 mg tablets in the "Discontinued Drug Product List" section of the Orange Book. The "Discontinued Drug Product List" delineates, among other items, drug products that have been discontinued from marketing for reasons other than safety or effectiveness. ANDA's that refer to cimetidine 100 mg tablets may be approved by the agency.

Dated: May 14, 1998.

William K. Hubbard,

Associate Commissioner for Policy Coordination.

BILLING CODE 4160–01–F

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

Medical Devices; Implementation of Third Party Review Under the Food and Drug Administration Modernization Act of 1997; Emergency Processing Request Under OMB Review

[Docket No. 98N–0331]

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing a program under which persons may be accredited to review premarket notifications and recommend initial classification of certain medical devices. At the same time, FDA is announcing the termination of the Third Party Review Pilot Program. This notice announces the criteria to accredit or deny accreditation to persons (Accredited Persons) who request to conduct premarket notification reviews consistent with provisions of the FDA Modernization Act of 1997 (FDAMA). FDA is also announcing that this proposed collection of information has been submitted to the Office of Management and Budget (OMB) for emergency processing under the Paperwork Reduction Act of 1995 (the PRA). FDA is requesting OMB approval within 45 days of receipt of this submission. FDA is taking this action to implement section 210 of FDAMA. The availability of guidance detailing the review of submissions, training for third party reviewers, and basic document processing by FDA is announced elsewhere in this issue of the **Federal Register**.

DATES: Submit written comments on the collection of information by June 22, 1998. FDA will begin accepting applications for accreditation of Accredited Persons on July 20, 1998, and intends to make a list of Accredited Persons available on or about September 23, 1998. Beginning November 21, 1998, the agency will accept reviews and recommendations from Accredited Persons. On that same date, FDA plans to terminate the Third Party Review Pilot Program that began on August 1, 1996. FDA is currently planning to provide periodic training sessions for Accredited Persons, with the first such session scheduled for October 14-16, 1998.

ADDRESSES: Submit written comments on the collection of information to the Office of Information and Regulatory Affairs, OMB, New Executive Office Bldg., 725 17th St. NW, rm. 10235, Washington, DC 20503, Attn: Desk Officer for FDA. All comments should be identified with the docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: John F. Stigi, Division of Small Manufacturers Assistance (HFZ–220), Center for Devices and Radiological Health, Food and Drug Administration, 1350 Piccard Dr., Rockville, MD 20850, 301–443–6597, FAX 301–443–8818.

SUPPLEMENTARY INFORMATION:

I. Background

A. Third Party Review Pilot Program

In the **Federal Register** of April 3, 1996 (61 FR 14789), FDA announced that it would begin a 2-year voluntary pilot program to test the feasibility of using third party reviewers to improve the efficiency of the agency's review of 510(k)'s for selected low-and-moderate risk medical devices. FDA had previously solicited public comments on its plans for the pilot program in a notice issued in the **Federal Register** of June 1, 1995 (60 FR 28618), and at a public workshop held June 19, 1995. The comments received by the agency were addressed in the **Federal Register** notice (61 FR 14789).

The program announced in the April 3, 1996, notice provided for third party review for 251 types of devices that were included in the pilot program. These included all class I devices that were not exempt from 510(k) at that time (221 devices), and 30 class II devices, 24 of which were to be phased into the program over time.

Under the pilot program, persons required to submit 510(k)'s for the eligible devices were permitted to contract with an FDA Recognized Third Party and submit a 510(k) directly to the third party for review. Persons who did not wish to participate in the pilot continued to submit 510(k)'s directly to FDA. The third party applied FDA's 510(k) review criteria and submitted its documented review and recommendation on the substantial equivalence of the device to FDA. FDA then checked the review and issued a decision letter. FDA established a 30-day performance goal for its issuance of final decisions based on third party reviews.

The purpose of the pilot program was to: (1) Provide manufacturers of eligible devices with an alternative review process that could yield more rapid marketing clearance decisions, and (2) enable FDA to target its scientific review resources at higher-risk devices while maintaining confidence in the review by third parties of low-to-moderate risk devices. The pilot program was intended to determine the feasibility of these outcomes.

The agency received applications for recognition as third party reviewers from 37 prospective third parties. These applications were reviewed by a Third Party Recognition Board established by FDA. On July 11, 1996, FDA made publicly available a list of seven Recognized Third Parties, and immediately began a training program for third party review.

The pilot program began August 1, 1996, as scheduled. During the first 18 months of the pilot program, FDA received 22 510(k)'s that were reviewed by Recognized Third Parties. In contrast, during the same period, FDA received more than 1,300 510(k)'s for third party-eligible devices that were not reviewed by third parties.

B. FDA Modernization Act of 1997

The President signed FDAMA into law on November 21, 1997. Section 210 of FDAMA codifies and expands the ongoing Third Party Review Pilot Program by establishing a new section 523 of Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 360m), directing FDA to accredit persons in the private sector to conduct the initial review of 510(k)'s for selected low-to-moderate risk devices. This section specifies that an Accredited Person may not review class III devices or class II devices that are permanently implantable, life-supporting, life-sustaining, or for which clinical data are required. This section also sets limits on the number of class II devices requiring clinical data that may be ineligible for Accredited Person review.

II. FDAMA Third Party Review Program

Under the provisions of FDAMA, FDA is establishing the criteria it will use to determine whether it will accredit or deny accreditation of persons for the purpose of reviewing reports submitted under section 510(k) of the act (21 U.S.C. 360(k)) and making recommendations to FDA regarding the initial classification of devices under section 513(f)(1) of the act (21 U.S.C. 360c(f)(1)). As intended by Congress,

this process is an expansion of FDA's Third Party Review Pilot Program. This expanded program is applicable to a greater number and variety of devices. To ensure accurate and timely review, Accredited Persons will be expected to consult review guidance or national and/or international standards recognized by FDA. FDA is making available on the CDRH home page on the World Wide Web a list of devices for which there are recognized standards or review guidance and which will be eligible for review by Accredited Persons. FDA will update the list regularly.

To be accredited by FDA, applicants must demonstrate that they have the appropriate qualifications and facilities to conduct competent 510(k) reviews and have instituted effective controls to prevent any conflict of interest or appearance of conflict of interest that might affect the review process.

In accordance with FDAMA, to be accredited by FDA an applicant must, at a minimum, have the following qualifications:

(1) An Accredited Person may not be a Federal Government employee;

(2) An Accredited Person shall be an independent organization not owned or controlled by a manufacturer, supplier, or vendor of devices and have no organizational, material, or financial affiliation with such a manufacturer, supplier, or vendor;

(3) An Accredited Person shall be a legally constituted entity permitted to conduct the activities for which it seeks accreditation;

(4) An Accredited Person shall not engage in the design, manufacture, promotion, or sale of devices;

(5) An Accredited Person shall operate in accordance with generally accepted professional and ethical business practices and agree in writing that, at a minimum, it will:

(a) Certify that reported information accurately reflects data reviewed;

(b) Limit work to that for which competence and capacity are available;

(c) Treat information received, records, reports, and recommendations as proprietary information;

(d) Promptly respond and attempt to resolve complaints regarding its activities for which it is accredited; and

(e) Protect against the use of any officer or employee of the Accredited Person who has a financial conflict of interest regarding the device, and annually make available to the public disclosures of the extent to which the Accredited Person, and the officers and employees of the Accredited Person, have maintained compliance with requirements relating to financial conflicts of interest.

In accordance with FDAMA, an Accredited Person also must, at a minimum, maintain records that support its initial and continuing qualifications to be an Accredited Person. These records include:

(1) Documenting the training qualifications of the Accredited Person and the employees of the Accredited Person;

(2) The procedures used by the Accredited Person for handling confidential information;

(3) The compensation arrangements made by the Accredited Person; and

(4) The procedures used by the Accredited Person to identify and avoid conflicts of interest.

In addition to the above minimum requirements for Accredited Persons, FDA is establishing the following:

1. Personnel Qualifications

FDA expects to consider several factors with respect to personnel qualifications when it considers accrediting applicants. These include:

(1) Whether the applicant's personnel have demonstrated knowledge of:

- The Federal Food, Drug, and Cosmetic Act (21 U.S.C., 301 *et seq.*);
- The Public Health Service Act (42 U.S.C., 201 *et seq.*); and
- The regulations implementing these statutes, particularly 21 CFR parts 800 through 1299.

(2) Whether the applicant:

- Has established, documented, and executed policies and procedures to ensure that 510(k)'s are reviewed by qualified personnel, and will maintain records on the relevant education, training, skills, and experience of all personnel who contribute to the technical review of a 510(k);
- Has clear written instructions for duties and responsibilities with respect to 510(k) reviews available to its personnel;
- Has employed personnel who, as a whole, are qualified in all of the scientific disciplines addressed by the 510(k)'s that the Accredited Person accepts for review;
- Has identified at least one individual who is responsible for providing supervision over 510(k) reviews and who has sufficient authority and competence to assess the quality and acceptability of these reviews; and
- Is prepared to conduct technically competent reviews at the time of requesting accreditation by FDA.

(3) For appropriate review of a particular class II device, FDA will expect specialized education or experience to assure a technically competent review. In addition, Accredited Persons will be expected to consult national and/or international standards recognized by FDA or review guidance.

2. Facilities

FDA expects to accredit persons that have the capability to interface with FDA's electronic data systems, including FDA home page, CDRH home page, and CDRH Facts-On-Demand. At a minimum, this would include a computer system with a modem and an independent facsimile machine. FDA will rely extensively on the use of FDA's electronic data systems for timely public dissemination of guidance documents to Accredited Persons.

3. Prevention of Conflicts of Interest

FDA expects Accredited Persons to be impartial and free from any commercial, financial, and other pressures that might present a conflict of interest or an appearance of conflict of interest. To that end, when deciding whether to accredit a person, FDA will consider whether the person has established, documented, and executed policies and procedures to prevent any individual or organizational conflict of interest, including conflicts of contractors or individual contract employees.

4. Training

Accredited Persons must certify in their application that they will have designated employees attend FDA training for Accredited Persons. FDA plans to provide such training on a periodic basis for persons newly accredited. FDA encourages applicants who wish to begin submitting reviews on November 21, 1998, to apply at least 60 days before the scheduled October 14 through 16, 1998 training session. FDA will not accept 510(k) reviews and recommendations from Accredited Persons that have failed to have at least one designated employee attend a training session for Accredited Persons.

C. Safeguards

The Third Party Review Program established by FDAMA includes safeguards to maintain a high level of quality in 510(k)'s reviewed by Accredited Persons and to minimize risk to public health. To ensure that persons accredited under section 523 of the act will continue to meet the standards of accreditation, the statute requires FDA to: (1) Make onsite visits on a periodic basis to each Accredited Person to audit the performance of such person, and (2) take such additional

measures as the agency determines to be appropriate.

In addition, the statute permits FDA to suspend or withdraw accreditation of any person accredited under section 523 of the act, after providing notice and an opportunity for an informal hearing, when such person is substantially not in compliance with the requirements of this section or poses a threat to public health or fails to act in a manner consistent with the purposes of this section.

The act also has been amended to establish a new prohibited act section to protect the integrity of the Accredited Person Program established by section 523 of the act. It is a prohibited act under new section 301(y)(1) of the act (21 U.S.C. 331(y)(1)) for an Accredited Person to:

(1) Submit a report that is false or misleading in any material respect;

(2) Disclose confidential information or trade secrets without the express written consent of the person who submitted such information or secrets to the Accredited Person; or

(3) Receive a bribe in any form or do a corrupt act associated with a responsibility delegated to the Accredited Person under the act.

FDA also is requiring applicants who wish to become an Accredited Person to establish policies designed to identify, prevent, and ensure reporting to FDA, of instances of forum shopping by submitters of 510(k)'s. Submitters of 510(k)'s who consult with more than one party in order to find the Accredited Person who is most likely to recommend clearance of the 510(k) will undermine the independence and integrity of the Accredited Person Review Program. FDA, therefore, expects Accredited Persons to ensure that the submitters of the 510(k)'s they are reviewing have not previously presented the submission to another Accredited Person.

It is not feasible to identify or state categorically all of the criteria for evaluating whether a submitter has forum shopped. However, if FDA determines that a submitter has obtained reviews of the same 510(k) from more than one Accredited Person, there will be a presumption of forum shopping and FDA may refuse to provide special processing of a submitter's 510(k) unless the submitter can explain to FDA's satisfaction why the circumstances do not indicate forum shopping.

III. Environmental Impact

The agency has determined under 21 CFR 25.30(k) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

IV. Paperwork Reduction Act of 1995

This voluntary third party review program contains information collection provisions which are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). FDA has submitted this proposed collection of information to OMB and has requested emergency processing under section 3507(j) of the Paperwork Reduction Act of 1995 and 5 CFR 1320.13. The information is essential to the agency's mission and is needed immediately to meet the statutory deadline for implementation of the voluntary third party review program as required by FDAMA. The use of normal clearance procedures would be likely to result in the prevention or disruption of this collection of information. The title, description, and respondent description of the information collection provisions are shown below with an estimate of the annual recordkeeping and periodic reporting burden. Included in the estimate is the time for reviewing instructions, gathering and maintaining the data needed, and completing and reviewing each collection of information.

With respect to the following collection of information, FDA invites comments on: (1) Whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Title: Medical Devices; FDAMA Third-Party Review.

Description: Section 210 of FDAMA establishes a new section 523 of the act, directing FDA to accredit persons in the private sector to review certain premarket applications and notifications. As with the third party pilot program previously conducted by FDA, participation in this third party review program by accredited persons is entirely voluntary. A third party wishing to participate will submit a request for accreditation. Accredited third party reviewers will have the ability to review a manufacturer's 510(k) submission for selected devices. After reviewing a submission, the reviewer will forward a copy of the 510(k) submission, along with the reviewer's documented review and recommendation, to FDA. Third party reviewers should maintain records of their 510(k) reviews and a copy of the 510(k) for a reasonable period of time. This information collection will allow FDA to implement the Accredited Person review program established by FDAMA and improve the efficiency of 510(k) review for low to moderate-risk devices.

Description of Respondents: Businesses or other for-profit organizations.

FDA estimates the burden of this collection of information as follows:

TABLE 1.—ESTIMATED ANNUAL REPORTING BURDEN[1]

Item	No. of Respondents	No. of Responses per Respondents	Total Annual Responses	Hours per Respondents	Total Hours
Request for accreditation	40	1	40	24	960
510(k) reviews conducted by accredited 3rd parties	35	4	140	40	5,600
Total hours					6,560

[1]There are no capital costs or operating and maintenance costs associated with this collection of information.

TABLE 2.—Estimated Annual Recordkeeping Burden[1]

Item	No. of Recordkeepers	Annual Frequency per Recordkeeping	Total Annual Records	Hours per Recordkeeper	Total Hours
510(k) reviews	35	4	140	60	8,400

[1]There are no capital costs or operating and maintenance costs associated with this collection of information.

The burdens are explained as follows:

1. Reporting

a. *Requests for accreditation:* Under the agency's third-party review pilot program, the agency received 37 applications for recognition as third party reviewers, of which the agency recognized 7. Under this expanded program, the agency anticipates that it will not see a significant increase in the number of applicants. Therefore, the agency is estimating that it will receive 40 applications. The agency anticipates that it will accredit 35 of the applicants to conduct third-party reviews.

b. *510(k) reviews conducted by accredited third-parties:* In 18 months under the Third Party Review Pilot Program, FDA received only 22 510(k)'s that requested and were eligible for review by third parties. Because the new program is not as limited in time, and is expanded in scope, the agency anticipates that the number of 510(k)'s submitted for third-party review will increase. The agency anticipates that it will receive approximately 140 third party review submissions annually, i.e., approximately 4 annual reviews per each of the estimated 35 accredited reviewers.

2. Recordkeeping

Third party reviewers are required to keep records of their review of each submission. The agency anticipates approximately 140 annual submissions of 510(k)'s for third party review.

Prior to the implementation of the program, FDA will publish in the **Federal Register** a notice of OMB's decision to approve, modify, or disapprove the information collection provisions. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

Dated: May 19, 1998.

William B. Schultz,

Deputy Commissioner for Policy.

Agency Information Collection Activities; Announcement of OMB Approval

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a collection of information entitled "User Fee Cover Sheet" has been approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (the PRA).

FOR FURTHER INFORMATION CONTACT: JonnaLynn P. Capezzuto, Office of Information Resources Management (HFA–250), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–827–4659.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of February 13, 1998 (63 FR 7420), the agency announced that the proposed information collection had been submitted to OMB for review and clearance under section 3507 of the PRA (44 U.S.C. 3507). An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. OMB has now approved the information collection and has assigned OMB control number 0910–0297. The approval expires on April 30, 2001.

Dated: May 14, 1998.

William K. Hubbard,

Associate Commissioner for Policy Coordination.

Food and Drug Administration

[Docket No. 98D–0298]

Guidance for Industry on General/Specific Intended Use; Draft; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of the draft guidance entitled "Guidance for Industry on General/Specific Intended Use." This draft guidance is not final or in effect at this time. The purpose of this draft guidance is to help medical device manufacturers understand the principles used by FDA to determine whether the addition of a specific indication for use to a medical device cleared for marketing with a general indication for use could trigger the need for a premarket approval application (PMA). The draft guidance is intended to help manufacturers answer the following questions: Under what circumstances is a device with a new, specific indication for use likely to be found to be substantially equivalent to a device legally marketed for a general indication for use? Conversely, when does a specific indication for use become a new intended use that requires submission of a PMA to establish the safety and effectiveness of the device?

DATES: Written comments concerning this draft guidance must be submitted by June 22, 1998.

ADDRESSES: Submit written requests for single copies on a 3.5" diskette of the draft guidance entitled "Guidance for Industry on General/Specific Intended Use" to the Division of Small Manufacturers Assistance (HFZ–220), Center for Devices and Radiological Health, Food and Drug Administration, 1350 Piccard Dr., Rockville, MD 20850. Send two self-addressed adhesive labels to assist that office in processing your request, or fax your request to 301–443–8818. Submit written comments concerning this draft guidance to the Dockets Management Branch (HFA–305), Food and Drug Administration, 12420 Parklawn Dr., rm. 1–23, Rockville, MD 20857. Comments should be identified with the docket number found in brackets in the heading of this document. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance.

FOR FURTHER INFORMATION CONTACT: Daniel G. Schultz, Center for Devices and Radiological Health (HFZ–470), Food and Drug Administration, 9200 Corporate Blvd., Rockville, MD 20850, 301–594–5072.

SUPPLEMENTARY INFORMATION:

I. Background

Congress indicated that FDA should provide additional guidance on the approach that the agency takes when evaluating whether a new indication for use, which appears to fall within the scope of the intended use of a legally marketed predicate device, is a new intended use that would require a PMA. This guidance is issued in accordance with new section 513(i)(1)(F) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360c(i)(1)(F)), which was added by section 206 of the Food and Drug Administration Modernization Act of 1997 (Pub. L. 105–115).

II. Significance of Guidance

This draft guidance represents the agency's current thinking on general/specific intended use. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the applicable statute, regulations, or both.

The agency has adopted good guidance practices (GGP's), which set forth the agency's policies and procedures for the development, issuance, and use of guidance documents (62 FR 8961, February 27, 1997). This draft guidance is issued as a Level 1 guidance consistent with GGP's.

III. Electronic Access

In order to receive copies of the draft guidance entitled "Guidance for Industry on General/Specific Intended Use" via your fax machine, call the CDRH Facts-On-Demand (FOD) system at 800–899–0381 or 301–827–0111 from a touch-tone telephone. At the first voice prompt press 1 to access DSMA Facts, at the second voice prompt press 2, and then enter the document number 499 followed by the pound sign (#). Then follow the remaining voice prompts to complete your request.

Persons interested in obtaining a copy of the draft guidance may also do so using the World Wide Web (WWW). CDRH maintains an entry on the WWW for easy access to information including text, graphics, and files that may be downloaded to a personal computer with access to the Web. Updated on a regular basis, the CDRH home page includes the draft guidance entitled "Guidance for Industry on General/Specific Intended Use," device safety alerts, **Federal Register** reprints, information on premarket submissions (including lists of approved applications and manufacturers' addresses), small manufacturers' assistance, information on video conferencing and electronic submissions, mammography matters, and other device-oriented information. The CDRH home page may be accessed at http://www.fda.gov/cdrh.

A text-only version of the CDRH Web site is also available from a computer or VT–100 compatible terminal by dialing 800–222–0185 (terminal settings are 8/1/N). Once the modem answers, press Enter several times and then select menu choice 1: FDA BULLETIN BOARD SERVICE. From there follow instructions for logging in, and at the BBS TOPICS PAGE, arrow down to the FDA home page (do not select the first CDRH entry). Then select Medical Devices and Radiological Health. From there select CENTER FOR DEVICES AND RADIOLOGICAL HEALTH for general information, or arrow down for specific topics.

IV. Comments

Interested persons may, on or before June 22, 1998, submit to the Dockets Management Branch (address above) written comments regarding this draft guidance. Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. The guidance document and received comments may be seen in the office above between 9 a.m. and 4 p.m., Monday through Friday.

Dated: May 12, 1998.

D.B. Burlington,

Director, Center for Devices and Radiological Health.

Food and Drug Administration

[Docket No. 98D–0312]

Draft Guidance for Staff, Industry, and Third Parties: Implementation of Third Party Programs Under the FDA Modernization Act of 1997; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the

availability of a draft guidance entitled, "Guidance for Staff, Industry, and Third Parties: Implementation of Third Party Programs Under the FDA Modernization Act of 1997". Elsewhere in this issue of the **Federal Register**, FDA has published criteria to accredit or deny accreditation to applicants who request to become Accredited Persons. To the extent this guidance discusses recommendations and procedures that have not been incorporated into the criteria established in the **Federal Register** notice, this guidance is not final nor is it in effect at this time. This guidance will assist those who are interested in participating in the Third Party Program, either as persons accredited to perform 510(k) reviews (Accredited Persons) or as applicants pursuing clearance of 510(k) submissions consistent with the FDA Modernization Act of 1997 (FDAMA), as well as FDA staff responsible for implementing the program.

DATES: Written comments concerning this guidance must be received by June 22, 1998.

ADDRESSES: Written comments concerning this guidance must be submitted to the Dockets Management Branch (HFA–305), Food and Drug Administration, 12420 Parklawn Dr., rm. 1–23, Rockville, MD 20857. Comments should be identified with the docket number found in brackets in the heading of this document. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance. If you do not have access to the World Wide Web (WWW), submit written requests for single copies of the guidance document entitled, "Guidance for Staff, Industry, and Third Parties: Implementation of Third Party Programs Under the FDA Modernization Act of 1997" on a 3.5" disk, to the Division of Small Manufacturers Assistance (HFZ–220), Center for Devices and Radiological, Food and Drug Administration, 1350 Piccard Dr., Rockville, MD 20850. Send two self-addressed adhesive labels to assist that office in processing your request, or fax your request to 301–443–8818.

FOR FURTHER INFORMATION CONTACT: John F. Stigi, Division of Small Manufacturers Assistance (HFZ–220), Center for Devices and Radiological Health, Food and Drug Administration, 1350 Piccard Dr., Rockville, MD 20850, 301–443–6597 or FAX 301–443–8818.

SUPPLEMENTARY INFORMATION:

I. Background

On August 1, 1996, FDA established the Third Party Review Pilot Program, a voluntary pilot program, to assess the feasibility of using third party reviewers to improve the efficiency of the agency's review of 510(k)s for selected low-to-moderate risk devices. Under the pilot program, persons required to submit 510(k)s for the eligible devices were permitted to contract with an FDA Recognized Third Party and submit a 510(k) directly to the third party for review. Persons who did not wish to participate in the pilot continued to submit 510(k)s directly to FDA.

Under FDAMA, this pilot program has been codified and expanded and FDA is required to establish and publish criteria to accredit or deny accreditation to persons who request to perform third party reviews. Those criteria are published elsewhere in this issue of the **Federal Register** in accordance with section 210(b) of FDAMA. This guidance document contains additional information regarding applications for accreditation of third party reviewers, as well as additional information about the agency's plans for implementation of the third party review program. FDA will begin to accept applications from prospective accredited persons beginning July 20, 1998. FDA will review those applications in 60 days and approved Accredited Persons may begin to submit reviews of 510(k)s on November 21, 1998. Because Accredited Persons must participate in training prior to submitting recommendations, applicants who wish to attend the initial training that will be held October 14 through 16, 1998, should submit their applications at least 60 days in advance of that date.

II. Significance of Guidance

This guidance document represents the agency's current thinking on implementation of the third party review program. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the applicable statute, regulations, or both.

The agency has adopted Good Guidance Practices (GGP's), which set forth the agency's policies and procedures for the development, issuance, and use of guidance documents (62 FR 8961, February 27, 1997). This guidance document is issued as a draft Level 1 guidance consistent with GGP's.

III. Electronic Access

Persons interested in obtaining a copy of the guidance may also do so using the WWW. CDRH maintains an entry on the WWW for easy access to information, including text, graphics, and files that may be downloaded to a personal computer with access to the Web. Updated on a regular basis, the CDRH home page includes "Guidance for Staff, Industry, and Third Parties: Implementation of Third Party Programs Under the FDA Modernization Act of 1997," device safety alerts, access to **Federal Register** reprints, information on premarket submissions (including lists of approved applications and manufacturers addresses), small manufacturers assistance, information on video conferencing and electronic submissions, mammography matters, and other device-oriented information. The CDRH home page may be accessed at http://www.fda.gov/cdrh.

A text-only version of the CDRH home page is also available from a computer or VT–100 compatible terminal by dialing 800–222–0185 (terminal settings are 8/1/N). Once the modem answers, press Enter several times and then select menu choice 1: FDA BULLETIN BOARD SERVICE. From there follow instructions for logging in, and at the BBS TOPICS PAGE, arrow down to the FDA home page (do not select the first CDRH entry). Then select Medical Devices and Radiological Health. From there select CENTER FOR DEVICES AND RADIOLOGICAL HEALTH for general information, or arrow down for specific topics.

IV. Comments

Interested persons may on or before June 22, 1998, submit to the Dockets Management Branch (address above) written comments regarding this draft guidance. Two copies must be submitted of any comments sent to the Dockets Management Branch, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. The guidance document and received comments may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

Dated: May 19, 1998.

William B. Schultz,

Deputy Commissioner for Policy.

Agency Information Collection Activities: Proposed Collection; Comment Request

In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Health Care Financing Administration (HCFA), Department of Health and Human Services, is publishing the following summary of proposed collections for public comment. Interested persons are invited to send comments regarding the burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

Type of Information Collection Request: Revision of a currently approved collection; *Title of Information Collection:* Information Collection Requirements Contained in the Medicaid Termination of Enrollment Regulation 42 CFR 434.27; *Form No.:* HCFA–R–141, OMB–0938–0572; *Use:* The termination of enrollment contract requirements, as referenced in 42 CFR 434.27 allow States, through contracts with Medicaid Managed Care Organizations (MCOs), to restrict disenrollment from an MCO up to a one year period. However, Medicaid beneficiaries are allowed to disenroll during the period for good cause. *Frequency:* On occasion; *Affected Public:* Business or other for-profit; *Number of Respondents:* 8,406,945; *Total Annual Responses:* 8,406,945; *Total Annual Hours:* 1.

To obtain copies of the supporting statement for the proposed paperwork collections referenced above, E-mail your request, including your address and phone number, to Paperwork@hcfa.gov, or call the Reports Clearance Office on (410) 786–1326. Written comments and recommendations for the proposed information collections must be mailed within 60 days of this notice directly to the HCFA Paperwork Clearance Officer designated at the following address: HCFA, Office of Information Services, Information Technology Investment Management Group, Division of HCFA Enterprise Standards, Attention: John Rudolph, Room C2–26–17, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

Dated: May 12, 1998.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Care Financing Administration

Privacy Act of 1974; Report of New System

AGENCY: Health Care Financing Administration (HCFA), Department Health and Human Services (HHS).

ACTION: Notice of New System of Records.

SUMMARY: In accordance with the requirements of the Privacy Act of 1974, we are proposing to establish a new system of records, "Long Term Care Minimum Data Set (LTC MDS)," HHS/HCFA/CMSO System No. 09–70–1516. We have provided background information about the proposed system in the "Supplementary Information" section below. Although the Privacy Act requires only that the "routine use" portion of the system be published for comment, HCFA invites comments on all portions of this notice. See "Effective Dates" section for comment period.

EFFECTIVE DATES: HCFA filed a new system report with the Chair of the House Committee on Government Reform and Oversight, the Chair of the Senate Committee on Governmental Affairs, and the Administrator, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB) on May 19, 1998. To ensure that all parties have adequate time in which to comment, the new system of records, including routine uses, will become effective 40 days after the publication of this notice or from the date submitted to OMB and the Congress, whichever is later, unless HCFA receives comments which require alterations to this notice.

ADDRESSES: The public should address comments to the HCFA Privacy Act Officer, Division of Freedom of Information and Privacy, Office of Information Services, C2–01–11, Baltimore, Maryland 21244–1850. Comments received will be available for review at this location, by appointment, Monday through Friday from 9 am.—3 pm., eastern time zone.

FOR FURTHER INFORMATION CONTACT: Helene Fredeking, Director, Division of Outcomes and Improvements, Center for Medicaid and State Operations, HCFA, 7500 Security Boulevard, S2–11–07, Baltimore, Maryland 21244–1850. The telephone number is (410) 786–7304.

SUPPLEMENTARY INFORMATION: Sections 1819(b)(3)(A) and 1919(b)(3)(A) of the Social Security Act require LTC facilities participating in the Medicare and Medicaid programs to conduct comprehensive, accurate, standardized, reproducible assessments of each resident's functional capacity. Sections 1819(f) and 1919(f) of the Social Security Act require the Secretary to specify an MDS of core elements and common definitions for use by the facilities, to establish guidelines for use of the data set, and to designate one or more assessment instruments which a state requires facilities to use.

A notice of proposed rulemaking (NPRM) was published in the **Federal Register**, Vol. 57, No. 249, page 61626 on December 28, 1992. A final rule was published, in the **Federal Register**, Vol. 62, No. 246, page 67174—67213, on December 23, 1997. The rule requires facilities certified to participate in Medicare and/or Medicaid to encode and transmit the information contained in the MDS to the state using a format that conforms to standard record layouts and data dictionaries. The state is subsequently required to transmit the data to HCFA using the same standard record layouts and data dictionaries.

This new system of records shall contain the assessment information (MDS records) for each individual residing in LTC facilities that are certified to participate in the Medicare and/or Medicaid programs (including private pay individuals). Each state's resident assessment instrument must contain the assessment instrument designated by HCFA, which includes the MDS and its common definitions, triggers, and utilization guidelines.

The LTC MDS includes standard demographic data for identification such as resident name, Social Security Number, Medicare number, Medicaid number, gender, race/ethnicity, and birth date. The MDS may also contain data elements that describe the resident's health status in the following areas:

Customary Routines
Cognitive Patterns
Communication/Hearing Patterns
Vision Patterns
Mood and Behavior Patterns
Psychosocial Well-being
Physical Functioning and Structural Problems
Continence Status
Disease Diagnoses
Health Conditions
Oral/Nutritional Status
Oral/Dental Status
Skin Condition
Activity Pursuit Patterns
Medications
Special Treatments and Procedures
Discharge Potential and Overall Status
Participation in Assessment

The Privacy Act allows us to disclose information without an individual's consent if the information is to be used for a purpose which is compatible with the purpose(s) for which the information was collected. Any such compatible use of data is known as a "routine use." The proposed routine uses in this system meet the compatibility requirement of the Privacy Act.

Dated: May 19, 1998.

Nancy-Ann Min DeParle,

Administrator, Health Care Financing Administration.

09–70–1516

SYSTEM NAME:

Long Term Care Minimum Data Set (LTC MDS), HHS/HCFA/CMSO.

SECURITY CLASSIFICATION:

None.

SYSTEM LOCATION:

HCFA Data Center, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

HCFA contractors and agents at various locations.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Residents in all LTC facilities that are Medicare and/or Medicaid certified, including private pay individuals.

CATEGORIES OF RECORDS IN THE SYSTEM:

Individual-level demographic and identifying data as well as clinical status data.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

Sections 1102(a), 1819(f), 1919(f), 1819(b)(3)(A), 1919(b)(3)(A), and 1864 of the Social Security Act.

PURPOSE(S):

To aid in the administration of the survey and certification of Medicare/Medicaid LTC facilities and to study the effectiveness and quality of care given in those facilities. This system will also support regulatory, reimbursement, policy, and research functions, and enable regulators to provide long term care facility staff with outcome data for providers' internal quality improvement activities.

ROUTINE USE OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

These routine uses specify additional circumstances under which HCFA may release information from the LTC MDS system without the consent of the individual to whom such information pertains. Each proposed disclosure of information under these routine uses will be evaluated to ensure that the disclosure is legally permissible, including but not limited to ensuring that the purpose of the disclosure is compatible with the purpose for which the information was collected. Also, HCFA will require each prospective recipient of such information to agree in writing to certain conditions to ensure the continuing confidentiality and physical safeguards of the information. More specifically, as a condition of each disclosure under these routine uses, HCFA will, as necessary and appropriate:

(a) Determine that no other Federal statute specifically prohibits disclosure of the information;

(b) Determine that the use or disclosure does not violate legal limitations under which the information was provided, collected, or obtained;

(c) Determine that the purpose for which the disclosure is to be made;

(1) Cannot reasonably be accomplished unless the information is provided in individually identifiable form;

(2) Is of sufficient importance to warrant the effect on or the risk to the privacy of the individual(s) that additional exposure of the record(s) might bring; and

(3) There is a reasonable probability that the purpose of the disclosure will be accomplished;

(d) Require the recipient of the information to:

(1) Establish reasonable administrative, technical, and physical safeguards to prevent unauthorized access, use, or disclosure of the record or any part thereof. The physical safeguards shall provide a level of security that is at least the equivalent to the level of security contemplated in OMB Circular No. A–130 (revised), Appendix III, Security of Federal Automated Information Systems which sets forth guidelines for security plans for automated information systems in Federal agencies.

(2) Remove or destroy the information that allows subject individual(s) to be identified at the earliest time at which removal or destruction can be accomplished, consistent with the purpose of the request;

(3) Refrain from using or disclosing the information for any purpose other than the stated purpose under which the information was disclosed; and

(4) Make no further use or disclosure of the information except:

(i) To prevent or address an emergency directly affecting the health or safety of an individual;

(ii) For use on another project under the same conditions, provided HCFA has authorized the additional use(s) in writing; or

(iii) When required by law;

(e) Secure a written statement or agreement from the prospective recipient of the information whereby the prospective recipient attests to an understanding of, and willingness to abide by, the foregoing provisions and any additional provisions that HCFA deems appropriate in the particular circumstance; and

(f) Determine whether the disclosure constitutes a computer "matching program" as defined in 5 U.S.C. 552a(a)(8). If the disclosure is determined to be a computer "matching program," the instructions regarding preparation and transmission of a matching agreement as stated in 5 U.S.C. 552a(o) must be followed.

Disclosure may be made:

1. To a Congressional office from the record of an individual in response to an inquiry from the Congressional office made at the request of that individual.

2. To the Bureau of Census for use in processing research and statistical data directly related to the administration of Agency programs.

3. To the Department of Justice, to a court or other tribunal, or to another party before such tribunal, when:

(a) HHS, or any component thereof;

(b) Any HHS employee in his or her official capacity; or

(c) Any HHS employee in his or her individual capacity where the Department of Justice (or HHS, where it is authorized to do so) has agreed to represent the employee; or

(d) The United States or any agency thereof where HHS determines that the litigation is likely to affect HHS or any of its components; is party to litigation or has an interest to such litigation, and HHS determines that the use of such records by the Department of Justice, the tribunal, or the other party is relevant and necessary to the litigation and would help in the effective presentation of the governmental party or interest, provided, however, that in each case HHS determines that such disclosure is compatible with the purpose for which the records were collected.

4. To an individual or organization for a research, evaluation, or epidemiological project related to the prevention of disease or disability, or the restoration or maintenance of health.

5. To a HCFA contractor for the purpose of collating, analyzing, aggregating, or otherwise refining or processing records in this system or for developing, modifying, and/or manipulating automated data processing (ADP) software. Data could also be disclosed to contractors incidental to consultation, programming, operation, user assistance, or maintenance for ADP or telecommunications systems containing or supporting records in the system.

6. To an agency of a state government, or established by state law, for purposes of determining, evaluating, and/or assessing overall or aggregate cost, effectiveness, and/or quality of health care services provided in the state; or for the purpose of administration of federal-state health care programs within the state. Data will be released to the state only on those individuals who are either residents in long term care facilities within the state or are legal residents of the state irrespective of the location of the LTC facility wherein they are residents. In effect, only data collected by the state for HCFA may be released for this purpose.

7. To another Federal agency (1) To contribute to the accuracy of HCFA's proper payment of Medicare health benefits, and/or (2) to enable such agency to administer a Federal health benefits program, or as necessary to enable such agency to fulfill a requirement of a Federal statute or regulation that implements a health benefits program funded in whole or in part with Federal funds.

8. To a HCFA contractor to perform Title XI or Title XVIII (of the Social Security Act) functions. Records from the LTC MDS may be released to a Peer Review Organization (PRO), or other HCFA contractor respectively, for performing medical review functions under these provisions of the law.

9. To a HCFA contractor, including but not limited to, fiscal intermediaries and carriers under Title XVIII of the Social Security Act, to administer some aspect of a HCFA-administered health benefits program, or to a grantee of a HCFA-administered grant program, which program is or could be affected by fraud or abuse, for the purpose of preventing, deterring, discovering, detecting, investigating, examining, prosecuting, suing with respect to, defending against, correcting, remedying, or otherwise combating such fraud or abuse in such programs.

10. To another Federal agency or to an instrumentality of any governmental jurisdiction within or under the control of the United States, including any state or local government agency, for the purpose of preventing, deterring, discovering, detecting, investigating, examining, prosecuting, suing with respect to, defending against, correcting, remedying, or otherwise combating such fraud or abuse in such programs.

11. To any entity that makes payment for or oversees administration of health care services, for the purpose of preventing, deterring, discovering, detecting, investigating, examining, prosecuting, suing with respect to, defending against, correcting, remedying, or otherwise combating fraud or abuse against such entity or the program or services administered by such entity, provided:

(i) Such entity enters into an agreement with HCFA to share knowledge and information regarding actual or potential fraudulent or abusive practices or activities regarding the delivery or receipt of health care services, or regarding securing payment or reimbursement for health care services, or any practice or activity that, if directed toward a HCFA-administered program, might reasonably be construed as actually or potentially fraudulent or abusive;

(ii) Such entity does, on a regular basis, or at such times as HCFA may request, fully and freely share such knowledge and information with HCFA, or as directed by HCFA, with HCFA's contractors; and

(iii) HCFA determines that it may reasonably conclude that the knowledge or information it has received or is likely to receive from such entity could lead to preventing, deterring, discovering, detecting, investigating, examining, prosecuting, suing with respect to, defending against, correcting, remedying, or otherwise combating fraud or abuse in the Medicare, Medicaid, or other health benefits program administered by HCFA or funded in whole or in part by Federal funds.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

All records are stored on magnetic media.

RETRIEVABILITY:

All records are retrieved by Social Security Number or Health Insurance Claim Number or by state-assigned Medicaid number.

SAFEGUARDS:

For computerized records, safeguards established in accordance with Department standards and National Institute of Standards and Technology guidelines (e.g., security codes) will be used, limiting access to authorized personnel. System securities are established in accordance with HHS, Information Resource Management (IRM) Circular #10, Automated Information Systems (AIS) Guide, Systems Security Policies, and OMB Circular No. A–130 (revised), Appendix III.

RETENTION AND DISPOSAL:

Records are maintained with identifiers as long as needed for program research.

SYSTEM MANAGER(S) AND ADDRESS:

Director, Center for Medicaid and State Operations, 7500 Security Boulevard, Baltimore, Maryland, 21244–1850.

NOTIFICATION PROCEDURE:

To determine whether the individual's record is in the system, the subject individual should write to the system manager and furnish the following information: Name of system; health insurance claim number; and for verification purposes, the subject individual's name (woman's maiden name, if applicable), social security number, address, date of birth, and sex.

RECORD ACCESS PROCEDURES:

For purpose of access, use the same procedures outlined in Notification Procedures above. Individuals in the system should also reasonably specify the record contents being sought. (These access procedures are in accordance with the Department regulations 45 CFR 5b.5.)

CONTESTING RECORD PROCEDURES:

The subject individual should contact the system manager named above, and reasonably identify the record and specify the information to be contested. State the corrective action sought and the reasons for the correction with supporting justification. (These procedures are in accordance with Department regulations 45 CFR 5b.7.)

RECORD SOURCE CATEGORIES:

LTC Resident Assessment Instrument which includes the minimum data set and resident assessment protocols.

SYSTEMS EXEMPTED FROM CERTAIN PROVISIONS OF THE ACT:

None.

BILLING CODE 4120–03–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–4341–N–11]

Federal Property Suitable as Facilities to Assist the Homeless

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This Notice identifies unutilized, underutilized, excess, and surplus Federal property reviewed by HUD for suitability for possible use to assist the homeless.

FOR FURTHER INFORMATION CONTACT: Mark Johnston, room 7256, Department of Housing and Urban Development, 451 Seventh Street SW., Washington, DC 20410; telephone (202) 708–1226; TTY number for the hearing and speech-impaired (202) 708–2565 (these telephone numbers are not toll-free), or call the toll-free Title V information line at 1–800–927–7588.

SUPPLEMENTARY INFORMATION: In accordance with 24 CFR part 581 and section 501 of the Stewart B. McKinney Homeless Assistance Act (42 U.S.C. 11411), as amended, HUD is publishing this Notice to identify Federal buildings and other real property that HUD has reviewed for suitability for use to assist the homeless. The properties were reviewed using information provided to HUD by Federal landholding agencies regarding unutilized and underutilized buildings and real property controlled by such agencies or by GSA regarding its inventory of excess or surplus Federal property. This Notice is also published in order to comply with the December 12, 1988 Court Order in *National Coalition for the Homeless* v. *Veterans Administration*, No. 88–2503–OG (D.D.C.).

Properties reviewed are listed in this Notice according to the following

categories: Suitable/available, suitable/unavailable, suitable/to be excess, and unsuitable. The properties listed in the three suitable categories have been reviewed by the landholding agencies, and each agency has transmitted to HUD: (1) Its intention to make the property available for use to assist the homeless, (2) its intention to declare the property excess to the agency's needs, or (3) a statement of the reasons that the property cannot be declared excess or made available for use as facilities to assist the homeless.

Properties listed as suitable/available will be available exclusively for homeless use for a period of 60 days from the date of this Notice. Homeless assistance providers interested in any such property should send a written expression of interest to HHS, addressed to Brian Rooney, Division of Property Management, Program Support Center, HHS, room 5B–41, 5600 Fishers Lane, Rockville, MD 20857; (301) 443–2265. (This is not a toll-free number.) HHS will mail to the interested provider an application packet, which will include instructions for completing the application. In order to maximize the opportunity to utilize a suitable property, providers should submit their written expressions of interest as soon as possible. For complete details concerning the processing of applications, the reader is encouraged to refer to the interim rule governing this program, 24 CFR part 581.

For properties listed as suitable/to be excess, that property may, if subsequently accepted as excess by GSA, be made available for use by the homeless in accordance with applicable law, subject to screening for other Federal use. At the appropriate time, HUD will publish the property in a Notice showing it as either suitable/available or suitable/unavailable.

For properties listed as suitable/unavailable, the landholding agency has decided that the property cannot be declared excess or made available for use to assist the homeless, and the property will not be available.

Properties listed as unsuitable will not be made available for any other purpose for 20 days from the date of this Notice. Homeless assistance providers interested in a review by HUD of the determination of unsuitability should call the toll free information line at 1–800–927–7588 for detailed instructions or write a letter to Mark Johnston at the address listed at the beginning of this Notice. Included in the request for review should be the property address (including zip code), the date of publication in the **Federal Register**, the landholding agency, and the property number.

For more information regarding particular properties identified in this Notice (*i.e.*, acreage, floor plan, existing sanitary facilities, exact street address), providers should contact the appropriate landholding agencies at the following addresses: AIR FORCE: Ms Barbara Jenkins, Air Force Real Estate Agency, Area–MI, Bolling Air Force Base, 112 Luke Avenue, Suite 104, Building 5683, Washington, DC 20332–8020; (202) 767–4184; ARMY: Mr. Jeff Holste, CECPW–FP, U.S. Army Center for Public Works, 7701 Telegraph Road, Alexandria, VA 22315; (703) 428–6318; COE: Mr. Bob Swieconek, Army Corps of Engineers, Management & Disposal Division, Pulaski Building, Room 4224, 20 Massachusetts Avenue, NW., Washington, DC 20314–1000; (202) 761–1749; INTERIOR: Ms. Lola D. Knight, Department of the Interior, 1849 C Street, NW., Mail Stop 5512–MIB, Washington, DC 20240; (202) 208–4080; GSA: Mr. Brian K. Polly, Assistant Commissioner, General Services Administration, Office of Property Disposal, 18th and F Streets, NW., Washington, DC 20405; (202) 501–2059; NAVY: Mr. Charles C. Cocks, Department of the Navy, Director, Real Estate Policy Division, Naval Facilities Engineering Command, Code 241A, 200 Stovall Street, Alexandria, VA 22332–2300; (703) 325–7342; (These are not toll-free numbers).

Dated: May 14, 1998.

Fred Karnas, Jr.,

Deputy Assistant Secretary for Economic Development.

BILLING CODE 4210–29–M

DEPARTMENT OF THE INTERIOR

Office of the Assistant Secretary of Water and Science

Central Utah Project Completion Act

Notice of Availability of the Record of Decision on the Provo River Restoration Project Final Environmental Impact Statement documenting the Department of Interior's approval for the Utah Reclamation Mitigation and Conservation Commission to proceed with the construction of the Proposed Action Alternative.

AGENCY: Office of the Assistant Secretary—Water and Science, Department of the Interior.

ACTION: Notice of availability of the Provo River Restoration Project Record of Decision.

SUMMARY: On April 1, 1998, Patricia J. Beneke, Assistant Secretary—Water and Science, Department of the Interior, signed the Record of Decision (ROD) which documents the selection of the Proposed Action Alternative (Riverine Habitat Restoration Alternative) as presented in the Provo River Restoration Project Final Environmental Impact Statement (FEIS), MC FES 97–01, filed December 23, 1997. The ROD approves the Utah Reclamation Mitigation and Conservation Commission (Mitigation Commission) proceeding with construction of the Provo River Restoration Project (PRRP) and authorizes Department of the Interior agencies to assist the Mitigation Commission with this project. The Department of the Interior and the Mitigation Commission served as the Joint Lead Agencies in the preparation of the NEPA compliance documents.

The FEIS for the PRRP considered three action alternatives (including the Proposed Action), as well as the No Action Alternative, for river restoration. The Assistant Secretary determined that the Proposed Action Alternative provides the greatest amount of mitigation and enhancement benefit among all alternatives considered.

Construction of the PRRP will restore a more natural steam channel along about 10 miles of the Provo River between Jordanelle Dam and Deer Creek Reservoir through the Heber Valley in Wasatch County, Utah. The project will fulfill Interior's environmental commitments made in the U.S. Bureau of Reclamation's 1987 Final Supplement to the Final Environmental Impact Statement, Municipal and Industrial System of the Bonneville Unit, Central Utah Project (INT FES 87–8). These commitments are now binding upon the Mitigation Commission. The selected alternative will fulfill the environmental commitments by: acquiring lands in public ownership along the Provo River thereby increasing public access for angling and other low impact recreation, restoring aquatic habitats to increase game fish populations, eliminating fish migration barriers and aquatic habitat impacts currently associated with operating irrigation diversion facilities, and providing public management of newly acquired lands to maximize public recreation benefits.

During preparation of the FEIS, the Mitigation Commission consulted formally on listed species with the U.S. Fish and Wildlife Service (FWS) under section 7 of the Endangered Species Act (16 U.S.C.A. Sections 1531 to 1544, as amended). In a letter dated December 10, 1997, the FWS indicated that the Proposed Action Alternative selected by this ROD is not likely to adversely affect listed or proposed species or designated or proposed critical habitats. Interior and the Mitigation Commission will continue to consult with FWS prior to and during construction to avoid actions that may affect proposed or listed species, or their proposed or designated critical habitat.

FOR FURTHER INFORMATION CONTACT: Additional information on matters related to this **Federal Register** notice can be obtained at the address and telephone number set forth below:

Fish and Wildlife Service

Action: Notice of Application for a Natural Gas Pipeline Right-of-Way

SUMMARY: Notice is hereby given that under Section 28 of the Mineral Leasing Act of 1920 (41 Stat. 449:30 U.S.C. 185), as amended by Public Law 93–153, Koch Pipeline Southeast, Inc. has applied to construct, install and maintain a 12-inch pipeline across approximately 2,566.88 feet of the Mississippi Sandhill Crane National Wildlife Refuge in Jackson County, Mississippi and Grand Bay National Wildlife Refuge, Mobile County,

Alabama within the existing corridor described as follows:

Legal Description of Centerline Proposed 50′ Permanent Pipeline Right-of-Way Across Property of United States of America Located in Section 7, T7S, R4W, Jackson County, Mississippi.

Commencing at a point having a Mississippi Coordinate System, East Zone coordinated of X = 1,114,194.65 and Y = 343,696.16, said point being the Point of Beginning; Thence, N 53°37′00″ E a distance of 1,681.58 feet to the Point of termination containing 1,681.58 feet or 101.91 rods.

Commencing at a point having a Mississippi Coordinate System, East Zone coordinated of X = 1,116,172.98 and Y = 345,153.82, said point being the Point of Beginning; Thence, N 53°37′00″ E a distance of 338.18 feet to the Point of termination containing 338.18 feet or 20.50 rods.

Commencing at a point having a Mississippi Coordinate System, East Zone coordinated of X = 1,116,445.24 and Y = 345,354.43, said point being the Point of Beginning; Thence, N 53°37′00″ E a distance of 480.94 feet to the Point of termination containing 480.94 feet or 29.15 rods.

Legal Description of Centerline Proposed 50′ Permanent Pipeline Right-of-Way Across Property of United States of America Located in Section 18, T7S, R4W, Jackson County, Mississippi.

Commencing at a point having a Mississippi Coordinate System, East Zone coordinated of X = 1,111,557.16 and Y = 341,753.08, said point being the Point of Beginning; Thence, N 53°37′16″ E a distance of 506.75 feet to the Point of termination containing 506.75 feet or 155.57 rods.

Legal Description of Centerline Proposed 50′ Permanent Pipeline Right-of-Way Across Property of United States of America Located in Sections 4 & 5, T7S, R4W, Jackson County, Mississippi.

Commencing at a point having a Mississippi Coordinate System, East Zone coordinated of X = 1,120,987.53 and Y = 348,701.42, said point being the Point of Beginning; Thence, N 53°40′49″ E a distance of 8.67 feet to the Point of termination containing 8.67 feet or 0.52 rods.

Legal Description of Centerline Proposed 50′ Permanent Pipeline Right-of-Way Across Property of United States of America Located in Sections 19 & 30, T7S, R4W, Jackson County, Mississippi.

Commencing at a point having a Mississippi Coordinate System, East Zone coordinated of X = 1,080,724.33 and Y = 363,181.92, said point being the Point of Beginning; Thence, N 27°18′18″ W a distance of 2,566.88 feet to the Point of termination containing 2,566.88 feet or 155.57 rods.

Legal Description of Centerline Proposed 50′ Permanent Pipeline Right-of-Way Across Property of United States of America Located in Sections 4 & 5, T7S, R4W, Mobile County, Alabama.

Commencing at a point having a Alabama Coordinate System, West Zone coordinated of X = 1,685,142.20 and Y = 167,740.37, said point being the Point of Beginning; Thence, N 53°40′49″ E a distance of 1,899.22 feet to a point, Thence, along a curve to the right having a radius of 11,670 feet and achord bearing and distance of 59°31′19″ feet to a point; Thence S 59°59′47″ E a distance of 51.41 feet to a point; Thence S 14°59′47″ E a distance of 467.89 feet to a point; Thence, S 47°01′52″ E a distance of 202.22 feet to a Point of termination containing 4,177.23 feet or 253.16 rods.

The land described above contains 11.18 acres, more or less.

The purpose of this notice is to inform the public that the United States Fish and Wildlife Service is correctly considering the merits of approving this application.

DATES: Interested persons desiring to comment on this application should do so on or before June 22, 1998.

ADDRESSES: Comments should be addressed to the Regional Director, U.S. Fish and Wildlife Service, 1875 Century Boulevard, Room 420, Atlanta, Georgia 30345.

Bureau of Land Management

[OR–050–1220–00; GP8–0194]

Closure of Public Lands

AGENCY: Prineville District, Deschutes, Resource Area, Bureau of Land Management, Interior.

ACTION: Notice is hereby given that effective immediately, the Skeleton Fire Area and adjacent lands as legally described below is closed to all motorized vehicle use, except those defined as open roads. The purpose of this closure is to protect wildlife (including critical deer range), vegetation, sensitive soils, watershed resources, areas of high visual quality, and to prevent spread of noxious weeds. Exemptions to this closure will apply to administrative personnel of the Bureau of Land Management. Other exemptions to this closure order may be made on a case by case basis by the authorized officer.

This closure will remain in effect until further notice.

Descriptive Location:

This closure applies to those lands administered by the Bureau of Land Management East of Bend, Oregon, South of Highway 20, and immediately West of the Millican Valley Off-Highway Vehicle Management Area as described in the July 1989 Brothers/LaPine Resource Management Plan (Page 48).

Legal Description

This closure order applies to those lands administered by the Bureau of Land Management within the area of Township 18 south, Range 13 east, Sections 14–36; Township 19 south, Range 13 east, Sections 1–4, 10–14, 24 and 25; Township 18 south, Range 14 east, Sections 30, 31, and 32; Township 19 south, Range 14 east, Sections 3–11, 14–24, 23–27. Seven roads will remain open during the closure period and are described as follows:

—Old Highway 20, Horse Ridge Segment.

—BLM Road 6515 from Old Highway 20 South to Forest Road 2015

—BLM Road 6515–AA from BLM Road 6516, east to Dyer Well.

—Stookey Flat Road, from intersection of Gosney Road and Arnold Market Road in a southeast direction to the intersection with BLM Road 6516.

—Ford Road, a continuation of BLM Road 6516 to the Forest Road 2015.

—Forest Road 2015.

—Forest Road 2015–500 from Forest Road 2015 south to Forest Road 18.

FOR FURTHER INFORMATION CONTACT: The Bureau of Land Management, Prineville District, P.O. Box 550, Prineville Oregon 97754, telephone 541–416–6700.

SUPPLEMENTARY INFORMATION: The authority for this closure is 43 CFR 8341.2 and 43 CFR 8364.1. Violations of this closure order are punishable by a fine not to exceed $1,000 and/or imprisonment not to exceed 12 months as provided in 43 CFR 8360.0–7.

Dated: May 12, 1998.

Danny L. Tippy,

Acting District Manager,

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[OR–100–6334–00; GP8–0192]

Notice of Emergency Closure of Public Lands: Douglas County, Oregon

AGENCY: Bureau of Land Management, Roseburg District Office, South River Resource Area.

ACTION: Emergency temporary closure of public lands in Douglas County, Oregon.

SUMMARY: Notice is served that the public lands located along Mitchell Creek, approximately 3 miles southwest of Canyonville, Oregon, are closed to all public uses, including vehicle operation, camping, open fires, shooting, hiking, sightseeing, mining, erecting structures and storing personal property, until July 15, 1998. The purpose of this closure is to minimize disturbance to threatened and endangered species, to protect wildlife and fishery resources and habitats, and to protect soil and water resources.

The lands affected by this closure are more specifically described as:

Willamette Principal Meridian, Douglas County, Oregon

T. 31 S., R. 5 W.,
Sec. 6, Lots 4, 5, 6, 7, those portions of Lot 3, SE¼NW¼, W½SW¼, and SE¼ lying west and south of BLM road 30–5–31.0; except those portions of BLM roads 31–5–6.0 and 31–6–2.0.

Containing approximately 560 acres.

Personnel that are exempt from this closure include any Federal, State, or local officer, or member of any organized rescue or fire-fighting force in the performance of an official duty. BLM roads may also be used under terms of existing easements of record. Additional persons authorized by the BLM South River Area Manager, may be allowed but must be approved in advance in writing.

EFFECTIVE DATES: The closure will become effective immediately and will remain in effect until July 15, 1998.

FOR FURTHER INFORMATION CONTACT: Alan R. Wood, Area Manager, South River Resource Area, 777 NW Garden Valley Blvd., Roseburg, Oregon 97470, (541) 440–4930.

SUPPLEMENTARY INFORMATION: Maps showing the above described area are available at the BLM's Roseburg District Office for public review. The public lands closed under this order will be posted with signs at points of access. This closure is consistent with the Roseburg District Record of Decision and Resource Management Plan (June 1995), which allows for the closure of areas where problems occur.

This temporary closure is to prevent further damage to wildlife and fishery habitats and resources, soil and water resources, and disturbance of threatened and endangered species.

This closure authorized under 43 CFR 8364.1. Any person who fails to comply with the provisions of this closure may be subject to, but not limited to, the penalties provided in 43 CFR 8360.0–7, which include a fine not to exceed $1,000 and/or imprisonment of not to exceed 12 months, as well as the penalties provided under Oregon State law.

Dated: May 13, 1998.

Alan R. Wood,

Area Manager.

Management Framework Plans, Etc: Alaska

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of availability; proposed amendment to the Southwest and Southcentral Management Framework Plans (MFP) in Southwest and Southcentral Alaska.

SUMMARY: The BLM has amended the Southwest and Southcentral MFPs to allow for the sale of public lands needed for church-group related development and to resolve several land occupancy problems. The following described public lands have been examined through the land use planning process and have been found suitable for disposal pursuant to Section 203 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1713. Parcel Two of the following described lands is also classified as suitable for lease and sale under the Recreation and Public Purposes Act, as amended, 43 U.S.C. 969.

Parcel One (AA–76879): Seward Meridian, Alaska, T. 20 N., R. 8 E., Sections 23 and 26, containing approximately 80 acres.
Parcel Two (AA–77643): Seward Meridian, Alaska, T. 15 N., R. 1 W., Lot 53, Section 19, containing approximately 1.42 acres.
Parcel Three (AA–77776): Seward Meridian, Alaska, T. 17 N., R. 2 E., Section 26, Lot 22, containing approximately 0.94 acre.
Parcel Four (AA–76396): Kateel River Meridian, Alaska, T. 27 S., R. 22 E., Section 32, containing approximately 45 acres
Parcel Five (AA–76935): Kateel River Meridian, Alaska, T. 27 S., R. 22 E., Section 32, containing approximately 1 acre.
Parcel Six (AA–77839): Seward Meridian, Alaska, T. 2 N., R. 12 W., Sections 21 and 22, containing approximately .72 acre

The above lands contain approximately 129 acres.

FOR FURTHER INFORMATION CONTACT: Robert P. Rinehart, Anchorage Field Office, Bureau of Land Management, 6881 Abbott Loop Rd., Anchorage, Alaska, 99507–2599, (907) 267–1272.

SUPPLEMENTARY INFORMATION: For a period of 30 days from the date this notice is published in the **Federal Register**, any party that participated in the plan amendment and is adversely affected by the amendment, may protest this action in accordance with 43 CFR 1610.5–5 only as it effects issues submitted for the record during the planning process.

Notice of Proposed Reinstatement of Terminated Oil and Gas Lease

Pursuant to the provisions of 30 U.S.C. 188(d) and (e), and 43 CFR 3108.2-3(a) and (b)(1), a petition for reinstatement of oil and gas lease WYW102780 for lands in Uinta County, Wyoming, was timely filed and was accompanied by all the required rentals accruing from the date of termination.

The lessee has agreed to the amended lease terms for rentals and royalties at rates of $5.00 per acre, or fraction thereof, per year and 16-2/3 percent, respectively.

The lessee has paid the required $500 administrative fee and $125 to reimburse the Department for the cost of this **Federal Register** notice. The lessee has met all the requirements for reinstatement of the lease as set out in Section 31 (d) and (e) of the Mineral Lands Leasing Act of 1920 (30 U.S.C. 188), and the Bureau of Land Management is proposing to reinstate lease WYW102780 effective January 1, 1998, subject to the original terms and conditions of the lease and the increased rental and royalty rates cited above.

[NV-930-1430-00; N-57883]

Notice of Realty Action: Lease/Conveyance for Recreation and Public Purposes

AGENCY: Bureau of Land Management.

ACTION: Recreation and Public Purpose Lease/Conveyance.

SUMMARY: The following described public land in T. 20 S., R. 60 E., section 6, Clark County, Nevada has been examined and found suitable for lease/conveyance for recreational or public purposes under the provisions of the Recreation and Public Purposes Act, as amended (43 U.S.C. 869 *et seq.*). Clark County proposes to use the land for a public park to include facilities for softball, baseball, volleyball, lawn games, roller hockey, lighted tennis courts, small/large, individual and family/group picnic areas, leisure and fitness areas, streets, roads, utilities and maintenance facilities for the park.

Mount Diablo Meridian, Nevada

T. 20 S., R. 60 E.,

Section 6: E½NW¼SE¼NW¼, SW¼SE¼NW¼,NW¼NE¼SW¼, W½SW¼NE¼SW¼.

Containing 30 acres, more or less.

The land is not required for any federal purpose. The lease/conveyance is consistent with current Bureau planning for this area and would be in the public interest. The lease/patent, when issued, will be subject to the provisions of the Recreation and Public Purposes Act and applicable regulations of the Secretary of the Interior, and will contain the following reservations to the United States:

1. A right-of-way thereon for ditches or canals constructed by the authority of the United States, Act of August 30, 1890 (43 U.S.C. 945).

2. All minerals shall be reserved to the United States, together with the right to prospect for, mine and remove such deposits from the same under applicable law and such regulations as the Secretary of the Interior may prescribe and will be subject to:

3. An easement along the north 30 feet and east 30 feet of the E½ of the NW¼ of the SE¼ of the NW¼ of section 6, T. 20 S., R. 60 E., M.D. M., Clark County, Nevada, together with a spandrel area in the NE¼ corner thereof, concave southwesterly, having a radius of fifteen (15) feet and being tangent to the south line of the north 30 feet of the west line of the east 30 feet.

4. An easement along the east 30 feet of the E½ of the SW¼ of the SE¼ of the NW¼ of section 6, T. 20 S., R. 60 E., M.D. M., Clark County, Nevada.

5. An easement along the east 30 feet of the E½ of the NW¼ of the NW¼ of the SW¼ of section 6, T. 20 S., R. 60 E., M.D. M., Clark County, Nevada.

6. An easement along the south 30 feet of the W½ of the SW¼ of the NW¼ of the SW¼ of section 6, T. 20 S., R. 60 E., M.D. M., Clark County, Nevada.

7. In addition, all road easements identified in the Clark County Master Transportation Plan, until such time as a patent would be issued.

Detailed information concerning this action is available for review at the office of the Bureau of Land Management, Las Vegas District, 4765 W. Vegas Drive, Las Vegas, Nevada.

Upon publication of this notice in the **Federal Register**, the above described land will be segregated from all other forms of appropriation under the public land laws, including the general mining laws, except for lease/conveyance under the Recreation and Public Purposes Act, leasing under the mineral leasing laws and disposal under the mineral material disposal laws. For a period of 45 days from the date of publication of this notice in the **Federal Register**, interested parties may submit comments regarding the proposed lease/conveyance for classification of the lands to the District Manager, Las Vegas District, 4765 Vegas Drive, Las Vegas, Nevada 89108.

CLASSIFICATION COMMENTS: Interested parties may submit comments involving the suitability of the land for a public park (Lone Mountain). Comments on the classification are restricted to whether the land is physically suited for the proposal, whether the use will maximize the future use or uses of the land, whether the use is consistent with local planning and zoning, or if the use is consistent with State and Federal programs.

APPLICATION COMMENTS: Interested parties may submit comments regarding the specific use proposed in the

application and plan of development, whether the BLM followed proper administrative procedures in reaching the decision, or any other factor not directly related to the suitability of the land for a public park.

Any adverse comments will be reviewed by the State Director. In the absence of any adverse comments, the classification of the land described in this Notice will become effective 60 days from the date of publication in the **Federal Register**. The lands will not be offered for lease/conveyance until after the classification becomes effective.

Dated: May 12, 1998.

Mark R. Chatterton,

Assistant District Manager, Non-Renewable Resources, Las Vegas, NV.

Notice of Availability of the Proposed Las Vegas Resource Management Plan and Final Environmental Impact Statement

AGENCY: Department of the Interior, Bureau of Land Management.

ACTION: Notice of availability.

SUMMARY: The Proposed Las Vegas Resource Management Plan and Final Environmental Impact Statement (RMP/FEIS) is available to the public for a 30 day protest period.

The Proposed Plan and FEIS has been developed in accordance with the National Environmental Policy Act of 1969 and the Federal Land Policy and Management Act of 1976. This plan is a variation of Alternative E which was presented in the Supplement to the Draft Stateline Resource Management Plan released in May 1994 and as modified by public comment. This document contains a summary of the decisions and resulting impacts, an overview of the planning process and planning issues, the Proposed Plan, a summary of written and verbal comments received during public review of the Draft Plan and Supplement, and responses to the substantive issues raised during the review.

The Proposed Plan may be protested by any person who participated in the planning process, and who has an interest which is or may be, adversely affected by the approval of the Proposed Plan. A protest may raise only those issues which were submitted for the record during the planning process (see 43 Code of Federal Regulations 1610.5–2).

All protests must be written and must be postmarked on or before July 14, 1998 and shall contain the following information:

- The name, mailing address, telephone number, and interest of the person filing the protest.
- A statement of the issue or issues being protested.
- A statement of the part or parts of the document being protested.
- A copy of all documents addressing the issue or issues previously submitted during the planning process by the protesting party, or an indication of the date the issue or issues were discussed for the record.
- A concise statement explaining precisely why the Bureau of Land Management, Nevada State Director's decision is wrong.

Upon resolution of any protests, an Approved Plan and Record of Decision will be issued. The approved Plan/Record of Decision will be mailed to all individuals who participated in this planning process and all other interested publics upon their request.

DATES: All written protests must be postmarked no later than June 19, 1998.

ADDRESSES: Protests must be filed with:

Director, Bureau of Land Management, Attn. Ms. Brenda Williams, Protests Coordinator, WO–210/LS–1075, Department of the Interior, Washington, D.C. 20240.

Copies of the Proposed RMP/FEIS may be obtained from the Las Vegas Field Office. 4765 W. Vegas Drive, Las Vegas, NV 89108.

Public reading copies are available for review at the public libraries of Clark and Nye Counties, all government document repository libraries and at the following BLM locations:

Office of External Affairs, Main Interior Building, Room 5000, 1849 C Street, NW, Washington, DC;

Public Room, Nevada State Office, 1340 Financial Blvd., Reno, NV; and the Las Vegas Field Office at the above address.

FOR FURTHER INFORMATION CONTACT: Jeff Steinmetz, RMP Team Leader, at BLM's Las Vegas Field Office listed above or telephone (702) 647–5097.

Dated: May 15, 1998.

Robert V. Abbey,

State Director, Nevada.

Announcement of the Second Meeting of the National Commission on the Future of DNA Evidence

AGENCY: Office of Justice Programs, National Institute of Justice, Justice.

ACTION: Notice of meeting.

SUMMARY: Announcement of the second meeting of the National Commission on the Future of DNA Evidence.

DATES: June 8, 1998, 8:30 AM to 5:00 PM (Central Standard Time).

ADDRESSES: The Renaissance Oak Brook Hotel, 2100 Spring Road, Oak Brook, IL 60521.

FOR FURTHER INFORMATION CONTACT: Christopher H. Asplen, AUSA, Executive Director (202) 616–8123.

Authority

This action is authorized under the Omnibus Crime Control and Safe Streets Act of 1968, §§ 201–03, as amended, 42 U.S.C. 3721–23 (1994).

Background

The purpose of the National Commission on the Future of DNA Evidence is to provide the Attorney General with recommendations on the use of current and future DNA methods, applications and technologies in the operation of the criminal justice system, from the Crime scene to the courtroom. Over the course of its Charter, the Commission will review critical policy issues regarding DNA evidence and provide recommended courses of action to improve its use as a tool of investigation and adjudication in criminal cases.

The Commission will address issues in five specific areas: (1) The use of DNA in post-conviction relief cases, (2) legal concerns including *Daubert* challenges and the scope of discovery in DNA cases, (3) criteria for training and technical assistance for criminal justice professionals involved in the identification, collection and preservation of DNA evidence at the crime scene, (4) essential laboratory capabilities in the face of emerging technologies, and (5) the impact of future technological developments in the use of DNA in the criminal justice system. Each topic will be the focus of the in-depth analysis by separate working groups comprised of prominent professionals who will report back to the Commission.

Jeremy Travis,

Director, National Institute of Justice.

Badger Paper Mills, Incorporated Peshtigo, WI; Notice of Affirmative Determination Regarding Application for Reconsideration

By letter of March 27, 1998, the petitioners requested administrative reconsideration of the Department of Labor's Notices of Negative Determination Regarding Eligibility to Apply for Worker Adjustment Assistance (TA–W–34,188) and NAFTA-Transitional Adjustment Assistance (NAFTA–02140) for workers of the subject firm. The TAA and NAFTA–TAA notices were signed on March 2, 1998 and published in the **Federal Register** on March 23, 1998 (63 FR 13878) and (63 FR 13879), respectively.

The petitioners present evidence that the Department's survey of the subject firm's domestic customers was incomplete.

Conclusion

After careful review of the application, I conclude that the claim is of sufficient weight to justify reconsideration of the Department of Labor's prior decision. The application is, therefore, granted.

Signed at Washington, DC, this 8th day of May 1998.

Grant D. Beale,

Acting Director, Office of Trade Adjustment Assistance.

Eagle-Picher Plastics Division A/K/A Cambridge Industries Huntington, Indiana; Amended Certification Regarding Eligibility to Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974 (19 USC 2273) the Department of Labor issued a Notice of Certification Regarding Eligibility to Apply for Worker Adjustment Assistance on July 3, 1996, applicable to workers of Eagle-Picher Plastics Division, located in Huntington, Indiana. The notice was published in the **Federal Register** on August 2, 1996 (61 FR 40454).

At the request of the State agency, the Department reviewed the certification for workers of the subject firm producing reinforced composite engine covers. New information provided by the State agency shows that on July 10, 1997 the subject firm was purchased by Cambridge Industries. Layoffs have continued and the facility is almost closed. Accordingly, some of workers separated from employment at the Huntington plant have had their wages reported under the unemployment insurance (UI) tax account for the Cambridge Industries. Accordingly, the Department is amending the certification to properly reflect this matter.

The intent of the Department's certification is to include all workers of the Eagle-Picher Plastics Division in the Huntington, Indiana plant adversely affected by increased imports.

The amended notice applicable to TA–W–32,372 is hereby issued as follows:

All workers of Eagle-Picher Plastics Division, also known as Champion Industries (as of July 10, 1997), Huntington, Indiana, who became totally or partially separated from employment on or after May 15, 1995 through July 3, 1998, are eligible to apply for adjustment assistance under Section 223 of the Trade Act of 1974.

Signed at Washington, DC. this 8th day of May 1998.

Grant D. Beale,

Acting Director, Office of Trade Adjustment Assistance.

[TA–W–34,404, et al.]

Henry I. Siegel Co., Inc., Chic by H.I.S. Division, Saltillo, Tennessee; Amended Certification Regarding Eligibility to Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department Labor issued a Certification of Eligibility to Apply for Worker Adjustment Assistance on April 29, 1998, applicable to all workers of Henry I. Siegel Co., Inc., Chic By H.I.S. Division located in Saltillo, Tennessee. The notice will be published soon in the **Federal Register.**

At the request of the State agency, the Department reviewed the certification for workers of the subject firm. Information shows that worker separations have occurred at the Gleason, Trezevant and South Fulton, Tennessee plants of Henry I. Siegel Co., Inc. The Gleason and Trezevant, Tennessee plants are expected to close in June 1998 and the South Fulton, Tennessee plant to close in November, 1998. The workers are engaged in the production of men's and women's slacks and jeans.

The intent of the Department's certification is to include all workers of Henry I. Siegel Co., Inc., Chic by H.I.S. who were adversely affected by increased imports. Accordingly, the Department is amending the certification to cover the workers of Henry I. Siegel Co., Inc., Chic by H.I.S. Gleason, Trezevant and South Fulton, Tennessee.

The amended notice applicable to TA–W–34,404 is hereby issued as follows:

All workers of Henry I. Siegel Co., Inc., Chic by H.I.S., Saltillo, Tennessee (TA–W–34,404), Gleason, Tennessee (TA–W–34,404A), Trezevant, Tennessee (TA–W–34,404B) and South Fulton, Tennessee (TA–W–34,404C) who became totally or partially separated from employment on or after March 17, 1997 through April 29, 2000 are eligible to apply for adjustment assistance under Section 223 of the Trade Act of 1974.

Signed at Washington, DC, this 11th day of May, 1998.

Grant D. Beale,

Acting Director, Office of Trade Adjustment Assistance.

Investigations Regarding Certifications of Eligibility To Apply For Worker Adjustment Assistance

Petitions have been filed with the Secretary of Labor under Section 221(a) of the Trade Act of 1974 ("the Act") and are identified in the Appendix to this notice. Upon receipt of these petitions, the Acting Director of the Office of Trade Adjustment Assistance, Employment and Training Administration, has instituted investigations pursuant to section 221(a) of the Act.

The purpose of each of the investigations is to determine whether the workers are eligible to apply for adjustment assistance under Title II, Chapter 2, of the Act. The investigations will further relate, as appropriate, to the determination of the date on which total or partial separations began or threatened to begin and the subdivision of the firm involved.

The petitioners or any other persons showing a substantial interest in the subject matter of the investigations may request a public hearing, provided such request is filed in writing with the Acting Director, Office of Trade Adjustment Assistance, at the address shown below, not later than June 1, 1998.

Interested persons are invited to submit written comments regarding the subject matter of the investigations to the Office of Trade Adjustment Assistance, at the address shown below, not later than June 1, 1998.

The petitions filed in this case are available for inspection at the Office of the Acting Director, Office of Trade Adjustment Assistance, Employment and Training Administration, U.S. Department of Labor, 200 Constitution Avenue, NW, Washington, DC 20210.

Signed at Washington, DC, this 4th day of May, 1998.

Grant D. Beale,

Acting Director, Office of Trade Adjustment Assistance.

[TA–W–33,261; et al]

Texas Instruments, Incorporated, Personal Productivity Products, Mobile Computing Business; Temple, Texas; et al; Amended Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974 (19 USC 2273) the Department Labor issued a Certification of Eligibility To Apply for Worker Adjustment Assistance on April 24, 1997, applicable to all workers of Texas Instruments, Incorporated, Personal Productivity Products, Mobile Computing Business, Temple, Texas. The notice was published in the **Federal Register** on May 9, 1997 (62 25659).

At the request of the company, the Department reviewed the certification for workers of the subject firm. Findings show the Department inadvertently omitted from the certification, various support function facilities of the subject firm. These facilities provided administration, designing and marketing services for the production of notebook computers at Texas Instruments. Worker separations began December 1996 and continued through May, 1997 as a result of the company selling its' notebook computer business.

The intent of the Department's certification is to include all workers of Texas Instruments, Incorporated, Personal Productivity Products, Mobile Computing Business adversely affected by increased imports of notebook computers.

The amended notice applciable to TA–W–33,261 is hereby issued as follows:

All workers of Texas Instruments, Incorporated, Personal Productivity Products, Mobile Computing Business, Temple, Texas (TA–W–33,261); and at the various locations cited below, who became totally or partially separated from employment on or after February 18, 1996 through April 26, 1999 are eligible to apply for adjustment assistance under Section 223 of the Trade Act of 1974:

TAW–33,261A Dallas Texas
TAW–33,261B Austin, Texas
TAW–33,261C Waltham, Massachusetts

DEPARTMENT OF LABOR

Pension and Welfare Benefits Administration

[Prohibited Transaction Exemption 98–17; Exemption Application No. D–10412]

Grant of Individual Exemption for the Metropolitan Life Insurance Company (MetLife)

AGENCY: Pension and Welfare Benefits Administration, Department of Labor.

ACTION: Notice of technical correction.

On April 22, 1998, the Department published in the **Federal Register** at 63 FR 19955, a notice granting an individual exemption (the Grant Notice) which would permit, effective April 1, 1997, (1) the purchase or retention by an employee benefit plan (the Plan); and (2) the sale or continuation by MetLife or an affiliate, of a synthetic guaranteed investment contract entered into between the Plan and MetLife under which MetLife guarantees certain amounts.

With respect to the information contained in the Grant Notice, the Department notes that there are several typographical errors in the paragraph captioned EFFECTIVE DATE: which appears in the second column of the Grant Notice on page 19956. As currently drafted, the paragraph states that "If granted, this exemption is effective as of April 1, 1996." Because the operative language of the Grant Notice states that the effective date of the exemption is April 1, 1997, the Department believes the captioned paragraph should be revised accordingly as follows:

EFFECTIVE DATE: This exemption is effective as of April 1, 1997.

FOR FURTHER INFORMATION CONTACT: Ms. Jan D. Broady of the Department, telephone (202) 219–8881. (This is not a toll-free number.)

Signed at Washington, D.C., this 18th of May, 1998.

Ivan L. Strasfeld,

Director of Exemption Determinations, Pension and Welfare Benefits Administration, U.S. Department of Labor.

BILLING CODE 4510–29–P

THE NATIONAL BIPARTISAN COMMISSION ON THE FUTURE OF MEDICARE

Public Meeting

Establishment of the Medicare Commission included in Chapter 3, Section 4021 of the Balanced Budget Act of 1997 Conference Report. The Medicare Commission is charged with holding public meetings and publicizing the date, time and location in the **Federal Register**.

Note: Previously published in **Federal Register**, Friday, May 15, 1998. Notice of Public Meetings to be held on Monday, June 1, 1998 and Tuesday, June 2, 1998 in Washington, DC.

The National Bipartisan Commission on the Future of Medicare will hold public meetings on June 1 and 2, 1998, at the Adams Building, Library of Congress, Room LA–202, located on the second floor of the Adams Bldg., which is located at the corner of Second Street, SE and Pennsylvania Avenue, SE.

Please check the Commission's web site for additional information: http://Medicare.Commission.Gov.

Monday, June 1, 1998, 1:15 PM–5:00 PM, Tentative Agenda: Modeling Task Force Presentation, Commission Discussion of Benefits, Cost and Eligibility Issues

Tuesday, June 2, 1998, 9:00 AM–11:00 AM, Tentative Agenda: Commission Discussion of Management, Administration and Financing Issues

If you have any questions, please contact the Bipartisan Medicare Commission, ph: 202–252–3380.

Authorized for publication in the **Federal Register** by Julie Hasler, Office Manager, National Bipartisan Medicare Commission.

I hereby authorize publication of the Medicare Commission meetings in the **Federal Register**.

Julie Hasler,

Office Manager, National Bipartisan Medicare Commission.

BILLING CODE 1132–00–M

NATIONAL COUNCIL ON DISABILITY

Establishment of Advisory Committees

SUMMARY: This notice announces the establishment of NCD's International Watch and Technology Watch.

FOR INFORMATION CONTACT: Mark S. Quigley, Public Affairs Specialist, National Council on Disability, 1331 F Street NW., Suite 1050, Washington, DC 20004–1107; 202–272–2004 (voice), 202–272–2074 (TTY), 202–272–2022 (fax), mquigley@ncd.gov (e-mail).

Agency Mission

The National Council on Disability is an independent federal agency composed of 15 members appointed by the President of the United States and confirmed by the U.S. Senate. Its overall purpose is to promote policies, programs, practices, and procedures that guarantee equal opportunity for all people with disabilities, regardless of the nature of severity of the disability; and to empower people with disabilities to achieve economic self-sufficiency, independent living, and inclusion and integration into all aspects of society.

International Watch

The purpose of NCD's International Watch is to share information on international disability issues and to advise NCD's International Committee on developing policy proposals that will advocate for a foreign policy that is consistent with the values and goals of the Americans with Disabilities Act.

Technology Watch

NCD's Technology Watch (Tech Watch) is a community-based, cross-disability consumer task force on technology. Tech Watch provides information to NCD on issues relating to emerging legislation on technology and helps monitor compliance with civil rights legislation, such as Section 508 of the Rehabilitation Act of 1973, as amended.

These committees are necessary to provide advice and recommendations to NCD on international disability issues and technology accessibility for people with disabilities.

We currently have balanced membership representing a variety of disabling conditions from across the United States.

Signed in Washington, DC, on May 18, 1998.

Ethel D. Briggs,

Executive Director.

NATIONAL FOUNDATION OF THE ARTS AND THE HUMANITIES

Sunshine Act Meeting of National Museum Services Board

AGENCY: Institute of Museum and Library Services.

ACTION: Notice of meeting.

SUMMARY: This notice sets forth the agenda of a forthcoming meeting of the National Museum Services Board. This notice also describes the function of the board. Notice of this meeting is required under the Government through the Sunshine Act (Public Law 94–409) and regulations of the Institute of Museum and Library Services, 45 CFR 1180.84.

TIME/DATE: 10:30 am–12:30 pm—Friday, June 12, 1998.

STATUS: Open.

ADDRESS: The Madison Hotel, Drawing rooms I and II, 15th and M Streets, NW, Washington, DC 20005, (202) 862–1600.

FOR FURTHER INFORMATION CONTACT: Elizabeth Lyons, Special Assistant to the Director, Institute of Museum and Library Services, 1100 Pennsylvania Avenue, NW, Room 510, Washington, DC 20506, (202) 606–4649.

SUPPLEMENTARY INFORMATION:

The National Museum Services Board is established under the Museum Services Act, Title II of the Arts, Humanities, and Cultural Affairs Act of 1976, Public Law 94–462. The Board has responsibility for the general policies with respect to the powers, duties, and authorities vested in the Institute under the Museum Services Act.

The meeting of Friday, June 12, 1998 will be open to the public. If you need special accommodations due to a disability, please contact; Institute of Museum and Library Services, 1100 Pennsylvania Avenue, NW, Washington, DC 20506—(202) 606–8536—TDD (202) 606–8636 at least seven (7) days prior to the meeting date.

72ND MEETING OF THE NATIONAL MUSEUM SERVICE BOARD, THE MADISON HOTEL, 15TH AND M STREETS, NW, WASHINGTON, DC, 10:30 AM–12:30 PM

Agenda

I. CHAIRMAN'S WELCOME AND APPROVAL OF MINUTES OF THE 71ST NMSB MEETING—JANUARY 27, 1998
II. DIRECTOR'S REPORT
III. LEGISLATIVE/PUBLIC AFFAIRS REPORT
IV. OFFICE OF RESEARCH AND TECHNOLOGY REPORT
V. OFFICE OF MUSEUM SERVICES PROGRAM REPORT

NATIONAL TRANSPORTATION SAFETY BOARD

Agency Recordkeeping/Reporting Requirements Under Emergency Review by the Office of Management and Budget (OMB)

The National Transportation Safety Board has submitted the following (see below) emergency processing public information collection request (ICR) to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. Chapter 35). OMB approval has been requested by May 27, 1998. A copy of this individual ICR, with applicable supporting documentation, may be obtained by calling the National Transportation Safety Board Departmental Clearance Officer, Larry Crabill (202) 314–6224.

Comments and questions about the ICR listed below should be directed to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for the National Transportation Safety Board, Office of Management and Budget, Room 10102, 725 17th Street, N.W., Washington, D.C. 20503.

Agency: National Transportation Safety Board.

Title: Evacuation Safety Study: Passenger Questionnaire.

OMB Number: New.

Frequency: Once.

Affected Public: Individuals.

Number of Respondents: 2000.

Estimated Time Per Respondent: 20 minutes.

Total Burden Hours: 667.

Description: The National Transportation Safety Board is currently conducting a study on emergency evacuation from commercial aircraft. The study will examine the effects on emergency evacuations of the following: (1) Evacuation equipment; (2) different cabin configurations; (3) different cabin and outside environments; (4) evacuation procedures and crew/passenger communications; and (5) passenger age, size, and other bio-behavioral factors. Further, the study will compile general statistics on evacuations, including the number of evacuations and the types and number of passenger injuries incurred during evacuations.

Therefore, the National Transportation Safety Board is seeking emergency clearance to obtain data from passengers who have evacuated from commercial aircraft on their observations of the evacuation and their personal experience during the evacuation.

Dated: May 19, 1998.

Rhonda Underwood,

Federal Register Liaison Officer.

BILLING CODE 7533–01–M

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards; Subcommittee Meeting on Advanced Reactor Designs; Notice of Meeting

The ACRS Subcommittee on Advanced Reactor Designs will hold a meeting on June 17–18, 1998, Room T–2B3, 11545 Rockville Pike, Rockville, Maryland.

The entire meeting will be open to public attendance.

The agenda for the subject meeting shall be as follows:

Wednesday, June 17, 1998—8:30 a.m. until the conclusion of business.

Thursday, June 18, 1998—8:30 a.m. until the conclusion of business.

The Subcommittee will continue its review of the Westinghouse AP600 design. Specifically, the Subcommittee will review the inspections, tests, analyses, and acceptance criteria (ITAAC), the AP600 Level 1 PRA, and the NRC staff's evaluation of Chapters 1, 4, 5, 7, 8, 11, 13, and 18 of the AP600 Standard Safety Analysis Report. The purpose of this meeting is to gather information, analyze relevant issues and facts, and to formulate proposed positions and actions, as appropriate, for deliberation by the full Committee.

Oral statements may be presented by members of the public with the concurrence of the Subcommittee Chairman; written statements will be accepted and made available to the Committee. Electronic recordings will be permitted only during those portions of the meeting that are open to the public, and questions may be asked only by members of the Subcommittee, its consultants, and staff. Persons desiring to make oral statements should notify the cognizant ACRS staff engineer named below five days prior to the meeting, if possible, so that appropriate arrangements can be made.

During the initial portion of the meeting, the Subcommittee, along with any of its consultants who may be present, may exchange preliminary views regarding matters to be considered during the balance of the meeting.

The Subcommittee will then hear presentations by and hold discussions with representatives of the NRC staff, Westinghouse Electric Company, their consultants, and other interested persons regarding this review.

Further information regarding topics to be discussed, whether the meeting has been canceled or rescheduled, and the Chairman's ruling on requests for the opportunity to present oral statements and the time allotted therefor, can be obtained by contacting the cognizant ACRS staff engineer, Mr. Noel F. Dudley (telephone 301/415–6888) between 7:30 a.m. and 4:15 p.m. (EDT). Persons planning to attend this meeting are urged to contact the above named individual one or two working days prior to the meeting to be advised of any potential changes to the agenda, etc., that may have occurred.

Dated: May 18, 1998.

Sam Duraiswamy,

Chief, Nuclear Reactors Branch.

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards; Subcommittee Meeting on Plant Operations; Notice of Meeting

The ACRS Subcommittee on Plant Operations will hold a meeting on June 19, 1998, in Room T–2B3, 11545 Rockville Pike, Rockville, Maryland.

The entire meeting will be open to public attendance.

The agenda for the subject meeting shall be as follows:

Friday, June 19, 1998—8:30 a.m. until the conclusion of business.

The Subcommittee will discuss the proposed changes to 10 CFR 50.59 (Changes, Tests and Experiments), status of resolution of issues identified in the March 24, 1998 Staff Requirements Memorandum related to SECY–97–205, "Integration and Evaluation of Results From Recent Lessons-Learned Reviews," and related matters. The purpose of this meeting is to gather information, analyze relevant issues and facts, and to formulate proposed positions and actions, as appropriate, for deliberation by the full Committee.

Oral statements may be presented by members of the public with the concurrence of the Subcommittee Chairman; written statements will be accepted and made available to the Committee. Electronic recordings will be permitted only during those portions of the meeting that are open to the public, and questions may be asked only by members of the Subcommittee, its consultants, and staff. Persons desiring to make oral statements should notify one of the cognizant ACRS staff engineers named below five days prior to the meeting, if possible, so that appropriate arrangements can be made.

During the initial portion of the meeting, the Subcommittee, along with any of its consultants who may be present, may exchange preliminary views regarding matters to be considered during the balance of the meeting.

The Subcommittee will then hear presentations by and hold discussions with representatives of the NRC staff, and other interested persons regarding this review.

Further information regarding topics to be discussed, whether the meeting has been canceled or rescheduled, and the Chairman's ruling on requests for the opportunity to present oral statements and the time allotted therefor, can be obtained by contacting the cognizant ACRS staff engineers, Mr. Michael T. Markley (telephone 301/

415–6885) or Mr. Amarjit Singh (telephone 301–415–6899) between 7:30 a.m. and 4:15 p.m. (EDT). Persons planning to attend this meeting are urged to contact one of the above named individuals one or two working days prior to the meeting to be advised of any potential changes to the agenda, etc., that may have occurred.

Dated: May 18, 1998.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No.: 30–01233]

Site Decommissioning Plans Etc: U.S. Army Garrison, Fitzsimons, Aurora Co; Hearing

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of consideration of amendment request for decommissioning the Department of the Army, U.S. Army Garrison, Fitzsimons, Aurora, Colorado, and Opportunity for a Hearing.

The U.S. Nuclear Regulatory Commission (NRC) is considering issuance of a license amendment to Byproduct Material License No. 05–00046–13, issued to the Department of the Army, U.S. Army Garrison, Fitzsimons (Fitzsimons), to authorize decommissioning of its facilities at Aurora, Colorado.

On June 28, 1996, Fitzsimons ceased principal activities permanently at the Aurora facilities. The licensee has conducted limited decommissioning activities at the Aurora facilities in accordance with the conditions discussed in License No. 05–00046–13. On February 2, 1998, Fitzsimons submitted a site decommissioning plan (SDP) to NRC for review that summarized the decommissioning activities that will be undertaken to remediate the Aurora facilities and release them from radiological controls and licensing restrictions. Radioactive contamination at the Fitzsimons Aurora facilities discussed in the SDP consists of pipes, sinks, bench tops, cabinet drawers, flooring, and fume hood components contaminated with byproduct material resulting from licensed operations that occurred from 1956 until 1996.

The NRC will require the licensee to remediate the Aurora facilities to meet NRC's decommissioning criteria , and during decommissioning activities, maintain effluents and doses within NRC requirements and as low as reasonably achievable.

Prior to approving the decommissioning plan, NRC will have made findings required by the Atomic Energy Act of 1954, as amended, and NRC's regulations. These findings will be documented in a Safety Evaluation Report and an Environmental Assessment. Approval of the SDP will be documented in an amendment to License No. 05–00046–13.

The NRC hereby provides notice that this is a proceeding on an application for amendment of a license falling within the scope of Subpart L "Informal Hearing Procedures for Adjudication in Materials Licensing Proceedings," of NRC's rules and practice for domestic licensing proceedings in 10 CFR Part 2. Pursuant to § 2.1205(a), any person whose interest may be affected by this proceeding may file a request for a hearing in accordance with § 2.1205(d). A request for a hearing must be filed within (30) days of the date of publication of this **Federal Register** notice.

The request for a hearing must be filed with the Office of the Secretary either:

1. By delivery to Secretary, U.S. Nuclear Regulatory Commission, One White Flint North, 11555 Rockville Pike, Rockville, MD 20852–2738, between 7:45 am and 4:15 pm Federal workdays; or

2. By mail or telegram addressed to Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, Attention: Rulemakings and Adjudications Staff.

In addition to meeting other applicable requirements of 10 CFR Part 2 of the NRC's regulations, a request for a hearing filed by a person other than an applicant must describe in detail:

1. The interest of the requester in the proceeding;

2. How that interest may be affected by the results of the proceeding, including the reasons why the requestor should be permitted a hearing, with particular reference to the factors set out in § 2.1205 (h);

3. The requester's areas of concern about the licensing activity that is the subject matter of the proceeding; and

4. The circumstance establishing that the request for a hearing is timely in accordance with § 2.1205 (d).

In accordance with 10 CFR 2.1205 (f), each request for a hearing must also be served, by delivering it personally or by mail, to:

1. The applicant, Department of the Army, U.S. Army Garrison, Fitzsimons, 12101 E. Colfax Avenue, Aurora, Colorado, Attention: MCHG–BC–BC(RPO); and

2. The NRC staff, by delivery to Secretary, U.S. Nuclear Regulatory Commission, One White Flint North, 11555 Rockville Pike, Rockville, MD 20852–2738, between 7:45 am and 4:15 pm Federal workdays, or by mail, addressed to Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, Attention: Rulemakings and Adjudications Staff.

For further details with respect to this action, the SDP is available for inspection at the NRC's Region IV offices at 611 Ryan Plaza Drive, Suite 400, Arlington, TX 76011–8064.

FOR FURTHER INFORMATION CONTACT: Mr. Danny L. Rice, Division of Nuclear Material Safety, U.S. Nuclear Regulatory Commission Region IV, 611 Ryan Plaza Drive, Suite 400, Arlington, TX 76011–8064. Telephone: (817) 860–8151.

Dated at Rockville, Maryland, this 15th day of May 1998.

For the Nuclear Regulatory Commission.

John W. N. Hickey,

[FR Doc. 98–13712 Filed 5–21–98; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR WASTE TECHNICAL REVIEW BOARD

Meeting

Board meeting: June 24, 1998—Las Vegas, Nevada: Department of Energy (DOE) alternative designs for a potential repository that might be developed at Yucca Mountain in Nevada.

Pursuant to its authority under section 5051 of Public Law 100–203, Nuclear Waste Policy Amendments Act of 1987, the Nuclear Waste Technical Review Board (Board) will hold its summer meeting Wednesday, June 24, 1998, in Las Vegas, Nevada.

The one-day meeting, which is open to the public, will begin at 8:30 a.m. and will focus on efforts being made by the DOE's Office of Civilian Radioactive Waste Management (OCRWM) to develop alternative designs for a proposed repository that might be developed at Yucca Mountain in Nevada. In particular, the Board will hear presentations dealing with enhancements to the OCRWM's base-case repository design, and how, using technologies such as drip shields and ceramic coatings, those enhancements might affect repository performance. The Board also will hear a presentation on the technical basis for OCRWM's choice of specific technical designs to be analyzed in its forthcoming

environmental impact statement for the Yucca Mountain site. A detailed agenda will be available approximately two weeks before the meeting. Call for a copy, or visit the Board's web site at www.nwtrb.gov.

Time has been set aside for the public to comment on the technical issues raised during the meeting. Those wishing to speak are encouraged to sign the "Public Comment Register" at the check-in table. A time limit may have to be set on individual remarks, but written comments of any length may be submitted for the record.

The meeting will be held at the Crowne Plaza Hotel, 4225 South Paradise Road, Las Vegas, Nevada 89109; (tel) 702–369–4400; (fax) 702–369–3770. Reservations for accommodations should be made by June 1, 1998. Please mention that you are attending the Nuclear Waste Technical Review Board meeting to receive the preferred rate.

Transcripts of this meeting will be available via e-mail, on computer disk, or on a library-loan basis in paper format from Davonya Barnes, Board staff, beginning July 20, 1998. For further information, contact the Frank Randall, External Affairs, at the Board's offices, at 2300 Clarendon Boulevard, Suite 1300, Arlington, Virginia 22201–3367; (tel) 703–235–4473; (fax) 703–235–4495; (e-mail) info@nwtrb.gov.

The Nuclear Waste Technical Review Board was created by Congress in the Nuclear Waste Policy Amendments Act of 1987 to evaluate the technical and scientific validity of activities undertaken by the Secretary of Energy to manage the disposal of the nation's commercial spent nuclear fuel and defense high-level waste. In the same legislation, Congress directed the Secretary to characterize a site at Yucca Mountain, Nevada, for its suitability as a potential permanent repository for disposing of that waste.

Dated: May 18, 1998.

William Barnard,

Executive Director, Nuclear Waste Technical Review Board.

BILLING CODE 6820–AM–M

THE PRESIDENT'S COUNCIL ON SUSTAINABLE DEVELOPMENT

The Nineteenth Meeting of the President's Council on Sustainable Development (PCSD) in Washington, DC

SUMMARY: The President's Council on Sustainable Development (PCSD), a Presidential Commission with representation from industry, government, environmental, and Native American organizations, will convene its nineteenth meeting in Washington, D.C. on Thursday, June 4, 1998.

Under its current charter from the Clinton Administration, the Council is (1) continuing to forge consensus on policy, (2) demonstrating implementation, (3) getting the word out about sustainable development, and (4) evaluating progress. The Council will advise the President in four specific areas: domestic implementation of policy options to reduce greenhouse gas emissions, next steps in building the new environmental management system of the 21st century, promoting multi-jurisdictional and community cooperation in metropolitan and rural areas, and policies that foster the United States' leadership role in sustainable development internationally.

At the Council's last meeting in Atlanta, GA on November 20, 1997, the members listened to and questioned invited experts as they presented their views on the possibilities and limitations of new technologies to reduce greenhouse gas emissions. The Council also heard from people in the Atlanta region about ways in which the climate change issues are affecting, and could affect, their lives.

At the June 4th meeting the Council will hear presentations, discuss a wide array of business, and decide on important next steps.

June 4 Public Meeting

9:00 a.m.–12:00 p.m.

- National Town Meetings for a New American Dream. Progress on the goals, vision, audiences, anchor events, and overall planning for this seminal event taking place in Detroit and in communities across America on May 2–5, 1999.
- Benefits and opportunities for community-based greenhouse gas emissions reduction strategies.
- Progress of the Pacific Northwest Regional Council and Metropolitan and Rural Strategies Task Force.

12:00–1:00 p.m.—Lunch

1:00–4:00 p.m.—Public Meeting Continued

- Presentations "The Importance of Incentives for Early Action on Climate Change".
- Priority Climate Technologies and Barriers.
- Environmental Management Task Force's "Proposed Environmental Management Framework".
- Public Comment.

Public comment period: The Council will seek public comment on the Council's activities to implement the Administration's directive. Public comment will be taken during the substantive sessions as time permits, and during the allotted time for public comment identified in the agenda above. Written comments may be submitted before or during the public meeting. All written and oral comments will become part of the public record.

Specifically, the Council is interested in hearing from the public comments in the following areas:

- The Climate Task Force of the President's Council agreed last fall on the important role of technology in addressing climate change, stating that, "To protect the climate cost effectively, technology breakthroughs, technology incentives, and the elimination of barriers for the deployment of existing technologies are needed. Broad-based cooperative programs to stimulate markets and develop and disseminate new and existing technology to industrialized and developing countries, must be a high priority." What in your view is the most important new technology or class of technologies for reducing greenhouse gas emissions? What are the barriers to their adoption?
- The Climate Task Force of the President's Council agreed last fall on the need for incentives for early action stating that, "Greenhouse gases have atmospheric lifetimes ranging from decades to over a century, and both the concentration and the rate of increase of these gases in the atmosphere are important factors in determining the risk of climate change. Therefore, policies to reduce emissions of greenhouse gases and other measures to protect the climate should include incentives for early action." What key issues must be addressed in any system designed to create early incentives to reduce greenhouse gas emissions'?
- The Council's Charter directs the Council to "Get the Word Out About Sustainable Development." In the context of climate change, what strategies should the Council use to share its consensus views on the climate change issue?
- How can community-based strategies be used to address climate change?
- What are the most interesting innovations now underway in environmental management that are advancing or could advance the economic, environmental and social goals of sustainable development?

The Council's previous recommendations to the President may be found in two reports: Sustainable

America: A New Consensus for Prosperity, Opportunity, and a Healthy Environment for the Future (March 1996) and Building on Consensus: A Progress Report on Sustainable America (January 1997). Copies of both reports can be ordered by calling 1–800–363–3732 or downloaded off the Internet at "http://www.whitehouse.gov/PCSD".

Dates/Times: Thursday, June 4, 1998 from 9:00 a.m. to 4:00 p.m.

Place: Ronald Reagan International Trade Center Building, 1300 Pennsylvania Ave., Washington, DC. Enter at main entrance on 14th Street and proceed down stairs or escalator to the open courtyard and follow signs to the event.

Status: Open to the public. Public comments are welcome and may be submitted orally on Thursday June 4 or in writing any time prior to or during the meeting. Please submit written comments prior to the meeting to: PCSD, Public Comments, 730 Jackson Place, NW, Washington, D.C. 20503, or fax to: 202/408–6839, E-mail: "infopcsd@aol.com".

Contact: Paul Flaim, Administrative Assistant, at 202/408–5296.

Sign Language Interpreter: Please notify the contact if you will need a sign language interpreter.

Martin A. Spitzer,

Executive Director, President's Council on Sustainable Development.

[FR Doc. 98–13887 Filed 5–20–98; 2:20 pm]

BILLING CODE 3125–01–P

Railroad Retirement Board

Privacy Act of 1974; System of Records

AGENCY: Railroad Retirement Board.

ACTION: Notice of proposed changes to systems of records.

SUMMARY: The purposes of this document are to give notice of 26 non-substantial revisions of existing routine uses in 15 systems of records; to delete one routine use in one system of records; to delete 11 systems of records; and to give notice of several non-substantial changes in other categories for several systems of records.

DATES: The changes are effective as of May 22, 1998.

FOR FURTHER INFORMATION CONTACT: Leroy Blommaert, Privacy Act Officer, Railroad Retirement Board, 844 N. Rush St., Chicago, IL 60611–2092, (312) 751–4548.

SUPPLEMENTARY INFORMATION:

Part I: Minor revisions to existing routine uses

The following 26 existing routine uses in the following 15 systems of records are being revised to better express what information is being disclosed and for what purposes, or to change the name of the organization to which the information can be disclosed due to the renaming of the organization, or to limit the conditions under which the disclosure can be made:

RRB–1 "n"
RRB–3 "c"
RRB–5 "k"
RRB–6 "b," "c," "i," and "l"
RRB–7 "e," "h", and "o"
RRB–9 "g"
RRB–12 "a" "a" and "b"
RRB–17 "d"
RRB–19 "b," "c," and "e"
RRB–20 "p'
RRB–21 "c," "d," "j," and "r"
RRB–22 "w"
RRB–34 "b"
RRB–42 "c"
RRB–43 "a"

These revisions do not constitute new or expanded disclosures.

Part II: Deletion of routine uses

We have deleted routine use "b" in System of Records RRB–17 because it is not applicable.

Part III: Deletions of systems of records

The following nine systems of records are being deleted because they no longer meet the definition of "systems of records" under the Privacy Act: RRB–13, RRB–14, RRB–15, RRB–23, RRB–35, RRB–38, RRB–39, RRB–40, and RRB–47.

System of records RRB–24 and RRB–25 are being deleted because they are being consolidated into another, renamed system. These two systems are being consolidated into RRB–26.

Part IV: Changes in other categories

System name: We changed the system name for systems RRB–3, RRB–8, RRB–16, and RRB–26, to better express the content of these systems.

System locations: We revised this category for system RRB–3 and RRB–4 to reflect the current location.

Categories of individuals covered by the system: We revised this category for systems RRB–12, RRB–26, RRB–42, and RRB–43 to better or more comprehensively described the individuals covered by the system. None of these revisions reflect new groups of individuals covered by the system.

Categories of records in the system: We revised this category for systems RRB–1, RRB–3, RRB–7, RRB–8, RRB–11, RRB–26, RRB–42, and RRB–43 to correctly or more comprehensively describe the categories of records in these systems. None of the revisions reflect any new categories of records added to the systems.

Storage: We revised this category for systems RRB–4, RRB–8, RRB–18, RRB–19, RRB–21, RRB–26, RRB–43 to reflect current practice or better express the media use.

Safeguards: We revised this category for systems RRB–3, RRB–4, RRB–10, RRB–11, RRB–17, RRB–26, RRB–43 to reflect current practice or better express safeguard procedures.

Retention and disposal: We revised this category for systems RRB–1, RRB–3, RRB–4, RRB–8, RRB–10, RRB–11, RRB–17, RRB–19, RRB–20, RRB–21, RRB–22, RRB–26, RRB–42, RRB–43, and RRB–44 to bring it into conformity with actual practice and approval records disposal schedules.

System manager(s) and notification procedure: Because of organizational changes, we changed the name of the system manager and/or the official to contact in the following systems: RRB–1, RRB–2, RRB–3, RRB–4, RRB–5, RRB–6, RRB–7, RRB–8, RRB–12, RRB–16, RRB–18, RRB–19, RRB–20, RRB–21, RRB–22, RRB–26, RRB–27, and RRB–29.

Record source categories: We revised this category in systems of records RRB–4, RRB–10, RRB–17, RRB–20, and RRB–26 to better or more comprehensively describe the record sources for information in the system.

Part V: Existing systems covered by this document:

RRB–1 Social Security Benefit Vouchering System
RRB–2 Medical Examiner's Index
RRB–3 Medicare Part B
RRB–4 Microfiche of Estimated Annuity, Total Compensation and Residual Amount File
RRB–5 Master File of Railroad Employee's Creditable Compensation
RRB–6 Unemployment Insurance Record File
RRB–7 Applications for Unemployment Benefits and Placement Service Under the Railroad Unemployment Insurance Act
RRB–8 Railroad Retirement Tax Reconciliation System
RRB–9 Protest and Appeals under the Railroad Unemployment Insurance Act
RRB–10 Legal Opinion Files
RRB–11 Files on Concluded Litigation
RRB–12 Railroad Employees' Registration File
RRB–13 Disclosure of Information Files
RRB–14 Freedom of Information Register
RRB–15 Covered Abandoned Railroads
RRB–16 Social Security Administration Summary Earnings File
RRB–17 Appeal Decisions from Initial Denials for Benefits under the Provisions of the Railroad Examining System

RRB–18 Travel and Miscellaneous Voucher Examining System
RRB–19 Payroll Record System
RRB–20 Health Insurance and Supplementary Medical Insurance Enrollment and Premium Payment System (Medicare)
RRB–21 Railroad Unemployment and Sickness Insurance Benefit System
RRB–22 Railroad Retirement Survivor and Pensioner Benefit System
RRB–23 Benefit File of Lump Sum and Residual Awards Under the Railroad Retirement Act
RRB–24 Research Master Record for Lump Sum and Residual Awards Under the Railroad Retirement Act
RRB–25 Research Master Record for Survivor Beneficiaries Under the Railroad Retirement Act
RRB–26 Research Master Record for Retired Railroad Employees and Their Dependents
RRB–27 Railroad Retirement Board-Social Security Administration Financial Interchange System
RRB–29 Railroad Employees' Cumulative Gross Earnings Master File
RRB–34 Employee Personnel Management Files
RRB–35 Employee Skills File
RRB–38 Regional Rail Reorganization Act Reimbursement System
RRB–39 Milwaukee Railroad Restructuring Act Benefit System
RRB–40 Regional Rail Reorganization Act Title VII Benefits
RRB–41 Rock Island Railroad Transition and Employee Assistance Act Benefit System
RRB–42 Uncollectible Benefit Overpayment Accounts
RRB–43 Investigation Files
RRB–44 Employee Test Score File
RRB–47 Motor Vehicle Operator Records.

Dated: May 15, 1998.

By authority of the Board.

Beatrice Ezerski,

Secretary to the Board.

RRB—1

SYSTEM NAME:

Social Security Benefit Vouchering System—RRB.

* * * * *

1. The following sections and paragraph in RRB–1 are revised to read as follows:

CATEGORIES OF RECORDS IN THE SYSTEM:

Name, address, social security number, RRB claim number, type and amount of benefit, suspension and termination information.

* * * * *

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

* * * * *

n. Records may be disclosed in a court proceeding relating to any claims for benefits by the beneficiary under the Railroad Retirement Act and may be disclosed during the course of an administrative appeal to individuals who need the records to prosecute or decide the appeal or to individuals who are requested to provide information relative to an issue involved in the appeal.

* * * * *

RETENTION AND DISPOSAL:

* * * * *

MAGNETIC TAPE:

Tapes are updated at least monthly. For disaster recovery purposes, certain tapes are stored for 12–18 month periods.

* * * * *

SYSTEM MANAGER(S) AND ADDRESS:

Office of Programs—Director of Policy and Systems, Railroad Retirement Board, 844 Rush Street, Chicago, Illinois 60611–2092

* * * * *

NOTIFICATION PROCEDURE:

Requests for information regarding an individual's record should be in writing, including full name, social security number and railroad retirement claim number (if any) of the individual. Before any information about any record will be released, the individual may be required to provide proof of identity, or authorization from the individual to permit release of the information. Such requests should be sent to: Office of Programs—Director of Operations, Railroad Retirement Board, 844 Rush Street, Chicago, Illinois 60611–2092.

* * * * *

RRB–2

SYSTEM NAME:

Medical Examiner's Index.

2. The following sections in RRB–2 are revised to read as follows:

* * * * *

SYSTEM MANAGER(S) AND ADDRESS:

Office of Programs—Director of Policy and Systems, Railroad Retirement Board, 844 Rush Street, Chicago, Illinois 60611–2092.

* * * * *

NOTIFICATION PROCEDURE:

Requests for information regarding an individual's record should be in writing, including full name, social security number and railroad retirement claim number (if any) of the individual. Before any information about any record will be released, the individual may be required to provide proof of identity, or authorization from the individual to permit release of the information. Such requests should be sent to: Office of Programs—Director of Operations, Railroad Retirement Board, 844 Rush Street, Chicago, Illinois 60611–2092.

* * * * *

RRB–3

3. The following sections and paragraph in RRB–3 are revised to read as follows:

SYSTEM NAME:

Medicare, Part B (Supplementary Medical Insurance Payment System—Contracted to a United Health Care Insurance) Company.

* * * * *

SYSTEM LOCATION:

United Health Care Insurance Company, One Tower Square, Hartford, Connecticut 06115

* * * * *

CATEGORIES OF RECORDS IN THE SYSTEM:

Name, health insurance claim number, address, date of birth, telephone number, description of illness and treatment pertaining to claim, indication of other health insurance or medical assistance pertinent to claim, (date(s) and place(s) of physician service, description of medical procedures, services or supplies furnished, nature of illness(es), medical charges, name, address and telephone number of physician, Part B entitlement date, Part B deductible status and amount of payment to beneficiary.

* * * * *

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

* * * * *

c. Records may be disclosed in a court proceeding relating to any claims for benefits by the beneficiary under Title XVIII of the Social Security Act and may be disclosed during the course of an administrative appeal to individuals who need the records to prosecute or decide the appeal or to individuals who are requested to provide information relative to an issue involved in the appeal.

* * * * *

SAFEGUARDS:

The insurance company is bound by the contract set forth by the Railroad Retirement Board which contains specific instructions regarding its responsibility in claim information handled and released. It is also bound by the same regulations regarding

disclosure and security of information as the Board itself.

* * * * *

RETENTION AND DISPOSAL:

Each insurance company office retains material for 27 months. At the end of 27 months the material is sent to the Federal Records Center. After 2 years the Federal Records Center destroys the material.

* * * * *

SYSTEM MANAGER(S) AND ADDRESS:

Office of Programs—Director of Policy and Systems, Railroad Retirement Board, 844 Rush Street, Chicago, Illinois 60611–2092

* * * * *

NOTIFICATION PROCEDURE:

Requests for information regarding an individual's record should be in writing, including full name, social security number and railroad retirement claim number (if any) of the individual. Paper—Individual claim folders with records of all actions pertaining to the payment of claims are transferred to the Federal Records Center, Chicago, Illinois, 5 years after the date of last payment or denial activity if all benefits have been paid, no future eligibility is apparent and no erroneous payments are outstanding. The claim folder is destroyed 25 years after the date it is received in the center. Account receivable listings and checkwriting operations daily activity listings are transferred to the Federal Records Center 1 year after the date of issue and are destroyed 6 years and 3 months after receipt at the center. Other paper listings are destroyed 1 year after the date of issue. Change of address source documents are transferred to the Federal Records Center 6 months after date of completion and are destroyed 4 years and 6 months after receipt at the center. Microforms—Originals are kept for 3 years, transferred to the Federal Records Center, and destroyed 3 years and 3 months after receipt at the center. One duplicate copy is kept 2 years and destroyed by shredding. All other duplicate copies are kept 1 year and destroyed by shredding. Magnetic tape—Magnetic tape records are used to daily update the disk file, are retained for 90 days and then written over. For disaster recovery purposes certain tapes are stored for 12–18 months. Magnetic disk—Continually updated and permanently retained.
